The culture historical position was opposed by the functionalist and structuralist approaches; Edward Evans-Pritchard in his work on the Shilluk of the Sudan suggested that K. is "typical of, though doubtless not restricted to, societies with pronounced lineage systems in which the political segments are parts of a loosely organised structure without government functions. In societies of this kind political organization takes a ritual or symbolic form which in polities with a higher degree of organization gives way, though never entirely, to centralized administration" (1948:37). The structuralist Luc de Heusch (1987) mainly emphasized that the connection between the social and the natural worlds is made through the body of the king as created by diverse groups of people. He furthermore focussed on the ideas and practices through which the single person of the king is infinitely enlarged through constellations of "twinning" such as of the king and his mother, the ritual queens of the right and left, etc.

Most of the above-mentioned cultural features have been documented from kingdoms in Ethiopia, and traces can still be found in some monarchies in the south of the country. The historian Carlo ↗Conti Rossini and several anthropologists tackled this issue in various monographs, before Eike ↗Haberland (1965) ventured a comparative study of the topic analysing the relevant historical literature on the Christian empire as well as the ethnographic materials relating to southern Ethiopia. According to one of his crucial assumptions, Ethiopia is of decisive importance for any research into the historical age of kingship in Africa since it is geographically situated close to the High Culture of the "Near East" where K. was first documented. Haberland argued that K. developed in Ethiopia primarily through strong influence from western Asia, and within this country it spread from north to south. Since the early Aksumite period, in which the influence of Graeco–Roman elements (via Ptolemaic Egypt), including the Hellenistic idea of K., can be considered (Fiaccadori 2004), ideas and practices of the institution spread either by direct expansion of Highland Ethiopian monarchic systems or by stimulus diffusion to adjacent Omotic- and Cushitic-speaking peoples. Friedrich ↗Bieber (1920–23) even put forward the dubious hypothesis of cultural traces of the "Ancient Egyptians" in the kingdom of ↗Käfa.

The Christian empire after the restoration of the ↗Solomonic dynasty in the late 13th cent. obviously contained a set of characteristic features of K., such as rites of enthronement, royal rituals and symbols of authority, mainly consisting of armlets, finger rings and earrings, etc. most of which go back to, or are more or less consciously revived from the Aksumite period. The "archaic" custom of regicide is said to have been replaced by the practice of holding the bypassed royal kin in honourable, almost sacral captivity on the "mountain of the kings" (cp. ↗Amba Gəšän, ↗Wähni Amba). Royal animals were, as in other parts of Africa, the lion, the elephant and the bee, whose honey and wax were originally reserved for the monarch and his entourage. According to Haberland, many kingdoms of southern Ethiopia, such as ↗Ǝnnarya, ↗Wälaytta, ↗Yäm, ↗Kämbata, etc., reflected the model of the Christian empire to such an extent that elements which were partly obliterated by Christianity and the Old Testament prototype appeared to have remained almost unmodified. This view has been partly revised by more recent research. It is certain that the Omotic- and Cushitic-speaking regions underwent the strong influence of Highland Ethiopia in the sphere of K. But autochthonous cultural elements obviously predominated. These include the myths of supernatural origins, either celestial descent or solar procreation, the rule of succession through the epiphany of charisma, a highly sophisticated system of taboos concerning food and behaviour, the seclusion and untouchability of the monarch, his function as rainmaker and guarantor of fertility, peculiar forms of burials, human sacrifices at his death (as for example documented from Yäm; VSAe 339, 349f., 355f.). All these cultural features existed in the Christian kingdom of Highland Ethiopia only as a relatively weak substrate, and therefore the hitherto neglected possibility of a diffusion from the south to the north has to be considered in the context of K. in north-eastern Africa. In order to gain a more solid base of data on this topic much further historical and anthropological research is needed.

Kinship

Only a few comprehensive or comparative studies on K. in Ethiopia and Eritrea have been made. This is probably due to the remarkable diversity of the social and ethnic group traditions within these countries, which show a very broad range of K. types and terminologies, but also to the often-noted aspect of self-centredness in ↗Ethiopian [and Eritrean] studies within Africanist social sciences as a whole. The main sources for our understanding of K. in Ethiopia and Eritrea are the works of field anthropologists published since ca. 1960. Further material can be gathered from historiographic sources and works on dynastic and elite histories, as K. linkages have played an interesting but usually not clearly visible role in the national politics of the two countries. In what follows, various traditions of K. organization will be described on the basis of areal and typological affinities. Some major examples and reflections on a few recent changes in the relevance and role of K. will be given.

K. can be defined as the biologically based but socially constructed pattern of human relationships relating to ↗genealogy and filiation, i.e. descent reckoning in the wider sense. Historically it has marked, if not constituted, both local social life as well as elite politics in Ethiopia. While K., as an original form of social organization and as a social practice, cannot be considered in isolation from other social principles, such as age organization (↗age group systems), relations of areal contiguity, friendship or association, it has a relative autonomy based on certain systematic classificatory principles and terminologies that order the representations of descent, generation, family and affinity. K. can also be seen as an ideology of social positioning guided by the desire to regulate offspring. K. terminologies, of which there are six recurring types, are usually a good first guide to the social structure and kin norms within a population.

A basic distinction in K. is often made between consanguinal ("blood-related") or cognatic kin (kin tracing through any link), and affinal kin, the latter based on relationships established through ↗marriage but relevant to the kin-related transfer of rights, group membership and property. While not always distinguished as such, the difference is relevant and widely recognized, also terminologically, e.g., in Amharic respectively called ዝምድና (*zəmdənna*) and አማች (*aməčča*), and, for instance, among the Omotic-speaking ↗Aari in southern Ethiopia as *wa-sus* and *baysi*. However, adoption and fostering practices blur the distinction and often lead to the inclusion of non-kin into relations of K.. Thus, non-"blood-related" people can become (like) kin (s., for instance, ↗*Guddifaččaa*, ↗*Moassa*). In practice, a strict separation of the two spheres can therefore not be made.

Virtually all Ethiopian and Eritrean societies were deeply shaped by K. links, and also on the national political level these came to play a role in forging alliances between individuals and groups on the basis of descent and marriage. The Ethiopian political elites or would-be elites in the imperial era actively used K. bonds to consolidate rule and incorporate newcomers (cf. Heran 2002). Smaller-scale societies outside the highlands were marked by a kin-ordered mode of production, usually based on clan or lineage organization. Core concepts in K. are "clan", as a putative descent group with some corporate identity, "lineage", as a historical descent line with a known ↗ancestor and with either patrilineal or matrilineal bias, "generation", distinguishing genitors, children and grandchildren, and "filiation", rules or notions on the basis of which people, notably parents and children, are recognized as forming intimate lines of descent, either "real" (biological) or constructed. All K. systems are cultural systems, and it is important to note that societies or people have these notions of lineage, clan, segmentation, filiation, etc. as cultural representations or rule systems, and

not to assume that they exist in a realistic sense in material practice, settlement structures, etc.

An important issue for understanding K. types and terminologies in Ethiopia/Eritrea is that among several groups hybrid forms exist and changes have emerged: K. is a dynamic concept and practice. Neither can one say that all groups of a certain people or ethnic tradition follow exactly the same type of K. "system". For instance, the diversity in social and K. organization among the Oromo is remarkable, as they developed differently for reasons of economic and socio-political adaptation following their 16th-cent. expansion. "Pure" types cannot therefore be presented, because being logical (re-) constructions they probably never existed.

Overview

The remarkable diversity in K. rules, terminologies and systems in Ethiopia/Eritrea cannot be listed here in full; only examples can be discussed. While K. systems and rules across the various groups sometimes differ notably in relation to modes of subsistence, age group organization, ↗migration histories or articulation with state formation, socio-economic crisis, or externally induced change, there are also marked similarities and overlaps. There is no clear correlation between K. systems/ideas of groups with their cultural or linguistic provenance.

The major distinction of types seems to be between groups who have conceptions of clan/lineage organization, and those who have not, working instead with notions of bilateral or ambilineal descent and kin relationships. More rare is cognatic descent: tracing of descent from an apical ancestor through both males and females of any line. Among the clan-type societies are for instance the ↗ʿAfar, the ↗Saho, the ↗Somali, most of the ↗Oromo (↗Boorana, ↗Guğği, ↗Arsi), the ↗Sidaama, the ↗Wälaytta, most of the smaller ethnic groups in the south and west of Ethiopia, as well as the ↗Kunama, ↗Nara, ↗Rašāʾida, and ↗Beni ʿAmər in Eritrea. In several cases, the two types mix, as for example in the ↗Ñaŋatom case (Tornay 1981:151ff.), where both clan identity and bilateral kin ties are important in various contexts, but lineages have no large role. This attests to the versatility and pragmatics of K.

Theoretically, the concept of "clan", as a defined descent group relating agnatically related males and with an (unknown) person as original ancestor, is problematic, due to its situational and often mere emblematic nature instead of its being a corporate reality or "biological" unit. In societies with clans, clan identity is seen as the prime social identity, because it is based on exogamy, defining permitted and excluded marriage partners, the "legitimacy" of children, and indicating rights to land or other resources such as cattle as well as inheritance, and the rights and duties in crucial rituals (e.g., holding ↗*täzkar* or commemorative service) and in dispute resolution. Many societies also have specific terms for "clan", like *qommo* in Wälaytta and ↗Gamo, *olo* in ↗Kara, *kedo* among ʿAfar, *tooki* in ↗Maale, *kafa* among ↗Konso, *kèno* among ↗Suri, or *kabi* among ↗Mursi, to mention but a few peoples. Only in exceptional cases do clan members form a cohesive territorial unit. Certain localities, however, are seen as the domain of predominantly one clan, members of which originally settled there. This again shows that the idea of clan is a conceptual model, and not a blueprint for behaviour.

A result of descent thinking and clan organization is often a concomitant system of choosing marriage partners in some structured way. Rules about whom not to marry imply rules about who can or should be married. This has given rise to the "alliance theory" of K., which states basically that K. is constructed through affinal relations. It looks at marriage exchange patterns between groups, which can be both symmetrical, as in Ethiopia among the ↗Gumuz, who practise "sister exchange" (s. James 1986) and asymmetrical, as among the ʿAfar, who have the prescriptive patrilateral cross-cousin marriage or *absuma* (Getachew Kassa Negussie 2001:72), a form very rare in the Horn of Africa.

K. relations and the situating of individuals in K. links are of essential importance for personal identity, formation of "social capital", and economic rights and opportunities. Especially in the absence of a welfare state or even of predictable governance and adequate judicial structures, the role of K. solidarity and norms of assistance in achieving social status, claiming rights and performing duties is essential. Productive assets, such as rights to land, to livestock and to labour, are realized through K., underlining its economic functions next to its moral and social ones. In many clan-organized societies, clans serve as units mobilizing for the defence of individual members' interests or the settling of conflict. The threat of feuding was usually "bought off" with the payment of compensation ("blood money"),

as in several traditional Eritrean societies (Favali – Pateman 2003:73). Codified state law has been replacing these kin-based customs.

Clan and lineage societies: patrilineal societies

Clan or lineage-based K. forms are probably predominant in Ethiopia and Eritrea, both among pastoral groups and sedentary-agricultural peoples (as well as among the little studied caste groups). A few examples will be mentioned.

Most societies with lineages trace descent either through the paternal or the maternal line and are concerned with the determination of people's group affiliation. In Ethiopia/Eritrea, paternally traced kin or patrilineality predominates. Such societies also have a patriarchal slant, with males dominant in most spheres of life. The aim in lineage societies is to avoid children without recognized social *paters*/fathers (or in some cases *maters*/mothers). Many of these societies were originally organized in "moieties": a structure of duality grouping the clans in two halves and reflecting some kind of reciprocity.

The Oromo, the most numerous and diversified people in Ethiopia, are historically a segmentary, patrilineal clan society, based on named clans. The genealogical principle is strong. Among the Boorana, who often see themselves as the archetypical, "first-born" (*angaffa*) Oromo, one finds the clans (↗*gosa* or *mana*), lineages (also called *mana*) and sub-lineages (*balbala*) in full force. The Boorana clans are divided into moieties, or mirroring exogamous halves of a wider descent group, above the clans. But none of these kin units live together. A similar system is found among the Guğği and Arsi Oromo, although moieties are variable and change in composition. In non-pastoral Oromo societies such as ↗Mäčča (Hultin 1987), ↗Tuulama, ↗Ittuu, or Qottu, the clan-lineage basis is transformed and the "nuclear" patrilineal families (*warra*) and neighbourhoods (*olla*) are more important. Migrations and socio-economic change have led to local adaptations of the system. These societies are, however, still strongly patriarchal, and polygamy is frequent. There is no clear rule of clan exogamy among Oromo; instead there is (or was) a rule of not marrying within the *hidda* group of close relatives, reckoned five generations back (Haberland 1963:113).

Clan and lineage organization is also prominent among the Ogaden and ↗ʿIssa Somali of Ethiopia, who ground their basic social identity in patrilineal agnatic descent or *tol*. The principle leads to a complex segmentary structure within the large clan-family (of which there are six among the Somalis as a whole). Clan and lineage identity are essential for social and economic support, both within and outside Somali territory. Among several southern Ethiopian Cushitic-speaking peoples, K. organization is cross-cut by a generation set system, which impacts on marriage choice and timing as well as on cooperation patterns. Examples are the Gideʾo, Burği, Đáasanač, the Konso, with a particularly complex system (Hallpike 1972), and of course the Boorana (AsmGada; Bassi 2005).

The Cushitic-speaking Sidaama also are a strongly clan-oriented society (Hamer 2005), with patriclans that originally were the basis for the allocation of land rights. Hamer (1996:527) noted that there is much circulation of individuals between clans, as people are able to enter another clan though affinal relations and by using various non-clan ties. The Sidaama also have a notable gerontocratic generational class system (*luwa*), which "cross-cuts" the clans. Male members of a generational class count each other as "kin", and the bond created among elder males by ↗initiation into a new *luwa* class overrides clan membership on the basis of descent. Clans, however, function as exogamous units and reserve certain rituals for those born into them. Sidaama clans are also ordered in two groups: the Aletaa and the Yamaričo, a moiety-like structure.

Lineage systems vary in K. terminologies used, e.g., with some societies distinguishing (cross- or parallel-) cousins and generations with a more detailed terminology. This reflects the different status or social position of relatives vis-à-vis *ego* for purposes of marriage, ritual action, even mutual assistance or certain rights.

Clan and lineage societies: matrilineal societies

Matrilineality, tracing descent through the female line, can be seen as daughter-oriented parental investment, and it is often found in non-plough, horticultural societies with relatively few cattle. Only the Kunama trace descent through the maternal line. The Nara people, also in Eritrea, originally seem to have had this matrilineal system as well but gradually moved to patrilineality, influenced by their adopting Islam in the 19th cent. Also in the matrilineal system the males are dominant (notably the mother's brother of a person), but usually women are respected and have more rights.

The best example of a matrilineal society are the Kunama of south-west Eritrea. K. in the wider sense, including affinal relations, is termed *dugulè*.

Matrilineal kin or *kebesè šàdia* is the most important unit. Culturally this is expressed by metaphors about the mother as being formative of the child's "bones" (*sangà*) or essential being. As in virtually all matrilineal societies, the mother's brother (*imba*) is very important. The matrikin group is actualized in cases of homicide ("blood") compensation or feuding (*marbàta*), when the members must show solidarity and a sense of corporateness. Also land issues are (or were) decided on the basis of matrilineal identity. A patrilineal tracing of descent (*kiškišè*) occurs for some purposes but does not give rise to lineages. In one Kunama section there is a matriclan-based moiety system.

Bilateral/ambilineal societies

In the central highland societies of Amhara, Təgray, several Gurage groups, but also among the Omotic-speaking Dizi in the south-west, clans do not exist and people trace descent along bilateral lines. Both the above types rest on ideas of lineal K. through descent from a father's line, a mother's line or through both, but bilateral tracing or ambilineality excludes clanship. Males and females can inherit through both their mother's and father's line, but actualization of the rights of the claims is strongly situational.

In ambilineal societies, the nuclear family tends to be the most important unit, although in the rural areas this unit is often at least two-generational. Among the Amhara, wife and husband kept their rights of possession in property brought into the marriage, making for a relatively equal, or at least independent, and somewhat competitive relation between spouses. As clans are absent to define the kin circle outside of which one has to marry, bilateral or ambilineal societies use a generational rule of distance, e.g., the well-known one among Amhara (and taken over by many other groups) that one may not marry "within seven generations" reckoned from ego upwards, i.e., no descendant from a common great-great-great-grandparent on either mother's or father's side. Such a group of descendants from an apical male (*wanna abbat*) is often called *bet* ('house') among the Amhara or ↗*ənda* among Təgrəñña-speakers. This rule is the norm but not always the practice. Ambilineal or bilateral descent tracing in Ethiopia necessitates good genealogical knowledge. When applied to the pursuit of rights (e.g., to land), this system often gives rise to overlapping claims and therefore to disputes. Bilateral K. seems to be historically associated with diffuse, open-access property relations, i.e. where no collective kin group identity defines or exhausts a person's rights to claim and acquire property. While descendants do not live together, they keep rights to claim land even if they are long settled elsewhere. The best description of the specific form of cognatic descent, found among the Goğğam Amhara, was given by Hoben (1973).

The bilateral K. system in the case of the Amhara, and probably even more so the Təgray (s. Bauer 1985), has led to a highly individualistic ethos where kin bonds are subject to high variability and negotiation. As among clan group members, there are no automatically solidary kin group units in this society. Təgray K. in particular is marked by a strongly contractual, "political" character. Locality and neighbourhood are more important than kin-based households (Bauer 1985; Rosen 1974). Ambilineal societies have thus given rise to an extraordinary social dynamism, generating individual competition (thus perhaps contributing to the ↗meritorious complex in Ethiopia) but also to a high conflict potential on the level of households.

Among the Dizi of south-west Ethiopia, a people living in the midst of lineage societies like Me'en, Benç and Suri, there is neither clan organization nor lineage thinking. They trace bilateral lines on both sides, and in this they resemble northern Semitic-speaking societies, which whom they indeed claimed historical affinity (cf. Haberland 1993:141, 159). It is likely that as the Dizi evolved as an hierarchical chiefdom society, with frequent internal conflicts, the principles of chiefly hierarchy and territorial authority (based on military means) came to be dominant over that of descent. An intricate ranking system, of social strata and of labour and ritual obligations linking them, may have subverted the relevance of any lineage thinking and clan orientation. Chiefs traced long genealogies, however. Dizi exogamy rules are based on generational distance reckoning (the "seven generation" rule), as among the Amhara and Təgray. In the last century, the influence of the mode of life, culture and religion of northern immigrants reinforced bilateral K. thinking among the Dizi, but they still retain much of their complex system of social group ranking.

Hybrid forms

While "hybrid forms" actually may be a misnomer, because it may suggest a too strict typology of lineage, bilateral and other forms, kin-relation

systems vary in their degree of relative emphasis on certain descent relations. The Ñaŋatom have already been mentioned as a good example of the broad scope and variety of K. The K. organization of these southern Ethiopian agro-pastoralists can neither be described as purely a clan or lineage type nor as a bilateral one, because they combine elements of both. They have some 20 patriclans, but these are "emblematic" entities rather than descent units. Agnatic relatives are rivals in this system, and affines can develop into kin (s. Tornay 2001). One might term the Ñaŋatom system a bilinear or cognatic one, but even that is intersected by age organization, territorial organization, and artificial K. through ritual friendship bonds. This pattern is found among many smaller ethnic groups in the South. For example, among the Konso (Hallpike 1972:89), where the clan is only an emblematic identity defining ritual duties and forbidden marriage/sex partners. The importance of ritual bond friendship is obvious in societies like the Karo (Gezahegn Petros 2000), Đáasanač (Almagor 1978), Suri (Abbink 2006) or Arbore (Taddese Wolde Gossa 2000). What has become clear from recent K. studies is that strict patrilineal or matrilineal forms of K. excluding other relatives do not exist. Even among a strongly patrilineal, if not "patriarchal", society like the Somali, mother's kin is very important for individuals. The same is found among the nominally patrilineal clan society of the Mağaŋgir in south-west Ethiopia (Unseth 1998:153). Here the difference between siblings of the same mother or of the same father is also socially important, and reflected in kin terminology. What was known in ethnology as "complementary filiation" (a term of the British K. theorist Meyer Fortes) meant basically the recognition of the ties established through the mother. In practice, K. is always a pragmatic system of relations forged among people who have reason to believe they are related by descent or filiation, but have room to construct or "manipulate" relationship notions in social praxis. This idea is substantiated in work of the more recent generation of K. studies (cf. Carsten 2004).

The interface of age-grading and K. was already mentioned in the case of the Sidaama, and can be found among the Nuer and various Oromo groups, such as Boorana and Guğği. Like K., age organization is a largely metaphorical social system and allows the superseding of kin ties by cultural rules such as the ritual distinction of age groups or grades, which create solidarity across groups defined by birth.

The patrilineal Gamo societies of southern Ethiopia have an inclusive notion of K. (*dabo*) in that it can include both "blood" relations and other relations. As close proximity of groups over time generated an emphasis on territorial identity (*dere*) instead of existing clan difference, there seems to have emerged no strict minimum rule of "clan exogamy" (Freeman 2002:60), and a quite limited terminological differentiation of kin relations. The Gamo are also a society where important sacrificial and initiatory rituals created supra-kin solidarities, which perhaps contributed to a relative de-emphasizing of K., i.e. of clan identity, as well.

Among various Omotic-speaking societies in southern Ethiopia, it is interesting to note that descendants of 14th–15th cent. northern immigrant groups from the Amhara and Təgray regions, e.g. priestly families, came to form their own clans. For instance, the Wälaytta and Gamo have *kesiga* and *təgre* clans.

Kinship and modernity

Much of the relevance of K. as a social idiom of social relations and rights, however, has been de-emphasized since the Ethiopian Revolution of 1974, which by its land tenure policies and general disregard for the value of inherited social fabrics and customs, created a major rupture in social organizational continuity. In highland Amhara–Təgray society and in Oromo territorialized states and in several smaller chiefdom societies in the west and south, K. identity and linkages were realized or manifested in claims to land or disputes, but when land became state property, obviously K. as an idiom of rights and social identities became less important, although it kept some relevance in local community contexts. This pattern of "decline" was continued under the post-1991 regime, where land remained state property and customary law was ignored, although not as rigidly as under the *Därg*. Already in revolutionary situations, such as Eritrea or Təgray during the armed struggle of insurgent movements against the central government, traditional kin relations were often the issue of reform campaigns, leading to rather dubious programmes to "eliminate" K. (cf. Silkin 1989).

Apart from the political changes, Ethiopian and Eritrean societies also underwent general processes of modernization and social differen-

tiation. The impact of "modernity" and globalization in recent decades has meant the growth of economies of scale and also an increased pervasiveness of non-local socio-cultural influences. With the traditional land-holding systems gone in the early 1980s, urban society expanding and state-bureaucratic definitions of law redefining personal and group identities of people, K. lost much of its central place and constitutive role. But kin bonds are not gone. In times of social and economic insecurity they survive and are revived. Enduring crises, as seen in drought, famine, disease and HIV/AIDS mortality, poverty, and livelihood decline, may nevertheless tax existing K. arrangements to their limits. Traditional notions and norms of mutual assistance of kin folk in crisis are the last social rules to go, but cannot always be upheld and guarantee help and survival, due to generalized poverty and a physical inability to help. This is a frequent condition in Africa, including Ethiopia and Eritrea, and particularly evident in conditions of famine and in urban contexts ravaged by HIV/AIDS mortality.

In today's Ethiopia, people's knowledge of K. and family histories is also diminishing – in line with a decline of its social relevance. For example, the issues described in Hoben's (1973) study of Amhara K. and land tenure in Goğğam would be largely unrecognizable to the current generation of Goğğames. This fact of decline can be expected to further reduce people's "social capital", enlarge their dependence on outside forces, reshape political identity, and probably lead to more recourse to other means to realize their interests (including pressure, deceit, and coercion).

Nowadays, ethnic group identity (↗Ethnicity) is often more generally conceptualized as a "K. group writ large", as a social metaphor, whereby members perceived as being of the same (language or ethnic) group appeal to trust networks and group solidarity in order to advance socially, and these bypass criteria of individual merit, open access or educational qualification. K. both in the specific and the general sense will thus not disappear, and may gain new relevance in conditions of scarcity, state failure and trans-national mobility, when K. links provide generalized, larger scale networks of affinity, diffuse obligations, and mutual trust. These subjects stand in great need of comparative research.

Jon Abbink

Kirkham, John Charles

K. (in Tgn. tradition *däggiyat* ካርነል [*karnäl*, 'Colonel'], b. ca. 1830, Scotland, d. June 1876 Massawa) was a Scottish sergeant who participated in the ↗Napier expedition of 1867–68, and later served, with the rank of "General" (*däğğazmač*), as a military assistant and envoy for *aṣe* ↗Yoḥannəs IV.

Little is known of K.'s earlier life except that he had been a hotelier or ship's steward, and served as a soldier with William Walker in Nicaragua and in China under General Charles ↗Gordon during the Taiping rebellion in 1864 but was seriously injured (Mayo 1876:37f). He subsequently became a sutler, or small-time vendor, for the Napier expedition against *aṣe* Tewodros II, after which he gave his allegiance to *däğğazmač* Kaśa Mərčа (the future *aṣe* Yoḥannəs IV). The latter, impressed by British power and military prowess, had appealed to Napier to lend him two or three members of the ↗Mäqdäla expedition to train Ethiopian soldiers in the use of the weapons the British had given him. Napier refused, whereupon Kaśa, to the British Government's displeasure, employed K. privately.

K. later assisted Kaśa in his victory over *aṣe* ↗Täklä Giyorgis at the battle of ↗ᶜAssäm on 11 July 1871. On becoming the ruler of Ethiopia, Kaśa promoted K., though a man of humble origin, to the possibly sef-styled rank of "Colonel", and later *däğğazmač*. *Aṣe* Yoḥannəs also granted him a lucrative *gʷəlt* or tax-raising estate at ↗Ginda^{c}, on the edge of the northern plateau, overlooking the Red Sea port of ↗Massawa, and made him the Ethiopian governor of the newly created border Province of Ginda^{c} (including the village of Bet Maḵa near Asmära, where K. built his residence). K. established a second residence and a customs post at his estate at Ginda^{c} (KolTrad II, 165) and is reported to have flown the British Union Jack for a time in 1874 to deter possible Egyptian incursions (Dye 1880:127). He also attempted to import weapons for the Emperor, who also ordered him to train one or two thousand Ethiopians in British-style military discipline. This they reputedly disliked, as a result of which the project was abandoned. K. was, however, more successful in supervising building work for the monarch.

Faced with the Egyptian annexation of the ↗Kärän area in 1872 (the district of Bogos; ↗Bilin), Yoḥannəs employed K. to inform the British Government, and appealed for the restitution to Ethiopia of the annexed district, and control over ↗Amfilla port and part of the Arho salt plain. The monarch also dispatched him to London with letters to the governments of Britain, France, Germany, Austria and Russia. He was duly received at the Foreign Office, and by the French and Austrian ambassadors in London, but the European governments ignored the Emperor's appeal. *Ḫidīw* ↗Ismāᶜīl in his turn later complained that K.'s position as governor of Asmära, Ginda^{c} and Amfilla constituted a threat to Egyptian paramouncy in the area, Amfilla being part of the Egyptian "*mudirīya* al-Muṣuwwaᶜ" (↗Massawa Governorate). Later, after the Emperor's victory at ↗Guraᶜ, K. accompanied the returning Egyptian prisoners to Massawa. Though a British subject, he was arrested by the Egyptians and subjected to terrible prison conditions, and died in captivity after a long illness (according to Yoḥannəs having been poisoned, s. RubInd 333) and was buried at Massawa.

Richard Pankhurst

Kiros

K. (ቂሮስ, Copt. Kārās, i.e. Cyrus) is a saint of Roman origin, venerated by the ↗Coptic and the ↗Ethiopian Orthodox (Täwaḥədo) Church. K. is commemorated in the Ethiopian ↗*Sənkəssar* on 8 *Ḥamle* (corresponding to 8 *Abib* of the Synaxary of the Coptic Church).

K. is a popular saint in Ethiopia, as evidenced by several written traditions devoted to him, preserved in a large number of sources. There are at least four types of Ethiopic texts about K.: two different hagiographic accounts of the life of the saint (↗*Gädl*; s. 1 and 2 below) and two entries from the *Sənkəssar* (s. 3 and 4 below). K. is also honoured by at least seven different kinds of

↗*sälam* and ↗*mälkəʾ*. He is often mentioned, together with other saints, on the occasion of the death of various persons in hagiographic texts, and appears frequently in connection with ↗Gäbrä Mänfäs Qəddus and ↗Täklä Haymanot (s. Marrassini 2003:LX–LXII). K. is also frequently depicted together with the latter two saints. Asceticism and desert (in a general framework which can be labelled "Egyptian", s. Marrassini 2005) are undoubtedly the main concerns of K.'s Vita.

Abba Kiros; wall-painting, early 17th cent., church of Abba Yoḥanni, Qʷälla Tämben, Təgray; photo 2000, courtesy Michael Gervers

(1) The first *Gädlä Kiros* has not yet been edited (for detailed summary s. Marrassini in StudAeth). It is known from at least 30 mss. (for an extensive but incomplete list s. ibid. 80f.) and is often bound together with the Lives of such other saints as Gäbrä Mänfäs Qəddus, ↗Gäbrä Krəstos and/or Abib/Bula (unlike the latter two, the *Gädlä Kiros* does not appear in the ↗*Gädlä Sämaᶜətat*). The text exists in at least two distinct versions, "long" and "short", which are not clearly distinguishable in the catalogues. The "long" version is for sure the one in mss. BritLib Orient. 701, BN d'Abbadie 103, Ṭānāsee 143 = Dāgā Esṭifānos 32, Ṭānāsee 164 = Dāgā Esṭifānos 53; the "short version" is found in mss. BN d'Abbadie 123, Vat. aeth. 142 (here apparently very short as many fols. are lacking; s. for details Marrassini in StudAeth 80–84). In any case both versions derive from the same model (only a critical edition can reveal if also from a single archetype); the only difference is the omission of short sentences or adjectives, whereas the story seems to be basically the same.

(2) A completely different story (s. Turaev 1903, after ms. BN, éth. 56, fol. 96–109), written by a certain *abba* Bamwa, is preserved in at least two mss., BN Z 136 (where it is combined with the Lives of ↗Täklä Haymanot and of ↗Samuʾel of Waldəbba) and BN d'Abbadie 94 (combined with the Life of Abunäfər and homilies on Melchizedek and the archangel Afnin). It is possibly a translation of an Arabic *Vorlage* documented in at least ten mss. (s. GrafLit I, 532), which in turn may be a translation of a Coptic original, of which six mss. and fragments are preserved (Orlandi 1970:94f.). The author, Bamwa (Pambo), is different from the famous saint by the same name; the Life of St. Hilaria is also ascribed to him.

(3) A *Sənkəssar* entry for 8 *Ḥamle* with the story of *abba* "Misaʾel the meek whom *abba* K. buried". The narration is very similar to that included in the first hagiographic account on K.

(4) A *Sənkəssar* entry for the same day devoted to K. himself. It is entirely different from the *Gädl* and, according to Turaev (1903) probably depends upon text (2).

The story, according to the version of the saint's hagiography here numbered as (1), is more or less as follows: K., whose birth name was Dilasor, was the son of a Christian king of "Rome" Abya (son of Yonani) by his wife Genaser (vars. Anaser, Menaser etc.). Three years after his brother Tewodosyos succeeded their father, K. becomes a hermit. He first stays in a cave in the mountains of Adasar and then in the desert of Bardanos, where he receives the monastic habit from the hermit Paphnutius (*abba* Babnuda) who brought it for K. from Scetis. For sharing his "heavenly food" with a thievish monk from Däbrä Tona(ḥ) of Scetis, Paphnutius is condemned by God to be devoured by a lion. The thief is saved from Hell in accordance with the ↗*kidan* K. concludes with Jesus Christ. After a period of wanderings in the desert, K. meets a poor and ailing person – Misaʾel, the son of the king of Chalcedon. K. consoles him by telling him his story so that Misaʾel might accept his fate and, after the intervention of the Lord, he dies peacefully and goes to heaven. On accusing the monks of mistreating Misaʾel in life and death, K. is carried away by Elijah. Later, K. again intercedes for unworthy monks sent to hell and receives a new *kidan* from Jesus; the sinners are returned to their monastic life so they may later enter Paradise. After years

of asceticism K. receives a visit from Jesus (in the image of an old monk from Däbrä Erara) who announces K.'s approaching death; *abba* Bamwa of Scetis is to write down his life. In heaven, all the saints visit K., in particular such "desert fathers" as St. ↗Anthony, ↗Macarius, ↗Shenouda etc.

Paolo Marrassini

Kismaayu

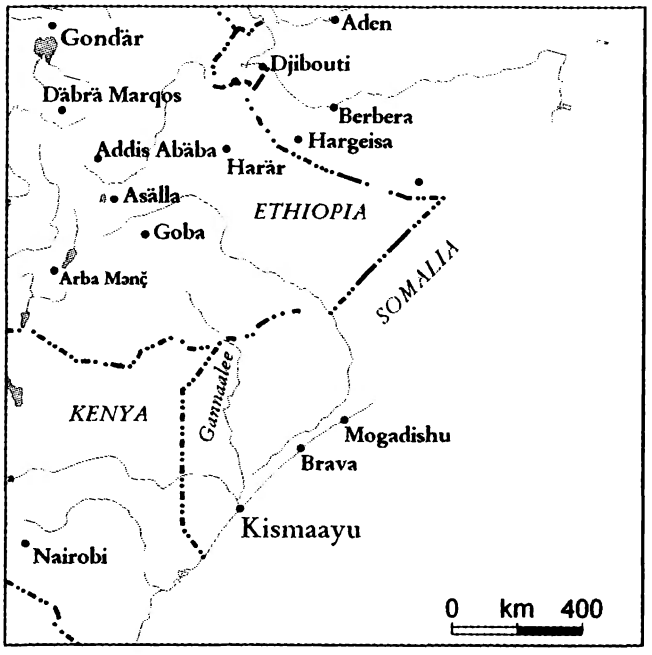
K. (also Kismaayo, Kismayuu, Kisimaayu, Kisimayu, population ca. 40,000) is a town in southern Somalia located near the mouth of the Juba River (↗Ganaalee) where it runs into the Indian Ocean. The word K. consists of Swahili *kisima* ('well') and *yuu* ('high ground'), being also the name of a nearby well. Located on a hill by the Indian Ocean, approximately 2 km south of the city, this well is still in use today. According to oral tradition (s. Freeman-Grenville 1996), K., along with ↗Mogadishu, ↗Merka and ↗Brava, was founded by Caliph ʿAbdalmalik b. Marwān (5th Caliph of the Umayyad line, r. 685–705). The Caliph had a "... soul long[ing] to found a new kingdom", and for this project he chose the Swahili coast of East Africa. He commissioned Persian (↗Iran) and Syrian immigrants to build a line of cities on the East African coast from Mogadishu in the north to Kilwa (Tanzania) in the south.

Not much is known about the history of K. during the ensuing centuries, until the Portuguese arrived on the East African Coast in the 16th and 17th cent. In the following two centuries, K. came under the suzerainty of the *sulṭāns* of Oman and Zanzibar. For a short interlude (1875–76), Egypt, under *ḫidīw* ↗Ismāʿīl *bāšā*, occupied the city and its environs. Shortly after this the German company Witu laid claim to K. (1889–90). From 1886 onwards Britain also began acquiring the extreme south-western edge of the Somali peninsula, an area including K. that became known as "Jubaland". K., along with part of Jubaland, was later ceded to Italy (1925) and merged with Italian Somalia.

K. is a coastal city that still retains Portuguese and Arab style buildings, and as the largest city in the Lower Juba area, it serves as the region's capital. It saw an economic and social transformation in the late 1960s when the old colonial harbour was replaced with a perennial modern facility capable of handling several large-scale vessels per day. Today a varied selection of local produce is exported from the port: bananas, Somalia's principal export product, skins, cattle, myrrh, and a variety of citrus fruits. In the early 1970s, when General Muḥammad Siyad Barre's socialist regime became increasingly involved with the Soviet Union, Somalia began to receive a considerable amount of military and economic aid from there. Part of this aid included the construction and operation of a large meat processing plant in K. that employed hundreds, which added to the city's growing prosperity.

Of all the Somali coastal cities, K. is the richest in agricultural and marine resources. In addition to the aforementioned modern port facilities, the nearby sea abounds with numerous varieties of fish, and the mouth of the Juba is home to shrimp, lobster and other kinds of sea life. The Juba overflows annually leaving behind a sizeable floodplain covered with fertile alluvial soil that creates ideal conditions for growing corn, millet and bananas. Additionally, the nearby woodlands are replete with fruits, principally papaya and mango. An all-weather asphalt road connects this fertile region to Somalia's capital, Mogadishu, several hundred miles to the east. K.'s population is a vibrant cross-cultural environment, featuring numerous cultures and languages – Somali, Bantu, Arab and Indian. As late as the 1970s, a third of the city's residents spoke the Baraawa (Bravanese) dialect of Swahili, as in Brava (now most live in other parts of East Africa and in Oman).

With the collapse of the Somali state (1991), the ensuing civil war and the cataclysmic social up-



heavals, K. diminished in importance. Numerous militia forces pursuing a host of warlords in the region led to the city being pillaged on several occasions causing K.'s indigenous inhabitants to either flee or suffer severe oppression. Much of the flora and fauna found on the outskirts of K. is endangered. Poachers continue to threaten the diverse wildlife – such as ↗elephants, giraffes, ostriches and several species of deer. Worse still, the slender stretches of forest on the banks of the Juba are constantly being cut down by smugglers and sold as charcoal to the Arab Emirates on the other side of the Red Sea.

Recent developments in the region, however, hint that the situation is improving. A truce between the region's two principal warlords is leading to a marked reduction of violence and looting. Additionally, the Bantu peasants – of diverse origins – in the east of the city, whose labour has historically contributed to K.'s economic stability, are beginning to plant crops again. Additionally, there has been a slow return in the number of entrepreneurs from K.'s skilled classes – merchants, artisans, craftsmen, etc.

Said S. Samatar

Kitāb al-farāʾiḍ ↗Farāʾiḍ, Kitāb al-

Klingenheben, August

K. (b. 11 May 1886, Barmen, Rhineland, d. 26 January 1967, Hamburg) was a German scholar of African studies. After a period studying theology which awoke in him an interest in oriental languages, he continued his studies in Halle with Franz ↗Praetorius and Carl ↗Brockelmann. In 1911, though not having earned any academic degree, K. was employed by Carl Meinhof, director of the *Seminar für Kolonialsprachen* at the Institute of Colonial Studies in Hamburg, to accompany him on an extended field research trip into the Sudan. K. spent World War I as Turkish First Lieutenant in Mesopotamia and Asia Minor. In 1920 he obtained his doctorate from the University of Leipzig with a dissertation on the Katagum Dialect of ↗Hausa. K. was appointed Associate Professor (Extra-Ordinarius) in Leipzig in 1930 and Full Professor in Hamburg in 1933. Having been the last Dean of Faculty under the Nazi regime K. was unemployed between 1945–48. Thereafter, from 1954, when he retired, he resumed his former office. He continued researching especially in ↗Amharic and Fulfulde up to a few months before his death in 1967.

Although K. authored several insightful studies on Ethiopian languages his major merits lie in the field of African linguistics, particularly in the field of Ful (Peulh/Fulfulde) language studies. His meticulous and methodically sound analysis of the nominal class system of that language was key in to demolishing the highly speculative, ill-founded ↗Hamitic theory developed by Meinhof, which presumed that "white" invaders in several waves had brought civilization to Africa.

In 1966 he published a 5,000-entry German–Amharic dictionary with a highly condensed 45-page grammatical introduction that has never received due attention, mainly because, for technical reasons, K. did not use the Ethiopic ↗script. He was assisted in that task by Däğğänä Ḥəllätä Wärq, lecturer in Amharic at Hamburg University in 1961-62. In addition, K. left an unfinished Amharic grammar, which appears to be lost. K. gave ↗Ethiopian studies its first home and a solid foundation in Hamburg, in co-operation with a long series of Ethiopian language assistants of whom Wäldä Maryam Dästa was the first from 1920 to 1925 (when he gave classes in Amharic and Oromo). This specialization of K. in Ethiopian studies was the reason that three years after his death the Chair in Hamburg was given to Ernst ↗Hammerschmidt.

The volume Brauner – Wolff (1988) was published at the occasion of the 100th anniversary of K., containing several articles highlighting K. as a scientist and as an amiable person. Johannes Lukas edited a Festschrift (1966) at the occasion of K.'s 80th birthday. A very incomplete bibliography is contained in Dammann et al. 1966–67.

K. was married to the Africanist Maria Klingenheben-von Tiling, who worked on Oromo, Somali and other Cushitic languages.

Ludwig Gerhardt

Kłobukowski, Antony Wladislas

K. (b. 23 September 1855, Auxerre, France, d. 24 April 1934 Paris) was for a short time a French diplomat in Ethiopia. His father, from the Polish nobility (Szlachta), fled to France after the battle of Crochow in 1830 and married a French woman. Their son, K., started his career in prefectorial administration before serving in the French colonial administration, in Indochina from 1882 to 1889. Then sent to China, Peru and India, he was later appointed to the post of *chargé d'affaires* at the Alexandria consulate in 1907. Following the difficulties triggered by the question of the Franco–Ethiopian railway (↗Railways), he was designated official minister extraordinary of France in Addis Abäba, standing in for ↗Lagarde.

He defined his politics in Ethiopia as follows: "Nous ne pourrons, je le répète, faire œuvre utile en Ethiopie, qu'en pratiquant une politique d'association avec un souverain qu' [...] il faut persuader et non pas intimider". On excellent terms with ↗Mənilək II, he signed a new Franco–Ethiopian agreement on the 10 January 1908 settling the political affairs between the two countries as well as commercial disputes (↗Kłobukowski treaty). He also settled the railway question, leading to the "Concession ↗Vitalien" and the constitution of a new company (Franco–Ethiopian railway company. In February 1908 he left Ethiopia to take up a post as a governor in French Indochina. He ended his career as French ambassador in Belgium.

Klobukowski treaty

The K.t. was a Treaty of Friendship and Commerce (Traité d'Amitié et de Commerce) signed between Ethiopia and ↗France on 10 January 1908 (full text s. Gingold Duprey 1955; Vanderlinden 1971:259). It was named after the French delegate Antony Wladislas ↗Kłobukowski.

At its origin were the crisis in the Ethio–French relations following the French takeover of the Ethio–French Railway (↗Railways) in 1902 and the increase in the number of foreigners in Ethiopia under *aṣe* ↗Mənilək II and the need to fix their legal status. Another motivation for the K.t. was the Tripartite Treaty of the year 1906. Towards the end of 1906 the three Great Powers, Britain, France and Italy, in part prompted by the belief that *aṣe* Mənilək II's failing health meant that his reign was coming to a close, decided on resolving their rivalries in this part of Africa. On 13 December 1906, they signed the Tripartite Treaty providing for concerted action in Ethiopia which was to be divided into three spheres of influence.

The K.t. gave the nationals of each contracting party the permission to enter the territory of the other party for the sole purpose of agricultural, industrial or commercial activities. In Art. 5 it was stated that Ethiopia had the right to import firearms freely. This important condition legal-

ized the entry of weapons through the French Somaliland Protectorate (Djibouti). Mənilək in return accepted a measure of French extraterritorial privileges, following the model of extra-territoriality praticed in the Ottoman empire. Art. 7 regulated the jurisdiction over French citizens on Ethiopian territory. It was agreed that in penal or civil cases in which French citizens complained against each other, the dispute should be judged by the French consul. In cases in which the defendant was an Ethiopian and the prosecutor a French citizen, or vice versa, the case should be decided by a judge of the Ethiopian state court in co-operation with the French consul or his proxy. However, in the first instance Ethiopian law was applied, whilst in the second judgement had to be in accordance to French law. If the Ethiopian judge and the French consul were not able to agree, the case should be judged by the Emperor, a clause that outraged the representatives of the ↗United Kingdom and ↗Italy.

Although the K.t. was binding on France alone, Britain and Italy were forced to accept its terms because of the "most favoured nation" clause – which was agreed in one of their former treaties with Ethiopia – and the absence of a similar treaty signed with these two nations. The clause, which was a regular feature of all commercial treaties contracted between Ethiopia and any other country, gave the other contracting nation the right to claim for her citizens on Ethiopian territory the same rights as those citizens who were subjects of the most favoured nation.

From the British and Italian point of view, the term concerning the "jurisdiction over Europeans in Ethiopia" opposed the ↗Tripartite Treaty of 1906 concluded between Britain, France and Italy. Therefore, their representatives made great efforts to convince Kłobukowski that the appointment of an international judge would be of much greater advantage for European nationals. However, *aṣe* Mənilək, who was already alerted by the Tripartite Agreement, strongly rejected anything having an international nature or limiting the sovereignty of the Ethiopian government. In consequence, Kłobukowski had nothing but to agree on this mixed (Ethiopian–French) jurisdiction.

Kłobukowski had also been sent to Ethiopia with the task of negotiating with the Emperor to transfer the Concession to a new company. On 30 January 1908, the Emperor, who had long since withdrawn his support from the old Company, willingly granted a new Concession for the operation of the railway. This Concession was granted to his personal physician, Dr. Vitalien, a black man from Guadeloupe, appointed physician to the railway in 1899.

In 1922 the ↗Special Court of Ethiopia was established by Imperial Decree along the lines of the above mentioned Art. 7. Emperor Ḫaylä Śəllase I complained about this treaty at an early stage already, mentioning in his memoires that already during his governorship of Harär it caused problems (HSLife I, 37). When he visited Europe in 1924, as heir apparent, he asked the French government for improvements of the K.t. concerning "in particular the judicial matters laid down in paragraph 7, [which] were extremely irksome to us" (ibid.). He did not succeed. The K.t. remained in force to 1936.

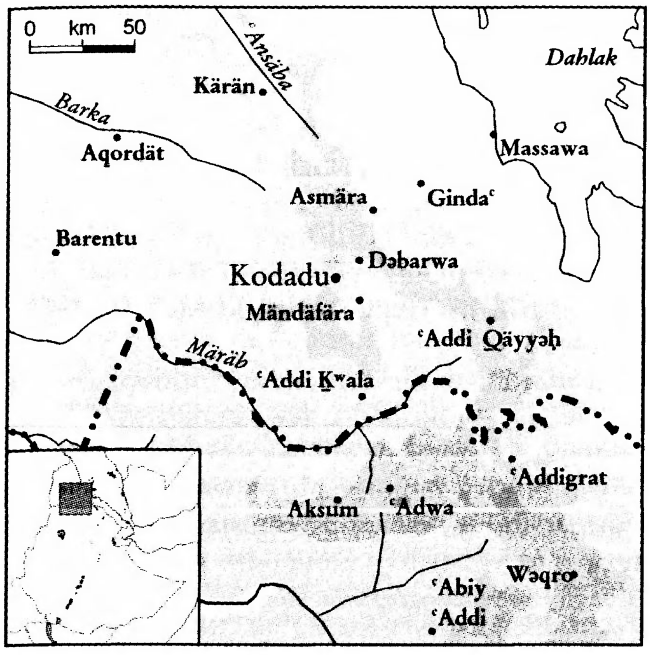
Leul-Tamrat Temesgen

Kodadu

The Təgrəññə word K. (ኰዳዱ, *kʷädadu* or ኮዳዱ, *kodadu*, pl. of *kʷədo* or *kudo*, 'hillock, small hill' [*nəʾəšto kʷərba*]) can be found in several placenames of Eritrea and Təgray.

A prominent example is the village K. lying in the Eritrean district of Ṣəlləma, south-west of ↗Dəbarwa. This settlement is mentioned in the *Gädlä ↗Bəṣuᶜa Amlak*, the hagiography of a 15th-cent. Eritrean monk and founder of the monastery of Ǝnda Śəllase, now Däbrä Məᶜəwan, in Ǝggäla Ḥamus, Akkälä Guzay. After a formative period in ↗Däbrä Bizän and ↗Däbrä Damo, Bəṣuᶜa Amlak left Təgray and reached the "region of K." (*bəḥerä Kʷädadu*), not far from the place where he was born (Ṭaṭya), and there he established his own community, from which a monastery later developed. During the pres-



ence of Bəṣuʿa Amlak in K., a political agreement occurred between the monastic leader and Yoḥannəs, the head of the region (*mäkʷännənä hagär*, *śəyyumä hagär*). In the words of the hagiography, the ruler agreed to initiate a religious celebration in honour of the Trinity and the saint blessed him on the eve of his departure for a victorious expedition against unspecified enemies.

The village no longer exists, but the monastery of Däbrä Abunä Bəṣuʿa Amlak is still active and is known in the whole region under the name of K. (a transfer of names that happened in several cases; e.g., ↗Wägariqo, the name of an old village in the Eritrean district of Liban, is used by the local people to indicate the monastery of Ǝnda Abunä Täklä Haymanot). There were ca. 25 monks and 40 nuns in 1993 living in stone cells; a recently built circular church stands at the centre of the compound. The *ʿəqa bet* preserves ca. 52 manuscripts, some of them of scholarly interest (e.g., a 15th-cent. illustrated Gospel originating from Däbrä Bizän; ↗Käbäsa).

Koddo

K. (ኮዶ, also Goddo), located on a commanding peak west of ↗Čenča and south-west of Ezo, used to be the *moṣa* (cattle breeders' secondary home) of Zadˀa of ↗Gamo (for location s. Kəbrä Mängəśt). In the mid-1890s it was occupied and fortified by the soldiers of *aṣe* ↗Mənilək II under *fitawrari* Täklä Maryam whilst the surrounding peoples of Gamo were made *gäbbar* (A. Asane 2000). The forts of Ezo and K. were designed to reinforce that of Čenča (PankHist II, 199).

During the ↗Italian war 1935-36 Gamo garrisons including K. were active in military operations under *fitawrari* Yəggäbawwal, *fitawrari* Dañña and *däğğazmač* Mäkʷəriya. At the same time, the Zadˀa, fearing that the occupation would mean double taxation, revolted and burnt down K., looting it (Gäbrä Śəyyum Dästa 1990; A. Asane 2000). In the revenge operation led by *fitawrari* Dañña the Zadˀa and Liša of K. were burnt and women and children were taken as slaves. *Däğğazmač* Wäldä Maryam, who was sent there from Belta Qara to calm the situation, performed the public execution of 40 Zadˀa men and two women.

Wolde Gossa Tadesse

Kolmodin, Johannes Axel

K. (b. 22 February 1884, Stockholm, d. 9 October 1933, Addis Abäba) was a prominent Swedish Orientalist who also worked as advisor to *aṣe* ↗Ḫaylä Śəllase I.

K. grew up in the missionary school of the ↗Evangeliska fosterlandsstiftelsen at Ulvsunda Lake near Stockholm, run at the time by his father Adolf, the director of the Foundation, who later became professor of N.T. exegesis at Uppsala University; the missionary school was then transferred to Uppsala and renamed Johannelund Theological Institute.

K. studied Semitic languages and Turkish, as well as history, at Uppsala University, graduating in 1905. He continued his studies in ↗Təgrəññña and ↗Amharic receiving his licentiate in 1908. In order to gather material for his Ph.D. thesis, he went to the (then Italian) Eritrea and to Ethiopia,

at the beginning accompanying his father, who was to inspect the missionary stations there on behalf of the Foundation. K.'s purpose was to study less known Ethio-Semitic languages of the region, mainly Təgrəññа. He spent two years there, and after his return he published both a report (1910) and a series of works the most important of which is the collection of the documents (including the Annales by Maḥṣäntä Maryam) and oral traditions of the Təgrəññа-speaking people of ↗Ḥamasen, with a French translation (KolTrad I–III). For the first two volumes he received his Ph.D. degree in 1914, and the same year became associate professor (*docent*) in Uppsala.

In 1917, he spent some time in Berlin studying Turkology at the Orientalisches Seminar. Later that same year he went to Istanbul where he was soon appointed honorary attaché at the Swedish legation. He used his time there also for research in the Turkish archives. He became an expert on Turkey's political life in the period crucial for the beginning of Kemalist Turkey, to which both his diplomatic reports and his letters to family and friends testify (Kolmodin 1999; Kahle 2006).

In June 1924, during his visit to Sweden, *ras* Täfäri Mäkʷännən met in Uppsala Nathan Söderblom, the Archbishop of the Swedish Lutheran Church. When *ras* Täfäri mentioned that he was looking for a political advisor, Söderblom suggested K. as a person suitable for the position. The proposition, which K. received in 1925, concerned, however, an advisory position either at the Ministry of Finance or at that of Trade, and K. was not interested. Eventually, thanks to the mediation of Söderblom and Knut Hanner, the Swedish consul and physician in Ethiopian service, K. received a position in the Ministry of Foreign Affairs. He arrived in Ethiopia in April 1931 (Halldin Norberg 1977:127); after a trial period, his next term on a new contract began in November 1931. Among his tasks was evaluating other foreign councillors' recommendations before they were submitted to the Emperor. He organized the Ethiopian diplomatic service dividing it into several departments according to the Swedish model. He was also instrumental in finding a compromise in the negotiations concerning the border question between ↗British Somaliland and Ethiopia (1931). He played a (marginal) role in drafting the ↗Constitution of 1931, and penned the speech the Emperor gave at its proclamation.

K. did not live to finish his second contract. His body was transported to Sweden and was buried in Uppsala.

K.'s collection of Ḥamasen ↗oral literature remains his most important contribution; recently it regained importance as a record of national traditions of Eritrea (Ezra Gebremedhin 2006). His other publications include a study of Ethiopian book catalogues (1916), a collection of folk poetry in ↗Təgre (1917), a collection of songs for child birth in Təgrəññа (1918), and critical remarks on some published texts in ↗Bilin (1914–15).

In addition to his writings in ↗Ethiopian studies he also published a few studies in Biblical matters, a chapter on the ancient Near East in a world history monograph, as well as articles in Turkic studies, including translations of Turkic texts into Swedish (s. Kolmodin 1999:128f.).

Witold Witakowski

Koman

K. is one of the "small" language families of the Ethio–Sudanese border area, belonging to ↗Nilo-Saharan, probably within a larger "core" grouping which includes East Sudanic, ↗Gumuz (exclusive to Ethiopia), and the Kadu languages

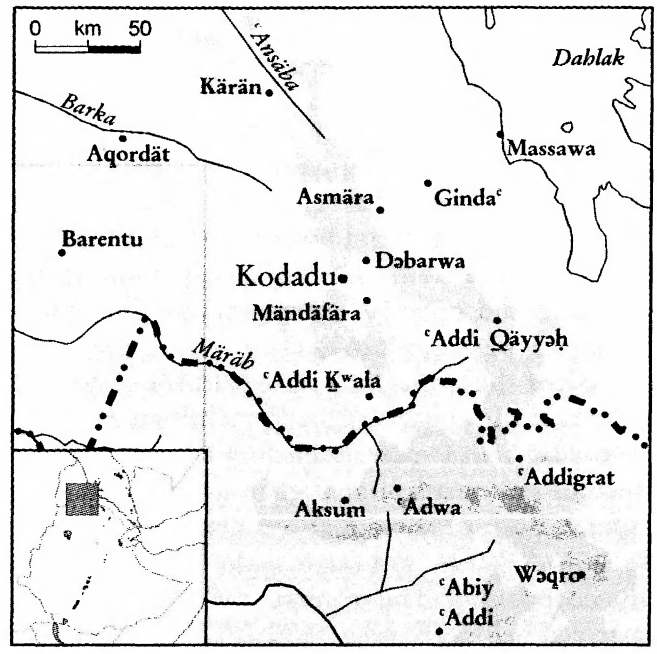
of Kordofan, Sudan (s. Bender 1996). Bender (1994) proposed grouping K. and Gumuz as a "Komuz" family, but this no longer seems supportable: K. and Gumuz are quite distinct, though they share much lexicon because of their geographical propinquity. The above genetic classification is opposed by Ehret (2001), who sees K. as the most deviant family in Nilo-Saharan because of its extensive consonantal inventory. However, he ignores morphological and lexical evidence which links K. to many other Nilo-Saharan languages, especially East Sudanic, Gumuz, and Kadu languages. In fact, K. belongs to a larger sub-family which is distinct from the really deviant Nilo-Saharan families: Songay, Saharan, and Kuliak (Bender 1996:64ff.).

The term K. was first used by the Italian scholars (spelled "Coman"), derived from the name of one of the languages (Komo?), and was revised by Greenberg 1950 to K. as an isolated family of African languages. For earliest accessible sources, s. Seligmann 1911–12 (Gulé), Corfield 1938 (Komo, Opuuo, "Kusgilo-Buldiit"), and Grottanelli 1946 (some Kwama material).

There are five distinct K. languages: ↗Ṭwampa (usually known as Uduk), ↗Komo, ↗Opuuo, ↗Kwama, and Gulé. The latter language, called after its locale around Jebel Gulé in eastern Sudan (the people refer to themselves as Aneǧ or ↗Funǧ, based on a myth of descent from an ancient Sudan political state in the area), was near extinction in 1978–79 when Bender found about four speakers (s. Bender 1983; 1994) and is noted as extinct in Gordon 2005:191. It is somewhat a "mystery language" because of inadequate data, especially grammatical, but there is little doubt that it is K.

Several other reported varieties, notably the "Kusgilo-Buldiit" of Corfield, have not been identified for sure, though it is likely they are merely regional in nature. ↗Šabo (= Mikeyir), a language of the Maǧaŋgir area of Illubabor Province does not belong to K.: although it has some K. content in a very mixed lexicon, the grammar is utterly unlike K. (s. Anbessa Teferra 1991; Anbessa Teferra – Unseth 1989).

The internal classification of K. is fairly clear: Ṭwampa and Komo are close to dialectal status with ca. 77 % common basic vocabulary. Opuuo has about 61 % in common with the foregoing. Kwama is more distant at about 42 % against these and, as mentioned above, Gulé is still more divergent, having from 18 % (vs. Kwama) to 33 % (vs. Ṭwampa) common lexicon with the others.



As for the sources on the K. family, there are partial descriptions of the languages, though much of this is unpublished. Ṭwampa has a grammatical sketch by Stevenson (contained in his 1966) based on 130 pages of grammar and lexicon notes compiled from correspondence with the missionary Malcolm I. Forsberg. There is an extensive Uduk–English dictionary (Beam – Cridland 1956) which is phonetically accurate but of limited use because of lack of an English index and the artificial nature of much of the lexicon (Bible-translation terms). Bender collected extensive notes on Ṭwampa and Gulé in 1978–79, somewhat less on Kwama in 1973–74 and Opuuo in 1980–81. Komo has an unpublished grammar of ca. 60 pages by missionary Samuel J. Burns (1947). Wordlists collected by various other investigators exist. More recently, there are lists of "North Kwama", "Begi Mao" (actually Kwama), and Komo (Wedekind – Wedekind 1993). There is no literature aside from missionary primers and partial Gospels in Ṭwampa and Komo.

The most interesting aspect of K.-languages, and one which has led Ehret to classify them as a primary branch of Nilo-Saharan, is the multiplicity of consonants. Ehret has reconstructed Nilo-Saharan to have the consonant system of Ṭwampa, the most developed system of the K. family. However, given that this multiplicity is atypical in Nilo-Saharan outside of K., it seems more likely that it is a later development in Ṭwampa, and not original in Nilo-Saharan.

The Ṭwampa system, according to the analysis of Bender (1983:262), has a minimum of 34 consonantal phonemes and five vowels. There

are six positions (labial, dental, alveolar, palatal, velar, glottal) and five manners of articulation in obstruents (aspirates, voiced and voiceless stops, ejectives, implosives). Other languages have reduced inventories, e.g., Komo lacks dentals and most palatals, but has ejective *ṣ*. Kwama and Opuuo are similar, and both have *f*, but Gulé, as is typical of a dying language, was reduced: no aspirates and only 19 consonants in all (for details, s. Bender 1983: 261–65).

One of the most intriguing features of K. languages is the combination of inclusive-exclusive distinctions in 1st pers. pl. pronouns and the presence of grammatical gender in 3rd pers. sg. pronouns. Both of these features are relatively rare in Nilo-Saharan and seem to be innovations in the core family. The occurrences in K. are summarized below (Bender 1989: 27, 29):

3rd pers. sg.: gender

	Ṭwampa	Komo	Opuuo	Kwama	Gulé
masc.		*har*	*ɔtaare*	*hal*	*ar*
fem.	*adi*	*hap*	*baare*	*hap*	*ab*
neut.		*hen*			

1st pers. pl.: inclusive / exclusive (subject forms)

	Ṭwampa	Komo	Opuuo	Kwama	Gulé
incl.	*ana*	*ana*	*mana*	*ma* (?)	*anog, anuuk*
excl.	*am*	*amo*	*miini*	*miini*	

As can be seen, only Ṭwampa lacks a gender distinction and only Gulé lacks an inclusivity distinction. Except for one dubious instance in Central Sudanic, 3rd pers. sg. gender in Nilo-Saharan is restricted to the four "core" families (East Sudanic, K., Gumuz, Kadu). Could the existence of gender in the core family be owing to influence from ↗Afro-Asiatic? Perhaps, though the particular exponents of gender are very dissimilar to those of Afro-Asiatic. Inclusive/exclusive is also found in all four families, but further in one Central Sudanic case, Kunama, and Kuliak. Such distinctions are not found in Afro-Asiatic, at least in the area.

In the sphere of syntax, K. languages are sharply opposed to Afro-Asiatic languages of Ethiopia in that they all have S[ubject]–V[erb]–O[bject] basic word order as opposed to Afro-Asiatic SOV (Bender 1996:39). This is another feature linking K. to the core family (ibid. 55f.).

The ten-word list for Gulé is as follows (for the other K. language s. corresponding entries): 'one' *dıdín*, 'two' *dùsùit*, 'three' *dúnnúme*, 'fire' *kəs*, 'water' *aaye*, 'moon' *àyún*, 'sun' *ta*ˀ, 'blood' *'gɔǧɔb*, 'tongue' *adatˀwai*, 'tooth' *seen* (< Arab.).

Even in such a limited corpus as ten-word lists, one can see a high degree of independence in basic lexicon among K. languages. As expected from the figures given above under classification, Ṭwampa-Komo-Opuuo share more than the others, especially Ṭwampa-Komo. But Opuuo and Kwama have unique forms for 'three' and 'blood'. Gulé is most divergent and also has the only loan word from outside.

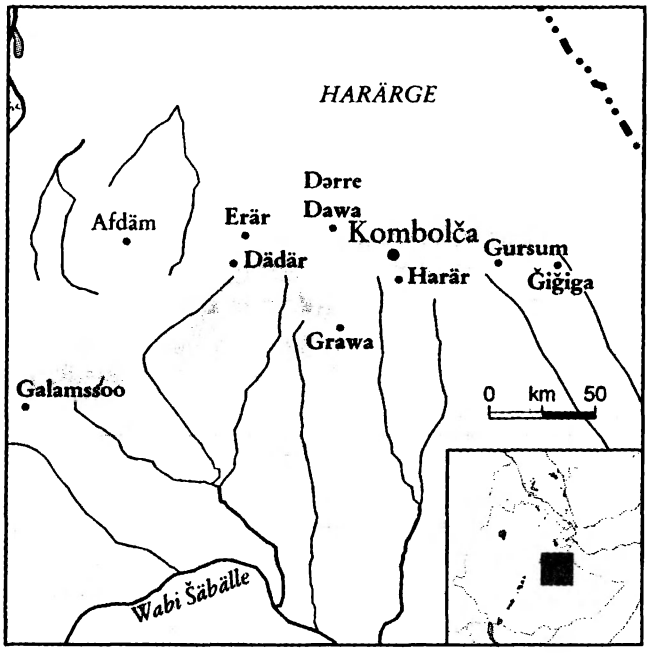
Kombolča

K. (ኮምቦልቻ, 9° 26' N, 42° 07' E) is the name of a town and a *wäräda* in the East Harär zone of the Oromiyaa *kəlləl*. They owe their name to the small tree, common to the highlands, called *kumbulča* in Oromiffa (*Maytenus ovatus, undatus*, Strelcyn 1973: 186; or *Maytenus obscura, senegalensis*, Fichtl – Admasu 1994:263f.).

K. town lies to the north of ↗Harär on the road to Eğersa Goro at an altitude of 2,125 m A.S.L. It used to be a rest stop on the caravan route to ↗Ğildessa. It is surrounded by irrigated terraces cultivated with a mix of ↗*č̣at* and potatoes, which



are sold at the urban markets of Harär, Dərre Dawa and Djibouti. The town is small (400 inhabitants in 1938), and the number of inhabitants is declining; it is not listed as a town by the CSA. Princess ↗Tänañña Wärq Ḫaylä Śəllase was baptized in the church of St. Mary in K.

K. *wäräda*, with the capital in Mälka Räfu (7,383 inhabitants in 2000 and 8,942 inhabitants in 2004) had a population of 98,885 inhabitants (density: 222.8 inhabitants/km²) in 2000 and 109,889 inhabitants (density: 249.1 inhabitants/km²) in 2004. Slumping ↗coffee sales together with population growth prompted the local ↗Qottu Oromo to engage in the cultivation of highly profitable cash crops (↗*č̣at*, ↗potatoes).

K. *wäräda* suffered much from ↗famines in 1946–48, 1978 and 1984–85. It was heavily affected by the 1975/76 Ethio–Somalian war and by the villagization programme of 1985–86. A major inter-ethnic conflict between Somali and Ǧaarso Oromo took place in K. in 1992.

Kombolča

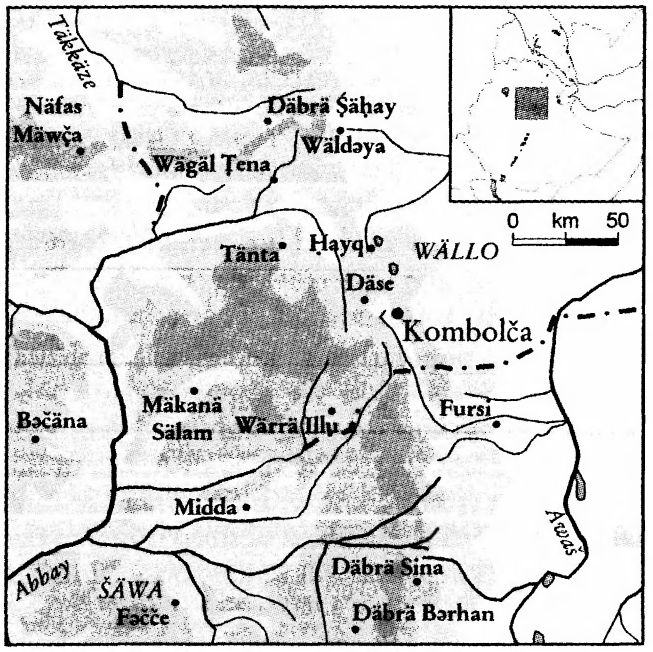
K. (ኮምቦልቻ, popularly also known as Kombälša; 11° 4' N, 39° 44' E) is an important town of South ↗Wällo and the main industrial centre of this region. It is located at 1,850 m A.S.L. in the ↗Borkänna river valley, with the Arägo mountain to the north and a chain of steep ridges to the east. It is 23 km south-east of the zonal capital of ↗Däse.

The K. site was an early settlement area. A large isolated stone sculpture of a ↗lion (described as a sphinx by ↗Lefebvre in 1843) dating back to the ↗post-Aksumite or Salomonic period was discovered on the Č̣əqa Bärät mountain a few kilometres south of the town.

Once a swampy and malaria infested area, K. served as a halting place for long-distance merchants and regional and imperial armies in the second half of the 19th cent. K. grew rapidly in the 20th cent., particularly during and after the Italian occupation, mainly thanks to the construction of the all-weather road between ↗Addis Abäba and ↗Asmära, branching to ↗ᶜAsäb. Under the Italians K. became the site of a military camp (associated with an Italian officer called Poricelli; hence Borčälle, the main market area), a prison, and a depot of road construction materials. They also built a saw-mill at the foot of the nearby Yägof mountain.

One of the decisive battles between the British and Italian forces, on 22 April 1941, took place near K. In April–May 1991 K. and its environs were the scene of fighting between the forces of the ↗Ethiopian People's Revolutionary Democratic Front and the retreating *Därg* troops.

The development of K. is directly linked with its location at the junction of the Addis Abäba–Asmära road and the second road leading eastwards to ᶜAsäb and Djibouti. At the end of the Italian occupation K. was still scarcely a town, Ančarro being the main trading centre in the area, but when in the 1950s the transport system changed from camels to roads and trucks, the latter was doomed. K. is a hub of freight truck traffic between the capital and north-eastern Ethiopia.



Owing to its warmer weather and more sprawling ambience than Däse, it has served as a weekend retreat for the affluent residents of Däse and a popular overnight stopover for lorry- and bus-drivers and visitors to north-eastern Ethiopia.

The main industries in K. are tanning, meat-processing, textiles, corrugated iron sheets, brewery and poultry farming. Its large Saturday market, attended by traders from Däse, ↗Bati, Ančarro and Kämise, is a major centre of exchange and distribution of agricultural and horticultural products. K. is conveniently located near a number of Muslim shrines (e.g., Gäta, Ğäma Nəguś, Mäğit). There is a small airstripe in K. whose relocation is currently under consideration.

K.'s urban landscape has been influenced by a number of factors: population growth, rural migration, recurrent famines, the stationing of army and militia units (on their way to ↗Təgray and ↗Eritrea against insurgency movements in the late 1970s and throughout the 1980s), the presence of factory workers and civil servants, the increasing volume of traffic and trade with the north ↗[c]Afar region, and through it, with the port of Djibouti (hence K.'s importance as a principal customs checkpoint). K. has retained, however, the ethos of the rural hinterland as evidenced by the daily contacts and interactions with the surrounding peasants, craftsmen, merchants, and predominantly Muslim teachers and their students through trade, intermarriage, the bureaucracy, and the traditional Islamic and government education systems.

With the growth of K., the surrounding farming areas (famous for the cultivation of high-quality *ṭef*) were transformed into residential and industrial zones. The resulting construction boom (which has gained momentum since 1991) created new jobs as well as a market for building material and furniture. The modernization of the telecommunications network, the improvement of road transport, and the adoption of a liberal policy towards the private sector have created new opportunities for K.'s commercial and bureaucratic elite, with the marginal benefits slowly percolating down into the lower strata of the urban community. A new mosque by the bridge over the Borkänna river graces the approach to K. from Däse.

In the 1950s K. belonged to the Ančarro *wäräda*, with the capital in Ančarro. With the administrative reorganization of the 1960s K. became the capital of Qallu *awraǧǧa* in Wällo *ṭäqlay gəzat*. In the 1990s K. became an urban *wäräda* within the South Wällo Zone in the Amhara *kəllal*. Like Däse, the K. urban *wäräda* is administered separately from the general *wäräda* in which it is located and thus it lost its official role in relation to Qallu *wäräda* with the transfer of the *wäräda* capital to Harbu, though the *wäräda* agricultural office is still in K. (in 2004). In 1994, K.'s population was estimated at ca. 40,000 inhabitants, 60 % Muslims and 40 % Christians. The 2004 census counted 65,696 inhabitants.

Komo

Komo language

K. (self-name: Gokwɔm; also known as Koma, Hayahaya, Madiin) is a member of the ↗Koman language family that belongs to the ↗Nilo-Saharan phylum. K. is spoken on both sides of the Ethio–Sudanese border (for location s. Koman). In Ethiopia, K. speakers live together with the ↗Mao people in the Mao-Komo Special *wäräda*,

an area south of ↗Asosa in the Beni Šangul/Gumuz National Regional State. On the Sudanese side they live around the Ahmar, Tombak and Yabus (Dabus) rivers in the Southern Funj Region of the Blue Nile Province. Extrapolating the population census data from 1996, K. speakers today number about 3,000 in Ethiopia and up to 20,000 in Sudan (s. CSA 1998, vol. 1, 99, vol. 2, 345).

The population census (1996) indicates that a third of the K. are monolingual, another third is bilingual in ↗Berta, and about a quarter stated to be bilingual in ↗Oromiffa. The K. language area appears to be homogenous with no noticeable dialectal differences. The following description of K. grammar is based on Burn's (1947) study.

K. consonants are as follows: labials (*ṗ*, *ɓ*, *p*, *b*, *m*), alveolars (*ṭ*, *ɗ*, *t*, *d*, *n*, *s*, *z*, *l*, *r*), alveopalatals (*š*), velars (*q*, *k*, *g*), glottals (*ṣ*, *ʾ*, *h*), semivowels (*w*, *y*). The vowels are: *i*, *e*, *ɛ*, *a*, *ɔ*, *o*, *u*, *ã*, *ɛ̃*, *ĩ*. K. has five diphthongs: *ɛi*, *ai*, *ɔi*, *au*, *ou*.

Burns (1947) found "four significant tone levels", high, mid, norm (?), and low, plus high falling tones (particularly word and utterance final) and "inherent rising tone on one syllable, sometimes due to elision". High tone is marked here with ´, low with `, mid tone is unmarked. Grammatical tone has been noted in a few cases. Length and stress are present, but no minimal pairs have been found distinguished by length or stress.

Nouns are usually not inflected for number: *gubí*, 'house(s)'; *kémé*, 'day(s)'. Some derived nouns, even if they are plurals in themselves, may be prefixed by an optional *go-* for plural: (*go-*)*bayana*, 'old people'; (*go-*)*twolena*, 'tall ones'. In some nouns, gender is marked by prefixes *ba-*, *bapi-*, *op-* (fem.) vs. *ye-*, *ke-* (masc.). Diminutives are usually expressed by *ṣɔ* 'small': *ṣɔ-na wɔs*, 'a small stone' (*na-* is a pronominal suffix marker).

The personal pronouns are *aka-na/aka-ne*, 'I, me'; *ai-na*, 'you' (sg.); *har-ná*, *hal-ná-*, 'he, him'; *hàp-ná*, 'she, her'; *hèn-ná*, 'it'; *a-na*, 'we, us' (inclusive); *amo-ná*, 'we, us' (exclusive); *om-ná*, 'you' (pl.); *hon-ná*, 'they, them'; all these forms may be used without the pronominal suffix *-na*. The possessive pronouns are *bám/bém/báʾam*, 'my'; *biní*, 'your(s)'; *bebér*, 'his'; *bebép*, 'her(s)'; *bebén*, 'its'; *banà*, 'our(s)' (inclusive); *babon*, 'our(s)' (exclusive); *bóm*, 'your(s)' (pl.); *bubún*, 'their(s)'. Demonstratives are *ba*, 'this, these'; *di*, 'that, those'; *dwi*, 'that' (fem. sg.). The interrogative pronouns are *dí mene*, 'who' (masc.); *dó mene*, 'who' (fem.) and *giba mene*, 'who' (pl.). Reflexive is expressed by *eš*, 'self', plus possessive pronoun: *yɛʾa eš bam*, 'I cut myself'.

The numerals follow the noun they qualify: *gúhi*$_1$ *so*$_2$, 'two$_2$ houses$_1$'. The K. system of counting is five-based, employing the lexemes for 'finger' and 'toe' for fives and tens. 'Twenty' is *tɛylen giba de*, lit. '*tɛylen*-person-one'.

The typical K. verb is composed of a monosyllabic stem, plus one or more suffixes. No separate category for past tense is noted; rather, complete and incomplete action are morphologically distinguished (completed, definite action is marked with the particle *ké*): *haor gakán*, 'he came/comes/is coming today' vs. *haor ké*, 'he has come'. Continuous action or action for no reason is indicated by stem reduplication: *pólgen ga pol*, 'I am just throwing it'. Future is indicated by the auxiliary *o-*: *o-na ya*, 'I will go' (*-(n)a* is here a suffix to mark the subject).

In K., verbal locational marking (spatial deixis) is an important feature. Burns (1947) notes *-uk-*, *-k-*, and *-ku* for indicating direction away from the agent or speaker: *ógen yel-uk*, 'I will look at it'. An *-o* suffixed to the verb stem indicates action towards the agent or speaker, or an action performed at some other place: *pwɔt-o-gen*, 'I pluck it'; *har paop ám-o*, 'she runs here'.

Conditional dependent clauses are marked by the particles *da*, *a*, or *ma*, followed by the postpositions *ṭen* or *qaš* (which can also function as auxiliary verbs): *da ór ya ṭén gaṣánga*, *óna hao*, 'If he goes tomorrow, I will come'.

The normal word order is Subject-Verb-Object; however, it can also be Verb-Subject-Object. In the noun phrase, modifiers precede the head noun: *swoliman*$_1$ *gubi*$_2$, 'small$_1$ houses$_2$'.

The ten-word list is: 'one' *deʾ*, 'two' *suʾ*, 'three' *dišin*, 'fire' *wutti*, 'water' *ii*, 'sun' *te*, 'moon' *pai*, 'blood' *baš*, 'tongue' *leṭ*, 'tooth' *šei*[*t*].

Komo ethnography

The K. (also Koma of Daga, Central Koma, South Koma, Koomoo, Gɔkwom, Hayahaya, Madiin, Burun) speak a language of the Nilo-Saharan ↗Koman language family. Together with the ↗Opuuo, ↗Uduk, Ganza (↗Mao) and ↗Kwama, the K. belong to a culturally and historically related group of peoples that is often referred to as "Koma".

Adäb Abos, Komo elder, spokesman at the Gambella Regional State Government; photo 2006, courtesy of Alexander Meckelburg

The K. live on both sides of the Ethio-Sudanese border. Historically they inhabited the area around Mount Ǧabal Gemi. The Sudanese K. today live in separated regions from the Yabus river (Blue Nile Province; in Eth. mostly called Dabbas) to areas along the rivers Daga and Lau (Upper-Nile Province) and along the River Ǧokaw (mostly called Garra in Eth.). In Ethiopia they inhabit areas around the towns of ↗Gambella, ↗Dambi Doolloo (Theis 1995:13) and ↗Asosa. The river Dota is their northern, and the Ǧokaw their southern border. While some 20,000 K. live in the Sudan, in Ethiopia the number of K. is today estimated to be 3,000 individuals. In Gambella their number is estimated to be 300 (Census of 1994). The major settlement in Gambella is Pokung, located near Itang.

Almost nothing is known about the belief system of the K. In terms of social structure the K. traditionally are divided in patrilineal clans. Their marriage system is traditionally based on sister exchange: the bridegroom is obliged to find a sister or close relative (i.e. the cousin) to marry a son from the bride's family. Today this has widely been abandoned and intermarriage with Oromo and ↗Añwaa, together with the payment of bridewealth is to be observed (James 1999:241).

The K. cultivate mainly sorghum, ground nuts, sesame, sweet potato, red pepper, cotton and tobacco. Additionally they keep a small number of cattle. In the past the domestication of pigs is reported, but cannot be confirmed for today. The pigs were "allowed to wander about in the forest feeding on roots and fruits of trees" (Corfield 1938:151). Fishing and hunting are practised.

The K. are one of the least studied ethnic groups of the area. Historical accounts are rare and the few we have (Schuver 1884; Marno 1886; Corfield 1938), though being valuable, generalize the K. with the Opuuo and Kwama under the blanket term "Koma". While Marno uses the term Burun, ↗Schuver's account of the Koma has been verified by Theis (1995) as a probable account of the Kwama. Outsiders have constantly tended to see the Kwama and the K. as one ethnic entity. The Kwama of Ethiopia, who greatly outnumber the K., negate the existence of an independent K. ethnic unit, but instead discern them as being a Kwama clan. On the Sudanese side, where the numerical proportion is the opposite, the K. are dominant and the Kwama are bilingual in K. language (Burns 1950).

The history of the K. is one of ↗slavery, constant persecution and dispersal. Since the ↗Nuer expanded into Ethiopia, they periodically raided the K. While the K. lived in peaceful terms with the ↗Leeqaa Oromo, paying tribute to them in form of ivory and cotton, this changed after 1886. While from the north, the ↗Waṭāwīṭ raided the K., they fell prey to Oromo raids from the south. The Leeqaa ruler ↗Ǧootee Tulluu and the Waṭāwīṭ enslaved especially women and children. This led to a demographic imbalance and the destruction of the traditional social order (Theis 1995:30). Both invaders saw the K. as their natural property and, according to Corfield (1938:135), Ǧootee's underlying idea in raiding the K. was to save his "ancestral properties" from the expansion of the Waṭāwīṭ. He captured as many of them as possible to "save" them from falling into the hands of his rival *šayḫ* ↗Ḫʷağalī. After Ǧootee's death he was succeeded by his son *fitawrari* ↗Mardassaa Ǧootee. During his rule the Oromo raids even increased in violence.

In 1924 the British administration established police posts to end the systematic slave raids in the area, and in 1928, during the "Anti Slavery Campaign", captured *asit* Amna, the wife of *šayḫ* Ḫʷağalī, who was herself highly engaged in slave trade. Nevertheless, the K. were still exposed to periodic raids by the Nuer. Corfield (1938:134) notes that "by 1924 when Daga and Kigille Po-

lice were founded, only remnants of these unfortunate communities were left".

Since the K. were displaced in history and sensitive to the war in southern Sudan, their scattered villages along the Ethio-Sudanese border show hardly any contact among each other. Rather the K. intermingle with their close neighbours, like, e.g., in Gambella the Añwaa or Oromo. Like most of the small ethnic units inhabiting the Ethio-Sudanese borderlands, the K. are at least bilingual in the language of their neighbours.

Susanne Hummel – Alexander Meckelburg

Komoru

In various ↗Surmic-speaking societies of southwest Ethiopia one finds a peculiar type of community leader: the K. The word is not easily translated but refers, in essence, to a kind of supernaturally sanctioned, priest-like community mediator, who is the embodiment of the well-being of the society as a whole. The K. has "authority" but it is difficult to define its nature. He is a mediator or conductor of energy (such as, e.g., fertility) between the Sky God and the people. He carries a kind of institutionalized charisma or personal power. A K. always belongs to a certain lineage within an ancient clan, but the candidate is nevertheless "chosen" or selected by the people he serves. A K. is always a male and has to be free from blemishes or physical defects. Neither must he have killed anyone. He has also to be a socially agile and accessible person, showing restraint and inspiring the quest for mediation and peace.

Three groups in south-west Ethiopia have this type of leader: the ↗Mursi (who have two K.), the ↗Suri (who have three) and the ↗Me'en (also three, called *komorut*). All are historically related and were originally agro-pastoral societies, where cattle and mobility is highly valued. Similarities exist between the K. position and forms of ritual leadership in other agro-pastoral societies in East Africa, e.g. among the ↗Nuer, Dinka, Pokot and other Surmic-speaking groups like Didinga, ↗Murle and Larim in southern Sudan. The political structure of these societies was traditionally marked by segmentary organization, a clan structure and a stratum of age grades, whereby the senior grade provides a kind of collective community leadership (via assemblies as political decision-making forums; cp. ↗*abbaa bokkuu*). In Me'en society, which is now predominantly sedentary-agricultural, new types of leaders have emerged, and among them the K. function has declined significantly. Except for a few semi-transhumant subgroups near the confluence of Šorum and Omo Rivers, the large majority of Me'en do not know of, or recognize, any K. Only the Bodi-Me'en (Mela and Čirim), east across the Omo river, also have K.

The K. carries no political, executive power and does not dispense justice. He is a ritual figurehead. The range of functions of a K. comprises: providing ritual blessings for collective actions (including raiding or the agricultural cycle), carry out rain control ritual, initiate mediation, bless cattle and the land, issue occasional curses on plagues and enemies, and summarizing or sanctioning decisions taken in public assemblies. In some rituals the K. also canalizes the discord or anger that may exist in a community and which is then symbolically directed at him.

The K. is nominally tied to the land of his people and is not allowed to leave it for any length of time. As these societies have become more linked to the wider Ethiopian society, new political functions (e.g., local councillors) were introduced that will rival with or transform the K. position within these groups. State authorities usually bypass or ignore the role of the K.

Konč ↗Konta

Konso

Konso language

The K. ([*xonso*], sometimes spelled as Xonso; also Komso) language was first established by Bender (1971) as a language of ↗Konsoid group, which is a close relative of ↗Oromiffa within the ↗Lowland East Cushitic group. K. itself is divided into two main dialects, Faša and Karatti. K. grammar is described by Black (1973), morphology and phonology also by Sim (1973). The syntax has also been studied by Bliese and Sokka Gignarta (1988) and by Daudey and Hellenthal (2004). Uusitalo (2001) has studied K. discourse. K. is spoken south of Lake Čamo in south-western Ethiopia, according to the 1998 census by 149,508 speakers (among them, 138,696 monolinguals; Gordon 2005:116).

Even though the Latin alphabet was adopted for K. in 1997, most materials in K. are still written in Ethiopic script. The texts published so far include the N.T. and other religious, cultural and educational material, and are used mainly by the church literature programme. K. is used by its speakers in all areas of everyday life, ↗Amharic being employed for wider communication and education.

K. consonants are unvoiced stops (*p, t, č, k* – allophonically voiced between vowels when they are non-geminated), voiced implosives (*ɓ, ɗ, f, g*), fricatives (*f, s, š, x*), nasals (*m, n, ŋ*), liquids (*r, l*), semivowels (*w, y*), and laryngeals (*h, ʾ*). Vowels are *i, e, a, o, u*. Length is phonemic, expressing both grammatical and lexical differences (e.g., *ama*, 'breast' ~ *amma*, 'now'; *tika*, 'house' ~ *tikka*, 'houses'; *mana*, 'house' ~ *maana*, 'what?'). Lexical prominence is achieved by both pitch (acute) and stress accent. In isolated words it usually falls on the penultimate syllable. Pitch and stress can be meaning-distinctive: some lexical pairs differ by pitch only (e.g. *písa*, 'flower' ~ *pisá*, 'all'). Pitch can also have grammatical value, showing sg./pl. distinction (e.g. *harká*, 'hand' ~ *hárka*, 'hands'), imperative (e.g. *dáma*, 'food' ~ *damá*, 'eat (pl.)!') and yes/no question. Pitch in K. needs further studies.

The citation form of all K. nouns ends in *-a*, except for proper names, which end in *-i, -o*, or *-e*. Nouns have either fem. or masc. gender in the singular, which is neutralized in the plural. Gender can sometimes be inferred from a special masc./fem. derivational suffix, but the basic stems do not exhibit any overt gender marker.

There are various plural-forming devices: geminating the root-final consonant, segmental phonological change, change of pitch, or adding one of the pl. suffixes *-ad(d)a, -aw(wa), -ew(w)a, -ay(y)a, -iy(y)a*. Often several devices are possible, even at the same time. E.g. *tik-a*, 'house' (masc.) ~ *tik-k-a / tik-k-adda / tik-adda*, 'houses'. Some nouns are plural in their grammatical behaviour, taking plural adjectives and verb forms, while at the same time referring to singular or mass objects (e.g. *innaa*, 'boy').

Some words have a vocative form with final *-o* (*moott-o*, 'friend!').

The K. personal pronouns have two sets of forms in the singular, one for non-focused subjects, the other for other cases (focused subject, object, indirect object, object of preposition): *anti/ana* (1 sg.), *atti/ke* (2 sg.). E.g. *atti i-k-kii-t-e, "i-n-ke-ʾ-daaš-a"*, 'You SAID, "I will give you (something)"' ~ *ke kid-e, "i-n-ke-ʾ-daaš-a"*, 'YOU said, "I will give you (something)"'. Possessive pronouns have both free and suffix forms, the latter having separate sets for sg. and pl. head nouns (*tik-ayti*, 'your house' ~ *tik-k-aatti*, 'your houses'). With nouns denoting family relationships, the sg./pl. distinction is used to differentiate meaning differences as well, e.g. *aapp-iyyo*, 'my husband'; *aapp-inno*, 'my/our father'.

K. adjectives form a small class (Black 1973 lists 31 adjectives) with both nominal and verbal features. They either precede or follow the head noun. In predicate position they take normal person prefixes for both positive and negative clauses (*in-kutt-i*, 'I am big'; *an-kutt-an*, 'I am not big').

In the K. verb, suffixes and prefixes are used to distinguish tense (past with *-e*, present/future *-a*), person (prefix *-n-* [1st pers.], *-ʾ-* [2nd pers.], suffix *-t-* [2nd, 3rd pers. fem.]) and focus (*i-*) on the predicate. E.g., past tense of *kat-* 'sell': *i-n-kat-e* (1st pers. sg.), *i-k-kat-t-e* (2nd pers. sg.), *i-kat-e* (3 masc. sg.), *i-kat-t-e* (3rd pers. fem. sg.), *i-n-kan-n-e* (1st pers. pl.), *i-k-kat-t-e-n* (2nd pers. pl.), *i-kat-e-n* (3rd pers. pl.). There is also a continuous form, which uses the same suffix *-n*

as the dependant verb form, and suffix *-i*. While other persons retain their personal prefixes and suffixes, 3rd pers. sg. and pl. do not differ. E.g., *i-n-kan-n-i* (1st pers. sg., 'I am buying'), *i-k-kan-n-i* (2nd pers. sg.), *i-kan-n-i* (3rd pers.), *i-n-kan-n-i-nna* (1st pers. pl.), *i-k-kan-n-i-ttan* (2nd pers. pl.). Dependant verb form uses the suffix *-o* instead of the *-i* of the continuous form (e.g. *ee kat-o-yye*, 'when he sold'). The verb is reduced to 3rd pers. sg. when the subject is focused.

Suffixes are employed to form direct causative (*-š-*), indirect causative (*-ačiis-*), benefactive (*-ad-*), and passive (*-am-*) (e.g. *i-n-sook-e*, 'I went out'; *i-n-sook-š-e*, 'I put out'; *i-n-sook-s-ačiis-e*, 'I caused somebody/something to be put out'; *i-n-sook-ad-e*, 'I went out for myself' [= 'I went to work in the fields']; *i-n-sook-s-ad-e*, 'I put out for myself'; *i-n-sook-s-am-e*, 'I was put out'). Reduplication of the last root consonant usually indicates singulative action (*i-ik-t-e*, 'she drank' ~ *i-ik-k-i-t-e*, 'she took a drink'); a reduplicative initial syllable of the root denotes prolonged or quick action, e.g. *keer-e*, 'run!' ~ *ke(k)-keer-e*, 'run! (many times/quickly)'.

K. is a S[ubject]O[bject]V[erb] language (e.g. *nama*$_1$ *tika*$_2$ *gupe*$_3$, 'A man$_1$ built$_3$ a house$_2$') with some peculiar features of its own, enumerated by Bliese and Sokka Gignarta (1988). Thus, K. places relative clauses and other determiners after the head in noun phrases; the person marker (= subject clitic) is either prefixed to the main verb (or a larger focused unit), or suffixed for focus on other clause arguments. The negative markers are found before and/or after the verb. The speech act verb normally precedes the quotation it introduces. Subordinate clauses often have both clause-initial and -final markers. In other respects K. shares the typical features of SOV languages (subordinate clauses precede main clauses, infinitives precede the main verb, the standard of comparisons precedes the topic, postpositions are used).

Normally indirect object comes after direct object, unless the order is changed for discourse purposes. The direct object is unmarked, while the indirect object is marked by a glottal stop (phonetically realized as doubling of the initial consonant of the following word) at the end of the phrase: *ahata*$_1$ *piša*$_2$ *enenta*$_3$ *daasse*$_4$ [*ahata piša enenta ddaasse*], 'Mother$_1$ gave$_4$ water$_2$ to the girl$_3$'.

The ten-word list for K. is: *takka*, 'one'; *lakki*, 'two'; *sessa*, 'three'; *apitta*, 'fire'; *piša*, 'water'; *atoota*, 'sun'; *lea*, 'moon'; *ilkitta*, 'tooth'; *diika*, 'blood'; *arrapa*, 'tongue'.

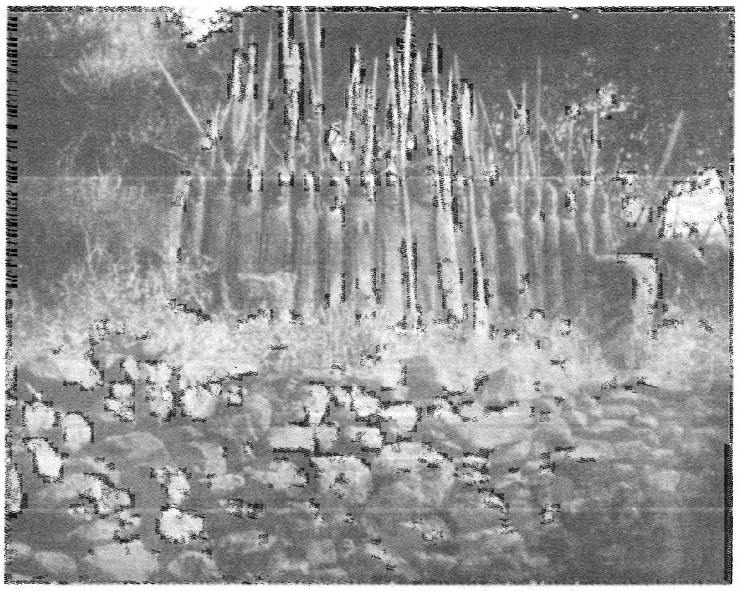
Konso ethnography

The K. are a south-western Ethiopian agricultural people. Apart from agricultural produce they trade in crafts, their speciality being cotton blan-



Konso memorial in the early 20th cent., from Hodson 1916:76/77

kets (like the ↗Gamo). They number around 167,000 (Watson – Regasa 2001) and occupy an area rising up to 2,000 m above the Ethiopian Rift Valley floor bordering on the ↗Boorana and ↗Burği, the ↗Diraaśša and Gatto, the ↗Gawwada and ↗Ṣamay and Karmet/↗Waṭa on the east, north, west and south, respectively.

Ethnic K. and administrative K. territories are quite different and are conceptualized differently by the people themselves. The latter is much larger than that recognized by the elders of the community. The main divisions of the K.-speaking area are Karatti and Takkaḍi; K̲olme; Turo and Arfayte; Pa'ayti and Kusuma [Kusumi] (also known as Gato; Amborn 2002). When in the 1890s the K. were incorporated into the Ethiopian Empire their land included the sections of Karatti, Takkaḍi and K̲olme and Turo, while the territories of the Gawwada, and Ṣamako, Ale, etc. were added later to administrative K. Much of their relations with their neighbours is based on trade and the markets of K. attract peoples of the neighbouring areas. Trade routes from the Indian Ocean, northern Ethiopia, and the west cross through K. country and give it prominence in the region (Kluckhohn 1962; Sobania 1991). K. skills in terrace building and in engraving of ancestral images from wood have won them fame.

According to the K. elders, the K. took over the present territory from a people known as the Wärra Dayya, who also left some of the big terraces and water wells. Unlike the elders, some of the clan leaders (*poqalla*) wield ritual and religious power, command sectional control and claim outside origin. Similarly handicraft workers such as iron forgers and potters claim outside origin (Amborn 1990).

Whilst the K. had occasional conflicts in the past with such close and distant neighbours as the ↗Guğği and the Boorana as well as, in the early 19th cent., the Ṣamako and the Gatto, peace was usually soon achieved by elders on both sides. The K. generally maintain good relations with their neighbours and have over the years peacefully spread into the territories of the Boorana, Gamo, Burği, Hoor (↗Arbore) and other peoples of the Omo region.

Local memory keeps that a number of K. settlements were burnt down and devastated by the army of *ras* ↗Lə'ul Sägäd during the conquest. A number of K. took refuge in British Kenya. The K. also can be found in the Sagan river valley. One Sawgame family already lived in the valley during the Italian occupation.

K. society as it stands today makes a distinction between farmers (*etenta*) and craft workers (*hauwuda*; Watson 1998, 2006; Wolde Gossa Tadesse 1999, 2001, 2002, 2003; Hallpike 2002). Neither clan membership nor settlement patterns distinguish between them, although in some parts (e.g., in Sawgame) potters take separate residence and are buried in places reserved for public defecation (*d'ina*). Both cultivators and non-cultivators belong to nine similar clans. The divide may have been quite clear in the past but today both cultivators and non-cultivating craftsmen and traders do not occupy independent occupational spheres and do not exclude or marginalize the other any more. Cultivators, e.g., take up weaving as a source of additional income (they apparently do not become blacksmiths and pot makers or tanners). Traders take up cultivation by purchasing land; this has considerably changed their position of power within K. society. Today they own land and also take cultivator spouses. Hallpike (1972) estimated ca. 700 weavers among both cultivators and craftsmen in a population of 50,000 and indicated that there were as many as ten blacksmiths in a population of 3,000 in Turo. He estimated a much lower numers of potters and tanners than blacksmiths in Karatte. In the period covered by Hallpike's account non-cultivators owned little cultivable land; the share has grown by today. The ↗*Fulḍo* trading society locally operates in K. with similar networks among the neighbouring peoples with the purpose of facilitating trade and providing security to traders and goods along trade routes.

The K. political system varies slightly within its sections. Appointed officials operate at the *wäräda* level, while in sections and settlements indigenous authority coexists side by side with state authority staffed by unpaid state appointees with political affiliation to a pro-government political party. In Karatti, e.g., both indigenous age organization and local state agents (*qäbäle*) exercise power with a strong bias towards the former. Every seven years followed by eleven years, new age sets take power while those in power retire. This takes place after a lengthy process of feeding seniors and getting power after erecting columnar stones to commemorate a retiring generation. Handing over of power occurs in one of the main public places by symbolically chasing out the retiring generation. The K. have many public places in their settlements and in the bush which they use for assemblies and other ritual purposes. The handing over of power is preceded by a ↗hunting festival (*Kara*) where a big beast must be killed (Wolde Gossa Tadesse 1991, 1993).

Most K. sections are led by hierarchically positioned clan chiefs and ritual leaders, the *poqalla*. Their prominence is to be observed especially during their elaborate ↗funerary ritual, which is said to last up to nine years (Wolde Gossa Tadesse 1992). Most of them emphasize the importance of their leadership rather than their religious role due to the continued intimidation by state bodies and powerful Christian organizations that abuse their practices, as occurs in many parts of southwest Ethiopia.

Konso-Gardula

The K.G. (also Konso) palaeoanthropological research area is located near the town of ↗Konso in south-western Ethiopia at an altitude of 1,100 to 1,500 m A.S.L. close to the headwaters of the Gato/Iyanda drainage system, a major tributary of the Sägän River (for location s. Konso). The K.G. palaeoanthropological research area includes important fossiliferous sediments dating from approximately 1.95 million years ago to younger than 1.3 million years ago of the Konso Formation, a component of the south-western section of the main Ethiopian Rift. The K.G. palaeoanthropological research area was first documented in 1991 and research carried out by the international Konso Palaeoanthropological Project since 1993 has produced fossil evidence for both *Homo erectus* (alt. *Homo ergaster*) and *Australopithecus boisei* (alt. *Paranthropus boisei*) hominid species and a rich assemblage of Plio-Pleistocene terrestrial mammals. In addition, an array of Acheulean tradition lithic tools has been documented in stratigraphic horizons dating from 1.6 to 1.5 million years ago and younger, providing some of the earliest evidence for Acheulean artifacts in Africa.

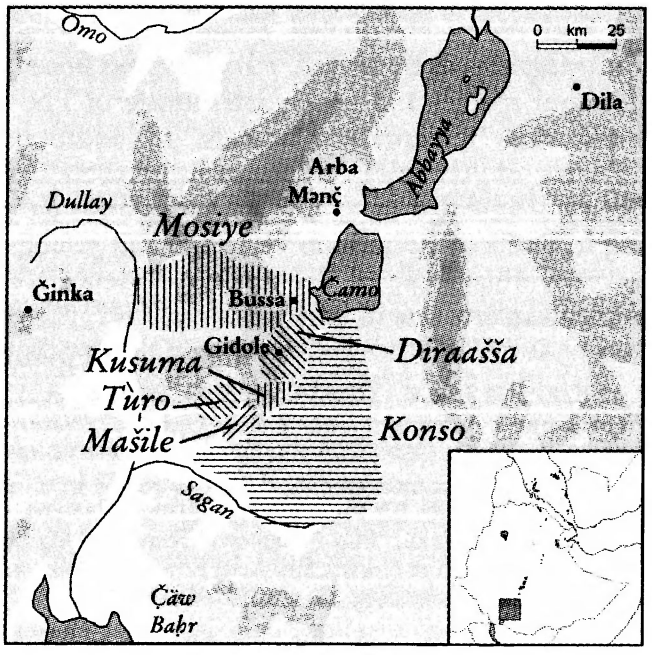
Matthew C. Curtis

Konsoid

The K. language cluster forms, together with ↗Oromo, a branch within ↗Lowland East Cushitic (↗Cushitic family). Comparative K. and its position within Cushitic is extensively treated by Black in his 1974 Ph.D. dissertation; Bender (1971) was the first to establish K. as a genetic unit. Some of the salient features of K. are absence of voice distinction in obstruents but rather one of glottic vs. pulmonic obstruents; length opposition in the vowels and in all consonants; the presence of an implosive *ɗ*; weakening (spirantization) of *k*; a singularative verbal derivation indicating an action done only once; a verbalizing suffix *-um* to indicate 'to become a person of a certain quality'. With the exception of spirantization of *k*, these features are shared with most of the ↗Dullay members and could well have arisen due to contact with the Dullay cluster (s. Sasse 1986).

The K. language area reaches from Bussa town in the north to the Sagan river in the south. The following seven varieties are distinguished: ↗Mosiye (also called Bussa), ↗Diraaśśa (also called Dirayta, Gidole, Gardulla), Mašile (Mašolle), Kusuma (Kato, Gato), Turo (Duro), Faša ↗Konso (including Kolme/Xolme), and Karatti Konso. Of these, Mosiye, Diraaśśa and Konso (which subsumes *inter alia* the Faša and Karatti dialects) are distinguished as languages, whereas Mašile, Kusuma, and Turo are dialects which are not usually subsumed under Konso or Diraaśśa but rather directly under the umbrella of the K. cluster.

Most varieties of K. do not have a written tradition; only Diraaśśa and Konso have publications in the language. Most linguistic research has also been carried out on these two languages.



Very little is known about the dialects in between Konso and Diraaśśa: (K.)-Mašile (not to be confused with a Dullay variety in the same area for which the same areal term Mašile [Mašolle] is used), Kusuma, and Turo. Black's survey shows that phonologically and grammatically Kusuma and Turo are closer to Konso while Mašile is equally similar to Konso and Diraaśśa. Lexically Mašile seems to be slightly closer to Diraaśśa than to Konso. The lexicostatistical percentages are lowest between the extremes Mosiye and Konso, around 50 %, and otherwise vary between 60 % and 80 % (Black 1974:38, 1973), showing that there is considerable variation within the K. cluster. Mosiye (Bussa) and Mašile denote two different varieties. The resemblance of their names has led to some confusion, for example, in the Bussa entry of *Ethnologue* (Gordon 2005:114), which mentions Mashile, Mashelle, Masholle as name variants of Mosiye (Bussa).

The K. cluster and the Dullay cluster are in close contact. Both are Lowland East Cushitic but only quite distantly related. These two clusters border upon each other with the Dullay chain of dialects in the west and the K. ones to the east. Many of the phonological and grammatical isoglosses go from east to west cutting right through the chains of genetically related dialects. This is evidence for a long established contact zone. The basis for this is presented in Black (1975); Sasse (1986) speaks of a south-west Ethiopian Language Area with these two dialect chains as its core. Sasse's wider picture suggest a key position for Diraaśśa. He also argues that at an earlier stage, before the southern advancement of the Konso people, there must have been contact between the Dullay and the ↗Burǧi speaking communities.

Maarten Mous

Konta

K. (also Kʷinta, by Crawford [1958:98, 176, 188] identified with "Conce" mentioned in Zorzi's itinaries, i.e. Konč, Konča, also Kʷənča) was one of Omotic-speaking kingdoms incorporated into Ethiopia during the late 19th cent. At present the people of K. constitute a special *wäräda* of the Southern Nations Nationalities and People's Region (SNNPR). The *wäräda* capital, Ameya, lies next to Mount Damota (2,090 m A.S.L.), ca. 350 km west of the regional capital ↗Awasa, 25 km off the Ǧimma – Wälaytta – Soddo all-weather road (for location s. Kullo Konta). In 1994 the population of K. was 49,625 (CSA 1998), and had reached 72,453 in 2002 (Bureau of Agriculture 1994).

Except the Oromo of Ǧimma, all neighbours of the K. are Omotic speakers: ↗Dawro in the east, ↗Käfa in the west, ↗Aari, ↗Gofa and ↗Č̣ara in the south. The Č̣ara have historically been part of the kingdom of K. and are still part of the K. special *wäräda*, though some also live on the Käfa side of the border. Dawro and K. were both part of the ↗Kullo-Konta *awraǧǧa*.

K. is one of the least documented societies of south-west Ethiopia. According to the K. royal genealogy (Haberland 1981, based on the information he collected in K. in 1974 and travel reports), the K. kingdom was founded by the king (*kati* or *kawo*) Gobe. He is believed to have come from either Abbaa Maalo or the neighbouring ↗Dokko, crossed the ↗Omo river and invaded today's K. ca. 1800. It was thus the last state foundation before the Amhara came at the end of 19th cent. (Haberland 1981:740). Counterchecking the royal genealogy collected by Haberland with that of the neighbouring Dawro and having interviewed many K. elders, Elias Awato et al. (1999) suggest that the kingdom of K. must have been founded at least one generation earlier, in ca. 1764.

Today K., like many of its neighbours such as Dawro, Käfa and Gofa, is still predominantly an agricultural society which grows root crops (e.g., *ənsät*), potatoes, cash crops (e.g., coffee), spices (e.g., cardamom) and cereals (e.g., *tef*).

A caste-like ranking of the society widely practised in this region is still more or less intact in K. (s. Freeman – Pankhurst 2001; Haaland – Haaland – Data Dea 2004; Data Dea 2003). It is ranked from *goqa* ('farmers, or citizens') at the top to the *manǧa* (a group that depends on forest resources) at the bottom. Artisans such as potters, tanners, smiths and iron smelters are ranked in between these two extremes of wealth, power and prestige. Traditionally, these status groups have different access to political offices, land and social status.

Data Dea

Koorete

Koorete language

K. (self-name; other names used: Koyra, Badditu, and Amarro) is an East-↗Ometo language of the ↗Omotic family. It is spoken by ca. 100,000 people called Kore or Koorete in and around Amarro, by the eastern shore of Lake ↗Abbayya in south-western Ethiopia (Hayward 1982:211; Gordon 2005: 116; for location s. Konso).

The consonantal segments of K. are as follows (the consonants in brackets are marginally used):

	labial	dental-alveolar	palatal	velar	glottal
plosive	*p, b, p*	*t, d, (t)*		*k, g, q*	*ʾ*
implosive	*(ɓ)*	*ɗ*			
nasal	*m*	*n*			
fricative		*s*	*š, ž*		
affricate		*ʦ, ʣ, ʃ*	*č, ǧ, č̣*		
liquid		*l, r*			
glide	*w*		*y*		

The vowels are *i*, *e*, *a*, *u*, *o*. Length is phonemic for both consonants and vowels. In K. there is

a clear distinction between two tones: high and low, but the occurrence of the high tone in a word is restricted. Because of this, K. is regarded as a tone-accent language. In this entry, high tone is marked by (´). Low tone is unmarked.

Three lexically determined terminal vowels *e*, *a*, and *o* characterize the endings of most nominals (i.e. nouns and adjectives). A fourth class consists of nominals that end in consonants. Number is distinguished by marking the plural with *-itte*; singular is unmarked, e.g. *qotto* 'hoe' vs. *qott-itte* 'hoes'. In kinship nouns, *-itte* may be replaced by *-atse*, e.g. *ʾáabbo* 'father' vs. *ʾaabbitte* or *ʾaabbwatse* 'fathers'. Object/accusative case is not marked, whereas nominative/subject case is marked by *-í*. For most nouns, accusative and genitive are not formally distinguished; in some nouns the genitive is marked by *-i*. Dative, instrumental, and ablative are marked by *-se*, *-na*, and *-apa* respectively. Examples: *ʾíndo* 'mother:ABS' vs. *ʾindose* 'for/to mother'; *tora* 'spear:ABS' vs. *torana* 'with a spear'; *wáatse* 'water' vs. *waatsapa* 'from water'. Nouns are not morphologically marked for gender. However, their gender (masc. or fem.) can be indicated through anaphoric 3rd pers. sg. pronouns or through pre-verbal pronominal clitics.

Four sets of pronouns are distinguished on the basis of case; the fifth set comprises pronominals used as possessive pronouns and as preverbal subject-agreement elements:

Pers.		Absolutive	Object	Nominative
1st	sg.	*tamba*	*taa*	*tani*
2nd	sg.	*nemba*	*niya*	*neni*
3rd	sg. masc.	*ʾesa*	*ʾesa*	*ʾesi*
3rd	sg. fem.	*ʾiso*	*ʾiso*	*ʾisi*
1st	pl.	*numba*	*numba ~ nuu*	*nuuni*
2nd	pl.	*hinumba*	*hinumba*	*hinuuni*
3rd	pl.	*ʾuso*	*ʾuso*	*ʾusi ~ ʾusini*

Pers.		Dative	Possessive or Pre-verbal
1st	sg.	*taase*	*ta*
2nd	sg.	*neese*	*ne*
3rd	sg. masc.	*ʾesuse*	*ʾe*
3rd	sg. fem.	*ʾisuse*	*ʾi*
1st	pl.	*nuuse*	*nu*
2nd	pl.	*hinuuse*	*hi*
3rd	pl.	*ʾususe*	*ʾu*

There are three basic deictic forms: *se-* 'far from speaker', *ha-* 'nearer to speaker', *ye-* 'nearer to second or third person than to speaker'. These are combined with 3rd pers. pronouns to form demonstratives distinct for gender, number, and case, e.g. *seʾesa* 'that (masc. abs.)', *seʾiso* 'that (fem. abs.)' vs. *seʾesi* 'that (masc. nom.)', *seʾisi* 'that (fem. nom.)'.

Question words include: *ʾonena ~ ʾona* 'who', *ʾamuna ~ ʾam* 'what', *ʾayna ~ ʾay* 'where', *ʾaydena* 'when', *ʾanṣuna ~ ʾanṣina* 'how much', and *ʾaʾesana* 'which one'.

Numerals, when modifying a noun, replace their final vowel with *-í*: cp. *bíddzo* 'one' and *bi(d)zzí ʾase* 'one man', *ʾóyde* 'four' and *ʾoydí ṣúnqe* 'four fingers'. Terms for tens are based on the element *tamma* (< *támme* 'ten'), and are followed by lower digits: *tamma bíddzo* 'eleven' (cp. *bíddzo* 'one'); *tamma lámʾe* 'twelve' (cp. *lámʾe* 'two'); *lamtamma bíddzo* 'twenty one'.

K. has a complex verb structure. For some verbs, up to four distinct verbal stems are used, depending on morphological and phonological criteria. E.g., the infinitive, perfective, imperfective, and imperative forms for 'to see' are respectively, *beet-*, *beed-*, *been-*, and *be-(ww)-*. Some verbs have three stems: *tup-* (infinitive), *tutt-* (perfective), and *tuk-* (imperfective and imperative) 'tie'. Others distinguish between two stems, e.g. *gett-* (perfective) vs. *geh-* (infinitive, imperfective, and imperative) 'sleep'. Aspect, mood, polarity, and subject-agreement markers are added to these verb roots, e.g. *gettosso* 'he slept', *gettobasso* 'he did not sleep', *gehwasso* 'he does not sleep', *gettobaye* 'has he not been asleep?', *gehesse* 'let him sleep!', whereas second person singular forms are: *gettonakko* 'you slept', *gettobanakko* 'you did not sleep', *gehwanakko* 'you do not sleep', *gettobanno* 'didn't you sleep?', *gehwa* 'sleep!'. Such verbs represent "simple paradigms". K. also has alternative "complex paradigms" in which the verb must occur twice. The affirmative declarative form of a complex paradigm has the structure: V1+*-akko* + pronominal + V2. None of these verbs is inflected. Rather, V1 is the "infinitive", and V2 represents the relative clause form of the verb. The pronominal element is selected from the pre-verbal/possessive pronouns. E.g., *gehakko ta gehe* 'I sleep', *gehakko ʾe gehe* 'he sleeps', *gehakko ʾi gehe* 'she sleeps'.

K. sentences have basic Subject-Object-Verb order; all modifying categories, including clausal modifiers, precede the head. E.g.:

kayma ʾatsí	*šooše*	*woddósso*
young man:Nom.	snake:Acc.	kill:3masc.sg.:perf.

'The young man killed a snake'

The standard ten-word list for K. is: 'one' *bíddzo*, 'two' *lámʾe*, 'three' *háydze*, 'water'

wáatse, 'fire' *táma*, 'sun' *qosse*, 'moon' *ʾagunna*, 'blood' *súuse*, 'tongue' *ʾerṣúmme ~ ʾorṣúmme*, 'tooth' *gággo*.

Azeb Amha

Koorete ethnography

The K. (also Koore, Amaaro [or Amarro]) live in the northern part of the ↗Amaaro mountain range east of Lake ↗Čamo, and count ca. 107,000 people (census of 1998). Their Oromo-speaking neighbours to the East and West, call them Badditu. The designation "K." or Koore for the language and the people has been introduced by linguists' informants and most likely is derived from the name of the marriage class of *koorese* (*koorese* as a name for the group, *koorete* for the language, as the postfix *-te* is sometimes used in the wider region to denote languages). Some K. use the name Koyra, which is also employed by the ↗Burği. Koyra originally was the name of the northern district of the K. country, which was the seat of the lineage of the priestly chiefs.

Due to fighting and alternating alliances between K. and Burği in the southern part of K. country (especially in Naddalay and Walley) the cultural features of the K. and the neighbouring Burği overlap each other; a fact that is mirrored in the language as well (Kellner 2006, ch. 2). According to Straube the southern area was politically dominated by the Burği while the northern K. constituted an independent kingdom (VSAe III, 76f.).

The high mountain region (up to 3,300 m A.S.L.) is covered with meadows and is unpopulated. In the highland below (1,800–2,000 m A.S.L.), scattered hamlets or homesteads within ↗*ənsät* gardens are the common settlement pattern. For several decades, the main settlement area has lain above the Galane river valley. Amaaro *kätäma*, the administrative centre of today's Amaaro Special *wäräda* and an important market town with access to an all-weather road, is situated there. The villagization programme of the *Därg* (↗Provisional Military Administrative Council) in the late 1980s that resettled people to lower areas did not have such a disastrous effect as in many other mountain regions of the south, because this demographic movement had already started voluntarily before the Revolution.

The fertile step at the eastern slope, well-watered by small rivulets, is intensively used for agriculture. The K. cultivate a great variety of cereals, *ənsät* types and vegetables. They practice crop-alternating on permanent fields, which are often on artificially irrigated stone terraces. Work in the fields is restricted to men, while women only help during harvest. Despite the fact that ample pasture is available, cattle-breeding is of limited importance. ↗Handicrafts such as smithing, pottery and leatherworking are done by professional craftspeople, who form endogamous groups, while weaving or wood-carving is not restricted to a special group of people. ↗Blacksmiths are sacred persons; to shed the blood of a blacksmith causes mischief for the country. Agriculturists ask potters to curse plagues, pests and ↗*buda* and the enemies of the K.

It is particular to the K. that they are subdivided into 83 patrilineal clans, which is an extraordinary number for this region. K. as a whole falls into the two exogamous marriage classes, *kanéi* and *koorese*. After marriage, women maintain the membership of their original clan. Every clan has an hereditary clan-leader (*kašáče*), whose most important task is to lead sumptuous rites of sacrifice. Probably clans originally were localised at specific places, as names for clans and places are often identical.

Koorete graves with forked grave planks, on the left note the slanting remnants of the *kombotse*-frame; photo 2003, courtesy of the author

Before the conquest of the Amaaro highlands by *däğğazmač* (later *ras*) ↗Ləʿul Sägäd at the end of the 19th cent., K. could be called a small state with a hierarchical structure of offices. At its centre was a priestly chief (*kaati*), mostly called king in the literature. The last independent K. *kaati* was Amole. Among his regalia the golden bracelet was the most prominent. The sacred character of the *kaati* was expressed in the belief in the primal ancestor's solar origin and his role as the one who brought *ənsät* (K.: *šunša*), barley, cabbage and hailstones to the people. A *kaati* was prohibited to look into fire or to touch the earth. He was separated from the common people in his compound and when travelling. Tradition holds that a boy was sacrificed on the occasion of the enthronement of the new *kaati* (VSAe 105–09).

The K. recognize a sky-god (*wonto*) who is a *deus otiosus*. Under extraordinary circumstances *wonto* may form a numinous union with the *kaati* via the *kaalača*, a metallic object used in ceremonies (cp. ↗*Kallačča*; VSAe III, 106; cf. Amborn in preparation). Next to traditional religion, ca. 30 % of the Koorete adhere to Christianity.

The transition of the living into the world of the dead plays an important role. The K. celebrate grandiose ↗funerals for the deceased. If a respected person is buried several hundred persons would take part. In honour of the deceased a conical scaffolding ca. 2.5 m high is erected, covered with clothing and insignia of rank. A calabash symbolizes the head of the deceased. After the feast the *kombotse*-scaffolding is placed on the grave, in addition to the grave board (ending in three or more prongs, s. ill.), which will gradually decay thereafter. The feasts were forbidden by the *Därg* state administration because they were considered immoral. However, the tradition of lavish ceremonial burial is still maintained.

Hermann Amborn

Koräm

K. (ኮረም) is a town located halfway between Däse, Wällo, and Mäqälä, where the road forks west for ↗Säqoṭa at 100 km. It lies at an altitude of 2,490 m A.S.L. on the top of an escarpment, 6 km southeast of Lake ↗Ḫašəngä (for location s. May Č̣äw).

Historically, K. and its surroundings were a crossroads in peacetime and a key point in wartime between the regions of ↗Wag, ↗Təgray and ↗Azäbo. In September 1909, K. was the place where *däğğazmač* ↗Abrəha Arʾaya tried, unsuccessfully, to stop, ↗Abatä Bʷayaläw, then the appointed governor of Wag, Lasta and Təgray with the title of *wag šum*. Many died and thousands were wounded in the battle. Carlo Annaratone was asked to take care of them and organized their treatment at K. for several weeks (Annaratone 1914).

In 1936, K. was the base of operations of the Ethiopian army before the battle of ↗May Č̣äw. More recently, during the 1984–85 drought, K. was an important feeding centre for refugees.

Today K. is the capital of the Wäfla (or Ofla) *wäräda* in the Southern Təgray zone in the *kəlləl* Təgray. Its area was once part of Wällo in the past. The evolution of the territorial extent of K. can not be accurately documented as historical maps are often blurred and inexact. What is certain is the fact that K. has been at the crossroads between Wag and Təgray. From 16,895 inhabitants in 1994, the population increased to 28,046 in 2004 (CSA 1994, 2004). A recently-built motor road bypassing K. has diminished its importance as a transit town between Däse and Mäqälä.

Koro ↗Ğimma

Koso

K. (ኮሶ) is the Amharic name for *Hagenia abyssinica*, which belongs to the family of *Rosaceae* (Hedberg 1989). K. is an indigenous tree that grows to a height of about 20 m in the forests of the highlands at altitudes of about 2,500–3,000 m A.S.L. It is also cultivated as a garden and roadside tree in urban areas. K. wood is used as firewood and for the production of furniture, as flooring and for carving. The tree may serve as a firebreak. The fallen leaves have a beneficial influence on the soil.

The dried female flowers are commonly known to be an important taenicide in traditional medicine (Gelahun Abate 1989). Both the tree and the medicine are known as K. The latter has been in use to expel tapeworm since at least the 16th cent. and is an extremely bitter but powerful taenicide. Research into the chemistry of K. has shown that

there are a number of kossotoxins responsible for its taenicidal effect (Belachew Desta 1995).

The dried and pounded female flowers are mixed with water and given to a person having the signs and symptoms of tapeworm. The crushed flowers are soaked, usually in water but also in ↗*ṭälla* or ↗*ṭäǧǧ* overnight. In the morning the filtered solution is drunk on an empty stomach and abstention from food is maintained up to mid-day. The proglottids (the mature segments) of the worm are expelled in the faeces.

In Ethiopia, where the consumption of raw meat is widespread, tapeworm infections are common, and a number of taencides are in wide use. The problem with K. is that it often fails to expel the entire tapeworm. The latter's head in many cases remains in the host's body. There it grows again, thus necessitating the taking of the taencide every two or three months (Pankhurst 1969; 1979). The taking of K. was therefore a frequent and important occasion: courtiers, when taking K., were excused from attending the king's presence, while murderers would have their sentence of execution postponed.

In the 19th cent., *aṣe* Tewodros's then destitute mother was accused of being a K. vendor, an allegation illustrating the low status attached to the occupation. On the other hand, oral tradition relates that *aṣe* Ḫaylä Śəllase I had planted a K. tree at Eğersa Goro in Harärge, where he was born.

A *koso* tree in Aṣbi, Aṣbi Dära; photo 2005, courtesy of Ewa Balicka-Witakowska

K. was traditionally a major trade item in Ethiopia and has for long been a widely available and cheap commodity. The first modern pharmacy in Addis Abäba was called *koso bet*, 'K. house' or 'medicine house' (Fekadu Fullas 2001). The taenicide also enjoyed some short-lived popularity in early 19th cent. Europe (Pankhurst 1979).

Zemede Asfaw

Kote

K. (**ኮቴ**, r. ca. 1710–25), was king (*kawo*) of the ↗Wälaytta, the son of Adaye. Concerning his life, oral traditions among the Wälaytta differ markedly; some claim that he was the fifth (Wanna Wagesho 2001:20) or the seventh king of the "Təgre" dynasty that took over royal power from the ruling aristocratic ↗Wälaytta-Malla clan in the mid-16th cent. (s. HabKön 260). Most traditions, however, state that K. was the first full king of the "Təgre" dynasty, and that he married the daughter of the last Wälaytta-Malla king, Lačia Očče. After the marriage, she allegedly helped her new husband usurp the royal title by a ruse. Another tradition (Chiatti 1984:312) associates these deeds with K.'s father, Adaye. K.'s paramount rule was symbolized by the possession of a royal golden ring; worn on the right index finger, it served as an insignia of power and was inherited by his successors.

There are traditions stating that K. established his court in Dälbo, the later royal capital, centrally located and opposite Mt. Damota, near

the current Wälaytta capital of Soddo. However, these present inconsistencies. it is likely that he was based in either Kindo or Lašo, further west.

In Wälaytta oral tradition, K. is predominantly remembered as a wise, generous and tactful ruler who reformed the Wälaytta political structure and established more peaceful relations with neighbouring peoples such as the Dawro, Kambaata, Arsi and Hadiyya, against whom his predecessors had frequently fought. At the end of his rule, however, he was forced into exile, his position contested by a conspiracy of powerful nobles. K. died childless whilst exiled in Dawro, across the Omo River, and was buried there. K.'s successors, his brother Libana and the latter's son, Tube, expanded the kingdom to the northeast, but also died in exile, due to their alleged abuse of office and disagreements with the people.

Jon Abbink

Kotzikas, Ioannis

K. (also Cozzikas; b. early 19th cent., fl. mid-19th cent.) was a Greek merchant and visionary in Egypt and Sudan, who championed Ethiopia, and was a strong admirer of *aṣe* ↗Tewodros II with whom he enjoyed good relations. K., who married the "Rose of Taka", the half-Oromo daughter of Giyorgis Mika'el, a Coptic trader and scholar at ↗Kassala, Province of ↗Taka, was a keen Greek patriot, and a strong opponent of the ↗Ottoman Empire.

K. established himself at Kassala, just across Ethiopia's frontier with Sudan, around 1847, and later appointed a certain *šayḫ* ʿAbdalqādir as his commercial agent at Qallābat (↗Mätämma). K., who was later assisted by his nephew Panayiotis Kotzikas, was actively involved in Ethiopian foreign trade, i.e. export of coffee and musk, and import of cotton cloth, velvet, beads, bracelets, sugar and fire-arms. Anxious to expand such commerce he travelled to and in Ethiopia in 1851, when he met *ətege* ↗Mänän Libän at Däbrä Tabor, and again in 1853, shortly before she lost power. Interested in supporting Christian Ethiopia, building up Orthodox opposition to the Turks – as well as opposing the slave trade on Ethiopia's western frontier – he proposed the establishment of a Philo-Abyssinian Association, and provided information on the country to the Athens newspaper *Pandora*. He also corresponded with St. Folk, the Russian consul in Cairo, and drew up a report on Ethiopia in 1859 for King Otto of Greece.

K. later emerged as a staunch supporter of *aṣe* Tewodros, whom he considered enterprising, brave, and kind-hearted, and conceived of as a potential Peter the Great. K. supplied him with a sizeable number of rifles, and proposed that the monarch should send his son and other young Ethiopians to study in Greece, and surround himself with Greek advisers. K. also held that Tewodros, benefiting from the opening of the Suez Canal, should establish his capital at Aksum, and extend his empire from the Red Sea to the Nile. Passionately opposed to the ↗Napier expedition of 1867–68, which he considered an act of folly, he wrote an appeal against it to the "People of Great Britain", in Greek, which was later published in French as a pamphlet entitled *Question d'Abyssinie*. It contained a detailed, but probably exaggerated evaluation of Ethiopia's military potential.

Richard Pankhurst

Kračkovskij, Ignatij

K. (Ignace Kratchkovski etc., differently rendered in transliteration; Arabic pen-names Ġanṭūs [shortened form of Iġnāṭiyūs] ar-Rūsī and al-Ġarīb ['the Alien'] ar-Rūsī; b. 16 March 1883, Wilno [= Vilnius], d. 24 January 1951, Leningrad) was the greatest Russian Arabist of the 20th cent. who made a noticeable contribution to ↗Ethiopian studies.

K.'s father, Julian Fomič, son of a Belorussian peasant, was ennobled for his service in the sphere of public education in the Russian Empire. K. finished the 1st gymnasium of Wilno with distinction in 1901 and was admitted to the faculty of Ori-

ental languages of St. Petersburg University. He studied Arabic, Persian and Ottoman Turkish accompanied by regular courses on classical Oriental philology and the history of the Middle East. In addition, K. attended ↗Turaiev's lectures on the Christian Orient and Gəᶜəz classes. In December 1905 K. graduated from the University with a first-class diploma and a gold medal for his thesis *The Reign of the Caliph al-Mahdī according to Arabic Sources* and was left at the Chair of Arabic philology "for training for Professorship".

In 1908, after the sudden death of the famous Russian Arabist Baron Victor Rosen, K.'s tutor and the Faculty dean, K. was sent on a two-year scholarly mission to Syria and Egypt. In Beirut he attended the lectures of Louis Sheikho, Henry Lammens, Carlo ↗Nallino and other prominent Orientalists at the Faculté orientale of the Université de St. Joseph. On his return in July 1910 K. was recruited by St. Petersburg University as a "Privat-Dozent" (Assistant Professor without salary). In May 1915 he defended his Master's dissertation on Abū l-Farağ al-Waᵓwāᵓ's poetry (equivalent to Ph.D.).

During the first years of his scholarly activities, K. took great interest in Christian Arabic and Ethiopian studies, the development of which he later followed closely. The hostility of the new regime towards religion forced K. to abandon the study of the Christian Orient and to concentrate on Arabic studies. He acquired fame as the author of the edition of Ibn al-Muᶜtazz's treatise on poetics, as well as a monograph on the Arabic geographic literature, a translation of the ↗Qurᵓān with commentary and numerous essays.

In 1918 K. was promoted to Professor. After the disbandment of the faculty of Oriental languages he offered courses in Arabic language and philology at Petrograd (later Leningrad) University, at the Institute of living Oriental languages and other educational institutions. When ↗World War II broke out, he stayed in the besieged city from 1941 to July 1942; for his efforts in the preservation of cultural heritage during the war he was awarded the Order of Lenin in 1944.

From 1944, when the faculty of Oriental languages reopened under the name of the Oriental faculty, till his death in 1951, K. was the head of the Arabic philology department. In 1947 ↗Amharic was introduced into the permanent curriculum of the Oriental faculty. In 1948–49 K. delivered at the faculty the course *Introduction to Ethiopian Philology*. Printed posthumously, this work (with ca. 950 bibliographic items) focuses on Ethiopian written culture and Ethiopian philology, but contains, in fact, a general evaluation of the state Ethiopian Studies had reached by 1940s. The last years of K. were darkened by the persecutions of classical Russian Orientalism organized by the Soviet authorities in the late 1940s and early 1950s.

K. was member of many scholarly institutions. In 1916 he was recruited by the Asiatic Museum (from 1930 – the Institute of Oriental studies) and from 1930 till his death was at the head of its Arab Cabinet. In 1921 K. became a member of the Russian Academy of Sciences, from 1922 till 1929 he was Academic Secretary (i.e. head) of the Department of history and philology. In addition, K. was honorary or corresponding member of many foreign academies and research societies, such as the Arab Academy of Sciences in Damascus (1923), the Polish Oriental Society (1928), the Deutsche Morgenländische Gesellschaft (1934), the Islamic Research Association in Bombay (1935), the Iranian Academy of Sciences (1944), the Royal Asiatic Society of Great Britain and Ireland (1946), the Polish Academy of Sciences (1946), the Flemish Academy of Sciences (1946), the Asia Institute in New York (1947).

Serguei Frantsouzoff

Krapf, Johann Ludwig

K. (b. 11 November 1810, Derendingen near Tübingen, d. 26 November 1881, Korntal, Württemberg) was a German Protestant missionary of the pietistic movement; a brilliant linguist and outstanding traveller in East Africa, famous for the first European description ("discovery") of the snow-peaked Mount Kenya as well as for his fundamental work on Swahili and Oromo languages. Together with Johann Rebmann, he initiated the search for the sources of the Nile from the Swahili Coast. Well researched are K.'s five journeys to Ethiopia (s. ArEvang; CrumMis) whose fruitful scientific results also had a deep impact on other 19th-cent. travellers (cp. the two biographies of K., Eber 2006; Gütl 2001).

The son of a farmer, K. received his initial education in Tübingen. There he showed, at a very early stage, his talent for learning languages (Latin, Greek, French, Italian). But young K. was also interested in geography and history – James ↗Bruce's narratives on Ethiopia were amongst his favourite literature. At the age of 15 he was attracted by missionary work and in 1825 K. applied for the Missionary School in Basle, which he entered two years later. Because of his mystic and theosophical attitude, he soon came in conflict with official opinions. In 1829 he therefore left the school, passed his final exams in Stuttgart and began to study theology in Tübingen until 1834. Employment as a trainee priest in Wolfenhausen and as a private teacher in Kirchheim near Nördlingen followed, and in 1836 he returned to the Mission in Basle. A short time later, while K. was learning Turkish and Modern Greek, he was instructed by the ↗Church Missionary Society (CMS) in London to start a mission in Ethiopia. Consequently, he read Hiob ↗Ludolf's *Historia Aethiopica* and began to learn Amharic.

On his first journey to Ethiopia in 1837, K. travelled via Cairo, where he studied Arabic. At the end of the same year, he set sail to ↗Massawa and proceeded via Ḥərgigo and Ḥalay to the highlands. In ↗ᶜAdwa he met the missionaries Carl Wilhelm ↗Isenberg and Carl Heinrich ↗Blumhardt. It was planned that K. was to work in ᶜAgamä and Ḥamasen, Blumhardt near Gondär, while Isenberg was to settle in ᶜAdwa. But the mission was not successful. Allegedly, French Catholics, mainly Antoine and Arnaud d'↗Abbadie, had instilled in the Ethiopian authorities and clergymen a distrust of them, and the missionaries had to leave the country after nearly two months. K. then tried to reach Šäwa via the coast, but failed because of serious illness and travelled back to Cairo.

The second journey to Ethiopia began in January 1839. K. and Isenberg again tried to reach Šäwa, via Tağūra. On 7 June, in Ǝslam Amba they met King ↗Śahlä Śəllase of Šäwa, who allowed them to start missionary work in Ankobär. K. settled down in the capital of Šäwa where he soon began to study the ↗Oromo language, in order to start his missionary work amongst the Oromo, while Isenberg went back to Cairo. At the same time K. translated the ↗New Testament into ↗Oromiffa (published in portions 1839-41), with an Oromo assistant, compiled geographic and ethnographic information and sent more than 80 Ethiopian manuscripts for linguistic studies back to Europe. He was also allowed to accompany Śahlä Śəllase on several military expeditions to Oromo regions. Together with the newly arrived French traveller ↗Rochet, he came close to the sources of the Awaš-River in the spring of 1840 and shortly afterwards visited the monastery of ↗Däbrä Libanos. Of scientific interest are also his notes on the "Doko", an allegedly "pygmy-like" people of the southern Omo (↗Dokko). In autumn 1840 K. met the explorer Charles Tilstone ↗Beke in Šäwa, and one year later he served as an interpreter for the official British expedition of Major William ↗Harris, in this position actively promoting the rise of British political influence in Ethiopia. K. went as far as thinking of a British protectorate, which would also promote missionary activities. Harris published much information which he had obtained from K., in his book *The Highlands of Ethiopia* (HarAeth). The same was done by Rochet, who used the missionary's geographic and linguistic knowledge for his own report.

Until springtime the following year, K. was able to proselytize in Ankobär, and on 10 March 1842 he left Šäwa to marry his fiancée Rosine Dietrich of Basle. He travelled to the Red Sea coast via ↗Tänta but was imprisoned near Gitara. His travel description is an important source on Wällo, that was not easily accessible in that time. The same year K. was given an honorary doctorate by the University of Tübingen for his geographical collections and his linguistic studies.

Accompanied by his wife and the missionaries Johannes Mühleisen and Carl Wilhelm Isenberg, K. set out for his third journey to Ethiopia at the end of 1842. The group first sailed to Aden and then tried to reach Šäwa through the ᶜAfar desert, in the first place via Taǧūra, later via Zaylaᶜ in Somalia. But both roads were blocked because of opposition against Protestants by the Ethiopian clergy and the royal court, who feared the political implications of their presence and a split within the Ethiopian Church. The Protestant-educated *abunä* ↗Sälama seems to have played a decisive role here.

In 1843 Mühleisen and Isenberg decided to go to Gondär instead, while K. planned to travel to the Swahili Coast where he intended to proceed to the Oromo region. A last attempt to enter Təgray from Saho ("Schoho") was undertaken in May 1843, but on the way, K.'s wife had a miscarriage and, in addition, *däǧǧazmač* ↗Wəbe Ḫaylä Maryam refused to let the mission enter Təgrayan territory.

While Isenberg and Mühleisen went back to Cairo, K. and his wife set sail from Aden to the Swahili Coast in November 1843. The Arabian dhow was shipwrecked in the north east monsoon. However, a second attempt was successful: via Soqoṭra, K. reached ↗Zanzibar on 7 January 1844, where he received permission from Sultan Sayyid Saᶜīd to establish a mission station on the Swahili Coast. In May 1844 the couple arrived in Mombassa and settled down; his wife died the same year. Together with Johann Rebmann, K. later proceeded to the mountain area near Mombassa where they established the first mission station in Rabai. In 1851, after his return, the famous first Kiswahili grammar and dictionary were published in Tübingen together with a translation of a portion of the Gospel in Kikamba. K.'s presence in eastern Africa was accompanied by hopes from missionary circles, that the Oromo could be reached from here. These were considered one of the most important peoples of Africa, and could, it was believed, become the "evangelizers" of all Africa, spreading Christianity everywhere after their expected conversion.

Portrait of Johann Ludwig Krapf; courtesy of Mission21, Basle (no. QS–30_006_0132_01)

With the help of bishop Samuel ↗Gobat of Jerusalem, the missionary Martin ↗Flad of the ↗St. Chrischona Pilgermission was sent to Ethiopia in 1855, accompanied by K., on his fourth journey to Ethiopia. Both initiated the Protestant mission under *aṣe* Tewodros II. K. returned to Württemberg in September 1855, where he took residence in the "Evangelische Brüdergemeinde" in Korntal near Stuttgart. He married for the second time on 10 May 1856. Two years later his well known *Travels in East Africa* were published in Korntal.

The last journey to the Swahili Coast took place in 1861–62. On his fifth journey to Ethiopia K. joined General Robert ↗Napier on behalf of the British intervention army in 1867/68, acting as an interpreter (together with Captain ↗Speedy), thus helping in the overthrow of Tewodros II, who had become an enemy of the Protestant mission. K.'s weak health forced him to return before the final release of Tewodros's European captives. In the same year his second wife died, and in October 1869 he married again. During his last years he worked for the diverse Protestant missions as a fund raiser, advisor and

continued to work on Amharic and Oromo bible translations. He planned to travel again to East Africa at the beginning of 1876, which, in the event, was unable to do.

K.'s role in the establishment and the pursuit of a Protestant mission in Christian Ethiopia and further south in the Oromo regions cannot be underestimated. He was the first and most ardent propagator of a Protestant Oromo mission, which he believed to be a fundamental Christian duty, given the importance of this population, both in their numbers and in their presumed openness towards conversion (cp. ↗Fathme, Pauline). K. was among the first to create Oromo texts (↗Oromo literature), together with diverse Oromo assistants starting from 1839. Of these the most important was ↗Ruufoo, a young Oromo slave he had ordered to be purchased in the Sudan and be sent to Germany to create an Oromo bible together with him (↗Bible translations, modern: Oromo). K.'s role in missionary history is subject to dispute, and it was already in his time. K. was ready to link himself with political power, whenever he believed that this could help in the establishment of a world-wide "Christocracy", even if this meant supporting foreign armies intervening in Ethiopia (s. Smidt 2005). In doing this he met opposition also in missionary circles, but his importance as a well-informed advisor in Ethiopian affairs guaranteed him a central position in any projected and implemented missionary activity in the region.

Krencker, Daniel

K. (b. 15 July 1874 in Andolsheim, Haute Alsace, d. 14 November 1941 in Berlin) was a prominent German architect and archaeologist who was also an excellent draughtsman.

Trained in Berlin as an architect, he acquired his first field experience during the excavations at Baalbek, Lebanon, between 1900 and 1903 under the direction of Otto Puchstein. During these years he also studied several Roman sites in Syria, among others at Palmyra, and became an expert on Roman architecture.

Because of his excavation experiences K. became the Technical Director of the ↗Deutsche Aksum Expedition led by Enno ↗Littmann, which was likewise funded by Wilhelm II. The success of this expedition resulted not the least from his skills. Together with Littmann he wrote the preliminary report (1906), and contributed to the main publication as the editor of DAE II.

In 1907 K. participated in the German excavations in Boghazköy (Hattusa, 150 km east of Ankara). Between 1907 and 1911 he worked in Berlin, Düsseldorf, and Quedlinburg. Early in 1912 K. was appointed chief architect at Trier, where he worked for many years excavating late Roman ruins. He received honorary degrees from Bonn in 1919 (Dr. phil. h.c.) and from Aachen in 1921 (Dr.-Ing. h.c.).

From 1922 until his retirement 1939 he was professor of architectural history at the Technische Universität Berlin and again carried out many study trips to the Near East. He published many of the excavation results in the form of preliminary reports or final editions from Baalbek, ↗Aksum, Palmyra, Ankara, Aizanoi, Trier, either alone or together with others.

He continued to be interested in Ethiopian architectural history; Dabbert's study on the Lalibela churches strongly relies on discussions with K. (Dabbert 1938:5). Several of the unpublished photographs of the DAE were published by him in 1935 (Krencker 1935:679ff.).

Krəstənna: Mäṣḥafä krəstənna

The M.k. (መጽሐፈ፡ ክርስትና, lit. 'the Book of Christening') is the service book for the administration of the Sacraments of Christian Initiation (↗Baptism) used by the ↗Ethiopian Orthodox (Täwaḥədo) Church (today also by the Eritrean Orthodox Church and, in principle, the Catholic Church in Ethiopia and Eritrea). In manuscripts and editions, the M.k. is sometimes grouped with the much more recent ritual of the Blessing of the Waters for the Feast of the Epiphany (↗*Ṭəmqät*) known as the *Mäṣḥafä* ↗*ṭəmqät*. The M.k. proper is sometimes also referred to as *Mäṣḥafä ṭəmqät* (e.g., mss. EMML 432; 620; 3107) or *Mäṣḥafä ṭəmqät zäkrəstənna* (e.g., ms. EMML 3264).

The M.k. exhibits a basic dependence upon the baptismal book of the Coptic church. Prayers are not identical, some biblical readings not being fully equivalent (Chaîne 1913:38f.), but the structure is the same. The M.k. includes the preparatory rites and the threefold service of baptism, chrism (as a distinct sacrament) and ↗Eucharist, which is immediately administered, irrespective of the age of the neophytes (s. the synopsis of the service under Baptism).

The oldest M.k. witness of the present rite seems to be ms. Vat. Aeth. 4 (fols. 122–47v), attributed to the 14th cent. (GreTisVat I, 13–20; UhPal 241; but cp. LöfUpp 53). It provided the *Vorlage* for ↗Täsfa Ṣəyon's Latin translation of the ritual (*Modus baptizandi* ...), published in Rome in 1549 as an appendix to the second part of his ↗New Testament edition. It was the first Ethiopian ritual ever printed, preceded only by the Anaphora of the Apostles (↗Anaphoras), from Vat. Aeth. 16, in 1548. Other important witnesses are the 17th-cent. ms. Vat. Aeth. 188 (GréTisVat vol. 1, 652–55), and the 16th-cent. ms. Paris, BN 78, fols. 52vff. (ZotBNat 85: "this rite of baptism agrees almost entirely with that of the Church of Alexandria published by [Joseph Aloysius] Assemani, *Codex liturgicus ecclesiae universae* ..."). Interestingly, the first part of this ms. is paginated with Coptic numbers. The EMML collection lists nearly 70 copies of the M.k. on both parchment and paper, the oldest ones (ten) dating back to the 18th cent. Bilingual (Gəᶜəz–Amharic and Gəᶜəz–Təgrəññа) printed books have now replaced, with appreciable textual differences, the manuscripts almost everywhere in Ethiopia and Eritrea. No comprehensive critical edition has been undertaken so far (though Grébaut in his 1927–28 edition included the textual variants of Chaîne 1913).

Abunä ↗Sälama "the Translator" has been suggested, on the basis of the ms. evidence, as the possible translator of the Coptic rite of Christian Initiation into Ethiopic in the late 14th cent. Having a handbook to administer the Sacraments of Initiation, however, must have been a chief priority of the Ethiopian church from the onset. In terms of the history of dogma, the year 381 could be a *terminus ante quem*, albeit highly hypothetical, for the translation (from Greek) of the prayer for the Blessing of the Water "Domine, o Domine pater bone ..." (s. Scheidt 1935:52f., 55), and an even earlier dating being suggested for the "Benedictus sit Deus excelsus" (BrakKirche 161f., esp. n. 808). Documents representing earlier practice exist: e.g., the *Trois antiques rituels du Baptême* and the Ethiopic version of the ↗*Traditio Apostolica* (s. Duensing 1946:40–43, 52–67; Salles 1959; Brakmann 2003:534ff., 558), or the Ethiopic ↗*Testamentum Domini* (chs. 47–51). Yet, the extent to which the available texts actually bear witness to the earlier Ethiopian practice is unknown. It is likely that what was common in ↗Egypt extended somehow to Ethiopia (in spite of the alleged ↗Syrian influences): Ethiopian references point in particular to Middle or Upper Egypt, as in the cases of the *Mäṣḥafä* ↗*qəddase* or the ↗*Gəbrä ḥəmamat*. Assessing the extent to which the available canonico-liturgical literature reflects actual practice is a delicate matter, such collections being

an amalgam of different strata of additions with no certain continuity (Metzger 1998:610, Faivre 1980:214, 297; Bradshaw et al. 2002:13f., 108). Untangling the rich baptismal liturgy embedded in the Ethiopic *Apostolic Tradition* has hitherto proved impossible (Brackmann 1998:341f.).

Several ancient ritual elements can nevertheless be seen in today's rite. One example is the remains of the ancient Catechumenate of adults, when the Lenten season was the ultimate preparation to Baptism and included at its beginning the selection of catechumens found ready for Baptism (scrutiny, giving of ↗names), genuflexion prayers, exorcisms and profession of faith before the immersion. The fact that these elements used to be spread over several occasions is still witnessed by the repetition of certain initial prayers and dialogues. Another example is the ritual's prescription that the neophytes be given ↗milk and ↗honey after Communion (s. EOC 1973:93, no. 24; Salles 1959:62; Talvacchia [1922]:288, Bradshaw et al. 2002:120, 134f.). One also finds ritual adaptations of unchanged texts: the tying of the neck-cord (↗*matäb*) is the object of prayers hardly said and actually concerned with a crown. Finally, there is archaeological evidence for the palaeochristian character of such baptisteries as those at ↗Yəḥa, ↗Dəgum, or ↗Mäṭära (e.g., Anfray in PICES 4, 757; Lepage – Mercier 2005:51f.).

In the practice of today, the ministers regularly omit several parts of the lengthy ritual. The water is always blessed only by singing the doxology *Aḥadu ab qəddus* ('One is the Holy Father ...'), even though the anaphora-like prayer for the Consecration of the Jordan is faithfully reproduced in the M.k. (the same practice applies to any blessing of water). The sacramental water is likened, despite the absence of this theme in the Jordan Prayer, to the water and the blood that came out of Jesus on the cross (Jn 19:34) – water being for Baptism, blood for Communion (s. the unfinished 20th-cent. *Treatise on Baptism* in Amharic, EMML 1204, fols. 33rv). Since Chrism is poured into the Baptism water, as the blood and flesh of Christ are united in the Eucharistic rite of *Dəmmare* (lit. 'Joining together, uniting', i.e. the commixtion), it is often assumed that the baptized person receives the Chrismation automatically – it is exceptionally administered at Baptisms on the occasion of ↗pilgrimages or *Ṭəmqät* celebrations. Although necessary to allow the water to return to its natural condition, the prayer for the Absolution of the water is not always reproduced; in the EOC edition its title (*Sälotä fəṭḥatä may*) alone is given. The short service of the Purification of the mother (which precedes Baptism and is often performed apart from Baptism itself, either at home or in the church compound) is printed only in the ritual of Rome.

In the EOC edition of the M.k. (1973 A.M. etc.), the text is divided into two large parts. The first includes Preparation, Catechumenate and Service of Baptism, the second, introduced by the only title used in the book, "Chapter Two", and employing a separate paragraph numbering, includes the Service of the Chrism followed by the Eucharist reception and post-baptismal rites. The 2002 EOC edition of the M.k. includes an English translation. Recently, the EOC has issued the M.k. and the rites of ↗Matrimony, Penance for the Apostates (*Mäṣḥafä ↗qedər*) and ↗Unction in one single volume forming an actual "ritual" in the western sense.

Krəstodolu I

Abunä K. (**ክርስቶዶሉ**, fl. late 16th cent.) was metropolitan of the ↗Ethiopian Orthodox Church from before 1588 until after 1594. He is to be placed between *abunä* ↗Marqos II and *abunä* ↗Peṭros III (s. nos. 93, 94 in Guidi 1899: 11, n. 1). The *Mäṣḥafä* ↗*Aksum* contains the texts of two acts in which fiefs are awarded by *aṣe* ↗Särṣa Dəngəl: in the first, K. is mentioned in connection with Thomas, ↗*nəburä əd* of Aksum, who held this function around 1588 (CRAxum 56, no. 59); in the second, his name is paired with that of ↗Admas Mogäsa (ibid. 55).

K.'s name, absent in Guidi's list (1899–1900) and the royal chronicles, also occurs in the manifesto issued by *aṣe* ↗Susənyos in 1624 (s. Almeida in BecRASO VI, 399; VIII, 116; Ludolf 1691:510). Here Susənyos accused him of having kept several concubines, a fact described as being well known during K.'s days and put forward as one of the reasons for his joining the Roman Catholic Church. The manifesto formulates the same accusation against *abunä* ↗Peṭros III (d. 1607), and identical charges were also brought forward against *abunä* ↗Marqos under *aṣe* ↗Fasilädäs (s. van Donzel 1983:419–29).

Krəstodolu II

Abunä K.II (**ክርስቶዶሉ**, r. 1664–71, d. 1675/76) is considered the 99th metropolitan of the ↗Ethiopian Orthodox Church (Guidi 1899–1900:12). He arrived in Ethiopia during the tenure of the Alexandrian patriarch Matthew IV (1660–75) in the 32nd year of reign of *aṣe* ↗Fasilädäs (BassÉt 291; BegCron 38f.; DombrChr 204). As a metropolitan, K. participated in three synods convened while he was in authority. One took place in 1666/67, the 35th year of Fasilädäs's reign, another during the reign of *aṣe* ↗Yoḥannəs I, when in April–May 1669 it was decided to expell the last remnants of the Roman Catholic Portuguese (↗Portugal) to ↗Sinnār. At the one convened in April 1670 the disputes between the ↗*qəbat* and the ↗*täwaḥədo* factions were re-examined, since the schism has become even deeper since the synod of 1664 when the Unionists gained the upper hand.

Soon after the third synod, *aṣe* Yoḥannəs, who favoured *qəbat*, imprisoned K. in an attempt to have him replaced (BassÉt I, 292; Perruchon 1899:173; DombrChr 207). Oral traditions preserved in Goğğam report that K. was put in jail

in Sarka – where a prison had been built during the ↗Jesuit period, and already used to detain *abunä* Yoḥannəs in 1649 (BassÉt 288; BegCron 51; Perruchon 1898:88) as well as later many other religious opponents throughout the 18th cent. The Chronicle of *aṣe* Yoḥannəs, however, presents a more cautious account of the change of patriarchs. It mentions a letter of 15 October 1671 from patriarch Matthew which announced the consecration of a new metropolitan, ↗Sinoda, who arrived in Gondär two days later. However, in the same letter the patriarch confirmed K. II in the dignity of metropolitan (GuiIohan 13) thus suggesting that K. may have been (partially) rehabilitated. Oral tradition claims that K. remained at Sarka until his death (in 1675/76 according to a version of the "short chronicles, s. Kropp 1990:107) and was buried in ↗Gonǧ Tewodros.

Krəstodolu III

Abunä K. (ክርስቶዶሉ, d. 13 August 1735) was considered the 102nd Metropolitan of the Ethiopian Church. He arrived in Ethiopia during the reign of *aṣe* ↗Dawit III in 1720, replacing *abunä* ↗Marqos who had died on 5 July 1716. Upon K.'s arrival in the capital city of ↗Gondär, on 14 November 1720, the two conflicting theological parties of Unctionists and Unionists (↗*qəbat* and ↗*täwaḥədo* respectively) immediately appealed to him for help in resolving their differences. K., being unaware of the problem at that time, gave the most cautious answer and said that his faith was the same as that of *abunä* ↗Sinoda and *abunä* Marqos, his predecessors (but cp. DombrChr 268). *Ras bitwäddäd* Giyorgis made a proclamation on 8 April 1721 in the name of K. in favour of *Qəbat*, the faction supported by royal power. The opponents – the monks of "the house of Täklä Haymanot" led by *abba* ↗Zäwäldä Maryam from ↗Magʷina, *əčč̣äge* ↗Täklä Haymanot, *abba* ↗Niqolawos etc. – rushed to K. for an explanation, and he said: "The faith is: by union He stays the Only Son and by unction He became Christ (*bä-täwaḥədo wäld waḥd, wä-bä-qəbaʾt konä mäsiḥa*)" (BassÉt II, 387f.; DombrChr 268; BégCron 102). The supporters of *Täwaḥədo* considered these words as a verdict in their favour and on 19 April 1721 held a triumphant procession singing songs and praising their victory "over (the) infidels". There were even celebrations at the residence of the *əčč̣äge* in Gondär. Such rejoicing infuriated Dawit, and at his command his Oromo ↗Ǧawe guards pillaged the residence of the *əčč̣äge* and massacred many monks. Dawit then ordered K. to the top of the tower called the *ʿawaǧ mängärya* to proclaim the *Qəbat* doctrine: "By unction [He is] in his essence Son [of God] (*bäqəbʾat wäldä baḥrəy*)" (BassÉt II, 389; DombrChr 269; BégCron 103). This was considered a triumph for the *Qəbat* party, for which K. later (in January 1726) had to vindicate himself before the monks of ↗Waldəbba (GuiIohan 330f.).

This particular case is characteristic of the types of situation in which K. found himself throughout his sojourn in Ethiopia. He was in tenure during the last part of the reign of Dawit III and throughout the reign of *aṣe* ↗Bäkaffa, to whom a document mentioning K. should be most probably referred: Manchester, John Rylands University Library, Eth. Ms. 28, fol. 1 (Fiaccadori in MiscAethKur, 63ff. and n. 10). K. remained a prominent figure both at the court and in the Church, enjoying all outward signs of respect due to his title. Politically, however, he remained impotent and was used rather freely by the ruling powers for their own ends. The Long Chronicle of *aṣe* ↗Iyasu II states that in January 1733, when a rebellious warlord, ↗Tänśe Mammo, besieged the palace complex in Gondär to dethrone Iyasu II and his mother, *ətege* Məntəwwab (↗Bərhan Mogäsa), he captured K. and the *əčč̣äge* Täklä Haymanot and ordered them to excommunicate the Emperor, his mother and all their warriors: they complied. Tänśe Mammo was later defeated, captured and hanged. The *əčč̣äge* and K. were then put on trial but pardoned (GuiIyas 80). The Short Chronicles, on the contrary, picture the metropolitan trying, together with others religious prelates, to bring peace or even fighting against the rebels (Kropp 1982:166f., 184).

In April 1733 *abuna* K. blessed the *tabot* of ↗Däbrä Śaḥay Qʷəsqʷam church, to be placed in a temporary church. The construction of Qʷəsqʷam's buildings then began (GuiIyas 96f).

The Chronicle states that K. died on 9 *Nähasé* 7227 [13 August 1735 A.D.] and was buried at Däbrä Śaḥay Qʷəsqʷam (GuiIyas 88). He was succeeded by ↗Yoḥannəs III in November 1744.

Sevir Chernetsov

Krəstos Bezanä

K.B. (ክርስቶስ፡ ቤዛነ) was a 14th-cent. saint from ↗Däbrä Täʾamina in Tämben (Təgray). A manuscript of his unpublished ↗*Gädl* is reportedly kept in that monastery (KinBibl no. 87).

Abba Krəstos Bezanä; wall-painting, 20th cent., the church of St. Mary, Däbrä Täʾamina, Qʷälla Tämben; photo 2002, courtesy of Michael Gervers

K.B. was a disciple of ↗Mädḫaninä Ǝgziʾ and a contemporary of ↗Tadewos of Däbrä Bartarwa, in whose Acts K.B. is mentioned as visiting him immediately after the latter was martyred, when robbers set fire to the church of his monastery where he was sheltering with two disciples. K.B. went to Däbrä Bartarwa together with other monks of Däbrä Täʾamina when they were informed of those events by a certain Gäbrä Waḥəd. The Acts describe how Tadewos rose from the dead to respond to K.B.'s lamentations, and blessed him seven times before resting again. K.B. then wrapped Tadewos's corpse and took it with him back to Däbrä Täʾamina (§ 59f., ed. De Santis 1942:40f.).

Osvaldo Raineri

Krəstos Śämra

K.Ś. (ክርስቶስ፡ ሥምራ; fl. 14th/15th cent.) is an Ethiopian female ↗saint. According to her Acts, the main source on her life (Cerulli 1956), she was a native of Šäwa; her parents were the pious Ǝleni and the wealthy Därgʷäni. They married K.Ś. to Śämrä Giyorgis, a son of *qes aṣe* Iyäsus Moʾa (cp. ↗*näfs abbat*), from the "clan of ᶜƎṣa Särgʷa": K.Ś. bore him eight sons and two daughters. Her future spiritual profession was symbolically foretold when one day the Archangel Michael appeared to her offering three loaves of "heavenly bread"; after eating them she no longer had need for food (Cerulli 1956:11).

Once K.Ś. became so upset at a mischievious maid that she pushed burning coals down the maid's throat, killing her. Repenting, K.Ś. vowed to God to leave the worldly life if he would resurrect the maid. The latter rose from the dead, and K.Ś. went to ↗Däbrä Libanos of Šäwa. Since no male was allowed into the nunnery, she left her child on the road (by chance, he was saved by a nun who took him into her hut, against monastic regulations).

The Acts do not tell explicitly how and why K.Ś. moved to the region of Lake ↗Ṭana. She spent 12 years praying in the water of the lake; she stayed

Krəstos Śämra saving souls from hell; wall-painting by Wägaḥta Kaśahun, 20th cent., church of Gäbrə'el Qänäf near Aksum; photo 2002, courtesy of Michael Gervers

at Narga (↗Narga Śəllase), ↗Ṭana Qirqos and other places, in solitary ascetic life. There she had numerous visions and saw "mysteries", conversing with Christ, St. Mary, angels and saints (cp. Raineri in EncSan vol. 1, 293). She settled on the isle of Gʷangut, where "the daughters of kings and officials" would soon come to "prostrate themselves beforethe soles of her feet", according to a prophecy she had received from the biblical patriarchs (Cerulli 1956:42f., 48). Yəsḥaq, a monk who came to K.Ś., built a church devoted to St. Michael (ibid. 49–52) and was in charge of introducing female novices into the monastic profession and celebrating the mass, whereas K.Ś. was the head of the new community. Later, K.Ś. withdrew for her last ascetic deed: three years of standing in a pit, surrounded by 12 iron "thorns" (similar to the last ascetic deed of *abunä* ↗Täklä Haymanot), and three years of standing in Lake Ṭana. Thereafter, she received the ↗*kidan*. She died on 24 *Näḥase* and was buried on Gʷangut by Yəsḥaq.

The Acts of K.Ś. are a remarkable work of Ethiopian ↗hagiography. The text lacks the proper narrative structure but represents a rare example of a ↗*gädl* composed mostly of descriptions of the saint's visionary experiences and revelations, told in the first person. The Acts contain a number of interesting accounts, e.g., a story about the "wings" of K.Ś.; how K.Ś. asked God to forgive Satan; a story of Yəsḥaq's life; a story about the "pest army"; a reference to the early usage of devotional images (Heldman 1994:170f.), etc. Particularly striking is the image of K.Ś. as a "repenting sinner", a rare (though not unique) case in Ethiopian tradition.

The Acts of K.Ś. were edited from two recent witnesses (Cerulli 1956:1ff.); the existence of a few others manuscripts has been reported. A text contained in ms. Oxford, Aeth. e. 4 (fols. 83r–90v, preceded by the Acts of K.Ś.) presents the life of K.Ś. briefly, but in a coherent, narrative way, with fewer "revelations" and miraculous accounts (s. Cerulli 1956:71–77). Being similar to the genre of the commemorative notice proper to the ↗*Sənkəssar* (where K.Ś. is not mentioned), this text is clearer on such points as, e.g., K.Ś.'s stay at Däbrä Libanos and her move to Gʷangut (ibid. 75); in fact, it might have been the basis of the lengthy Acts of K.Ś. (Cerulli 1956:1-61).

All colophons of the Acts (ibid. 60, 69f., 76) mention a certain Filəppos, a "son of Täklä Haymanot" as the author, who would have been inspired by K.Ś. herself; in one of them she is said to have informed him about her life during the time of "Dawit II" (ibid. 60), which may be a reference to *aṣe* ↗Dawit II or to ↗Bä'ədä Maryam I, also called Dawit II in certain traditions (Fiaccadori 1994:94f., n. 37); the identification with *aṣe* ↗Ləbnä Dəngəl (Cerulli 1956:1) is less likely. At the same time, the colophon in ms. Aeth. c. 4 says that K.Ś. died in the time of Gäbrä Mäsqäl (maybe *aṣe* ↗ʿAmdä Ṣəyon I or ↗Yəsḥaq; ibid. 69).

The presence of an old nunnery at Gʷangut is attested in the Acts of ↗Yafqərännä Ǝgzi', but it seems that the place was of limited importance. Surprisingly, the isle of which the Acts of K.Ś. explicitly speaks is not known today (cp. Cerulli 1956:v and n. 13; Ullendorff 2958:180). A small ↗*gädam* called K.Ś. is located on the shore of the lake, opposite to the island of Č̣əqla Mänzo. Despite the local tradition, which traces the foundation of the monastery directly to K.Ś. (Bosc-Tiessé 2000:222f.), it can be linked to *aṣe* ↗Iyasu I who built a stone mansion at Č̣əqla Mänzo (An-

nequin 1975:91f.), and possibly (re)established or transferred K.Ś.'s foundation from the island. In any case, the small monastic library of K.Ś. possesses a few old manuscripts (e.g., a precious early 15th-cent. Pentateuch, ibid.; Fiaccadori 1994:83 [EMML 8517, Bosc-Tiessé 2000:223f.]), at least one of which certainly comes from Gʷangut (15th-cent. Gospel book, EMML 8752, Bosc-Tiessé 2000:224).

The revival and extension of K.Ś.'s veneration (up to ↗Däbrä Ḥayq Ǝsṭifanos, Təgray etc.) may have taken place during the late 19th/20th cent. She has been praised as one of the few Ethiopian female saints, although the modern interpretation of her life tends to level the dramatic points in her Acts (AmhChurchD vol. 5, 47f.; ms. EMML 5350, fols. 64ff.).

Kuᶜbar

K. (كعبر [also vocalized as Kaᶜbar], or Kaᶜban, Kufar etc.) appears as the name of the Ethiopian ruler's residence in the works of several medieval Arab authors. It is first mentioned by the 10th-cent. historian and geographer al-↗Yaᶜqūbī, who located it "near the harbour" of ↗Dahlak. Also al-↗Masᶜūdī refers to K. in his *Murūǧ aḏ-ḏahab* (vol. 3, 34, ll.3f.; ed. Pellat, vol. 2, 127, ll.14f. = § 877, French tr. Pellat, vol. 2, 331), yet without indicating that he drew on al-Yaᶜqūbī; he describes K. as a "huge city" and "residence of the ↗Nağāšī" (*madīna ᶜaẓīma wa-hiya dār mamlakat an-Nağāšī*). In a similar context, in his *Aḫbār az-zamān*, the same al-Masᶜūdī calls the Ethiopian capital Kafar or Kufar. In Arabic works of the 13th–14th cent. K. is mentioned quite often, e.g., by ↗Ibn Ḫaldūn in his *ᶜIbar* (*Taʾrīḫ al-ᶜallāma ...*, vol. 6, 411, l.2 [with reference to ↗Ibn Saᶜīd al-Maġribī] = Cuoq 1975:340).

Because of variations in the form of the name and the lack of localizing data, hypotheses about both the name itself and its geographical situation vary to a considerable extent. An early proposal of conti Rossini (1895:341, n. 2) to identify K. with the modern ↗Ankobär has to be discarded on factual, chronological and linguistic grounds, just as Littmann's suggestion (1915:264) to match K. with ↗Gondär. Later, conti Rossini preferred the idea (1906:51; CRList 263f.) that K. might be a corrupted spelling of ↗Aksum, where the ↗coronations took place. This explanation seems more plausible, and has been subsequently favoured by Guidi, Trimingham, Beckingham, Wagner and Kropp. Taddesse Tamrat and Baum, on the other hand, opted for locating K. in southern ↗Təgray or in ↗Angot. Lastly, connecting K. with Gəᶜəz *kəbur* ('glorious', DillmLex 846), Godet (in PICES 9, vol. 6, 56) concluded that K. was an epithet of the king's residence.

Kučo ↗Kullo

Kufale: Mäṣḥafä Kufale ↗Jubilees, book of

Kufit, battle of

On 23 September 1885 a decisive battle between a Mahdīya force (↗Mahdists) and an Ethiopian army took place at K., half way between Asmära and ↗Kassala (for location s. Kunama). The commander (*amīr*) of the Mahdīya in north-eastern Sudan, ↗ᶜUṯmān b. Abī Bakr Diqna, had laid siege to the Egyptian garrison of Kassala, which the Ethiopians under the 1884 ↗Hewett Treaty were committed to rescue (cp. ↗Egyptian–Ethiopian war, 1875–84). The Mahdists also spread their influence among various Eritrean tribes in the Sudanese–Eritrean lowlands as ᶜUṯmān Diqna aimed at controlling the route down to the Red Sea and ↗Massawa.

Ras ↗Alula Ǝngəda, who in late 1884 began building his administration in the ↗Märäb Məllaš around his new capital of Asmära, was expected by *aṣe* ↗Yoḥannəs IV to march on Kassala. However, in February 1885 the Italians, to the Ethiopians' surprise, landed in Massawa and were preparing to encroach inland. While Alula was wavering where to turn, the British did their best to divert him away from the Italians into fighting the Mahdists and relieving the Egyptians. Though in August the garrison in Kassala surrendered, *ras* Alula Ǝngəda was not informed. Meanwhile he was already exchanging provocative messages with the Mahdists and ᶜUṯmān Diqna. The latter was ordered by the Mahdist *ḫalīfa* ᶜAbdullahi at-Taᶜāᵓišī to "leave the Ethiopians" and turn elsewhere, but the written message arrived too late. On 23 September ᶜUṯmān Diqna's force (reports ran between 6,000 to 12,000) took up position at K. and was attacked by *ras* Alula's army of 10,000 to 25,000. Alula's lieutenant *blatta* Gäbru was killed in the first assault. When Alula arrived, he outflanked the Mahdists and forced them to leave their fortifications and storm his main force. The day ended with some 1,500 Ethiopians dead, including most of Alula's commanders. The Mahdists were slaughtered, estimates ran between 3,000 to 5,500 killed. ᶜUṯmān Diqna himself escaped but Alula, his men exhausted, did not advance on Kassala. Instead he decided to ensure only the loyalty of the tribes of western Eritrea and returned triumphantly to Asmära. He would return to that area a year later, resorting to atrocities against the ↗Nara and the ↗Kunama in order to maintain this buffer zone.

The battle of K. was an Ethiopian success in stemming the Mahdist drive into Eritrea. Its drawback was, however, that *ras* Alula's attention was diverted to the west, allowing the Italians to solidify their hold in and from Massawa. The Mahdist defeat in K. was also a major cause for the *ḫalīfa*'s decision of late 1885 (or early 1886) to declare a holy war (↗*ǧihād*) against Ethiopia, a step that would eventually lead to Yoḥannəs's demise and to Ethiopia's loss of ↗Eritrea to the Italians.

Kugler, Christian

K. (b. 6 October 1801, Schopfloch, Württemberg, d. 29 December 1830, ᶜAdwa) was an ordained Protestant missionary. He was trained in the mission seminary of Basle and later in England and Malta in Bible work, oriental languages and medicine. After Peter ↗Heyling he became

one of the first pioneers of Protestant Bible work in Ethiopia. With his friend Samuel ↗Gobat, K. was sent to Ethiopia by the ↗Church Missionary Society. Both actively practised great respect towards other Churches and religions, which opened them many doors.

In the beginning, in 1826, K. and Gobat rescued Ethiopian envoys stranded in Cairo and also nursed the sick. They helped the envoys to succeed in their diplomatic mission to ↗Muḥammad ᶜAlī *bāšā*. At this time it had been virtually impossible for Europeans to reach Ethiopia, but *däğğazmač* ↗Säbagadis Wäldu, ruler of the northern part of the country, encouraged by Muḥammad ᶜAlī, invited both to come in 1829.

Already in Egypt and Jerusalem, K. and Gobat had an excellent relationship with Ethiopians whom they considered as exemplary Christians. The Gospels they distributed – newly translated into Amharic (cp. ↗Bible translations, modern) – proved to be an essential tool for the progress of their mission. For his hosts K. started a Bible translation in Təgrəñña, which was not finalized, however. K.'s life ended tragically after a hunting accident. He had taken with him his fellow-countryman, the carpenter Aichinger. This craftsman made the mission popular through his skill in house building, especially in ᶜAddigrat, where he constructed the Ṣärqos church for Säbagadis.

K.'s and Gobat's mission opened the way for the distribution of many later editions of the Amharic Bible and especially, starting from the 1850s, for some of the missionaries from the ↗St. Chrischona-Pilgermission (cp. ↗Wäldä Śəllase Kənfu).

Wilfred Heintze-Flad

Kuhi

K. (Kuki) is an archaeological site area located approximately 5 km south of ↗Aksum in Təgray. ↗Aksumite-culture-period artefacts including pottery, architectural remains, and stelae have been documented in the K. area. Results from regional archaeological survey directed by Michels in 1974 suggest that the K. area may have contained a large town settlement (over 11 ha in size) during the Aksumite culture period.

MICHELS, "Regional Political Organization in the Axum-Yeha Area during the Pre-Axumite and Axumite Eras", in: *PICES* 10, vol. 1, 61–80, here 78.

Matthew Curtis

Kullo

K. (self-name: Dawro) is a member of the North ↗Ometo branch of the ↗Omotic language family. It is spoken by the ↗Dawro people in southwest Ethiopia (number of speakers ca. 313,000 in 1994). Dialect variation, e.g., in ↗Kullo Konta and Waka areas, is reported but the exact differences are not well-documented (s. Dawro).

The consonant segments of K. are: plosives: *b*, *t*, *d*, *k*, *g*, *ʾ*; implosives: (*ɓ*), *ɗ*; fricatives: *f*, *s*, *z*, *š*, *ž*, *h*; ejectives: *ṣ*, *č̣*, *q*; affricates: *ʦ*, *č*, *ǧ*; nasals: *m*, *n*; approximants: *w*, *l*, *r*, *y*.

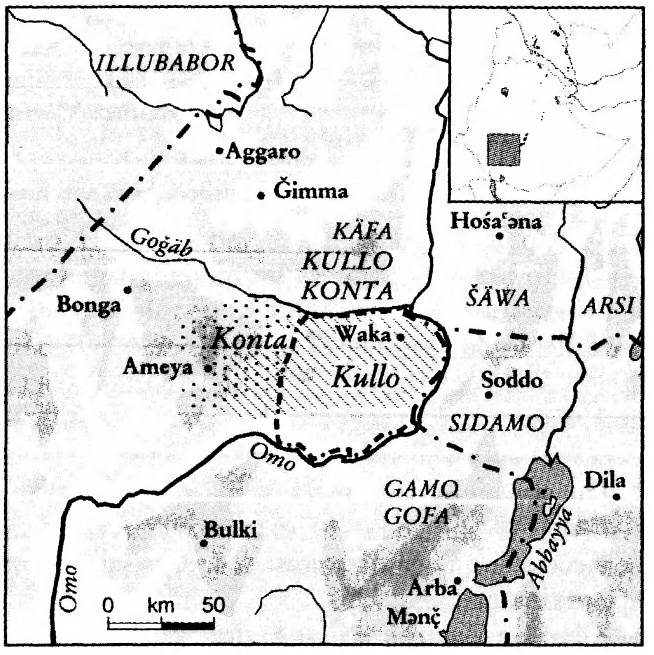
Allan (in BendNonSLang) doubts the phonemic status of *ɓ*. He also reports the velar implosive *g* and ejective affricate *ʦ̣* (instead of ejective fricative *ṣ*) but these are not attested in our data and in other unpublished manuscripts (e.g. M.A. theses and a study by Hirut Woldemariam).

Vowels are: *i*, *e*, *a*, *o*, *u*. Vowel length and gemination of consonants are contrastive. According to Allan (in BendNonSLang 328), pitch in K. is mostly predictable and non-contrastive, although he provides a few minimal pairs that are distinguished solely on the basis of pitch.

Nouns and adjectives end in one of the lexically determined terminal vowels: *i*, *e*, *o*, or *a*. These vowels are often deleted when a suffix is added. K. uses only suffixes for inflection and derivation.

Gender distinction in nouns is sex-based and is realized through portmanteau morphemes indicating case. Inanimate nouns have the same case and verbal subject-agreement marking as masculine singular nouns. Definiteness is overtly marked only on feminine nouns by *-tt-*; definite masculine is unmarked. The K. noun has nominative (Nom.), accusative (Acc.), dative (Dat.), directional (Dir.), ablative (Abl.), instrumental (Inst.), and (general) locative (Loc.) cases. The endings are: Nom: *-í/y* or *ú* for sg. masc. and pl., *-á* for sg. fem.; Acc. (marked only in definite nouns): *-á* for sg. masc. and pl., *-ó* for sg. fem.; Dat.: *-u/w*; Dir. *-kko*; Abl.: *-appe*; Inst./Loc.: *-n* (the last four cases being invariable for gender).

Number is distinguished by marking the plural with *-at*; singular is unmarked, e.g. 'guest' *ʾimattá* (sg.) vs. *ʾimatt-at-ó* (pl.); 'short' *qántsa* (sg.) vs. *qánʦ-at-o* (pl.).



Examples of the gender/case/number distinction: *na'á-y kaná déčč'eédda* 'The boy [Nom. masc.] hit a dog [Acc. indef.]'; *naa-tt-á kana-tt-ó déčč'aáddu* 'The girl [Nom. fem. def.] hit the dog [Acc. fem. def.]'; *kap-ú paalleédda* 'The bird [Nom. masc.] flew'; *kap-at-ú paalleédden* 'The birds [Nom. pl.] flew'; *bitán-í dorsá-a šammeédda* 'The man [Nom. masc.] bought the sheep [Acc. masc. def.]'. For locative cases cp.: *kana* 'dog' vs. *kana-w* 'for/to the dog'; *'álga* 'bed' vs. *'álga-kko* 'towards the bed'; *goll-íya* 'the house [Acc.]' vs. *goll-íya-áppe* 'from the house'; *goloodó* 'knife' vs. *goloodó-n* 'with a knife'; *'álga* 'bed' vs. *'alga-n* 'on/in bed'. Besides these, independent forms, e.g. *giddó* 'inside', *garsá* 'interior', *bollá* 'body/on/above' are used to express locational relations.

The personal pronouns are:

Pers.		Subject	Object	Dat.	Possessive
sg. 1st		*taání*	*taána*	*taás*	*ta*
2nd		*neéní*	*neéna*	*neéss*	*ne*
3rd	masc.	*'í*	*'á*	*'aáw*	*'aa*
3rd	fem.	*'ízá*	*'ízó*	*'iíw*	*'ii*
pl. 1st		*nuúní*	*nuúna*	*nuúss*	*nu*
2nd		*hintentú*	*hintentu*	*hintentass*	*hintentu*
3rd		*'untuntú*	*'untuntá*	*'untúss*	*'untuntu*

In nominalized possessive clauses, the gender and number of the possessed NP is distinguished as in *dorséy tawá* 'The sheep [masc.] is mine' – *dorsattá tawunnó* 'The sheep [fem.] is mine' – *dorsatú tawuntá* 'The sheep [pl.] are mine'.

The demonstratives are *háa* ('this') and *yée* ('that'). As modifiers, they are not marked for gender or number, but in nominal function they inflect for gender, number, and case of the noun they represent. Example: *háa dorsa* 'this sheep [masc.]' – *háa dorsáttó* 'this sheep [fem.]' etc. but *hawé* 'this one [Nom. masc.]', *hawá* 'this one [Acc. masc.]', *hanná* 'this one [Nom. fem.]', *hannó* 'this one [Acc. fem.]', *hawantú* 'these ones [Nom. pl.]'; *hawantá* 'these ones [Acc. pl.]'.

Numeral and adjective modifiers are not marked for gender or case. A kind of connecting vowel (CONN), namely *u*, replaces the final vowel of the numeral when the latter modifies a noun, e.g. *laa'á* 'two' vs. *laa'u kutatu* 'two chickens'. In data available, a noun modified by a numeral occurs in the plural form (as in above example, cp. *kuta* 'chicken').

Question words include: *'oóní* 'who', *'oóna* 'whom', *'ay* 'what', *'awdé* 'when', *wooóta* 'how' and *'aáppuno* 'how much'.

K. distinguishes perfective (PFV) and imperfective verbal paradigms for affirmative, interrogative and negative clauses. It also has an invariable future tense marked by *-aná*. For example, the perfective declarative-affirmative form of *'oočč-* 'visit/ask', is *'oočč-aáddi* 'I visited', *'oočč-aádda* 'you [sg.] visited', *'oočč-aáddu* 'she visited', *'oočč-eédda* 'he visited', *'oočč-eéddo* 'we visited', *'oočč-eéddita* 'you [pl.] visited', *'oočč-eéddino* 'they visited'. Examples of the negative perfective of *b-* 'go': *b-ábíkke* 'I did not go', *b-ábeíkka* 'you [sg.] did not go', *b-íbeénna* 'he did not go', *b-ábeékku* 'she did not go', *b-íbeékko* 'we did not go', *b-íbeékketa* 'you [pl.] did not go', *b-íbeékkino* 'they did not go'. Examples of the imperfective interrogative: *b-eénne* 'doesn't he go?', *b-eékke* 'doesn't she go?', *b-oókko* 'don't we go?'.

Singular and plural positive imperatives are marked by *-á* and *-ite* respectively: *pítt-á* 'sweep [2nd pers. sg.]!', *pítt-ite* 'sweep [2nd pers. pl.]!'. The optative/hortative is marked by *-ú* (fem.) and *-ó* (sg. masc., pl.): *pítt-ú* 'let her sweep!', *pítt-ó* 'let him sweep!' Examples of negative imperative: *pítt-óppa* 'do not sweep [2nd pers. sg.]!', *pítt-óppite* 'do not sweep [2nd pers. pl.]!'; negative optative: *pítt-úppú* 'let her not sweep', *pítt-óppó* 'let him/them not sweep'.

Among the numerous morphological categories used in dependent clauses, the converb (CNV) is special in that it is represented by a distinct paradigm indicating the subject of the dependent clause.

Verbal extension markers such as the passive *-ett-*, causative *-is-* and intensive *-eret-* occur

before the tense/aspect markers, e.g., *šoč-* 'beat' – *šoč-is-aáddi* 'I got someone beaten' – *šoč-étt-aáddi* 'I was beaten'.

K. has basic Subject-Object-Verb order. In noun phrases, modifier-head order is the most frequent but the reverse order is also attested. Dependent clauses precede main clauses.

naʾá-y	*ʾiččáš-u*	*míy-at-úwa*	*digg-ídí*
child-M:NOM	five-CONN	cow-PL-ACC	herd-CNV
haatsá	*ʾušš-ídí*	*maatá*	*buúçç-ídí*
water:ABS	drink:CAUS-CNV	grass:ABS	mow-CNV
ketsáa	*gel-is-eédda*		
house:LOC	enter-CAUS-3MS:PFV		

'The boy herd five cows, he gave them water and collected grass for them and brought them home'

The ten-word list is as follows: *ʾittó* 'one', *laaʾá* 'two', *heezzá* 'three', *tamá* 'fire', *haatsá* 'water', *ʾawá ʾípátto* 'sun', *ʾagína* 'moon', *suútsa* 'blood', *ʾinṣársa* 'tongue', *ʾaččá* 'tooth'.

Kullo Konta

K.K. (ኩሎ፡ ኮንታ, sometimes simply "Kullo") is the name of a former administrative unit of the province of ↗Käfa in south-western Ethiopia; situated south of the ↗Goğäb river, south and south-east of the territory of the former Käfa kingdom. Its name is a combination of two ethnolinguistic designations. ↗Kullo (also K^{w}illo, K^{w}ello) is a derogatory term for the Omotic-speaking ↗Dawro in the eastern part of the area, in a neutral sense still used by linguists. ↗Konta is the name of an Omotic-speaking group west of Dawro country. In some sources Kullo and Konta are mentioned together with a "kingdom" of Koyša, which is actually the lowland area of Konta towards the Omo river, which was separated from the Konta kingdom in 1837 (s. Haberland 1981:743, map: 744).

The area of K.K. is historically deeply linked to the kingdoms of Käfa and ↗Wälaytta as well as to the small kingdom of Kuča with which it shares most of its historical experience. The people of Konta were vassals of the king of Käfa from 1600. The country of Kullo became dependent to the ↗Wälaytta Malla dynasty until it was able, for a short period, re-establish its independence under the leadership of Mahedo in the early 18th cent. From the early 19th cent. the Dawro and Konta were tributary to the kingdom of Käfa (BeckHuntAlm lxvif.).

The region was conquered by the forces of *däğğazmač* (later *ras*) ↗Wäldä Giyorgis Abboyye between 1889 and 1893, who was then appointed the first governor. The Dawro under their *kawo* Ganza rebelled in 1896 but were defeated one year later. The area served as a concentration area for Wäldä Giyorgis's troops on their way to conquer Käfa in the same year. Groups of "Kullo" (i.e. Dawro) then joined the army of Wäldä Giyorgis as irregular troops.

After *ras* Wäldä Giyorgis was dismissed by *ləğ* Iyasu, the new governor of Käfa, *däğğazmač* (later *ras*) ↗Bərru Wäldä Gäbrəʾel, gave K.K. to *däğğazmač* Wäldä Kätäma. On the eve of the ↗Italian war (1935–36), K.K. was separated from Käfa; but after 1942 it was one of 32 "territories" to become a *wäräda* and later an *awrağğa* within the province of Käfa.

In 1964 K.K. *awrağğa* consisted of the eight *wärädas* (administrative centres): Čäta (later dissolved; Šoma), Tällo (later suspended; Waša), Toča (Toča), Wašaye (Wašaye), Loma (Loma, later Bale), Maräqa (Maräqa), Gänabossa (Gäna) and Illa (later Konta; Ameya). The *awrağğa* capital was the town of Waka (CSA 1964:196; CSA 1970:14). Today the area is part of North Omo Zone of Southern Nations, Nationalities and Peoples Regional State.

Dirk Bustorf

Kulmer, Friedrich Freiherr von

Louis Francis (Friedrich) Freiherr von K. (b. 15 April 1874, Vienna, d. 9 December 1908, Red

Sea) was a Hungarian Lieutenant in the Austro–Hungarian Army, from a Croatian noble family. After his education in Vienna and Graz he was sent as Kadett-Offiziersstellvertreter ('deputy officer') to the Divisions-Artillerie-Regiment 39 in Karlstadt in 1895. From 1902 on he worked as a teacher of French and drawing at the Artillerie-Kadettenschule in Vienna.

After a year of preparation, on 28 April 1907 K. embarked on a voyage to Ethiopia together with the businessman Louis Francis Kaden. Via Port Said, Aden, Djibouti and Dərre Dawa they reached the town of Harär a month later. From Harär they made some short journeys and hunting trips into the hinterland, which K. described in his journal. In autumn 1908 he left Harär and travelled via Dərre Dawa with a caravan and the German engineer Marquordt, General Mining Director of *aṣe* ↗Mənilək II, to Addis Abäba which he reached on 13 December 1907. In his journal he described in detail the living conditions in the city, the small foreign community, the court of Mənilək, the chances for Europeans to establish economic connections with the country and his short excursions into the environs of Addis Abäba.

In July 1908 Marquordt was accused of incorrect control of his work, imprisoned and expelled from Ethiopia. When Marquordt was arrested, his guest K. was mistreated by the palace guards and lost a part of his property. So he decided to leave the country. On 4 November 1908 K. started for Djibouti where he embarked. He died on board of the steamer during his voyage across the Red Sea of heart failure, caused by fever. His journal was published posthumously and describes the daily events of the journey with some interesting photographs, e.g. of Mənilək.

Erich Korger

Kulub

K. (from English "club") was a nationalist movement in ↗Harär that began in the mid-1940s. Harari testimonies claim that following the Battle of ↗Čällänqo (1887) the Christian Emperor ↗Mənilək II signed an agreement guaranteeing the Muslim Harari religious freedom and limited self-government. In the decades that followed, these rights were gradually eroded until the Italians restored Harari prestige and the public respect for ↗Islam. After returning from exile in 1941, ↗Ḫaylä Śəllase I failed to recognize fully the agreements made between the Italians and the Harari, so in the mid-1940s some Harari formed the *al-Ǧamᶜīya al-waṭanīya* ('The Nationalist League'). Popularly known as *Ǧamᶜīya* or *Waṭanī*, the group's primary goal was to persuade the Emperor to uphold the agreements made with his predecessors (Mənilək and the Italians). At about the same time, ca. 1946, the Somali Youth Club (SYC; later Somali Youth League = SYL), which was founded in 1943 to struggle for the unity and independence of all Somali, opened a branch office in Harär. Although initially there was no formal relationship between it and the *Ǧamᶜīya*, the two groups' politics were both somehow opposed to the central government. The SYC branch announced that a United Nations commission was travelling to Mogadishu to discuss the type of post-war administration the former Italian subjects would prefer. The Emperor had ignored the *Ǧamᶜīya*'s petitions, so a few Harari, hoping to increase pressure on Addis Abäba, joined the SYL delegation that was to meet with the U.N. This move apparently led Ethiopian security officials to associate the *Ǧamᶜīya* with the SYL, and the names of the Harari and Somali groups soon became synonymous. Most commonly they were referred to as K., a term that in Harari usage today usually means the Harari movement and the subsequent crackdown on it. Another sobriquet the groups received was *Hanolato*, from a Somali nationalist slogan in the ↗Ogaden: *Itoobiya ha dhinto, Somalia ha noolaato* ('Death to Ethiopia, long live Somalia').

For the Harari, the K. was primarily concerned with (re-)gaining previously promised rights, but from the government's perspective it was a seditious movement and a potential threat to national interests. At that time, while the Arab newspapers publicized the Christian-Muslim conflict in ↗Eritrea, and the British extended support to the SYL in the Ogaden, Ḫaylä Śəllase sought to obtain U.N. recognition of Ethiopian sovereignty over these two areas. On the other hand, he feared that domestic opposition activity might influence U.N. decision-makers to counteract his territorial ambitions.

In this context, the SYL's Islamic orientation and desire to remove the Ogaden from Ethiopian control made it politically dangerous. U.N. and British involvement compelled some Ethiopian restraint towards Somali nationalists (↗Somalia), but the Harari community was comparatively tiny and primarily considered a domestic concern. Therefore, when Ethiopian officials learned that the Harari had sent a delegation to meet with U.N. representatives, they reacted swiftly, closing the SYL and the *Ǧamᶜīya* offices, confiscating organizational and private properties, and arresting a significant number of Harari adult males. Many detainees were held for several months, and 81 prominent individuals remained in prison for a year and a half.

During interrogations, police asked the arrested men to identify: local leaders and their financial support, Harari grievances, and any ties the K./*Ǧamᶜīya* had with an earlier cultural group, the *Firmačč*, of whom Ethiopian officials knew little. The fact that the Harari were Muslims and allied with would-be Somali separatists only exacerbated the government crackdown.

Before the government's actions, residence in Harär was extremely important to the identity and ethnic unity of Harari society. Historically, when individuals left the town for travel, trade, or pilgrimage, they usually returned to live there. It was only after the state's oppression in 1948 that a significant number of ↗Harari people started to leave the town permanently. For this reason, the rise of the K./*Ǧamᶜīya* movement can be regarded as a highly significant 20th-cent. historical episode for the Harari people.

Kunama

Kunama language

K. (self-name: *Kù'nàmà àu'rà*, 'K. speech', or *Kù'nàmà ŋée'là*, 'K. tongue'; also called Baada, Baaza, or Diila) is a language spoken in western ↗Eritrea on the ↗Gaš and ↗Täkkäze Rivers with extensions westward into Sudan and south into ↗Təgray Region of Ethiopia.

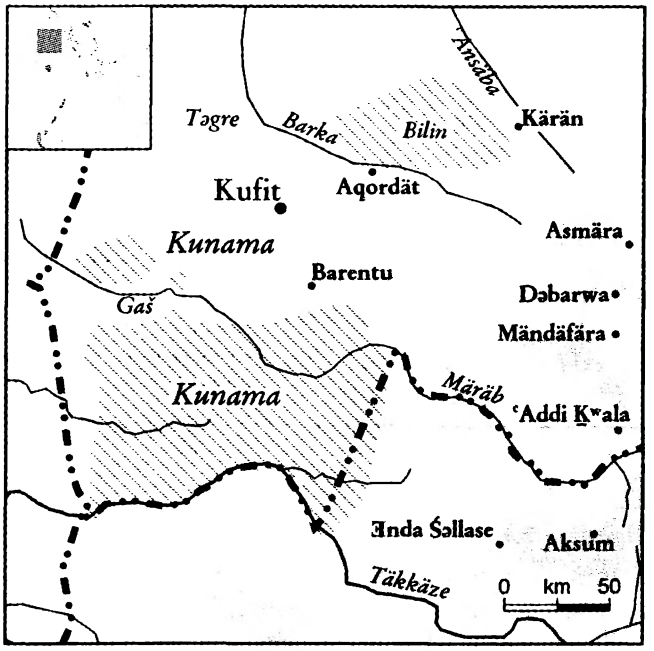
K. was once classified by Greenberg (1950) as an African isolate, but in recent years (s. Bender 1996a) analysis of both the old and new data places K. in the ↗Nilo-Saharan phylum as one of the "Satellites", co-ordinate with Maba, Fur, Central Sudanic, and the Core Family (East Sudanic, ↗Koman, ↗Gumuz, Kadu). Ehret's (2001) competing classification of Nilo-Saharan has K. as a branch of his "North Sudanic".

There are four main dialects: Marda (the most prestigious), ↗Barka, Aymasa, and Tika, and several minor varieties. Ilit and Sokodas (also known as "Western Kunama"; s. ↗Ilit and Sokodas) are reported by Daniel Teclemariam et al. (1997) as sharing less than 70 % of basic lexicon with other dialects and thus may perhaps be classified as closely related languages. The position of Bitaama dialect is not clear (most of its speakers seem to have completely shifted to ↗Təgre). The present sketch is based mainly on the Marda dialect described in Bender (1996b). The total number of speakers is ca. 110,000 (Gordon 2005:112). Literature so far is minor, including partial ↗Bible translations. K. is a language undergoing development by the Eritrean government.

The inventory of consonants is as follows: voiced stops *b, d, ǧ, g*; voiceless stops: *t, č, k*; fricatives: *f, s, š, h*; nasals: *m, n, ñ, ŋ*; liquids: *l, r*; glides: *w, y*. Notice the absence of distinctive */p/*, which is replaced by */f/* (an areal feature, s. ↗Ethiopian language area). Consonant sequences across a syllable boundary are rare except for geminates, e.g. *'ana* 'above, on top', *'anna* 'god, creator'.

Vowels are: *i, e, a, o, u*. Diphthongs (*ai, au, oi*) are widely used. Vowel length is phonemic, e.g. *'eesa* 'dig (pl.)!', *'esa* 'go out!'.

The suprasegmental system is complex, with tone and both vocalic and consonantal length involved. The distinctive function of tone and stress is problematical, but consider *má* 'weeding' (high tone marked as ´), *ma* 'tooth' (low tone unmarked) and *i'me* 'love!', *'ime* 'they (pl.)' (stress marked by the symbol ' before the stressed syllable). Connell – Hayward – John Abraha Ashkaba (2000) assert that there is no stress and that there



are three levels of tone; contours are all to be analyzed as sequences. This analysis is said to be true of both Barka and Marda. In the present article, Marda forms from Bender (1996b) are given (with high, low and falling [ˋ] tone), pending confirmation of this statement and presentation of a fuller lexicon under the Connell et al. analysis.

Almost all native K. nouns end in *-a* for sg. and *-e* for pl., reflecting an archaic Nilo-Saharan feature. There is no grammatical gender.

The pronoun system is unique in Nilo-Saharan and very different from ↗Afro-Asiatic systems. There is no gender, but there are three numbers (sg., dual, pl.), and the inclusion (in.) or exclusion (ex.) of the person spoken to is encoded. Independent pronouns: 1st pers. sg. *'aba* 'I'; 2nd pers. sg. *'ena* 'thou'; 3rd pers. sg. *'unu* 'he, she, it'; 1st pers. dual in. *'kiime* 'we two'; 1st pers. dual ex. *'aame* 'we two'; 2nd pers. dual *'eeme* 'you two'; 3rd pers. dual *'iime* 'they two'; 1st pers. pl. in. *'kime* 'we'; 1st pers. pl. ex. *'ame* 'we'; 2nd pers. pl. *'eme* 'you'; 3rd pers. pl. *'ime* 'they'. Phonological realizations vary dialectally, e.g. geminate consonants may be used rather than long vowels. There are corresponding possessives and two sets of verb subject affixes, all with a reduction in distinctions: e.g. in non-first persons, dual and pl. are identical. K. also has the rare feature of selectors (affixes that combine pronoun subject and object), found also in a few Nilo-Saharan languages (and similar to selectors in ↗Cushitic). Demonstratives show dialectal variation; the Marda preposed demonstrative adjectives are: 'this' *'nn+à* (sg.); *'nn+ame* (dual); *'nn+ae* (pl.); 'that' *'wain+à*/*'oin+à* (sg.); *'wain+ame*/*'oin+ame* (dual); *'wain+ae*/*'oin+ae* (pl.).

A peculiar feature of K. is that there are two classes of verbs: those taking pronominal prefixes and those taking pronominal suffixes in conjugation. There are two tenses, non-future and future. Verbs are inflected for person and number. Examples of conjugation for suffixing verb 'sit, stay' are: non-future 1st pers. sg. *go+na+ke*, 2nd pers. sg. *go+ŋ+ke*, 3rd pers. sg. *go+s+ke*, 1st pers. dual/pl. in. *go+t+ke*, 1st pers. dual/pl. ex. *go+ma+ke*, 2nd pers. dual/pl. *go+ŋ+ke*, 3rd pers. dual/pl. *go+ŋ+ke*; future 1st pers. sg. *go+na+na*, 2nd pers. sg. *go+nu+na*, 3rd pers. sg. *go+su+na*, etc.; for prefixing verb 'be present': non-future 1st pers. sg. *na+'kos+ke*, 2nd pers. sg. *no+'kos+ke*, 3rd pers. sg. *'kos+ke*, etc.; future 1st pers. sg. *ná+kósí+na*, 2nd pers. sg. *nó+kósí+na*, 3rd pers. sg. *kósí+na*.

Interrogatives appear in great variety and show dialectal variation. Many contain the element *ái*, basic meaning 'which?'. Examples from Marda: *ái'ka'dí* 'when?', *ái'kalle* 'how many, much?', *ai'kal'lé*/*'(í)nkálé* 'where?', *aikédi(bu)*/*áikédíp* 'how?', *a(i)mino* 'why?', *'náno*, pl. *nakeno* 'who?', *nan+ki* 'how, in what way?'.

There are several copulas: the invariable auxiliary *+(n)dia*, which alternates with zero; the verb 'be alive, live, reside' *'óiñóda*; the verb 'be, become' (also 'exit, go out') *i+ša*.

There are no case suffixes in K. (contrary to Grimes 1996:255): all case functions are handled by postpositions, e.g. *súba-la* 'at river'. Connectives are 'and' *+na... +na*; 'both ... and' *+inna... +inna* (both suffixed to both conjuncts); 'and, what about?' *+ki*.

The word order is Subject – Object – Verb: *u'nu*$_1$ *tukuša*$_2$ *kiŋke*$_3$ 'he/she$_1$ eats/ate$_3$ porridge$_2$'. K. is a Type D language in Heine's (1976) terminology, with nominal object, question particle, and adverbial preceding verb and usually auxiliary following verb. But K. is not a "rigid" verb-final language like the Afro-Asiatic languages of Ethiopia and Eritrea and has a "mixed" appearance syntactically as well as grammatically and lexically: ↗Ethio-Semitic, and Cushitic are involved, perhaps even ↗Omotic.

Ten-word list: 'one' *'élla*; 'two' *'báara*; 'three' *sat'te*; 'blood' *koko'ba*; 'tongue' *ŋée'là*; 'tooth' *ma*; 'fire' *to'ma*; 'moon' *tee'la*; 'sun' *wi'ya*; 'water' *bi'a*.

Kunama ethnography

The K. (Kù'nàmà, Baza, by outsiders: Bazen) are an ethnic formation of Nilo-Saharan linguistic stock who have for centuries inhabited the south-western lowlands of Eritrea near the ↗Gaš and ↗Setit rivers with an altitude ranging between 600 and 850 m A.S.L.

The region receives an annual rainfall of between 250 and 450 mm and the mean temperature is about 28° C. It borders ↗Säraye to the east, Sudan to the west, the ↗Barka region to the north and ↗Təgray to the south. The K. constitute about 2 % of the total population of Eritrea, but a relatively large proportion of the population of the western lowlands. As a consequence of contemporary wars and famine, in the last decades many families have moved to several main Sudanese towns and to western Təgray. Some K. groups in Təgray, living near the border, largely adapted to the Təgrayan way of life already some time ago, and speak Təgrəññña.

K. groups are the Marda, ↗Barka, Taguda, Aymasa, Tika and the geographically and linguistically separated ↗Ilit and Sokodas. The K. group Bitaama does not speak K. anymore, but Təgre.

The main internal subregional divisions are Tika, Barka, K. Marda, while Aymasa and Koyta Marda are falling out of use. Some villages near ↗Täsänäy are still inhabited by Sokodas and islamized Ilit and Bitama.

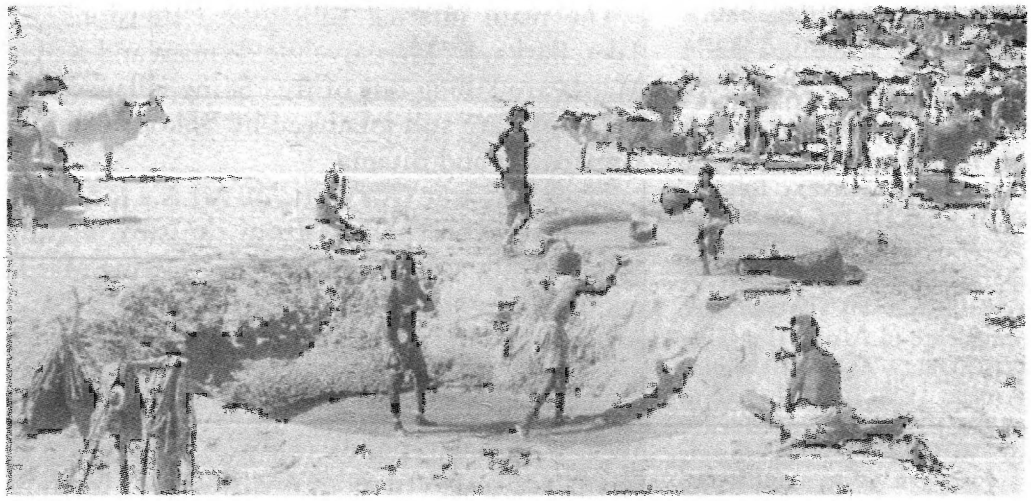
Their language (*Kù'nàmà àu'rà*) is a tonal one with lexical borrowings from the surrounding Semitic languages, the main dialects being Marda and Barka, which were first written in the Latin script by western missionaries. Other K. groups are the Taguda, Aymasa, Tika.

The K. live in villages, with sacred spaces and various burial grounds (*nabulé*). These settlements are scattered along the slopes of the hills and plains north and south of the Gaš. Villages like Kulluku, Fōde, Kedagul, Oganna, Alummu are already attested in the Ethiopian royal chronicles. There is no individual ownership of farmland and access to agricultural land was regulated through the ritual office of the "leader of the land" (*laga manna*), chosen from within selected matrilineal lineages. After Eritrean independence, the new land tenure policy states that land belongs to the State, which is encouraging the movement of people from highland Eritrea and the resettlement of most of the returnees from the Sudan in the K. Gaš-Setit region.

Agriculture is based on the use of the hoe, spades, sickles and the ox- (or camel)-drawn plough (*nauìt*); signs of a past terraced agriculture are still visible near villages like Kedagul. The main field crop is ↗sorghum (*kinà*), which has a ceremonial value, then millet (*bortà* or *bečà*) and additionally pulses and ↗maize (*àfokìna*).

The K. make use of assistance from neighbouring households in all agricultural activities where group effort is considered useful; this is called *kowa*. Harvesting is celebrated with a collective feast, *kina furda*. *Furda* is a key concept, meaning ceremony, ritual, ancestral heritage. Women collect firewood, fetch water, perform kitchen work, and sometime are engaged in petty market-exchange or as seasonal labourers on farms. The K. keep live-stock (goats, sheep, oxen, camels) and exchange them in the cattle-markets of Mogolo and Šambuko. A gender-related term refers to women possessed by spirits (*ašìrmè*) after the period of harvesting: among them are the *andinne* (sg. *andinna*) professionals who perform divination and healing with ppropriate rituals.

The K. claim that they are the first people who settled in Eritrea. They recall their ancestors who were thought to have brought their ancient ag-



Kunama boys fetching water for the cattle; photo 1950s, from Leuenberger 1955:179

ricultural skills from farther west, i.e. the Blue Nile flood plains of the Sudan.

The Arab traveller al-↗Yaᶜqūbī in 872 A.D. mentions the kingdom of Bāza, which is a self-designation of the K. (s. "Five Beğa Kingdoms" in vol. 5). Təgrəñña oral tradition ascribes K. origins to the legendary Aksumite king ↗Bazen. In the process of "attack and push", hierarchical forms of leadership could have been evolved among K. as a response to forcibly shifting settlement. Təgrəñña oral traditions state that the name K. derives from King Bazen's wife, Queen Kunamwe, who was highly respected: this myth of origin is employed today by the K. in the contemporary political arena.

The K. have been affected by sometimes dramatic historical processes, due to their crucial position between the two political and cultural main-streams, Sudanese influence and Ethiopian pressure. Thus, they experienced the ↗Funğ kingdom with its centre at Sinnār, and their in the 19th cent. raids and partial occupation from the Təgrayan ᶜAdyabo, the *Turkīya* (↗Egypt) and the *Mahdīya* (↗Mahdists); followed in the 20th cent. by Italian colonial rule and the ↗British Military Administration, the Federation, the *Därg* regime, the 30-year guerrilla war and the process of construction of the new Eritrean State. The K. learned how to cope with competition over water and agricultural resources mainly along the Gaš river (K.: Sonà) and the Setit (K.: Tika) and the raids of pastoral Beğa groups.

The slave trade dominated the region for centuries until the beginning of the 20th cent. The K. have been stigmatised as slaves (↗*Barya*), as blacks (Tgn.: *ṣällim*) and pagans. This has had a powerful and long-lasting impression on their oral tradition. The Təgrəñña from Wälqayt, ᶜAdyabo, and Säraye are remembered for their raids to obtain slaves, grain and cattle: *Ras* ↗Alula Ǝngəda's campaigns against the Mahdists (1885–89) are recalled as a painful and never-ending period of spoliation and devastation. The inter-ethnic conflicts over farming land during the British Military Administration are still referred to as *Salab biya* (1948–52) and have a bitter place in their historical memory. They refer to their neighbours by a variety of labels: they call Beni ᶜAmər *Šilè*, Təgrayans *Alakè*, *Makadè*, *Dalè*, the Nara Mogareb *Marda*.

K. society is dominated by a matrilineal social structure. Sharing the same blood does not place a father and his offspring in the position of primary relatives. The role played by the father's metaphoric "blood" in procreation pales into significance in contrast with the contribution of the mother. The closeness that defines relatives proper, i.e. the matri-kin (*kebesè šàdia*), among the K. is created by the "bones" (*sangà*) of a child being shaped inside the mother's womb. The mother's side prevails over the father's side and is expressed through the "bones' idiom". *Kebesà* means descent through female ancestors; *kebesè* form a corporate group and are those who pay compensation in the case of a feud (*marbàta*). The *kiškišè* are descendants through the male line, implying relationship between persons of different *kebesè* through one or more paternal links which never coalesce into proper lines. *Kebesè* and *kiškišè* taken as a whole are called *dugulè*, a term that has far-reaching implications for social alliances. The term *koynie* defines the relationship between the children of male *kebesè* (patrilateral parallel cousins). The mother's brother (*imba*) is a pivotal social figure, and the term *imba* is also used for the funeral commemorative feast, with ostentatious consumption of meat and local sorghum beer (*aifà*). At least 18 matrilineal subdivisions of the four ancestral exogamous clans (*Šua*, *Gurma*, *Karawa*) are recognized among the K. In the K. *Barka* section only, the four divisions

are paired in moities (*kosamate*): *Šua* with *Karawa*, *Serma* with *Gurma*.

The ↗Swedish Evangelical Mission established itself in the K. area as early as 1866, and the Catholic Mission from 1912 argued that this "exotic" kinship logic – characterized by the force of the bond between the mother's brother and the sister's sons (at that time defined as a "matriarchy") – should be transformed into a patrilineal kinship system.

Cattle, sheep and goats are highly valued on the occasion of an official marriage (*diginà*). They are used for the bride-wealth transfer of goods from the groom's relatives to the bride's side, a deep-rooted custom which has been challenged by the Christian churches. Although labelled "pagans" or "animists" by highlanders, the K. believe in a creator god, called *Annà*. The same name is used among the Christian K.; however, important feasts like *Anna sāsa* (Tuka among Marda), performed every eight to ten years, have now vanished.

Until the recent historical changes in K. customary laws a crucial role was played by the *sanga-anene* (forming "bone's idiom"). These are specific male traditional office-holders, responsible for granting asylum in the sanctuary of their compounds, who perform the ritual of reconciliation in the case of internal homicide, preventing retaliation. This respected office is hereditary, transmitted in matrilineal succession from the eldest brother to the next born in a ranking order. Along the Gaš river these office-holders descend from the *Karawa* lineage, in the Marda area from the *Sogonà* clan.

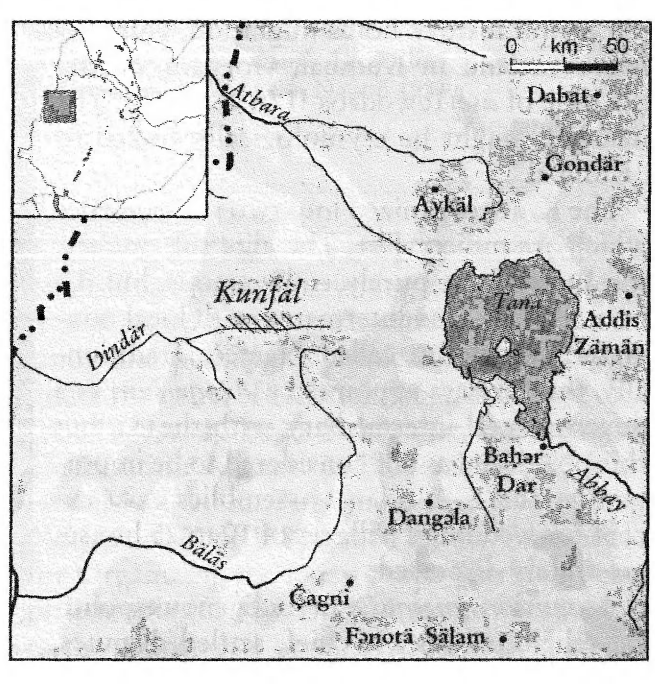
Kunfäl

Kunfäl language

K. is a little-known language close to ↗Awŋi (↗Agaw subgroup of ↗Cushitic language family), spoken to the west of Lake ↗Ṭana, in the south of the ↗Qʷara region along the north side of the Dəndär River. *Ethnologue* estimates the number of speakers as 2,000 (Gordon 2005: 116). There is widespread bilingualism with Amharic. The only information on K. language comes from a single brief survey by Teqebba Birru, Zena Adal, and Cowley (1971). The available data comprise a 100-item word-list, from which five entries are left blank, together with a list of numerals, demonstratives, a further 139 items of vocabulary classified according to semantic field, and lastly 21 short phrases.

The language material was first noted in Ethiopic script and then transcribed. Comparing this data with Awŋi it is evident that the researchers had difficulty in knowing how to deal with a number of non-Amharic sounds that apparently also exist in K. (note that within the present article voiceless uvular stop is represented as *q*, voiced uvular stop as *ɣ*, dental voiceless affricate as *c*): whilst a velar nasal */ŋ/* is recognized, there is hesitation how to represent what in Awŋi is */ɣ/* (sometimes noted as */k/*, sometimes */h/* and sometimes zero), nor is the uvular */q/* distinguished from the velar */k/*.



There is little grammatical information other than what can be gleaned from the phrases and some verb forms in the word-lists. So, most verb forms end in *-əw*, *-u*, or *-w*, which is presumably the 3rd masc. of the Past and perhaps equivalent to Awŋi Past Definite *-y^{w}à*; others end in *-a* which may be the same as the Awŋi Past Indefinite *-a*.

Of the 95 items in the primary word-list 80 % have cognates in Awŋi, and of these 49 % either have their only cognates in Awŋi when compared with the rest of the Agäw languages (e.g., *wəla* 'all', *-tala* 'father', *gaz-* 'go', *šəw* 'heart' and *biwi* 'star') or show the same developments in form or meaning as are only found in Awŋi (e.g., *kant-* 'see', *kumbi* 'mouth', *kasi* 'leaf' and *leŋ* 'fire'). There are also a few unexpected forms like *wəzgi* 'belly' (cf. Awŋi *guzəg*) or *nadi* 'bone' (cf. Awŋi *ŋac*), though there is the chance that these are defective recordings.

Ten-word list: 'one' *law / lahu*, 'two' *lama*, 'three' *šäwa*, 'water' *ah^{w}*, 'fire' *leŋ*, 'sun' *awi*, 'moon' *arfa*, 'blood' *buri / bure*, 'tongue' *caŋ*, 'tooth' *ərkuwi*.

David L. Appleyard

Kunfäl ethnography

The K., speaking an ↗Agäw language very similar to ↗Awŋi, live in the originally wooded lowland area west of Lake Tana, in the Dəndär River valley. Most K. are bilingual in Amharic. Their oral history notes migration from an earlier homeland in Kumbäl, Goggam, during the time of *ase* Tewodros II (r. 1855–68). The name K. might be etymologically linked to "Kumbäl".

The K. are organized into two sub-societies which are moiety-like. The elite sub-society, the *Sambiri*, are purely endogamous, but the non-*Sambiri*, also intermarry with local non-Agäw, sometimes called Haméč. Traditionally, the Amhara appointed a ↗*čəqa šum* as a governmental intermediary with the K., but this position was not considered to be important by the K. No large assemblies exist except for weddings. Villages of 10 to 25 houses are widely dispersed.

A *sambiri məsqaš*, an indigenous political-religious leader, a chief, settled disputes, prayed to the spirits for bountiful crops and livestock, and wielded supernatural powers, including cursing evildoers. *Sambiri* are the sole intermediaries with the *qole* spirits and make sacrifices to them.

Today, the K. are at least nominally Ethiopian Orthodox Christians. Manifestations of their former religion abounded through the 1970s. Conversion began in the time of Tewodros II and finished in Italian times. In the distant past, non-Christian K. could not touch a Christian. Doing so, the K. had to ritually bath to cleanse the ensuing pollution. The most important *qole* site is Agazän Mäbağo, a large hill in ↗Q^{w}ara. Only a *məsqaš* climbs the hill, to sacrifice goats and honey. K. swear oaths at the base of the sacred hill.

The economic backbone of the K. is slash-and-burn horticulture using a hoe. In annually rotated plots they produce dagussa (*Eleusine coracana*), sorghum, maize, nug, sesame, cayenne, and cotton. Since the 1940s sometimes the plough is used. Goats and chickens are common, sheep present, and cattle rare. Numerous wicker beehives rest in trees for beekeeping (↗Bees and Beekeeping) which is traditionally an important source of income. ↗Honey is plentiful, sold in markets, and was once used to pay taxes. The diet of the K. includes antelope, which are hunted with rifles. Traditionally the killing of a lion or elephant proved the manhood of a youngster (↗Meritorious complex). The K. are generally not craftsmen, but a few are blacksmiths. K. houses are cylindrically constructed of wattle which is smeared with some daub. Their cone-shaped roofs are thatched. Brenzinger estimated a K. population of 2,000 in 2000 (Gordon 2005:116).

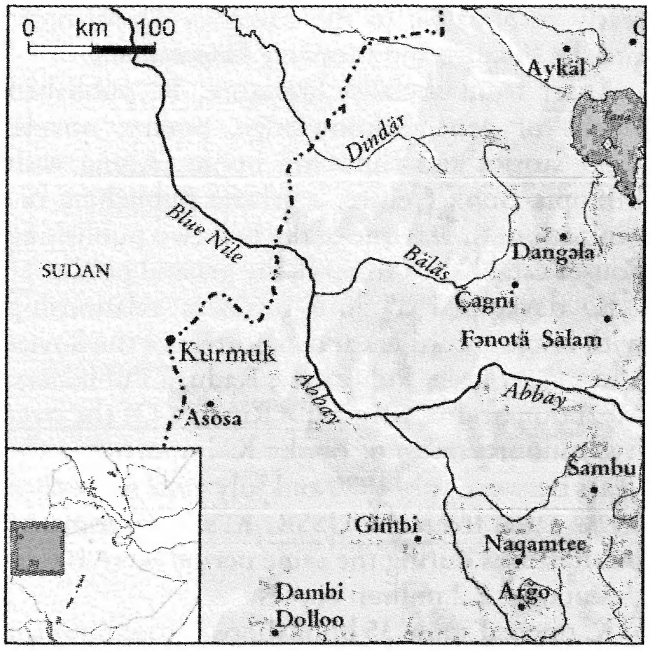
Kurmuk

Strategically situated on the borderland between the former Blue Nile Province of ↗Sudan and the ↗Beni Šangul region of north–western Ethiopia, K. was established by the British in 1910 as a police post along the newly–established Ethio–Sudanese frontier (1902) to control clandestine trade in ↗gold and slaves (↗slavery). Across the frontier, the small market town of Dul grew as its Ethiopian counterpart.

The border area long benefited from the lively trade being exchanged between the Blue Nile hills and the Ethiopian escarpment. Sudanese merchants came to settle in this region, which they had named the *Ṣaᶜīd*, since the heyday of the old Kingdom of ↗Sinnār in the 18th cent. The Turco-Egyptian occupation of ↗Sudan, followed by the rule of the Mahdī, and then by British colonial rule and the short–lived Italian occupation, cared little about the border region and never managed to subdue or control the largely illegal transborder trade which animated a productive network of flourishing market villages and centres traditionally inhabited by local ↗Gumuz, ↗Berta and ↗Komo peoples living alongside with northern Sudanese traders and highland settlers from Ethiopia.

During the imperial regime, K., and its Ethiopian counterpart, Dul, were peaceful trading and administrative centres remote from central governments, though bustling with trading and smuggling activities. The area was relatively untouched by the first civil war raging in Sudan which started before independence in 1956 and lasted up to 1972, but became vulnerable after the *Därg* took over in Ethiopia in 1974 and civil war returned to the Sudan in 1983. During the 1980s and 1990s the border region became an important recruiting ground and an escape area for refugees fleeing from the liberation movements and successive governments' recruiting raids. During this period, the whole border region became increasingly politicized and K. became an important military target for both the Sudanese government and its southern opponents, the Sudanese People's Liberation Movement (SPLM) and their military arm, the Sudanese People's Liberation



army (SPLA), supported by their Ethiopian allies. The town was taken alternatively by the various opposition forces in their respective bids for power over the border region and suffered greatly since the late 1980s, witnessing recurrent dispersal of the original inhabitants and incoming flows of new refugees and settlers from across the border. From 1997, the SPLA-M retained control of K. up to the Comprehensive Peace Agreement of 9 January 2005. This created a new unit within northern Sudan, to be known as the Blue Nile State, with its capital Damazin, in which special constitutional arrangements would reflect the diverse character and history of the region.

Kurraz

K. (ኩራዝ, lit. 'kerosene lamp') was an Ethiopian publishing agency functioning from 1979 till 1991. It was set up by the state with the aim of translating and publishing political literature, at first under the name of K. Book Store, and later, on 21 June 1979, as K. Book Publishing, Importing and Distribution Agency. In November 1980 it was established as K. Publishing Agency by Legal Notice no. 72 of 1980 issued by the Commission for Organizing the Party of the Working People of Ethiopia (COPWE). K. became "accountable to the appropriate organ of COPWE", being di-

rectly responsible to the Ideology Department and the Finance and Property Department.

Apart from socialist literature, K. published works of general knowledge, poetry, novels, short stories and children's books. Along with Ethiopia Book Centre, a private publishing organization, K. was one of the first two publishing houses established to serve the general public.

K. developed a close business relationship with book publishers and exporters of the Soviet Union (Progress Publishers, Raduga Publishers, Mežhdunarodnaja Kniga; ↗Russia). Of the over five million copies of books K. imported in the years between July 1980 and July 1987 more than 95 % came from the USSR. K.'s own domestic publications during the same period were 106 titles in over 2.2 million copies.

K. opened some 35 bookshops throughout the country; it also held a number of periodic book fairs. K's legal existence ended with the demise of its mentor, The Workers' Party of Ethiopia (WPE), in 1991. Eventually, K. was taken over by Mega Publishers.

Kush

Kush/Cush terminology

Geographic term

The toponym *K s/ś*, indicating the region south of ↗Egypt (2nd cataract) first occurs in Egyptian inscriptions (Urk. VII, 5:17) during the reign of pharaoh457 Sesostris I (ca. 1900 B.C.). It is written *K š(i)* in the late Middle Kingdom [MK], *Kši* in the so-called 2nd Intermediate Period and *Kš* in the New Kingdom [NK] (Erman – Grapow 1957:109, 1). In the texts of the 25th Dynasty and in Demotic, the form is *ikš*, corresponding to Coptic ⲉϭⲱⲩⲓ *ekjōš* (<**ǐkāš*), 'Ethiopian, Nubian', Meroitic *qes* (Leclant 1975:105). The contemporary vocalization is reflected in Middle Babylonian ^{KUR}*Ka-ši*; Old Nubian ϰⲁⲥ; Gəʿəz ↗Kasu (DAE no. 11.4; Gr. Κάσου; Vycichl 1957:177ff.), but also (*ā* > *ū*) in later Assyrian ^{KUR}*Ku(-u)-ši*; Old Persian *kusā*; Hebrew כּוּשׁ, borrowed as Gr. Χοῦς (> Bohairic ϫⲟⲩⲥ). Syriac and Arabic texts have *kūš* (Vantini 1975, s. index). The graphical oscillations in Egyptian reveal K. as a loanword, obviously borrowed from a proto-language related to Meroitic, which itself has been deciphered, but is not yet properly understood (Rilly 1999; Hintze 1979; Hofmann 1981:291).

Linguistic term

In the ↗Bible, K. is the name of the son of Ham and grandson of Noah (Gen 10:6–8) as well as the toponym used for ↗Nubia (Ezek 29:10; 30:4, 9; Jes 11:11, 20:3–5). The Septuagint uses Χοῦς for the former and ↗Aithiopía for the latter. With reference to the sons of Noah, Lepsius (1880) coined the term ↗Hamito-Semitic as the designation of a language phylum, a branch of which is still called ↗Cushitic today, out of terminological continuation. This name is not related, however, to the language spoken in the Kingdom of K., although Zylharz (1956, 1960) suggested "Kaschitisch" for the Meroitic language.

Historical term

The 25th Dynasty in Egypt (about 765–655 B.C.) was traditionally called ↗Ethiopian dynasty, following Manetho's periodization (Zibelius-Chen 2006). Today, the hypercorrect term "Kushite period" is occasionally used.

Geographical framework

During the MK, K. stands for Upper Nubia (2nd–4th Cataract), specifically for the Kerma basin (Gratien 1978). It is only from the Hyksos period on that the term can be used for entire Nubia, i.e. the middle ↗Nile valley south of Egypt. In the Old Kingdom, Lower Nubia (Aswān to Wādī Ḥalfā) was divided into *w w t*, *irṯt* and *śṯw*; of which only the first one occurs in the MK. Since the NK, K. is the general term for Nubia, and Upper Nubia in particular. In this sense, after the Egyptian conquest, the "viceroy" of K. (*ś -nsw n*[*ỉ*] *K.*) was responsible for the whole Nubia, while his deputies, the *idnw* of K. or *w w t*, only for the respective regions. Under the 25th Dynasty and in the Napatan and Meroitic periods, the term K. is seldom used. The place name continued to be used in Kordofan and Darfur: when David Reubenis travelled to ↗Funǧ in 1522, the area ruled by King Amara (Dunkas), between his capital Lamʾul south of ↗Sinnār and ↗Dongola, was called *kaš, kaǧ* (Arkell 1961:174; Vantini 1975:745ff; Herzog 1957:17). After the Arabian conquest of the Nile valley, the toponym K. was replaced by Arab. *Bilād as-Sūdān*, which parallels Gr. *Aithiopía*: it was also a general term for Africa south of Syene/Aswān derives from the word for "black" (in keeping with the popular etymology

for *Aithiopía*). Nubia was the artificial term created from the proper name of the ↗Noba – notwithstanding a wide-spread belief, it is not connected with the Egyptian word for 'gold' (Old Egypt. *nb.w* > Copt. ⲛⲟⲩⲃ; s. Bechhaus-Gerst 1996:153ff.). The Arabic-speaking ↗Beğa group ᶜAbābda in Egypt still call darker-skinned people *kiš͡ʿāb* (pl. *kaša͡ʿīb*, *b* being a Beğa masc. object marker; s. Vycichl 1983:50f.).

History

Kūš in the 2nd millennium B.C: the kingdom of Kerma

A cultural continuity can be traced between the early kingdom of Kerma and the Meroitic period. The capital Kerma, with its huge tumuli (including the burials of the entire royal entourage), its palace and temples, is probably the first true city in Black Africa. The ruler of K. (*ḥq n(.i) Kš*) gained military power after the end of the Egyptian domination in Lower Nubia during the Middle Kingdom. During the Hyksos period, he entered the international political scene. The reunification of Egypt at the beginning of the New Kingdom led to the destruction of the Kerma kingdom (Thutmosis I/III, mid.-15th cent. B.C) and to the second Egyptian colonization. By the beginning of the Kushite dynasty in the 8th cent. B.C., Nubian culture had been totally obscured by Egyptian culture.

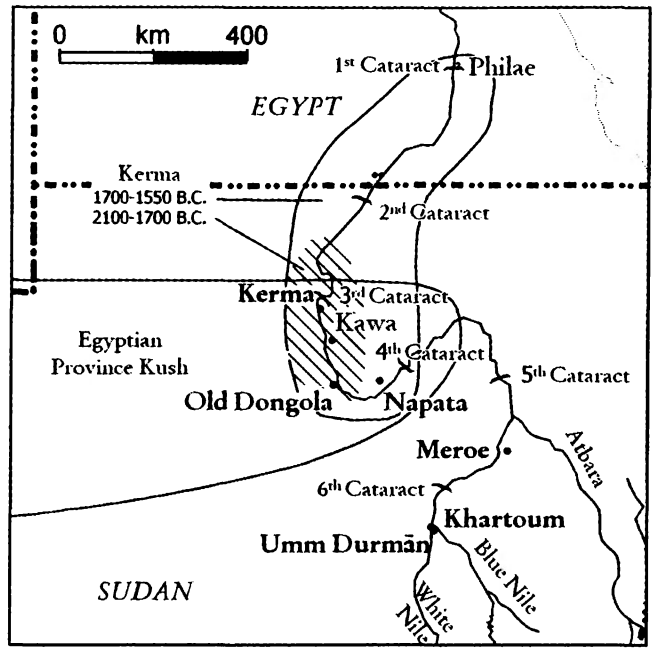
The kingdom of Kush

The 25th dynasty in Egypt

After the end of the Egyptian hegemony, an independent state developed near ↗Napata (Ǧabal Barkal) during the Third Intermediate Period, strongly influenced by Egyptian culture, as indicated by both the inscriptions written in Egyptian hieroglyphs and the worship of the Egyptian god Amun. The first rulers had their burial tumuli built at al-Kurru, later, pyramids for them can be also found at Nuri. King Piankhi conquered Egypt in about 765 B.C. Since then, Nubian rulers were seen and depicted as pharaohs. The struggle with Assyria began with the great builder, pharaoh Taharqa and culminated in the conquest of Thebes under pharaoh Tanutamani in 665 B.C., which marks the end of the Kushite rule in Egypt.

The kingdom of Napata

Tanutamani and his successors continued to reign in Nubia, even after Psammetik II's Nubian campaign in 593 B.C. (Herod. II, 161) which reached Pnubs/Kerma. The inscriptions began to be written in a special kind of Egyptian with



Meroitic substrate, called "Napatan" after Napata, the religious and political centre of the empire (Peust 1999).

The kingdom of Meroë

With the transfer of the royal necropolis to ↗Meroë in ca. 275 B.C., under king Ergamenes, the "African" elements of Meroitic society became more and more apparent. The Meroitic language used hieroglyphs and cursive script. At the same time, imported goods proved regular contacts to the Greco-Roman world. Under the Ptolemaic kings Ptolemy II and IV, Meroë lost influence in Lower Nubia; border conflicts also affected the relations with Rome. Petronius, the Roman prefect of Egypt, conducted a military campaign to Napata in 23 B.C., which was not as successful politically as it was propagandistically, for in 21/20 B.C. Augustus was forced to agree to a settlement with the ↗Candace Amanirenase in the peace of Samos. The border remained at Qaṣr Ibrīm until the Romans retreated from the Dodekaschoinos in 292 A.D. as a consequence of the Blemmyes invading Lower Nubia. The migration of ↗Noba and ↗Beğa brought the kingdom of Meroë to an end as well as the intensified Red Sea trade, which bypassed Nubia. The campaign of an Aksumite king sometimes after 260 or 269, and then of ↗ᶜEzana himself in ca. 350 A.D. drew the final line under this process (s. Fiaccadori 2004:116f., 125f.).

Kush in Ethiopian tradition

K. has always played a role in Ethiopian tradition, beginning with the Candace (her proper

name being in fact a misinterpretation of the female Meroitic title *kdke*, a misunderstanding occurring first in ↗Greek literature; Zach 1992:98ff., 2001:513ff., 2004:449ff.).

Folklore etymology links Aksum to K. (but s. Schneider 1996; Müller 1998), generally personfied and seen as an ancestor of the Ethiopians: e.g., ↗Ityopis in the 15th-cent. *Liber Axumae* is styled "the son of Kwəsa, son of Kam" (CRAxum 3; for similar "genealogies" cp. also Fiaccadori 1992a:89f. and 1992b:439, 442f.). The main reasons for that are the confusion between K. and Gr. *Aithiopía* of the Septuagint, and the wish to be part of the biblical tradition, an issue closely connected with that of the origins of Ethiopian ↗Judaism (UllBibl and esp, Rodinson 1964; Marrassini 1979). It is therefore not surprising that several names of Kushite pharaohs of the 25th Dynasty (i.e. Pi[ankh]y, Taharqa, Tanutamani) and other Napatan and Meroitic kings (i.e. Aspelta, Nastasen), taken from scholarly Egyptological literature, are included in the "king lists" of *ras* Täfäri Mäkʷännən (Kropp 2005; Zach 2002, 2005). Today, Ethiopian politicians often stress the "Cushite legacy" against the "Semitic" (i.e. Old South Arabian) one.

Kusuma ↗Konso

Kʷäᶜatit ↗ᶜAdwa

Kwama

Kwama language

K. (also Takwama, Gwama, Goma, Gogwama, Afan Mao, Ṭwa Kwama) is one of the least-known Ethiopian languages and belongs to the ↗Koman subgroup of the ↗Nilo-Saharan phylum. K. is spoken along the Ethiopia-Sudan border in the

southern Beni Šangul/Gumuz Region, from south of Asosa to Gidaamii, and in Gambella and Bonga (for location s. Koman). There is a K.-speaking community in the Yabus area of Sudan. The K.-speaking population has been estimated as few as 99 (CSA 1998:79) and as many as 20,000 (Bender 1976). *Ethnologue* estimates the population to be around 15,000 (Gordon 2005:116).

One of the dialects of K., called Mao, is spoken in the Begi and Tongo areas (different from the ↗Mao of Bambasi, which belongs to ↗Mao group of Omotic languages, s. Davis et al., in preparation; Baye Yimam 2005). Dialectal differences have caused some confusion in terms of the language classification and names (Bender 1997; Davis et al., in preparation). Some of the variations in the data presented in this entry may be due to the fact that research was conducted in different dialects of K. by the various researchers.

Even though ↗Oromiffa is the most important language of wider communication in the area, the majority of the K. people have only basic proficiency in Oromiffa (ibid.).

Outsiders generally consider the K. and ↗Komo people one ethnic group, called "Koma" or "Komo". Some K. people do not recognize the existence of a separate Komo people or language and consider them to be one of the K. clans. The Komo people, who are fewer in number on the Ethiopian side of the border, seem fully aware of the differences between the languages and are bilingual in K. This situation is reversed on the Sudanese side of the border, where the Komo are dominant, greatly outnumbering the K., and the K. are bilingual in the language of the Komo (Burns 1950).

The phoneme inventory of K. is as follows (Bryant, in preparation): plosives: *pʰ, b, tʰ, d, kʰ, g*; ejectives: *p, t, q, ṣ*; fricatives: *s, z, š, h*; nasals: *m, n, ŋ*; liquids: *l, r*; glides: *w, y*.

Zelealem Leyew (2005:8) also lists *f* and *ʾ* as phonemes, but according to other data [*f, ɸ*] seems to be in free variation with */pʰ/*, and the glottal stop [ʾ] may not have phonemic status. Many examples of labialized and palatalized plosives, ejectives, and fricatives, and a few examples of labialized/palatalized nasals are found. Zelealem Leyew explains this as a redefining of vowel sequences (e.g. *ṭua* > *ṭwa* 'mouth') that are generally not allowed in the language.

Zelealem Leyew (ibid.) and Hellenthal (in preparation) have described K. as having a five-vowel system – *i, e, a, o, u* along with their lengthened counterparts. Some data indicate the possibility of a seven-vowel system including */ɛ/* and */ɔ/* (Bryant, in preparation), but minimal pairs among the three front or back vowels have not been found. Some contrastive pairs are: *ṣí* 'death', *ṣé* 'mouse', *ṣè* 'ear'; *tʰúš* 'to defecate', *ṭóš* 'to push', *ṭóš* 'to hurt'.

K. has both lexical and grammatical tone. Some lexical contrastive pairs are: *swè* 'house', *swé* 'to pour'; *šà* 'to dig', *šá* 'to eat (grain)'; *pʰɔ̀* 'to bark', *pʰɔ́* 'to throw'; *bìrìṭ* 'to lay down', *bìrítʰ* 'fork (in the road)'.

Although no consistent patterns have yet been found, grammatical tone occurs in verbs. The following examples show the contrastive tone between 1st and 3rd pers. in the verbs:

gà zénízé	'I exist'	*má zèmìzè*	'we (excl.) exist'
ùhày zènízé	'he exists'	*ùm zèmízè*	'you (pl.) exist'

Gender agreement occurs in pronouns, person marking on the verbs and the relative marker (Hellenthal, in preparation). Masculine nouns take a *-zi* or zero suffix and feminine nouns take a *-to/ta* suffix (Zelealem Leyew 2005:24). Nouns having the prefix *mə-* (ibid. 23) or *mu-* (Hellenthal, in preparation) indicate plural although no number marking was evidenced in the Zebsher dialect (Bryant, in preparation).

Adjectives follow the head in noun phrases and relative clauses: *iim*$_1$ *seere*$_2$ *bo*$_3$, 'that$_3$ white$_1$ cow$_2$'. They can easily be predicated:

ga	*seere-n-seere*	*gu*	*ik*	*seere-ki-seere*
1sg.	white-1/3pl.-white	and	2sg.	white-2sg.-white

'I am white and you are white'

Verbs are inflected for person, number and gender (in 3rd pers sg.) as follows (Hellenthal, in preparation; Bryant, in preparation; when two forms are given, the second is from the Zebsher dialect):

sg.	subject	object	pl.	subject	object
1	*-n*	*-ga*	1incl.	*-n*	*-me*
2	*-g*	*-ʾi/-gi*	1excl.	*-m*	*-ma*
3masc.	*-a/-n*	*-l/-ø*	2	*-m*	*-m/-um*
3 fem.	*-b/-a*	*-b/-ap*	3	*-n/-b*	*-n/-on*

Although much more research needs to be done on the tense/aspect marking, the following observations have been made (Zelealem Leyew 2005:15–20; Hellenthal, in preparation): present and future are indicated by the form stem+person marker+stem while *-ga* indicates past; perfect aspect is indicated by *ma*+person marker+stem; imperfective aspect is indicated by *a*+person marker+stem.

The normal word order is S[ubject]-V[erb]-O[bject], e.g.:

gà	*ṭóp-n-í*	*tòmát*
I	drink-1sg-continuous	cigarette

'I am smoking a cigarette'

Varying OV word orders exist. One such case of OV order is seen with negative constructions, which may mean that word order changes for reasons of focus.

uma	*gaya*	*dama*	*aya*
language-Rel	Oromo	Neg.1PlExclSub	know

'The language of Oromo we don't know.'

ay-me	*um*	*araba*
know-1PlExclSub	language	Arab

'We know the Arab language.'

The independent pronouns are given below. When multiple examples are given, the first set of data is from Bryant (in preparation), the second set is from Bender (1994) or Zelealem Leyew (2005:12f.) and the third set from Hellenthal (in preparation).

gà 'I' *má* 'we (excl.)' *mènè/miini* 'we (incl.)'
ìkʰ 'you' *úm* 'you (pl.)'
hày/hal 'he' *hón/hun* 'they'
hapʰ/happ 'she'

The possessive pronouns are:

anà 'mine' *ámà* 'ours (excl.)' *ámènè/amini* 'ours (incl.)'
ákέ/ake 'yours' *ákóm/akum* 'yours (pl.)'
ádέ/adal/wal 'his' *ábón* 'theirs'
ádápʰ/adab/wap 'hers' [*abun* 'theirs (fem.)', *akun* 'theirs (masc.)'
(Zelealem Leyew 2005:13)]

The ten-word list for K. is: 'one' *ásèn / àsíyéné*; 'two' *swìyà*; 'three' *twàsán*; 'fire' *ánṭ*; 'water' *ìyá*; 'sun' *kʰáyá / kʰáálá*; 'moon' *ṣέwàn*; 'blood' *ṣám*; 'tongue' *ṭákʰé / ṭakáll*; 'tooth' *ší*.

Ralph Siebert – Michael Bryant

Kwama ethnography

The K. (self-name: Gwama; Takwama, Goma, Gogwama, Koma of Asosa, Nokanoka, Northern Mao, Amam) are speakers of a ↗Nilo-Saharan language of the ↗Koman sub-group. The K., like the ↗Opuuo, Uduk, Ganza (↗Mao) and Komo, belong to a culturally and historically related group of peoples that is often referred to under the blanket term "Koma".

According to Corfield (1938:128), the K. historically inhabited the region around Mount Banga. The K. today live along the Ethio–Sudanese border with settlements in both countries (for location s. Koman). They share settlements with the Komo. In Ethiopia they live in southern ↗Beni-Šangul around ↗Asosa and in today's regional state of ↗Gambella around Itang, Gambella town and Bonga. According to the 1994 census (CSA 1996), 2,732 K. (including the Komo) are Ethiopian citizens.

The majority of the K. today are Muslims. The K. are agriculturalists who cultivate mainly sorghum, ground nuts, sesame, sweet potato, red pepper, cotton and tobacco. Additionally they keep a small number of domestic animals. Beekeeping as well as fishing and hunting are practised.

Little is known about the history and social organization of the K. The most comprehensive account is a chapter in ↗Schuver (1884), where he calls them "Amam and Koma". A vocabulary, collected by Schuver, was verified by Theis (1995) as an account of K.

The K. suffered heavily from slave raids and the slave trade like all the small ethnic groups of the region of southern ↗Funǧ. According to Schuver (James – Baumann – Johnson 1996:155) the K. had trade relations with Arabs and Oromo who exchanged salt, cloth and beads for wild-honey and "abandoned women or orphan children".

K^{w}egu-Muguǧi

K^{w}egu-Muguǧi language cluster

K.-M. is a language cluster that belongs to the south-eastern group of ↗Surmic languages, in turn part of the East Sudanic family within the ↗Nilo-Saharan phylum. The K.-M. cluster consists of two or possibly three languages.

1. Koegu (self-name): The speakers are called Muguǧi by the ↗Kara (Omotic speakers), and Umuču by the ↗Ñaŋatom (Eastern-Nilotic speakers). Koegu is spoken in a small area along the ↗Omo River in the extreme south-western corner of Ethiopia. The number of speakers is approximately 300; in addition to this, approximately 200 people speak Koegu as a second language (according to author's own information collected during a field research in 1987–89).

2. K^{w}egu (self-name): The speakers are called Nidi by the ↗Mursi and Yidi by the ↗Me'en. K^{w}egu is an endangered language, the number of its speakers being no more than 300 according to Turton – Bender in BendNonSLang (1976). The K^{w}egu live among the Mursi and Me'en, along the Omo River, north to the Koegu.

3. K^{w}oygi: The speakers are a caste of hunters among the ↗Dizi (an Omotic language-speaking people; Haberland 1966). Due to lack of linguistic data it is not clear whether the K^{w}oygi belongs to the K.-M. cluster.

Koegu and K^{w}egu show sufficient convergence to be classified into one language cluster:

	Koegu	K^{w}egu
'mouth'	*tok*	*tok*
'water'	*mwa*	*mua*
'eye'	*karbo*	*kerbo*
'girl'	*hinasi*	*inas*
'ground'	*daali*	*dalu*
'nose'	*gurun*	*guro*

Below a short sketch of the Koegu language is presented.

Koegu has 26 consonants: plosive voiceless: *p*, *t*, *č*, *k*, (ʾ); plosive voiced: *b*, *d*, *ǧ*, *g*; plosive ejective: *ṭ*, *č̣*, *q*; implosive: *ɓ*, *ɗ*; voiceless fricative: *s*, *š*, *h*; voiced fricative: *z*; ejective fricative: *ṣ*; nasal: *m*, *n*, *ñ*, *ŋ*; flap *r*; lateral: *l*; and semi-vowel: *w*, *y*. The status of glottal stop ʾ is unclear; it may be an allophone of *h*. The vowels of Koegu are: *i*, *u*, *e*, *o*, *a*. Vowel length is phonemic. There are two levels of tone, which, however, have not been adequately studied in any of the dialects.

Plural number in nouns and adjectives is marked with suffix *-an*:

	sg.	pl.
'white hair'	*puup*	*puup-an*
'head'	*šubo*	*šub-an*
'small, little'	*kudi*	*kud-an*

There are, however, a few exceptions: *hiŋ-aši* 'girl' ~ *hiŋ-atan* (alongside with the regular form), *tači* 'big' ~ *tatač̣an*.

Plurality is marked only once on the final element in a nominal phrase. When a noun is modified with the plural form of an adjective, the singular form of the noun should be used:

hur	*tatač̣an*	
man	big:pl.	i.e. 'adults (lit. big men)'

In verbs, the 1st and 2nd pers. (sg. and pl.) are marked by prefixes *a-* and *i-* respectively. The 3rd pers. is unmarked. For verbal stems with initial vowel, however, the 3rd pers. pl. is marked by a prefix *g(V)-*. With the exception of a few irregular verbs, the singular stem ends in the vowel *-i*, and the plural stem ends in *-a*. Tense aspect markers follow the singular or plural verb stems.

Non-past tense (morphologically unmarked):

	-mat- 'drink'		*-am-* 'eat'	
	sg.	pl.	sg.	pl.
1st	*a-mat-i*	*a-mat-a*	*a-am-i*	*a-am-a*
2nd	*i-mat-i*	*i-mat-a*	*i-am-i*	*i-am-a*
3rd	*mat-i*	*mat-a*	*am-i*	*ga-am-a*

Imperfective aspect (marked by *-ba*):

	-mat- 'drink'		*-am-* 'eat'	
	sg.	pl.	sg.	pl.
1st	*a-mat-(i)-ba*	*a-mat-a-ba*	*a-am-(i)-ba*	*a-am-a-ba*
2nd	*i-mat-(i)-ba*	*i-mat-a-ba*	*i-am-(i)-ba*	*i-am-a-ba*
3rd	*mat-(i)-ba*	*mat-a-ba*	*am-(i)-ba*	*ga-am-(a)-ba*

Following are examples of personal, possessive and demonstrative pronouns: *aan* 'I', *iin* 'you (sg.)', *irun ~ iši* 'he or she', *uao* 'we', *iyou* 'you (pl.)', *galgitaʾan ~ galgitaʾi* 'they', *naani* 'my', *nuunu* 'your (sg.)', *neeni* 'his, her', *guayu* 'our', *guuyu* 'your (pl.)', *ka galgitaʾan* 'their', *hiʾiŋ* 'this', *gitaʾan* 'these', *haʾaŋ* 'those', *hiʾiŋ ka ham* 'that over there'.

Word order is Subject-Verb-Object:

hur	*niiš-i-aa*	*moho*	
man	kill-sg.-perf.	lion	'A man killed a lion'
moho	*niiš-i-aa*	*hur*	
lion	kill-sg.-perf.	man	'A lion killed a man'

The ten-word list is: *kium* 'one', *daa* 'two', *ğien* 'three', *gu* 'fire', *mwa* 'water', *šuuši* 'sun', *tigeši* 'moon', *ñiabo* 'blood', *kaat* 'tongue', *ñigi* 'tooth'.

There are no written documents in K.-M.

LIONEL BENDER, "Mursi", in: *BendNonSLang* 533–61.

Osamu Hieda

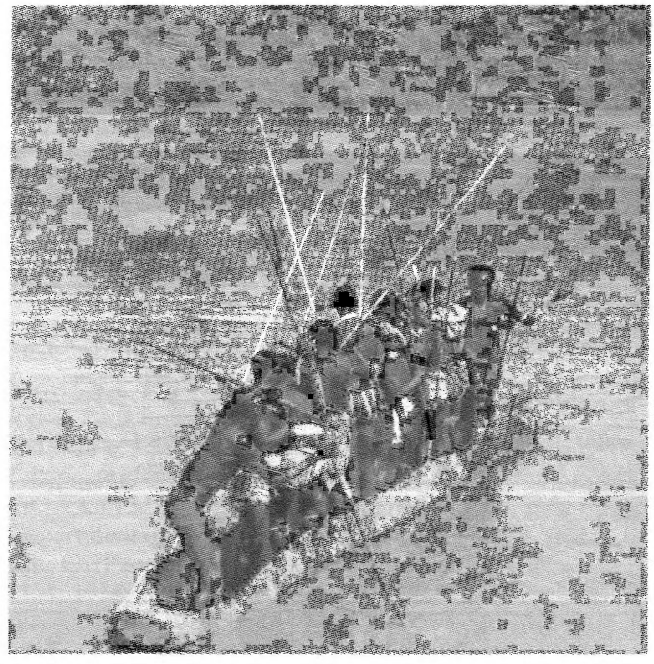
K^{w}egu-Muguği ethnography

At least three ethnically closely interconnected groups, belonging to the K.-M. cluster, are found along the lower ↗Omo in south-western Ethiopia. Their self-designations are K^{w}egu and Koegu (a further relationship to the K^{w}oygi, a clan of the Dizi, cannot be excluded; that name is also used by the Dizi to denominate the K.-M.). Considered as one group by outsiders, they are called Baača in the mountainous agricultural region, Nyidi by the ↗Mursi, Idinit by the ↗Bodi and ↗Meʾen, and Muguği by the ↗Kara.

The total population of these groups is not more than 1,200. Their subsistence economy depends mainly on sorghum cultivation along the river bank; fishing, hunting, and honey-collecting are subsidiary. The common social feature is that all three of them form a stratum which has suffered discrimination by the dominant groups such as the Mursi, the Bodi, and the Kara, mainly because of their non-pastoral and forager-like economy. Clan names originating from the K.-M. are found among the ↗Dizi, the ↗Mağaŋgir, and the ↗Čara.

The group with the self-designation Koegu (ca. 500; known as Muguği by others) has a symbiotic relationship with the neighbouring peoples, the Kara and the ↗Ñaŋatom. This is part of a political strategy that enables them to survive even though they are a minority group in the area. However, the social environment now endangers the Koegu's identity, because it forces them to adopt the languages of their neighbours. This group dwells in the southernmost region. Their oral history reports that they came to the present place from five directions: Bodi, Mursi (two groups), ↗Aari, and ↗Arbore (Marle). A chronological specification shows that this migration might have taken place about 100 to 200 years ago, and it was presumably caused by a cattle epidemic along the Kenyan–Ethiopian border in the 19th cent., and its resulting distress.

Until recently the existence of this cluster of groups was politically and academically ignored. The history of their migration as well as the specific nature of their relationship with their 'host



K^{w}egu crossing the Omo; photo 1988, courtesy of Matsuda Hiroshi

societies' is still largely undocumented (apart from Matsuda's, Turton's and Hieda's work). More knowledge on this, however, would help to understand the ethno-genesis of these communities in south-western Ethiopia as well as their local history and social dynamics.

Kʷəlgora

K. (ኩልጎራ; كلجورة, Kalğūra in Arab. sources) was a historical district situated between the Muslim sultanates of ↗Ifat and ↗Šäwa, according to Huntingford, south of ↗Ankobär and near ↗Aləyyu Amba (HuntGeogr 89f.).

In the account on the campaign of *aṣe* ↗ᶜAmda Ṣəyon I against ↗Ifat, K. is listed as one of the Muslim "lands", along with Gədayä (↗Gidāya), Kubät, Fädse, Qälse, Hargaya and Bəqul Zar. According to a contemporary report of Ibn Faḍlallāh al-↗ᶜUmarī (d. 1349), K. was one of the "founding cities" of Ifat (Arab. *mudun ummahāt*, "cites mères", s. UmMasGaud 8).

Kʷəlləkkəmu

K. (ኩልኩሙ) is a kind of ↗*qəne*. It is formed by adding an additional *bet* to the ↗*mäwäddəs qəne* (hence its occasional designation as "long *mäwäddəs*"). The name comes from the initial words of Ps 46/47 (*Kʷəlləkkəmu aḥzab* ..., 'You all people ...'), sung in combination with the K. *qəne*. Usually a K. has nine *bet* and is offered to elderly people or to the head of the Church in which the Sunday office is being performed.

K. are composed by the church scholars (↗*Däbtära, liqawənt*) and teachers well experienced in composing *qəne*. They are seldom improvized because the ↗*Dəggʷa* antiphonary contains a number of short pre-composed hymns, *arbaᶜət*, that serve the same function.

Kʷərᶜatä rəʾəsu

K.r. (ኩርዓተ: ርእሱ, lit. 'the striking of His [Jesus's] head', *percussio capitis*) was the name originally given to a European painting of Christ which served in Ethiopia as royal palladium. Later on, it was also applied to designate all its Ethiopian copies, and even other thematically related works.

Fig. 1: The original *Kʷərᶜatä rəʾəsu* or *Ecce Homo*, attributed to Adriaen Ysenbrant or his circle; private collection in Portugal; photo 1917, Courtauld Institute of Art

Fig. 2: Christ crowned with thorns; miniature in ms. *Gəbrä ḥəmamat*, fol. 123v, end of the 15th cent., Däbrä Abunä Märᶜawe Krəstos, Šire; photo 2005, courtesy of Michael Gervers

The original painting (tempera on an oak panel, 31.5 x 26 cm, fig. 1) is ascribed on stylistic grounds to a representative of the Flemish Northern Renaissance school, namely to Adriaen Ysenbrant/Isenbran(d)t (Brügge, ca. 1490–1551; s. Friedländer 1974:90) or his workshop (but cp. ↗Andrade, Lázaro de). It features Jesus in half-figure with raised hands in a gesture of acceptance, a mantel over his naked body, the crown of thorns and an elaborated, rayed halo. Christ's face is calm and his sufferings are only indicated by blood dripping from his forehead. This type of representation, called *Ecce Homo*, alludes to the Gospel account of the mocking of Jesus (Jn 19:4–6; Mat 27:27–31; Mk 15:17–19). The painting was most probably brought to Ethiopia either during the 1520s by the Portuguese Mission (↗Alvares) or later by the ↗Jesuits. A caption in Gəᶜəz was then locally added: **ዘከመ፡ ኰርዕዎ፡ ርእሶ፡ ለእግዚእነ** (*zäkämä kʷärᶜəwwo rəʾəso läʾəgziʾənä*, 'how they strike the head of Our Lord').

According to the chronicles of ↗Yoḥannəs I, ↗Bäkaffa, ↗Iyasu II and ↗Täklä Giyorgis, the painting accompanied the Ethiopian emperors on military expeditions; in its presence the people swore fidelity to the royal house. The icon was kept either in ↗Aksum or in the royal residences until it was captured by the Sudanese Muslims battling with Iyasu II in 1744, during his unsuccessful expedition to ↗Sinnār. Returned on payment of a ransom, the K.r. was transferred to one of the monasteries on Lake Ṭana for reasons of safety. *Aṣe* Tewodros II took it to ↗Mäqdäla as part of the royal insignia. From there it disappeared when General ↗Napier seized the fortress in 1868. In fact, the painting was taken by the ↗British Museum's envoy to Ethiopia, Richard Holmes, who kept it secretly in his private collection – which was the reason why the painting was not returned to Ethiopia when repeatedly requested by *aṣe* ↗Yoḥannəs IV, who even charged a diplomatic envoy with the task of returning it to Ethiopia.

In 1890 the K.r. was the subject of a lecture by the Belgian art historian A. Wauters, who ascribed it to Quentin Massys (1466–1530). Other specialists who examined the work when it was auctioned at Christie's in London (1917 and 1950) expressed different opinions concerning its origin. Detailed descriptions, with notes on the range of colours of the K.r., produced on those occasions are particularly valuable, since until recently the painting was known to scholars only from a black-white photograph. The K.r. is presently kept in a private collection in Portugal.

Ethiopian traditional ↗historiography lends a much more ancient and honourable origin to the K.r.: painted by St. Luke (GueCopMen 25f.) or by St. John the Evangelist or St. Mary (different versions in the "short chronicle", s. CerPal vol. 1, 267; Conti Rossini 1926:363), the picture is said have been brought to Ethiopia from ↗Jerusalem under "king Dawit" as booty from Egypt along with the fragments of the True Cross (↗*Mäsqäl*) and other precious relics. Kept in a "tower" of the royal palace, the painting was deposed on the throne covered by precious textiles, and venerated in daily and nightly services.

Another version of this story is reported in the *Mäṣḥafä ↗ṭefut*, oral tradition (Pollera 1926:308f.), and mentioned by James ↗Bruce: the origins of the K.r. are said to be connected with the Ethiopian acquisition of important holy places in Jerusalem, namely the Chapel of the Mock-

ing in the Holy Sepulchre, during the reigns of either ↗Zärᵓa Yaᶜəqob or ↗Baᵓədä Maryam. The main relic of this chapel was a fragment of the broken column on which Jesus was sitting when mocked and crowned with thorns (CerPal vol. 1, 265ff.). Not unimportant for the development of K.r. iconography might be those legends about "king Dawit" – actually ↗Dawit II (yet identified with *aṣe* ↗Ləbnä Dəngəl), or ↗Dawit III – according to which, among the relics obtained by him from Jerusalem were the nails of the cross, the reed used by the tormentors to smite Christ's head and the sticks to fix the crown of thorns on his head. A source concerning *aṣe* ↗Täklä Giyorgis ascribes to the K.r. supernatural powers, telling about the fire that devastated the military camp but did not touch the tent with the icon (BlunChr 248).

Given its prestige, the K.r. became a most frequent subject of painting on wood, usually along with other scenes of the Passion (IES 3894). It can either occupy a whole single panel or be the central subject of a triptych (IES 3329). In manuscript illuminations, the K.r. is not included in the Passion sequence, but ranges with the devotional images grouped at the beginning or at the end of the book (*Dərsanä Mikaᵓel* from Aṣbi Śəllase, fol. 5v). As a devotional picture it also appears on folded parchment strips or ↗*sənsul* (Sam Fogg no. 78). Significantly, it is one of the models dating from around 1700, in what remains of a painter's album from ↗Däbrä Damo, now Parma, Biblioteca Palatina, ms. Parm. 3853 (formerly in the collection of Antonio ↗Mordini, no. 20, fol. 2v). In the middle of the 18th cent. the K.r. turns up on the obverses of large, shafted ↗crosses, usually in addition to the Crucifixion, Flagellation and Entombment (IES 3570 from Waldəbba, Säqʷar Kidanä Məḥrät), as well as on the lower square of some hand crosses. It is seldom included in church decoration programmes. When present, it is placed on the west wall of the ↗*mäqdäs* as part of the Passion cycle, but seems to have been introduced as late as at the end of the 18th cent. (↗Narga Śəllase).

From the iconographical point of view, two main types of K.r. can be distinguished, both following the styles noted in Ethiopian art between the early 17th cent. and the present time. The first type closely follows the European *Vorlage* (panel IES 4195): if changes are made, they primarily concern the form and embellishment of the halo. This detail, depicted in the royal icon by a series of very thin rays with triple endings in

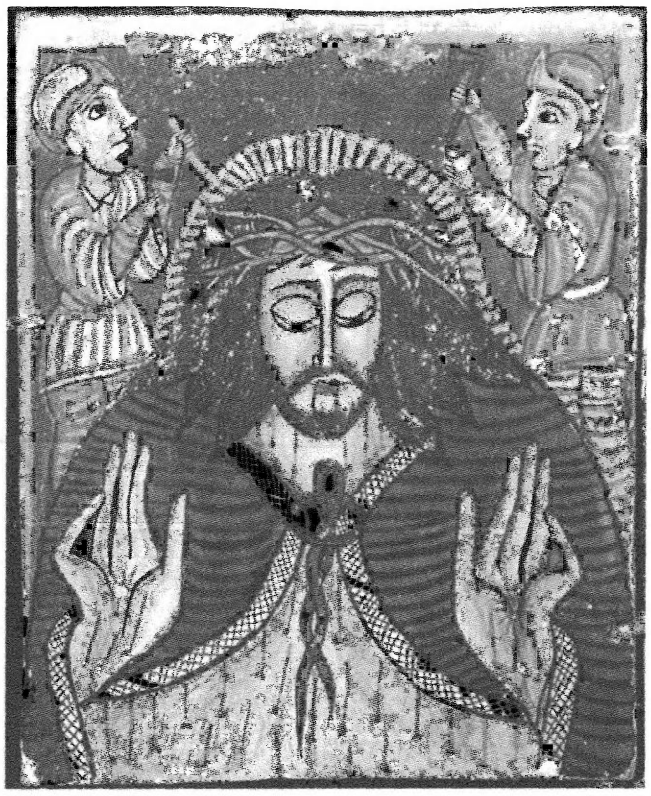

Fig. 3: Diptych, left wing; 18th cent., IES 3790; photo courtesy of Paul Henze

the form of *fleur-de-lis*, is often transformed into differently outlined circles (double diptych IES 6965) and sometimes into rhombi (triptych IES 4115). The second type includes elements borrowed from the Passion scenes, in particular the Arrest of Christ, the Mocking and the Crowning with thorns, which in their western form entered the Ethiopian pictorial repertory already at the end of the 15th cent. (fig. 2). The Crown, which assumed a peculiar form in Ethiopia, was conflated with the radiant halo of the royal icon and turned into the nails protruding from Christ's head (diptych IES 4116). In the narrative variant of the scene, two tormentors, often represented with beastly faces and Muslim attire, hammer them into his head (fig. 3). This iconographical type may be influenced by the elusive tradition of the magical square and the fifth nail, driven through Christ's forehead (instead of his chest) at the Crucifixion (Staude 1971:6f.). It was also suggested that the Ethiopian fixed poem form called ↗*sämənna wärq*, based on a multifaceted understanding of meanings, contributed to the pictorial combination of golden rays and nails/thorns (Stoffregen Pedersen 2002).

A fusion with the image of the *Vir doloris* ("Man of sorrow") and the west-European type of the Ascension resulted instead in the anachro-

nistic formula of Christ displaying the bleeding wounds on his palms. This addition is in agreement with the widespread interpretation of the scene by Ethiopian artists, in whose sight the subtle expression of Christ's sufferings as found in the European painting must have been ineffective: in order to dramatize the scene, they portrayed him with blood streaming from his wounded head, and even with bloodshot eyes (triptych IES 3492). Sometimes the K.r.'s devotional role is emphasized by the addition of a prostrated suppliant (IES 8052).

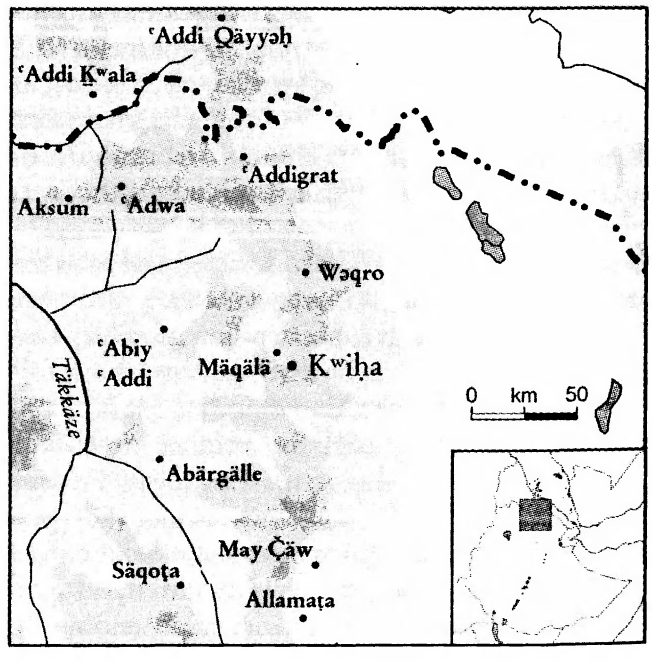
Kʷiḥa

K. (ኩሓ, Ital. Quihà) is an ancient settlement in ↗Ǝndärta about ten km away from Mäqälä, on the Ǝndärta route from the Red Sea coast via ↗Akkälä Guzay into inner Ethiopia. Today it is an important garrison for ↗Təgray.

Archaeological surveys showed that K. is a site of ancient settlement. Findings of obsidian and stone tools are reported. Godet (1977:54) compares them with the stone tool craftsmenship of the Mäqdäla area in Wällo, northern Somalia (Hargeisa) and Kenya.

K.'s site of ancient ruins, first described by Conti Rossini (1938), lies in the north-western part of the town. The compound of the modern Qəddus Čärqos church, built in 1985/86, separates the main part of the site, with 30 broken columns and carved stones, from a smaller site ca. 150 m away, with two more lying columns or stelae. The ancient ruins of the main site are the remnants of a rectangular building. They seem to date already from late Aksumite or post-Aksumite times (Godet 1977:54).

Local tradition attributes them to an ancient church "founded by *aṣe* ↗ᶜAmdä Ṣəyon",



The Č̣ärqos church of Kʷiḥa and Aksumite remains; photo 2005, courtesy of the author

called Ǝnda Č̣ärqos or Ǝnda Qirqos (Smidt 2007:110; Sengal in CRStud 43); later it was destroyed by ↗Aḥmad b. Ibrāhīm al-Ġāzī (Godet 1977:54; Smidt in StudAeth 260). There is also an oral tradition which claims that this church ruin is among "the oldest" in Ethiopia; it is said to date, along with the church ruin of ↗Agulaᶜ in ↗Ṣəraᵓ (north of K.), "from the time of the foundation of Aksum Ṣəyon". Archaeological research on the site has not been carried out yet. Anfray (1973:17; cp. Godet 1977:36; Smidt 2007:110) compares the columns with those from the also yet unexplored site of Däbrä Gärgiš, Ḥaramat (near an Ǝnda Č̣ärqos church), also possibly late Aksumite or early post-Aksumite.

After the 16th-cent. destruction of the church, the parish of Ǝnda Č̣ärqos became part of the parish of Ǝgär Ḥariba (እገር፡ ሐሪባ, also Wəgär Ḥariba, Wägər Ḥariba), up on a nearby hill overlooking the trade route passing by and then becoming the main centre of the area, as the seat of the local ↗*č̣əqa šum*. In colonial times, when K. became more important than Ǝgär Ḥariba thanks to its location at the new asphalted road and the incorporation of the nearby Ǝmba Fäqadu settlement, another church (dedicated to St. Mary) was founded in K.'s new centre, near the road.

Through private initiative, the Č̣ärqos church was "rebuilt" during the *Därg* time (in rectangular shape). The surrounding land with the late Aksumite ruins, traditional *rəsti* of local families (↗*Rəst*), became church land, and peasants plough it around the ruins as a part of their service to the church (Tgn. *mäbaᵓ*). Occasional findings are ↗pottery and remains of human skeletons, which point to the former use of the site as a ↗burial place.

50 m from the main site, within the today's church compound, a stone with an ancient Arabic ↗inscription has been found. Identified by the local population as "Hebrew", witnessing their "descent from ancient Israel", it is kept in the church (s. Smidt in StudAeth). The inscription is part of a broken 10th/12th-cent. Muslim gravestone and belongs to a series of Arabic inscriptions of the same age described already in the 19th cent.; they are mentioned as having been found in Ǝgär Ḥariba, because the area belonged to that parish before attached to K. (Conti Rossini 1938).

All known inscriptions are from Muslim gravestones and have allowed a partial reconstruction of the genealogy of two important Muslim families of the 11th cent. and their connection to those known from the ↗Dahlak funeral stelae. They are thus important witnesses to the existence of Muslim trade posts connecting inner Təgray with the Red Sea commerce in the ↗Zagʷe period and before. It is reported that up to the 16th cent., Muslims had been responsible for the tax collection at K. Ǝgär Ḥariba was an important tax station for the salt trade until the reign of *aṣe* ↗Iyasu I (cp. GuiIohan 207; Conti Rossini 1938:404). At times, Ǝgär Ḥariba was the seat of important local governors, such as Däbbäb, the brother of *ras* ↗Wäldä Śəllase (ibid. 399). It appears as a tributary district within Ǝndärta with a *nägarit* for its own, apart from Mäqälä, in the tax register of *aṣe* Tewodros II (Girma-Selassie Asfaw – Pankhurst 1978:81).

L

Lä^{ə}asonhi

L. (**ለአሶንሂ**, also La^{ə}ašonhi) was king of Hinnaryo (↗ Ǝnnarya). He was installed after his predecessor ↗ Säpänhi had been killed, and ruled for an unknown number of years in 1570s (Lange 1982:33). His name is known from one of the versions of the Chronicle of *aṣe* ↗ Śärṣä Dəngəl only (CRHist 167), which refers to his favouring Christianity and his strong desire to embrace it (cp. ibid. 120). Later on in the text, the Emperor's *azzaž* in charge of finances is denounced for having prevented L. and his people from formal conversion, in order to retain extra revenue from Hinnaryo. L. was followed on the throne by his son ↗ Bädančo.

Labhalet ^{c}Are ↗ Minifire

Lada^{c} ^{c}Uṯmān

L.^{c}U. (لدع عثمان or لاد عثمان, Lād ^{c}Uṯmān; in Gə^{c}əz sources: **ለደዕ፡ እስማን**, Lädä^{c} Ǝsman; fl. 15th cent.) was, according to the Chronicle of *aṣe* ↗ Bä^{ə}ədä Maryam I, a governor (*mäk^{w}ännən*) of ↗ ^{c}Adal who shortly after the death of the ↗ Walašma^{c} *sulṭān* Muḥammad b. Aḥmad Badlāy (r. 1445–71) marched against Bä^{ə}ədä Maryam, so that the latter had to stop the preparations for his coronation in ↗ Aksum and to order all the *mäk^{w}anənt*, who should have participated in the ceremonies at Aksum, to join him (PerrZarY 150). The Chronicle does not say anything about the result of L.^{c}U.'s advance. Later, the troops of Bä^{ə}ədä Maryam were successful against ^{c}Adal twice (ibid. 159; 167), but finally they were defeated in 1474 (ibid. 180f.). It is not said whether L.^{c}U. participated in these later battles.

From ^{c}Arabfaqīh's ↗ *Futūḥ al-Ḥabaša* we know that L.^{c}U.'s son, *gärad* Aḥmad, played a role during the time of ↗ Aḥmad b. Ibrāhīm al-Ġāzī (Grañ), first in the entourage of the Walašma^{c} *sulṭān* ↗ ^{c}Umardīn Muḥammad b. Aẓharaddīn and later as an officer of Aḥmad Grañ.

According to Trimingham (TrIslam 82), L.^{c}U. was the governor of ↗ Zayla^{c}; however, this is not supported by any source. Perruchon (PerrZarY 150) considers L.^{c}U. to be the successor to the above-mentioned *sulṭān* Muḥammad b. Aḥmad Badlāy. This statement is, as Cerulli (1931:48, n. 37) pointed out, based on an over-interpretation of the passage in the Chronicle of Bä^{ə}ədä Maryam. Most probably, L.^{c}U. was only a nobleman in the Walašma^{c} sultanate, because according to the Walašma^{c} chronicle Muḥammad b. Aḥmad Badlāy was succeeded by his son Ibrāhīm (ibid.).

Basset (BassHist 8, n. 2 [tr.]) does not exclude the possibility of identifying L.^{c}U. with Muḥammad b. Aḥmad Badlāy's grandson, the renegade ^{c}Uṯmān b. Sulaymān b. Muḥammad b. Badlāy, mentioned by ^{c}Arabfaqīh for the year 1528 (BassHist 103 [tr.]). This, however, seems to be improbable for chronological reasons.

Morin (MorDicAfar 211) suggests that the name Lada^{c} may be derived from ^{c}Afar *la^{c}dé*, 'having a wrinkled face'. According to Morin, this would fit well with the hypothesis of an increasing influence of the ↗ ^{c}Afar in ^{c}Adal in the 14th cent.

Ewald Wagner

Lādū(h)

Gärad L. (لادو, لادو, probably the same name as لاد, لدع, also called لادوه زخل, Zuḫal Lādūh, d. 18 September 1588, Wäraba, Awsa) was governor of ↗ Zayla^{c}. He was put into power by *imām* ↗ Muḥammad Gāsā I b. Ibrāhīm of ↗ Awsa (r. 1576–83). The tenure of L. was interrupted when the eunuch *gärad* Nūr and the *Sem gärad* ^{c}Umardīn, together with the Somali, sacked the town. Muḥammad Gāsā I, however, removed Nūr from Zayla^{c} and reinstalled L. (Cerulli 1931:70; Wagner 1979:661).

It was L. who ordered the architect ᶜAṭīya b. Muḥammad al-Qurašī to build a wall around Zaylaᶜ. An Arabic document says that this happened when ↗Muḥammad b. Naṣīr b. ᶜUṯmān was in the Christian empire to fight *aṣe* ↗Śärṣä Dəngəl (Cerulli 1931:89), which, according to Christian sources (CRHist 48 [text]), was in 1576. Since it seems probable that the wall was built to prevent a second sacking of the town, we may suppose that the first happened at the very start of Muḥammad Gāsā I b. Ibrāhīm's rule and that L. had the wall built just after Nūr and his associates had been driven out of the town. After his restoration as governor, L. ruled the town till his death.

Läga Dadi

The L.D. (ለጋ፡ ዳዲ, Orom. sp. Laga Daadhii) is a tributary of the ↗Aqaqi river. It has its source on the edge of the North Šäwa plateaux in Oromiyaa. Its importance lies in the reservoir about 25 km north-east of ↗Addis Abäba (38° 92' E, 9° N) that supplies the Ethiopian capital with water. The reservoir is created by two dykes, made of reinforced rocks, damming the valley: upstream, 450 m long and 46 m high (110,000 m³), and downstream, 600 m long and 20 m high (21,000 m³). The artificial L.D. lake was inaugurated in 1970 by ↗Ḫaylä Śəllase I. Threatened by silting, it had to be cleaned ten years later. The reservoir contains 30,000,000 m³ of water and supplies the Läga Dadi Water Treatment Plant with 150 000 m³ water a day. Built in 1986 by the Addis Ababa Water Sewerage Authority this plant also treats 70,000 m³ a day provided by the Gäfarsa (built during the Italian occupation and later enlarged) and Dire reservoirs.

Läga Gora

L.G. (ለጋ፡ ጎራ, from Orom. *laga* 'river, stream', *goora* 'loop, curve, hill') is a highland region in southern ↗Wällo, roughly corresponding to the area of today's ↗Wärrä Illu. The natural frontier between L.G. and ↗Šäwa is formed by the ↗Wänčət river (for location s. Läga Hidda).

L.G. lies within the historical ↗Amhara province; it is here that the vestiges of the 15th-16th-cent. ↗Mäkanä Śəllase church were found. Due to the migration of the ↗Oromo in the 17th–18th cent., the population of L.G. had an Oromo cultural background. This faded away because of Amhara influences from inside and outside Wällo, although a difference was maintained through conversion to ↗Islam at the end of 18th cent.

In the early 19th-cent. European accounts L.G. acts as one of the powerful *säbat bet Wällo* ('the seven houses of Wällo'). As the form of the toponym L.G. shows, clan relationship or common descent with such other members of the *säbat bet* confederation as ↗Läga Hidda and ↗Lägambo seems possible.

L.G. was on good terms with Šäwan rulers and gained a favourable position in the balance of power among Wällo chiefdoms. The residence of the chief of L.G. (↗Adära Bille in the 1840s) was at Gattira, a day's walk from the stronghold of Dayär, from where the northern border of Šäwa was controlled. The "Gattiročč dynasty" was influential in this part of Wällo, until *nəguś*

Mənilək brought the region under Šäwan control in the 1870s.

An early and detailed account of L.G. is provided by Krapf who spent one week there, when he was detained and robbed. The missionary passed L.G. on his way to Egypt in 1842 and was warmly received by Adära Bille. Krapf travelled the next day to Lägambo and ↗Wärrä Himäno but on reaching Dälanta he had to turn back because of problems with the armies of Bägemdər. This time he was arrested in Gattira and escorted out of Wällo through ↗Täkʷəladäre and Yäğğu without his luggage. It is likely that Adära Bille had been ordered by ↗Śahlä Śəllase of Šäwa (through the governor of Dayär) not to let the European missionary return. This episode indicates that the ruler of L.G. cooperated with Šäwa in protecting its northern border. According to Krapf, his guards spoke Amharic but used Oromiffa when they wanted not to be understood by their captive (who, however, could understand them). According to the same source, Adära Bille took major decisions after a ↗*wädağğa* ceremony, i.e. an Islamic ritual gathering with Oromo religious influences.

The exact location of the historical L.G. cannot be reconstructed as it varied throughout history. It gradually disappeared as a political unit after the foundation of Wärrä Illu town in the 1870s. In the 20th cent. L.G. was absorbed into the Wärrä Illu province dominated by Šäwa. In the provincial administration of post-war Imperial Ethiopia (1941–74) the northern part of historical L.G. became a *wäräda* in the south-east of Wärrä Himäno *awraǧğa*.

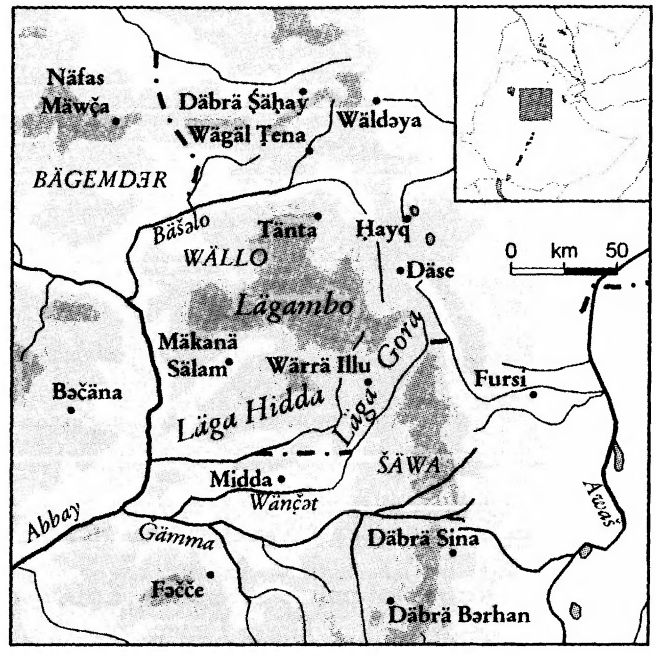
Éloi Ficquet

Läga Hidda

L.H. (ለጋ ሂዳ, from Orom. *laga*, 'river, stream', *hidda*, 'vine') is a highland territory in the South ↗Wällo zone of the Amhara region, in the northwest of the ↗Wärrä Illu area.

The ruins of the 15th-cent. monastery of ↗Däbrä Nägʷädgʷad are believed to be in L.H. (Brielli in CRStud 82). Reliable historical data on



L.H. appears in the first descriptions of Wällo in the middle of the 19th cent. They mention L.H. as one of the *säbat bet Wällo*, 'the seven houses of Wällo', i.e. the seven most powerful Wällo Oromo clans of the ↗*Zämänä mäsafənt* period. The toponymic similarity between L.H. and the designations of such adjoining territories as ↗Läga Gora and ↗Lägambo, also mentioned among the *säbat bet Wällo*, may suggest clan links.

In 1836, French travellers Combes and Tamisier stopped in L.H. and were first welcomed by its chief Ḥasan Dullo (name indicating that he was an Oromo confessing Islam) but then robbed when it was discovered that they were European and Christian.

The territorial extent of L.H. before the 20th cent. is vague and cannot be reconstructed exactly, as it varied with the political and military conditions prevailing in this region. In the provincial administration of post-war modern Ethiopia (1941–74) it was a *wäräda* of ↗Wärrä Illu *awraǧğa*, with its capital at Wäyn Amba. After the administrative reform of 1987, it became part of an *awraǧğa* that included the neighbouring Kälala. Today, the name does not hold any administrative status.

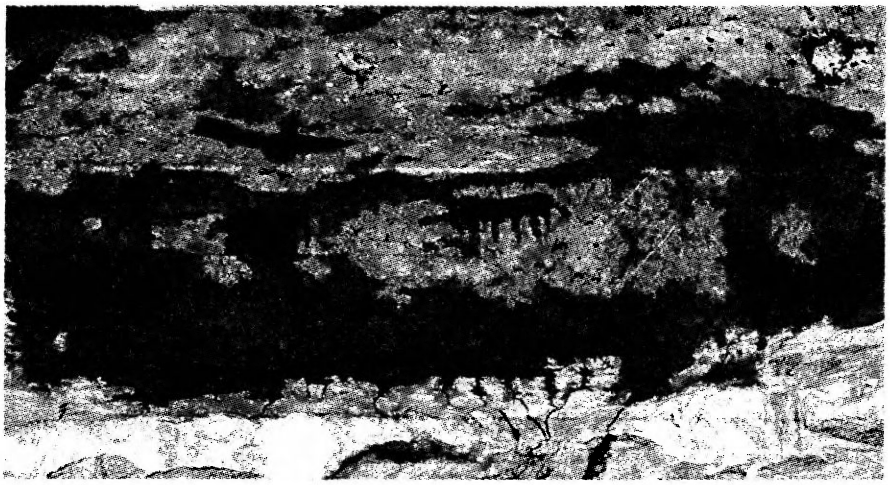
Läga Oda

The L.O. (ለጋ ኦዳ) archaeological sites comprise two rockshelters located in the foothills



Rock paintings from Läga Oda; photo 1950/52 by Elisabeth Pauli, courtesy of the Frobenius-Institut (no. 23–Pa091–24)

of the ↗Č̣ärč̣är Mountains in eastern Ethiopia, ca. 25 km south-west of Dərre Dawa and 10 km north of Qulləbi.

The L.O. sites contain hundreds of paintings on their limestone walls including scenes of long-horned and humpless cattle, fat-tailed sheep, possible ↗elephant figures, and human figures (↗Rock art). The paintings were studied by Patricia Vinnicombe in mid-1970s; the tracings she made are kept in the Rock Art Research Institute in Johannesburg, with copies at Berkeley.

Test excavations led by Clark in 1975 produced a long occupation sequence stretching from the late Pleistocene to the modern era. Fragmentary cattle remains were associated with flaked stone tool artifacts made mostly from chert material and with pottery sherds that were radiocarbon-dated via an associated charcoal sample to about 1500 B.C. Camel faunal remains recovered from an upper level date to between 1300 and 1600 A.D. In addition, Clark and Prince reported evidence of intensive grass collection in the form of sickle sheen gloss and polish observed on stone tools (sickle sheen is a silica deposit or polishing that may occur along the working edge of chert stone tools during their use to harvest plants).

While the L.O. human occupation was long, the sample of artefacts from early levels is small and, apart from the possible sickle sheen, no other archaeobotanical evidence of wild or cultivated plants was recovered from the excavations.

Lagamara

The ↗Oromo district of L. (or Läga Amhara, 'River of the Amhara') is located about 250 km west of Addis Abäba, along the main east-west road, near Tibbe, in western Šäwa (for location s. Limmu Ǝnnarya). It is divided into the sub-districts of Wärrä Gibbu, Wärrä Badesso and Wärrä Gode. This area is positioned on what was, in the middle of the 1800s, the main north-south trade route between Goǧǧam and the Gibe states. At that time it was a cause for numerous rivalries for economic and political control. In 1855 Guglielmo ↗Massaja made Tibbe-Lagamara the centre of his missionary activity, and his writings are our major source of information about this period. In addition to providing a detailed geographic and anthropological description of the area, he presents a rare first-hand account of warfare, conquest, and political change, recounting bat-

tles between the ↗*abbaa dulaa* of L. and the Čala that resulted in the subjugation of the people of Čala. From the 1870s this region was fought over by forces from Goǧǧam and Šäwa, and by 1882 L. was under the control of ↗Mənilək (II) and his allies.

Lägambo

L. (ᎱᏋᎰᎮ, also Läga Ambo, from Orom. *laga* 'river, stream' and Orom./Amh. *ambo* 'mineral water') is a territory in southern ↗Wällo. Being the highest and most mountainous area of the province, altitudes ranging from 1,700 to 4,000 m A.S.L., L. is an inhospitable land frequently affected by ↗famines, but its central topographic position led it to become a crossroads and/or buffer zone between the other territories of Wällo (for location s. Läga Hidda).

A place called Gʷäl is found in L. It can be probably identified with the historical monastery of Däbrä Gʷäl possibly founded by *abunä* ↗Bäṣälotä Mikaʾel and destroyed by the troops of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī in the 16th cent. (AmhChurchDic vol. 2, 33).

L. is counted among the *säbat bet Wällo*, 'the seven houses of Wällo', i.e. clans constituting the frame of power relations in Wällo during the ↗*Zämänä mäsafənt* period. Throughout its history it was particularly influenced by the hegemonic influence of ↗Wärrä Himäno.

In the second half of the 20th cent. L. constituted a *wäräda* within the *awraǧǧa* of Wärrä Himäno. After 1991, it became a *wäräda* of Dəbub Wällo zone of the Amhara region, with Aqästa as its main town. L. *wäräda* covers an area of over 1,000 km² and borders on Kälala in the south, on Wägde in the south-west, on Däbrä Sina in the west, on Sayənt in the north-west, on Tänta in the north, on Kutabär in the north-east, on Däse Zuriya in the east and on Wärrä Illu in the south-east. In 2005, L. had an estimated population of ca. 215,500 (corresponding to the density of 184.5 inh./km²), ca. 5,000 inhabitants living in the main town.

Éloi Ficquet

Lagarde, Léonce

Léonce Antoine Marie L., comte romain de Rouffeyroux (b. 10 October 1860, Lempdes sur Allagnon, Haute Loire, d. 15 February 1936, Paris) was a governor of the French colony of ↗Obock, French minister in Ethiopia and then advisor to Ethiopia at the ↗League of Nations.

L. was the descendant of a family of notaries and military and civil functionaries, and grandson of the famous writer Alfred Assolant. He started his career in prefectorial and diplomatic administration; during service at the Vatican he purchased his title of Count. After working with the governor of Cochinchina in 1883, he returned to ↗France for health reasons and was nominated for a post in Senegal. However, because of his good relationship with the secretary of state responsible for the colonies, the future President Félix Faure, instead he went to Obock in December 1883 and was appointed commander of the colonie d'Obock in June 1884. He immediately signed protectorate treaties in order to enlarge the territory ceded to France by the treaty of 1862. One was concluded with the *dardar* ↗ᶜAfar of Tağūra on 21 September 1884, others with the *dardar* of Gobᶜad on 9 August 1884 and 2 January 1885 respectively. As Obock was not the "natural" port of the commercial route from Harär to the Red Sea, L. decided, in agreement with Mənilək of Šäwa and ↗ᶜIssa chiefs (treaty of 26 March 1885), to transfer the capital of the colony to ↗Djibouti in 1888. The administration was transferred in 1892. In 1887 L. was appointed governor of Obock and French consul at ↗Zaylaᶜ. As such he was the key-person in the Anglo–French Treaty of 1888 regarding Harär.

L. helped to strengthen *aṣe* Mənilək's independence by promoting projects of collaboration with France, such as the establishment of the Chemin de fer franco–éthiopien (↗Railways), discussions about Italian debts, the establishment of a monetary and a ↗postal system (cp. ↗Stamps) among others. Therefore *aṣe* Mənilək awarded the specally created Europeanizing title of *yäʾənṭoṭṭo duk* ('Duke of Ǝnṭoṭṭo') to him in 1897. His long term friendship with *ras* Mäkʷännən led him to become a tutor of his son Täfäri (later *aṣe*

Léonce Lagarde on a postcard; photo around 1900, fonds des Colonies d'Aix-en-Provence : CAOM, 43 fi/3 (portrait I 70, boite 7)

↗Ḫaylä Śəllase I). L. was nominated director of political and commercial affairs at the Ministry of Colonies in February 1895, but did not assume this post, as he was immediately thereafter made minister plenipotentiary of France in Ethiopia, in addition to his post of governor. Having been the key-person for French politics in eastern Africa since 1884, he naturally became involved in the affair of ↗Fashoda. In this context he was asked to renew the Franco–Šäwan Treaty of 1843 which led to the Franco–Ethiopian convention of 20 March 1897. L. also organized the expeditions of ↗Clochette and Bonchamps to the Nile to meet capitaine Marchand in Fashoda, which brought him into conflict with Ethiopian interests. As a sanction, L. lost his post of governor of the renamed Côte Française des Somalis (Djibouti) in 1899, but he remained as the French minister in Addis Abäba until 1907.

After he had returned to France, where he had lost political support, he did not assume important political posts any more. During World War I he was the director of the war prisoners office of the Navy under General Gallieni. However, L. continued to serve Ethiopia, where Täfäri had assumed government from 1916. L. was nominated advisor to Ethiopia at the ↗League of Nations in 1924, and was crucial in organizing *ras* Täfäri's journey to France this same year. Considered almost as a member of the imperial family, he sat behind *aṣe* Ḫaylä Śəllase I during his coronation in 1930.

After his death, L. was quickly forgotten. In 1952, during a visit to France, Ḫaylä Śəllase fixed a commemorative plaque at L.'s birthplace on account of his services to Ethiopia. A square in Djibouti is named after him.

Lukian Prijac

Läğo

L. is the name of a mountain range separating two right-bank tributaries of the ↗Wabi Šabälle river and a pass which crosses the range (at 3,420 m A.S.L.) which also gives its name to a town on the Šašämane Goba–Bale road, between the towns of Adaba and Dinčo. The town, which emerged less than 30 years ago near the boundary of the Arsi zone, belongs to Adaba and Agarfa *wäräda*, Bale zone, Oromiyaa *kəlləl*. Since L. has less than 1,000 inhabitants it is not listed by the CSA.

Alain Gascon

Laḥa Maryam

The L.M. (ላሐ፡ ማርያም, 'The Lament of Mary') is a homily well-known in Ethiopia. Its topic is the grief and lament of St. ↗Mary over the ↗crucifixion of Jesus and other events of Good Friday and the days following. It starts with a reminiscence of Jacob's lament over Joseph, proceeds with Mary's lament during the Passion and Crucifixion, interwoven with reports of the events. The second part of the text does not deal with Mary at all, but with the role of ↗Pontius Pilate in the crucifixion. In keeping with the apocryphal literature about him, Pilate is depicted as a basically benevolent governor who agreed to the crucifixion out of weakness, and recognized his fault as soon as he saw the supernatural phenomena during Jesus's death; after a dream-vision, he understood the divine nature of Jesus Christ.

The L.M. is attributed to the enigmatic bishop of Behnesa (Arab.: al-Bahnasā; Lat.: Oxyrhynchos), Cyriacus (cf. Coquin 1991). In fact, the text is based on the apocryphal Gospel of Gamaliel, originally written in Coptic probably in the 5th or 6th cent. by a Christian hostile to Judaism. Of the Coptic text only fragments survived (cf. Elliott 1993: 159f.). The narrative of the Gospel of Gamaliel was integrated into an Arabic homily on the Lament of the Virgin, ascribed to Cyriacus, which survives in several manuscripts (GrafLit vol. 1, 247f.; Mingana 1928). The text was translated from Arabic into Gəʿəz: according to the manuscript tradition, by *abunä* ↗Sälama "the Translator", in the second half of the 14th cent. So far, there is no reason to doubt this (van Lantschoot 1960: 400).

The L.M. forms part of the ↗*Gəbrä Ḥəmamat* liturgical service and, therefore, the cycle of texts regularly recited in Ethiopian churches during Holy Week (*Mäṣḥafä gəbrä ḥəmamat*). It fits in well with the tendency of the Coptic and Ethiopian churches to exculpate Pilate, and even to regard him as a saint (Cerulli 1973).

The L.M. manuscripts are numerous. To the eleven mentioned by van den Oudenrijn (1959: l–liv), many more *Gəbrä ḥəmamat* manuscripts can be added, e.g., the 15th-cent. ms. EMML 1765 from ↗Däbrä Ḥayq Ǝsṭifanos (for more cf., e.g., indices in EMML I–X and other mss. catalogues; cf. ProvRec 56ff.). The text was published as part of the Ethiopian Orthodox Church edition of the *Mäṣḥafä gəbrä ḥəmamat* (Wäldä Mikaʾel Bərhanä Mäsqäl 1942 A.M.: 298–451, but with omissions, s. Hammerschmidt 1966: 383). A scholarly edition was prepared by van den Oudenrijn (1959: 2–83). On problems of textual criticism cf. Hammerschmidt 1966: 384 and HamTana II, 132f.

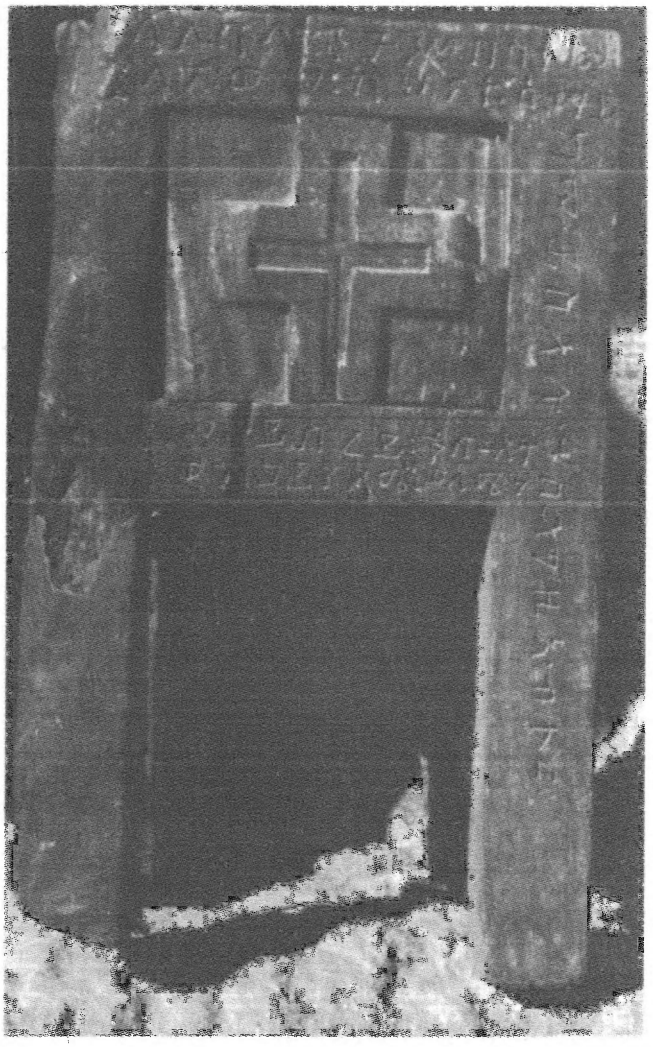
Stefan Weninger

Lalibäla

L. (ላሊበላ; regnal name Gäbrä Mäsqäl) was a late 12th/early 13th-cent. king of the ↗Zagʷe dynasty. Venerated as a saint by the ↗Ethiopian Orthodox Church, L. is one of the best-known Zagʷe kings, even if the available information is dispersed, and one of the most famous Ethiopian rulers, reputed as the builder of the churches of ↗Lalibäla town. However, one has to distinguish clearly between the historical figure of L., known from historical sources dating from his period of activity, and the traditional figure of L. that emerged long after his death out of the hagiographical tradition created around him as a saint.

L. was the son of ↗Žan Śəyyum and the brother of his predecessor ↗Ḥarbay. L.'s mother was reportedly a certain Kerwärna (Žan Śəyyum's maid in later legends). Tradition gives the following folk etymology of his name: one day his mother saw her child surrounded by a swarm of ↗bees who did not harm the baby (Perruchon 1892: 12, 77). Taking it as a good omen (cp. Hab-Kön 123f.), she gave the child the name L., which in ↗Agäw is said to mean 'the bees obey him' (s. Conti Rossini 1895: 356 and 1905: 220 for the possible Agäw etymology).



Wooden *mänbär* with engraved invocation by king Lalibäla, 13th cent.; Lalibäla, Betä Mädḫane ᶜAläm; from Strelcyn 1979:pl. B (no. LMA2)

According to L.'s Acts, Ḥarbay first persecuted L. and then abdicated in his brother's favour (Perruchon 1892:44); it is more probable, however, that L. overthrew his predecessor (CRStor 307; Conti Rossini 1943:106). L. was succeeded on the throne by his nephew ↗Näʾakkʷəto Läʾab, whose Acts further style him as L.'s godson (Conti Rossini 1943:178) – possibly in order to support his legitimacy as the heir to the throne in spite of his being a nephew, and not the son, of L. (Marrassini 1994:211f.).

The "king lists" are sometimes used to define the period of L.'s reign – 40 years – and to relate his tenure to that of his predecessors and successors. According to one such list, L. succeeded his cousin ↗Yəmrəḥanna Krəstos (SerHist 240). These lists give from five to eleven names of Zagʷe kings, depending on the period of reign attributed to the dynasty (from 133 to 370 years, s. CRStor 305). It is now impossible to decide which list is the most accurate one. Yet, from historical sources, one can ascertain the chronology of L.'s reign.

The *History of the Patriarchs of Alexandria* testifies to him exerting his power in 1200, during the office of patriarch John VI (1189–1216), to whom he sent an embassy aimed at obtaining the appointment of a metropolitan. The patriarch appointed ↗Mikaʾel II of Fūwa, who had to return to ↗Egypt after four years in Ethiopia. In 1210, L. sent a new embassy, and another metropolitan, ↗Yəsḥaq, was appointed with an assistant, Yosef (SawHist² vol. 3, part 2, 109-15). According to the land grants preserved in the Golden Gospel of ↗Däbrä Libanos of Šəmäzana, L. was reigning in 1209, and was still king in 1225, when the metropolitan was ↗Giyorgis (who is also mentioned, together with L., in the colophon of the ↗*Kəbrä nägäśt*).

In his land donations, L. styled himself as "the son of Morara [abbreviated form for Mära Täklä Haymanot, the founder of the Zagʷe dynasty (CRStor 306)], son of Zansəyyum, son of Assəda" (CRDLib nos. 6–7, s. ill. in EAE vol. 2, 28) and adopted the title *ḥaśani* (↗*Aṣe*), reviving the form of "titulature" of the Aksumite kings (cp. ↗Danəʾel, *ḥaśani*). L. had his centre of power in Bəgʷəna, in northern ↗Lasta, but he also also ruled far to the north, since the monastery of Däbrä Libanos of Šəmäzana and its abbot, the *ᶜaqqabe säᶜat*, were closely associated with his reign.

L.'s wife, ↗Mäsqäl Kəbra, is known both from Arabic and Ethiopic sources, and her Acts were compiled in Gəᶜəz (Kur 1972). From her L. had a son, ↗Yətbaräk. The *History of the Patriarchs* mentions a second son, Atyab or Anab (SawHist² vol. 3, part 2, 115), identified with Läʾab, i.e. Näʾakkʷəto Läʾab, by Tedeschi (1990 [1996]:338, 1999:301).

Written testimonies reveal L.'s role in establishing the group of churches now called by the same name. In Gospels (EMML ms. 6907, fol. 208v) preserved in one of the churches he would have founded (Betä Mädḫane ᶜAläm in the town of Lalibäla), a note informs that L. made gifts to the church (EMML no. 6907, fol. 208v). He also had his name and that of his wife, Mäsqäl Kəbra, engraved on *mänabərtä* ↗*tabot*, which demonstrates the link between him and the churches he founded at Roḥa (e.g., Pirenne in PICES 8).

The construction of the churches of L. is one of the traditional arguments for justifying the sainthood of this king (but s. Tedeschi 1990

[1996]:341 and 343 n. 43). The meaning of the complex, often understood as a New ↗Jerusalem for Ethiopian pilgrims, is still debated (van Donzel 1998). There is little doubt that L. himself had at least some churches constructed. And it seems that the site, especially Betä Maryam, was first dedicated to Christ (Lepage 1999:963f.). The toponymy having greatly moved, the identification of L.'s churches with a New Jerusalem could be the result of a later process.

L.'s Acts were written at the end of the 14th or at the beginning of the 15th cent. Obviously hagiographic in style, the text begins with a long rhyming exordium, quite different from those of the other Acts known for the Zagʷe kings (CerLett 84; Tubiana in EtRicci 297). It provides little factual information on the king, who is constantly compared to Jesus Christ. An angel takes L. up to heaven, calling him "Second Isaiah", there, the mysteries are revealed to the future king, and he learns that he has to build ten churches from one stone. On his return to earth, L. succeeds his brother, carries out his task (founding the churches of L.), and dies on 12 *Səne*, the day of his commemoration in the ↗*Sənkəssar* (GuiSyn I, 600ff.).

The 1892 edition of the Acts of L. by Perruchon is based on a single manuscript, BritLib Orient. 718. The editor selected parts of the text that he considered most significant. Nevertheless, the manuscript tradition is quite rich: more than ten copies are known today (BritLib Orient. 719; BN d'Abbadie 139; Ṭānāsee 31; India Office 4; EMML 2836; IES 898; VatLib Cerulli 223 etc.). Kur (1972) additionally translated excerpts from a later compilation known as the Acts of Mäsqäl Kəbra.

An abbreviated version of the Acts of L. has become known as the ዜና ላሊበላ (*Zena Lalibäla*) after Sergew Hable Sellassie (SerHist 266 n. 5). According to this version, the mother of L. was of noble origin (which is quite common for saints). She gave birth to him in 1120, and he was baptised in the church of Arbaᶜətu Ǝnsəsa. His father died when he was 9 years old and was buried at Sarzenä Mikaᵓel. The older son, Ḥarbay, became king whilst L. later was educated at Märṭulä Maryam in Goğğam. L. married Mäsqäl Kəbra and went to Jerusalem, leaving his wife behind in Təgray (↗Mädäbay). Then he came back to Roḥa and succeeded his brother (SerHist 266f.).

Basing his judgement on EMML 1614 (which seems to be a 20th-cent. Amharic translation of the *Zena Lalibäla*), Getatchew Haile has recently suggested that the hagiographer of the *Gädlä Lalibäla* was a certain Krəstos Ḫaräyo of Sarzenä Mikaᵓel, a foundation of *aṣe* Yəsḥaq (EMML V, 121). The version of the Acts in EMML 1614, however, seems to be later than the one published by Perruchon, and than the reign itself of Yəsḥaq (1414–30): the reference to Märṭulä Maryam, which was not founded before the end of the 15th cent., might be the result of an oral tradition known at Sarzenä Mikaᵓel and written down later.

Another version of the life of L., focusing on his childhood, exists in the form of a homily within the collection dedicated to Uriel (↗*Dərsanä Uraᵓel*; EMML 54, 79, 327), and could be more recent than the Acts of the saint (Derat in PICES 15).

The Acts provided support for the cult of saint L., attested since ca. mid-15th cent., as esp. attested in the Acts of ↗Śämrä Krəstos. Then, *aṣe* ↗Zärᵓa Yaᶜəqob gave a manuscript of the Acts of L. to Betä Golgota (BritLib Orient. 719, fol. 163r), and a painter (maybe ↗Fəre Ṣəyon) inserted the first known image of L. as a holy rider, in a diptych with other ↗equestrian saints (diptych IES, 4053). The tomb of L., in the complex of Däbrä Sina–Golgota, was since then a centre of cult that attracted thousands of people, as witnessed by Alvares at the beginning of the 16th cent. (BeckHuntAlvar 220f.; cp. Gervers 2003).

As with other Zagʷe kings, L.'s holiness alongside his belonging to a dynasty of kings that were considered as usurpers has long puzzled historians. It was suggested by Marrassini (1994:214–25) that this seeming contradiction might be explained by the status of sacred kings (cp. ↗Kingship, divine), acquired by the Zagʷe, being changed into that of saints as a late recognition of their fame (cp. Tedeschi 1990 [1996]:340f.).

L. is sometimes erroneously identified with a "Nubian king" who was in Constantinople in 1203 (s. Fiaccadori 2005).

Marie-Laure Derat

King Lalibäla in art

There is no evidence that Ethiopian artists developed iconography clearly distinguishing L. (ላሊበላ) from other similar holy figures, which makes it difficult to recognize him when an identifying legend is absent. Depicted as a middle-aged, bearded and haloed man, he is bereft of any specific attribute. His garments, particularly rich in the representations dating to the 15th–16th cent. (*šämma* with decorated patterned borders, wide trousers, and ornamented diadem with ribbons) and supposedly corresponding to the style of dress of Ethiopian noblemen of that time, are also worn by other saints, especially equestrian ones. It has been suggested that L.'s royal rank is marked by the short pick-like ornament inserted through the lobe of his ear (Chojnacki 2000:315).

The oldest available representations of L. are 15th-cent. ↗paintings on wood. From the 17th cent., he is also portrayed in illuminated ↗manuscripts and frescoes. Usually he appears within a group of saints assembled for devotional purposes. Separate portraits of L. are rare, the earliest dating to the 18th cent. Equally rare are narrative scenes illustrating episodes from his life. The picture of L. as a warrior on horseback, also combined with other ↗equestrian saints, suggests the apotropaic character of these types of images. Not surprisingly, L. is most often represented in ↗Lasta and ↗Wag, the regions closely connected with the ↗Zagʷe dynasty with a deeply rooted cult of these holy priest-kings (cp. ↗Kingship, divine).

The earliest known image of L. is found on a triptych of which only the side panels are preserved (IES 4056). Dated to the second half of the 15th cent., it is sometimes ascribed to ↗Fəre Ṣəyon. Here L. is included in a group of 13 martyrs, most of them depicted as saintly horsemen, haloed and armed with a lance. L. is riding a white horse on the right wing, vis-à-vis St. ↗Gälawdewos. As an equestrian saint L. is also represented on the obverse side of a contemporary bilateral triptych (IES 3450): placed at the bottom of the left wing and facing the mounted St. ↗George, he wears a decorative diadem with floating bands and an ear ornament. A very similar L. figure, this time accompanied by a soldier and three attendants, one holding an umbrella and two blowing horns, is depicted on the 15th–16th cent. wall-painting in the church of ↗Yädəbba Maryam, Dawənt. One may assume that the small figure on the central panel of the 15th/16th-cent. triptych IES 3990 is also L. He is shown holding a hand cross and wearing a diadem but without a halo, and is followed by ↗Mäsqäl Kəbra. This assumption is confirmed by the diptych IES 4328, where two similar fig-

King Lalibäla and his court; wall-painting, 16th cent., Yädəbba Maryam, Dawənt, Wällo; photo 2005, courtesy of Michael Gervers

ures are identified by inscriptions as L. and his wife. Yet, the name L. written above the central figure represented on the right panel of the diptych IES 7070 (15/16th cent.) must be a mistake. Its iconography as well as the accompanying saints Peter and Paul point to Jesus. This confusion might be caused by L.'s Acts, in which the king is on many occasions compared to Christ.

L. is portrayed in three 17th-cent. painted booklets (↗*Sənsul*), one is kept in a private collection at Oxford, another one in Ašätən Maryam church near ↗Lalibäla and the third one in ↗Gännätä Maryam (presently missing). All represent a distinctive, geometrical style, which seems to have been created in Lasta or even in the Lalibäla region itself. L. stands among frontally rendered and identically looking Zagʷe holy kings, ↗Yəmrəḥannä Krəstos, ↗Nä'akkʷəto Lä'ab, ↗Ḥarbay, each identified by his written name. The same group appears on the fresco painted in the "first Gondär style" on the west façade of the ↗Wəqro Mäsqäl church near Säqota, but here all kings are represented as equestrian saints, armed with lances and riding galloping horses.

Two depictions of L. are kept in Betä Qəddus Mika'el in Lalibäla, which, according to a tradition, houses his grave. The first is a painting on canvas, executed in the "second Gondär style" and presently displayed in the middle of the sanctuary. It shows L. sitting on a throne, wearing a ↗crown of *zäwd* type and holding a handkerchief. He is surrounded by two guards armed with swords and two courtiers bearing an umbrella and a flywhisk. An ecclesiastic and probably the ↗donor of the painting, prostrate at the king's feet, grasp the tail of his coat – an iconographic formula typical for 18th-cent. representations of donors alongside highly venerated ↗holy men. The second depiction is a triptych, probably from the 19th cent., the central panel of which is composed as the "vita–icon", with the large figure of enthroned king in the middle surrounded by small scenes staging episodes from his legend, such as L. as a child surrounded by a swarm of bees, and young L. hunting. Also from the 19th cent. is the manuscript BritLib Orient. 718 containing L.'s vita, and illustrated with eight full-page miniatures. Two of them (fols. 126r, 127v) show the construction of the Lalibäla churches.

The manuscript from the H. Krenz collection (Berlin), dated to the turn of the 19th/20th cent. and decorated with 102 pictures, contains a version of the ↗*Kəbrä nägäśt* that claims a Solomonic origin for the Zagʷe dynasty (through the son of king ↗Solomon by the Queen of Sheba's servant). That part of the text is illustrated by the scene of L.'s celestial vision and by the presence of the messengers sent to the king by his brothers.

As an example of recently executed images devoted to L. and his life, one may mention the wall-painting in the Təgrayan church of Ṣəge Iyäsus Gʷaḥgot, which represents the king holding a building tool at the front of the church of St. George in L., rendered very accurately and in correct bird-eye perspective.

Lalibäla

The town L. (ላሊበላ) is situated on the slopes of Mount Abunä Yosef in the Wärwär district of the north-central ↗Lasta highlands at an altitude of 2,600 m A.S.L., ca. 340 km north of Addis Abäba (12° N, 39° E). It lies in the Amhara *kəllələ* (former Wällo province).

According to popular belief, the town was founded by the Zagʷe king ↗Lalibäla in the late 12th cent. and became the capital at the beginning of the 13th cent. The archaeological history of the town may not accord with the historical founding tradition (that the town was developed solely by King Lalibäla during the 12th cent.). The complex clearly developed over a longer period, and the site may have been inhabited earlier. Originally known as Wärwär or Roḥa (Heldman 1995:29), it is thought that the town was named after the Syrian city of ↗Edessa, which had been recently sacked by Muslim armies; in Syriac the town was known as Orhāy – ar-Ruhā in Arabic. It is unclear when this site became officially known as L.

Because of the permanence of the stone from which they were created, the rock-carved churches of L. have survived fire, destructive impulses of invaders, and natural decay. In contrast, all physical traces of ᶜAdäfa, the nearby Zagʷe political capital mentioned, e.g., in the Acts of ↗Yəmrəḥannä Krəstos (Marrassini 1995:44 [text], 75 [tr.]) and in the Arabic sources (e.g., Perruchon 1899:85), seem to have disappeared, although local oral traditions identify the site (TadTChurch 59).

According to the founding legend transmitted in Lalibäla's Acts, God revealed his plan to the king in a dream, and commanded him to build a replica of ↗Jerusalem in the place where he was born. Toponymically this is reflected in the presence of a watercourse called the Jordan (Yordanos) – complete with a monolithic cross and pillar commemorating the baptismal place of Christ himself – and a Mount of Olives (Däbrä Zäyt) and Golgotha (Golgota). L. is thus one of the many "Small Jerusalems" in the tradition of Christianity. The Ethiopian tradition connects the erection of the New Jerusalem with the fall of Jerusalem in 1187. Whether this was indeed the reason is still debated (van Donzel 1998).

If L. reflected the mystical topography of the real Jerusalem, which was now off limits to Christian pilgrims, it may also carry echoes of the main churches of ↗Aksum with the presence of Mädḫane ᶜAläm – possibly a copy of the cathedral of ↗Aksum Ṣəyon – and the Church of Betä Dänagəl (Heldman 1995). L. may have been designed as an alternative ↗pilgrimage site to Aksum. Particular interest attaches to the monolithic churches hewn from volcanic tuff. Although not unique to L. – numerous examples of similar styles of church have been recorded in Təgray and in Eritrea – it is the sheer concentration of such ornate and well-finished churches that merits mention.

The churches at L. are found in two main concentrations: a group to the north of the Yordanos River, a group to the south-east, and a single outlying church – Betä Qəddus Giyorgis – to the west. The northern group of churches comprises: Betä Mädḫane ᶜAläm, Betä Maryam, Betä Mäsqäl, Betä Dänagəl, Betä Qəddus Mikaʾel (Däbrä Sina) and Betä Golgota. The south-eastern group comprises: Betä Amanuʾel, Betä Märqorewos, Betä Abba Libanos, Betä Qəddus Gäbrəʾel Rufaʾel. In all cases the body of the church has been carved from a single block of stone, isolated or semi-isolated from a surrounding pit. The work would have required a large dedicated cadre of artisans working over a number of years; legend suggests that angelic help was often required, and other sources attribute the works to unidentified foreigners. The church pits are interconnected by a complex of passages and tunnels associated with rock-cut tombs.

The excavation of these churches, apart from being a time-consuming exercise, would also have yielded vast amounts of spoil, and it is unclear where this was dumped. It is also possible that a number of these buildings were not designed initially as churches; Betä Dänagəl may have been a subsidiary building to Betä Maryam, and the orientation of Betä Märqorewos (not along a strict east-west alignment), and the monumental façade of Betä Qəddus Gäbrəʾel Rufaʾel all suggest that these were probably secular buildings of some form.

In the years after the end of the Zagʷe dynasty, the churches and monastic establishments of L. continued to attract considerable imperial patronage; Gännätä Maryam, for instance, was richly endowed by ↗Yəkunno Amlak in the 13th cent.

Primary descriptions of the town at this period are, however, few in number. ↗Abū Ṣāliḥ "the Armenian" and the *History of the Patriarchs of Alexandria* mention that a certain Yəsḥaq was consecrated as Patriarch of the Ethiopian Church to the court at "Arafah, Royal City of the Ḥabašat". Arafah clearly implies a link to ᶜAdäfa.

Possibly the first European account of the town is found by Alessandro Zorzi (CrawItin), who mentions "Lalivela", but the best description is that of ↗Alvares writing prior to the attack on L. by ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") who reassembled his army here in early 1529 and later pillaged the town in 1533 (BassHist 409f.), but spared the churches (cp. Castanhoso 1902:96). Alvares attributes the construction of the churches to the Copts of Egypt, although his description is defensive in tone, implying that his European audience would be unable to comprehend the quality of the work he had seen. Other European sources provide cursory information about the town, which is reflected in the paucity of Ethiopian sources as a whole. In the 18th cent. James Bruce only provided a second-hand portrait of L., and it is only in the late 19th cent. with the accounts of Gerhardt Rohlfs, who accompanied the Napier Expedition, and in the 1880s of the French Consul Raffray (who estimated the size of the town to be ca. 3,000 people) that the reality of the place became known to the wider world. As yet little archaeological work has taken place within the town itself, and from more of an art-historical perspective the mid-20th cent. works of Georg Gerster, Irmgard Bidder and of course Bianchi Barriviera are the best witnesses to the importance and grandeur of the town.

This rich heritage has been recognized by the United Nations Education, Science and Cultural Organization (UNESCO) with the award of World Heritage Site status (on 8 September 1978). As with any other historical site in the country, the Ethiopian government's Centre for Research and Conservation of the Cultural Heritage is in charge of L.

Till recently, L. was only accessible by mule-back, and was reported to be three days away from the nearest road. Since 1960, a regular service of ↗Ethiopian Airlines has connected the town to other Ethiopian centres. A road network leads to the town and to some of the nearby churches.

Today L. is a thriving tourist centre, and measures have been put in place to protect the churches from the vagaries of the elements and large visitor numbers; as a World Heritage Site and an important place in the history of Ethiopian kingship, it is vital that future archaeological and conservation work takes account of the economic needs of the town and the visual impact of these unique buildings. The tourist infrastructure is so far limited and the town itself is relatively small, with two schools and one hospital. In 1994, L. had 8,484 inhabitants, and the current population estimation is ca. 11,000.

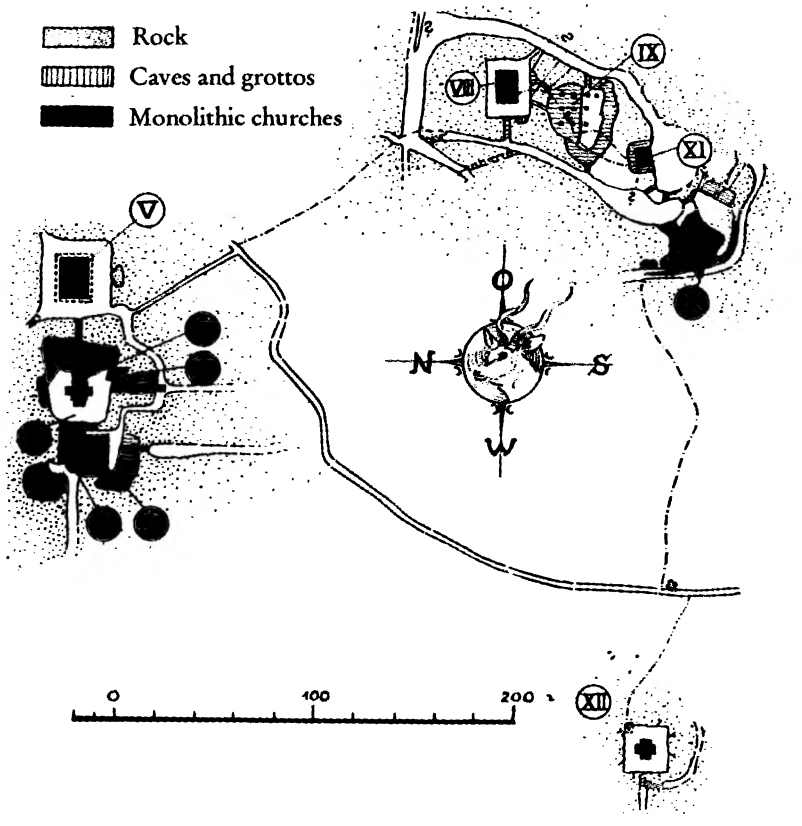
Niall Finneran

Churches of Lalibäla

The tradition of rock-cut architecture goes back to the ↗Aksumite period, and this technique was utilized to create ↗rock-hewn churches at a number of sites in the northern Christian highlands (Tewelde-Medhin Joseph in PICES 3; Buxton 1947, 1971; Sauter 1976), some of which may predate the 12th cent. (Lepage 1972), the period during which the ↗Zagʷe dynasty was established (TadTChurch 53–58). Nevertheless, no other Ethiopian site presents such an impressive concentration of rock-cut churches as L. Because of the lack of historical documentation of the Zagʷe dynasty, the rock-hewn churches of L. cannot be dated with any accuracy. According to reliable external documentation (Heldman 1995:28), king ↗Lalibäla's reign encompassed the years 1210–25. His Vita, which may not have been composed until the early 15th cent. (Derat 2006:561–68), credits him with undertaking the entire creation of this site (Perruchon 1892:88f.), a questionable attribution that has often been repeated (BeckHuntAlvar 205ff., 226). Nevertheless, it is quite unlikely that he was the first of the Zagʷe kings to initiate the excavation of this architectural complex, consisting of two clusters of structures and the church of Betä Giyorgis (St. George), which stands alone to the west of the two groups.

The architectural forms of L.'s rock-hewn churches reflect the forms of then contemporary construction techniques (↗Church buildings). Squared pieces of wood used to construct rectangular window frames of constructed churches, as at the church of ↗Däbrä Damo (GerKir [Eng], pl. 24), are simulated in the windows of the churches at L., such as Betä Amanuʾel (St. Emmanuel). A comparison of both churches with the simulated architectural face of an Aksumite ↗stela of ca. 300 A.D. demonstrates the continuity of construction techniques as well as the tradition of simulating construction techniques in stone. As in earlier Aksumite times, builders at Däbrä Damo utilized alternating courses of wood and stone to construct walls, courses strengthened by circular wooden ties set transversely, the projecting heads of which created decorative patterns on the exterior walls. Betä Amanuʾel most faithfully simulates the visual effect of alternating courses of stone and slightly inset wood, although circular wooden ties are not indicated. However, the exterior walls of the constructed church dedicated to ↗Yəmrəḥannä Krəstos (TadTChurch 58) is built of alternating courses of wood and stone with no visible wooden ties (GerKir [Eng], pl. 114), and, like Betä Amanuʾel, the walls are subdivided vertically with indentations and projections. These vertical indentations and projections displayed on the west



Plan of the rock-hewn churches of Lalibäla based on the drawing by Achille Raffray, amended by Hermann Dabbert; from Dabbert 1938:9
(I) Mikaʾel (Däbrä Sina); (II) Golgota (Grave chapel of Lalibäla); (III) Śəllase Chapel; (IV) Betä Maryam; (V) Mädḫane ʿAläm; (VI) Mäsqäl Chapel; (VII) Dəngəl Chapel; (VIII) Betä Amanuʾel; (IX) Märqorewos; (X) Gäbrəʾel and Rufaʾel; (XI) Abba Libanos; (XII) Betä Giyorgis

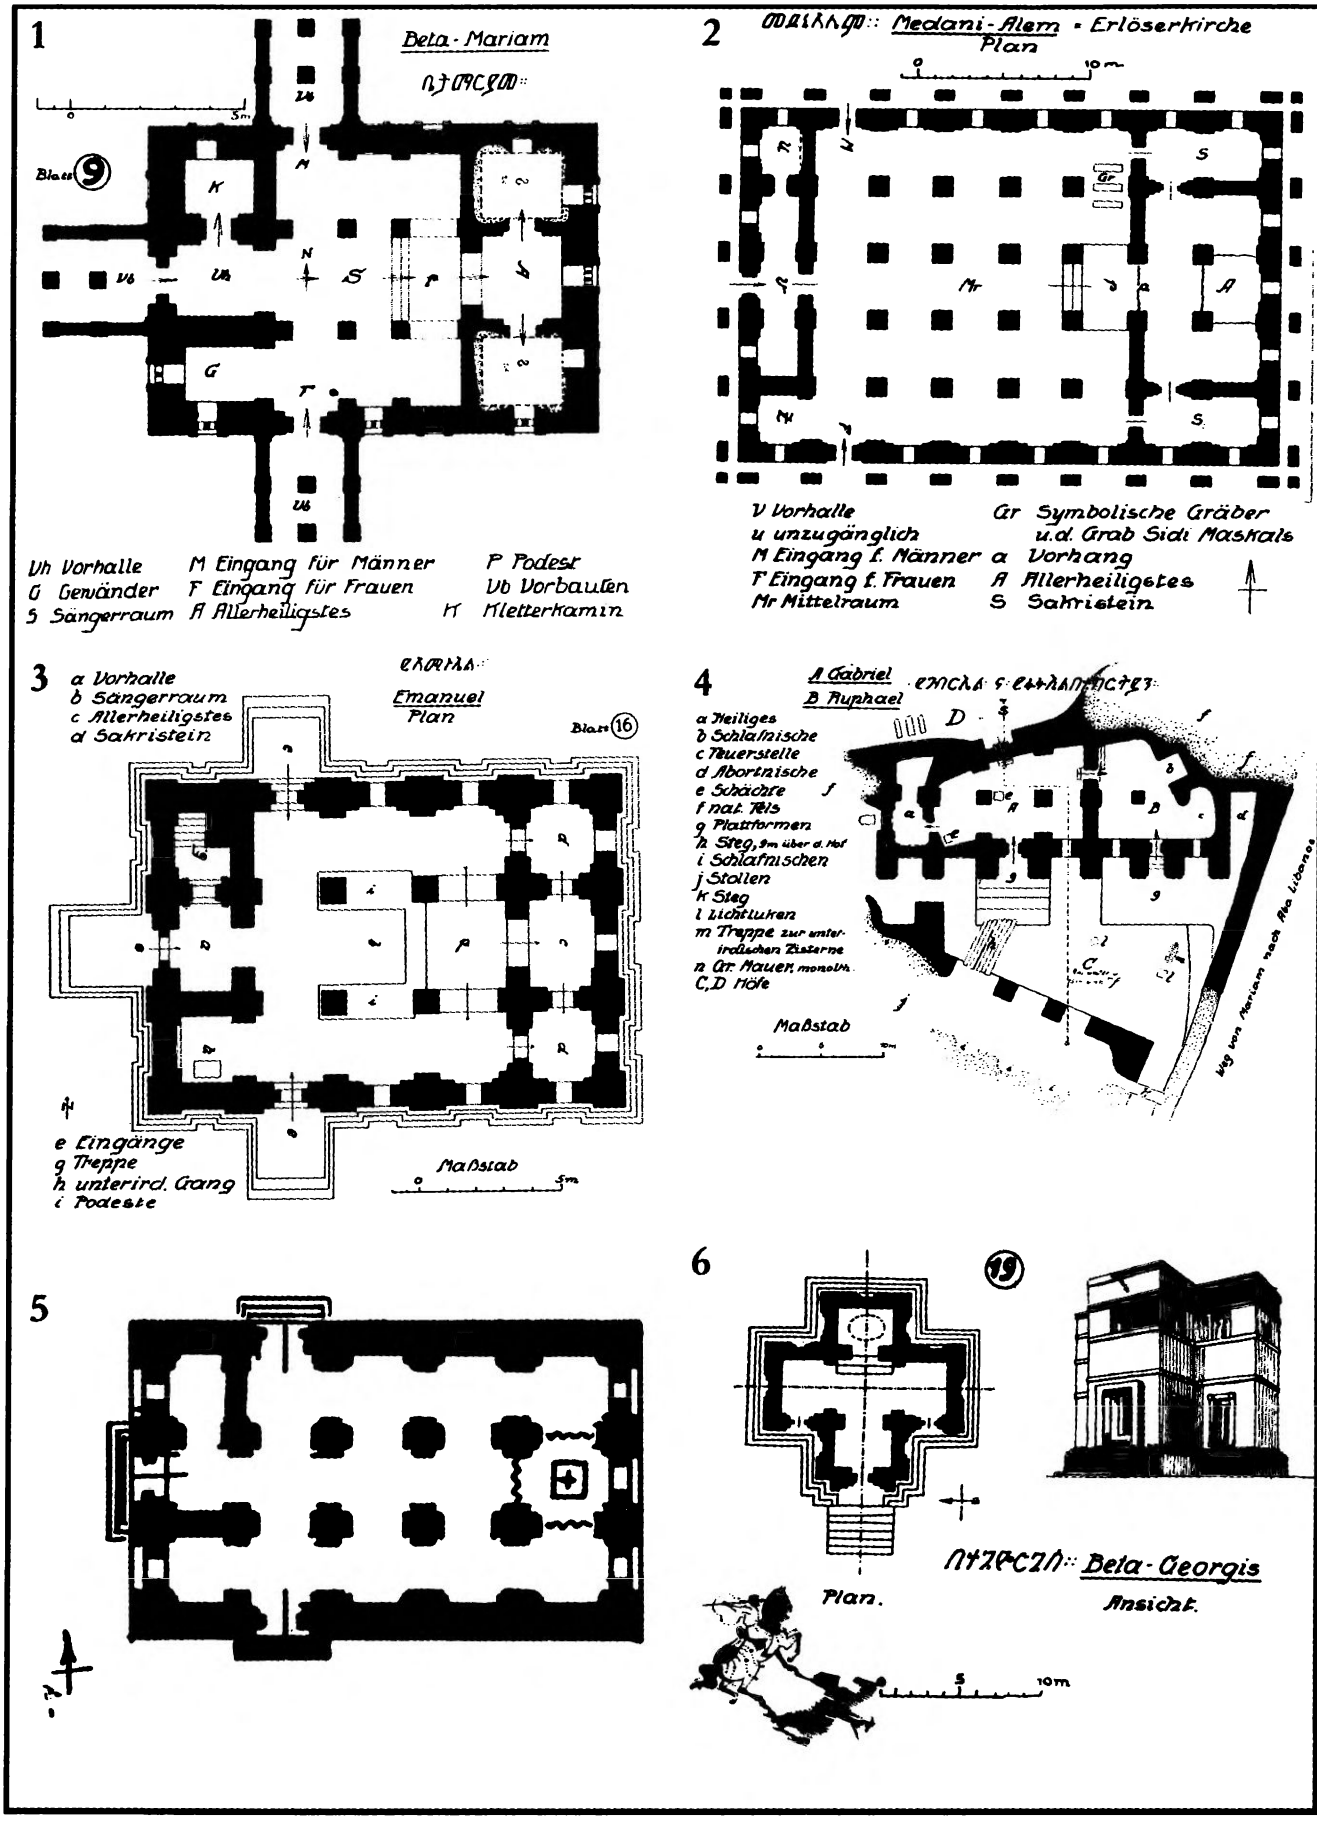


Table: Ground-plans of the rock-hewn churches of Lalibäla; from Dabbert 1938:55, 67, 76, 85, 88, 91
1: Betä Maryam; 2: Mädḫane ᶜAläm; 3: Amanuᵓel; 4: Gäbrəᵓel and Rufaᵓel; 5: Abba Libanos; 6: Betä Giyorgis

façade of Betä Amanu'el correspond to the division of the interior space into central nave and flanking side aisles. No other churches at L. have exterior walls that so accurately simulate constructed building forms.

Windows and other arched forms of some rock-hewn structures at L. exhibit ogival arches, a form not associated with Aksumite architectural traditions. Indeed, because the pointed arch was first developed in Islamic architecture, the appearance of these forms at L. gives some credence to the broad statement reported by Alvares, who was told that the churches at L. were made by Egyptians (*gəbṣawi*; BeckHuntAlvar 227).

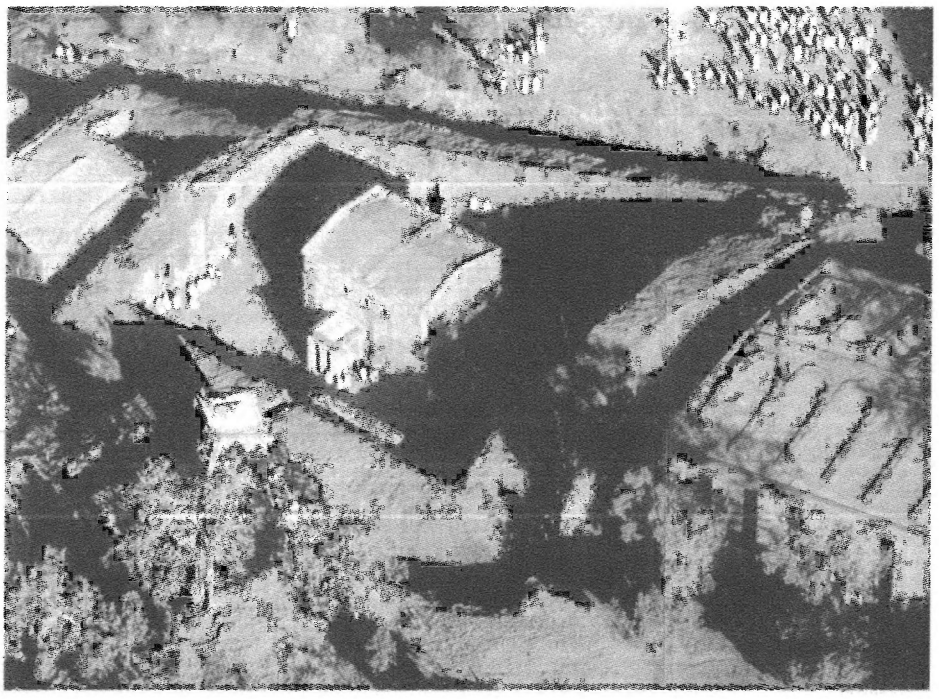
Only four churches of L. are cut completely free of the rock matrix – Betä Maryam (St. Mary), Betä Mädḫane ʿAläm, Betä Amanu'el, and Betä Giyorgis. However, even these structures, free-standing within an excavated courtyard, must be approached by means of a subterranean passage. Upon arriving at L., the visitor does not immediately see the churches, and there are no vantage points from which to view the entire complex. Such architectural vistas appear to have been deliberately withheld. The pilgrim must walk into and around, going through narrow crevices, entering dark tunnels that will lead to courtyards, open to the sky, in which stands a church, such as that of Betä Giyorgis or Betä Amanu'el. Neither are churches carved into a rock face entered by a direct path. A visit to the churches at L. is a physical and spiritual process, an experience of discovery, a symbolic model of a more extensive pilgrimage journey.

The churches of Betä Maryam (GerKir [Eng] 95), Betä Amanu'el, and Betä Abba Libanos (↗Libanos; ibid. 103f.) follow the oriented basilica plan of central nave with flanking single aisles, a standard plan followed throughout the Christian world (s. EAE I, 737 for basilica plan). Vestigial galleries above the narthex and side aisles in the churches of Betä Amanu'el and Betä Maryam follow a tradition established in Ethiopia by the 6th cent., as suggested by the excavated remains of a 6th-cent. basilica church at ↗Mäṭära (Anfray in PICES 4, fig. 4). Such galleries were characteristic of the basilica churches at Constantinople and vicinity, from whence the feature was introduced to the great urban centres on the eastern coast of the Mediterranean and to Palestine (Krautheimer 1986:108ff.).

Betä Giyorgis (GerKir [Eng] 107f.), to the west of the other two church groups, sits upon a typically Aksumite stepped podium with monumental staircase leading to the western portal. Cruciform in plan, four short arms extend from a central square bay; the primary entrance is located at the western arm and the dome-covered sanctuary is within the eastern arm. The flat roof of the exterior is decorated with a large, equal-arm cross in low relief. The ogival arches of the exterior windows in the upper story are surmounted by an arabesque-decorated cross in low relief (GerKir [Eng] 107f.). The cruciform plan is rare, if not unique in Ethiopia. The archetype is the frequently copied 4th-cent. cruciform Church of the Apostles in Constantinople (Krautheimer 1986: 69f., 75), but the more immediate prototype of Betä Giyorgis remains unknown (s., however, Lepage 1974).

Betä Mädḫane ʿAläm, the largest and most imposing of the churches at L., belongs to group of structures that includes Betä Maryam and the complex of Betä Däbrä Sina, Betä Golgota and Śəllase. An architectural quotation of the metropolitan cathedral of ↗Aksum Ṣəyon (Buxton – Matthews 1971–72, figs. 22f.; Heldman 1995a:32f.), it is a great five-aisled basilica surrounded by a rare external colonnade of piers. The placement of the exterior piers corresponds to the position of the square piers that divide the interior space into bays. Relief decoration of the exterior includes two rows of eight arcades each in low relief that run along the length of the shallow gable roof; these eight arcades are located in direct correspondence to the eight bays that run the length of the interior space (GerKir [Eng] 92f.). A blind-arcade frieze runs along the cornice.

A complex of two conjoined oriented churches (Betä Golgota – Däbrä Sina) and a smaller room (Śəllase; s. GerKir [Eng] 99ff., fig. 55) is a symbolic quotation of the church of the Holy Sepulchre in ↗Jerusalem, a great basilica church to which a chapel of Golgotha (the Place of the Skull) was attached. Golgotha was the purported site of Adam's burial and of the crucifixion of Christ. The single portal that gives entrance to the Däbrä Sina–Betä Golgota complex is located at the south-west side of the church of Däbrä Sina (Mount Sinai). Since the *tabot* dedicated to St. Michael was introduced to it, the latter church has also been known as Betä (Qəddus) Mika'el. Cruciform piers divide the interior space of the church into central nave and two side aisles, with the sanctuary at the eastern end of the nave. A



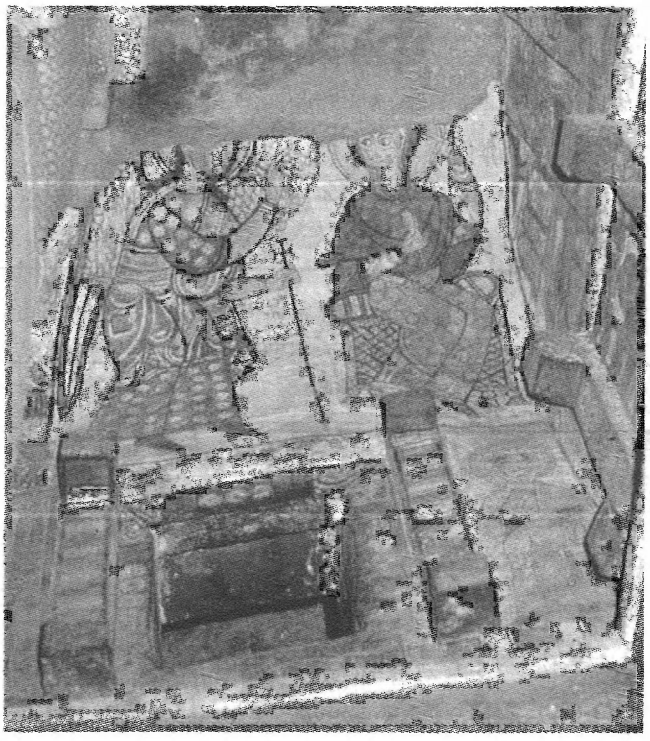
Bird eye's view of the central group of rock-hewn churches of Lalibäla, Mikaʾel (left), Betä Maryam (centre) and Mädḫane ʿAläm (right); photo 1960s, from Ethiopian Airlines 1976:10f.

door at the north-west area of the north side aisle gives entrance to Betä Golgota, a rectangular room divided in half along an east-west axis by a row of three piers. This arrangement, which does not follow any standard church plan, suggests that Betä Golgota should more properly be termed a chapel, rather than a consecrated space in which the liturgy is to be celebrated.

Along the south wall of Betä Golgota are low-relief figures standing with an arch frame, each carrying a scroll (?) in the right hand and a cross-topped staff in the left (Bianchi Barriviera 1962, pl. 9; GerKir [Eng] 101f., pls. 79f.). These are the "statues carved in the wall" as reported in the early 16th cent. (BeckHuntAlvar 221). The turbaned figure identified as St. ↗Qirqos by a later painted inscription upon the arch frame may be compared with the painted portraits of apostles and monastic saints in the rock-hewn church at ↗Gʷəḥ (GerKir [Eng], pls. 188–91) datable to the late 15th or early 16th cent. No other monumental sculpted figures decorating an Ethiopian church have been reported, although portraits of saints standing within an arcade frame are common in illuminated manuscripts (UNESCO 1961, pl. 1) and portraits of saints painted within arcades carved in low relief decorate the interior walls of the 15th-cent. monastery church at ↗Däbrä Ṣəyon in Təgray (GerKir [Eng], pls. 49f.).

Within the north-east corner of Betä Golgota is another group of relief sculpture – a raised ledge on which is carved a recumbent figure with an attendant angel that represents the tomb of Christ. The purported tomb of king Lalibäla, set within the floor and covered by a stone slab (Heldman 1995a:33ff.), is a later addition to this north-east corner of the chapel. Presently, at times of pilgrimage to L., such as Däbrä Zäyt (the fourth Sunday of ↗Lent), the slab is pushed aside and sacred earth that scooped from his tomb by a priest of the church is distributed to the faithful. Immediately before the west façade of Betä Golgota is a free-standing rock-hewn cube identified as the Tomb of Adam. A door in the east wall of the chapel of Betä Golgota gives entrance to L.'s most sacred sanctuary: only the most spiritually pure are believed to be able to enter the Śəllase (Trinity) chapel safely. Three rock-hewn altar coffers or chests sit upon a raised platform in the east portion of this trapezoidal, barrel-vaulted space (Bianchi Barriviera 1962, pls. 10–11bis; GerKir [Eng] 100ff., pl. 81f.). The three rock-hewn altar chests simulate the form of the *mänbärä ↗tabot* that is customarily carved from a single piece of wood (AfrZion 137ff.; Heldman 1992:222f.). Each of the three square altar chests is decorated with a cross in low-relief on each face. The left chest is inscribed Krəstos and the right one Päraqlitos, indicating that they contained altar tablets dedicated to Christ and to the Holy Spirit, respectively. The central chest is decorated on its four sides with relief sculptures of winged figures, standing with raised arms between the legs of the chest as if to support the throne-compartment above. These are the Four Living Creatures (*Arbaʿətu ənsəsa*) who uphold the throne of God (Ezek 1:1–10, Rev 4:1–8), the chest thus symbolizing God the Father. Therefore, the three altar chests, each with a consecrated *tabot*, are to be perceived as the actual representation of the presence of the entire ↗Trinity (Getatchew Haile 1988:13f.).

Carved in the north wall of the courtyard of the church of Betä Maryam is a single-story



Inside the rock-hewn church of Betä Maryam, Lalibäla, east end of nave and vaulted ceiling with painting of Annunciation; photo courtesy of the author

façade decorated with a blind arcade in low relief. Two doorways lead to what is essentially a single row of rooms (GerKir [Eng] 94, fig. 43, pl. 59). Although this simple excavated structure is known as [the church of] Betä Mäsqäl ('House of the Cross'), the layout does not lend itself to the celebration of the liturgy. It is safe to assume that these modest rooms were not originally intended to have a religious function. However, the low-relief frieze that decorates the façade suggests a visual harmony with the adjoining grand church of Betä Mädḫane ʿAläm.

The second group of rock-hewn structures includes Betä Amanuʾel (GerKir [Eng], figs. 61–64), Betä Abba Libanos (ibid. 103f., figs. 65f., pls. 89f.), Betä Gäbrəʾel-Rufaʾel (ibid. figs. 68f., pls. 91f.; Bianchi Barriviera 1963, pls. 29, 31f.) and Betä Märqorewos (GerKir [Eng], fig. 67; Bianchi Barriviera 1963, pl. 27). The latter two, as well as Betä Mäsqäl, are included among the list of ten churches recorded in hagiographies and historical documents as "ten churches carved from one rock" (Getatchew Haile in PICES 9, 15, 19 n. 21). Nevertheless, the unusual varied plans of each of these three structures, none of which are properly oriented, demonstrate that they were not conceived as churches. Materials recovered during the excavation of the deep silt-filled pit adjacent to the courtyard of Betä Märqorewos supports the theory that it was originally a civil palace. The function of the complex structure known as Betä Gäbrəʾel-Rufaʾel (also known as Church of the Archangels) is unknown, but it too may have been a palace (Lepage 2002).

The church of Betä Maryam is presently the only church at L. decorated with murals painted well before the fall of the Zagʷe dynasty in the late 13th cent. (↗ Painting). The interior of the church simulates built construction with a nave arcade and an Aksumite-style frieze at the gallery level (GerKir [Eng], pls. 66–75). Carved and painted designs on the soffits of the arches and the ceiling of the side aisles parallel the rich decorative treatment of these areas in constructed churches, such as the roughly contemporary Betä Yəmrəḥannä Krəstos near L. (ibid. 110f., pl. 117). Bust portraits of saints are painted on the blind panels of the gallery frieze of the nave. A fragmentary painting of the Transfiguration appears on the east nave wall above the sanctuary arch, and above, on the tunnel vaulted ceiling, are a fragmentary painting of the Annunciation (fig. 2) and a portrait of a hermit, probably St. Onophrius. In the bays of the south aisles, Gospel scenes painted along the top of the wall, including the Visitation and abbreviated scenes of Christ's miracles – Christ's meeting with the Samaritan woman at the well, the miracle of the loaves and fishes, and the curing of the paralytic. The north aisle was probably originally painted with Gospel scenes, but little paint survives in this area, with the exception of the east end of the north aisle where an episode of the flight of the Holy Family in Egypt is depicted (Lepage 1999:940–45).

The fauna of God's creation, various birds and animals including cocks, fighting zebus and a leaping leopard, decorate the nave spandrels. Although these painted creatures have been dismissed as reflections of "a naive pleasure in living things" (GerKir [Eng] 98), they collectively represent the natural history of the terrestrial world, a popular decorative scheme in Early Byzantine church decoration (Heldman 1995b:74). The murals of Betä Maryam and the stylistically related paintings of Betä Yəmrəḥannä Krəstos (Girmah Élias et al. 2001:333) are perhaps the oldest extant examples of monumental painting in Ethiopia.

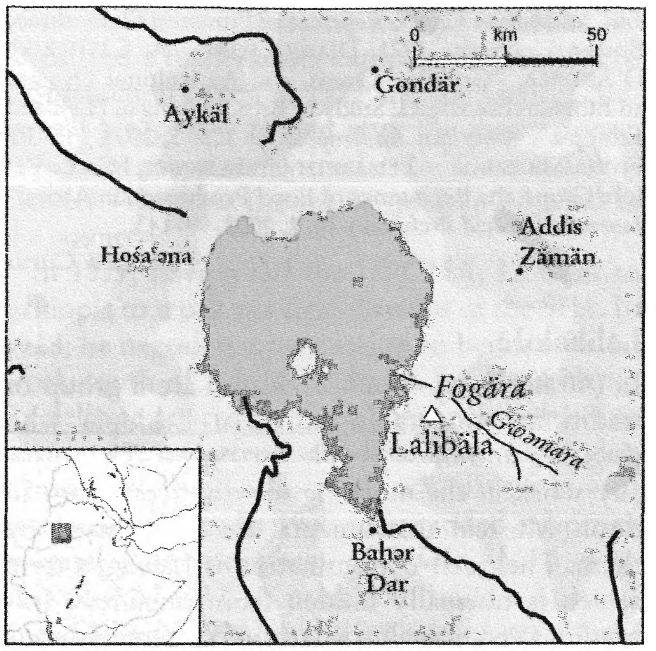
Lalibäla

L. (ላሊበላ) cave is an archaeological site east of Lake ↗Ṭana. It is one of the caves (along with Näčč̣abet) discovered in an escarpment overlooking ↗Fogära at ca. 2,200 m A.S.L., some 4 km north-east of the village of Hamuset, 35 km north of Baḥər Dar. The L. cave is located in a stream bed, near a seasonal waterfall. It was partially excavated in 1967 by Joanne Dombrowski. L. cave is particularly significant because it was one of the very first sites in the Horn of Africa to produce evidence for ancient domesticated plants and animals from excavated archaeological contexts.



Dombrowski reports that the upper levels of L. cave contained deposits dating back to 1320 A.D. ± 80 years. Finds from these levels included iron, pottery, grinding stones, polishing stones, circular stone weights, smoking pipes, hearths, and storage pits. The lower levels included fire pits, ash, charcoal, red ochre, stone tools, pottery, botanical remains (barley, chickpea, and legumes), animal bones (cattle and goat/sheep), and a human skeleton. The bottom area of the lower levels produced a radiocarbon date of 520 B.C. ± 80 years.

Näčč̣abet cave, 100 m to the east of L., yielded evidence for a campsite dating to about the first cent. B.C. (lower levels) and a more permanent settlement dating from about 1100–1400 A.D. (upper levels).

Stone tool artifacts, including thumbnail scrapers, microliths, and a point tool were documented on surface sites near the caves. More recently the caves were probably utilized as a place of retreat during times of invasions and local troubles (e.g., during the Italian occupation of 1936–41).

Matthew Curtis

Lalibäločč

L. (ላሊበሎች, sg. ላሊበላ, Lalibäla) are a group of traditional singers in northern Ethiopia who sing, beg and bless people for ↗alms. They usually work in the morning moving from door to door. Musical instruments are never used by them. Their self-denomination is Lawağ, a term which is normally hidden from outsiders, following a secret inclusive group concept. Anyone who does not belong to this group is called Balti and excluded from the Lawağ group. As a hereditary group, L. maintain close ↗kinship relations, the group members defining themselves as related by blood.

Dästa Täklä Wäld (DTWDic 725) notes that the term L. originates from the Amharic words ሌሊት (*lelit*, 'night') and በላ (*bälla*, 'eat'); thus, they are so named because they sing and beg at night. On the other hand, the L. community in Addis Abäba claims that the group was named after the 12th-cent. king ↗Lalibäla. One of the oral traditions commonly shared by the L. traces their origin back to the story of Adam and Eve. It states that when God found out that Adam and Eve did not present him with half of their children, he became angry and cursed those they hid to a life of singing and begging for alms.

Lalibäločč in Gondär: While the man is singing at the door, his wife (right) accompanies him by vocalizing; photo 2004, courtesy of the author

L. are called by different names in different regions: the most wide-spread term used by non-L. is ሐሚና (*Ḥamina*, also *Amina*), mainly in Gondär and Goğğam, which is, however, not liked by L. themselves; they are called አባውዴ (*Abbawde*) or *Abba Wəddaqi* in Wällo (Mesfin Messele 2000); and L., አባ፡ ጉንዳ (*Abba Gunda*), and አባ፡ ወጋት (*Abba Wäggat*) in Šäwa. A similar group of singers is known as *Ḥamen* (s. Yoḥannəs Gäbrä-Ǝgzi'abəḥer 1948:18) in the Eritrean highlands and in some regions of Təgray.

The majority of L. come from Šäwa, Wällo and Goğğam, and they are particularly concentrated in Däğen (Goğğam) and Fəčče (Šäwa). They travel from town to town alone or, more commonly, as individual families, a man with his wife and children. The setting of L. performances is strictly defined and always the same, different from that of ↗*azmari* (↗Ǝnzata), who are active in very different social settings. However, in some areas of northern Šäwa, L. occasionally attend ↗*täzkar* (*rota* in their own terminology), where they typically sing a requiem and receive a whole leg of a cow in return.

Their modes of singing can be roughly classified into two types. The first is a duet sung by a man and a woman. The couple moves from house to house with the woman singing vocals with a strained voice (Shelemay 1982), followed by the man singing verses of praise. The second mode of singing is performed by a single man or woman who sings both a chorus and verse. Before they start singing, they usually look for promising clients and collect information (religion, occupation, etc.) about these people, editing several verses to suit them. Once L. receive their alms – in the form of money, clothes or food – they sing special blessings, wishing prosperity on the listener. Thus, their songs are a mixture of fixed and improvised verses. They learn the skill as children whilst following their parents.

When speaking to each other, L. use an argot (↗Ethiopian argots), of which ten basic words fol-

low here: *antti* ('one'), *git* ('two'), *sälatina* ('three'), *əfna* ('fire'), *wačo* ('water'), *ğurru* ('sun'), *čərqəna* ('moon'), *dämalis* ('blood'), *ləmas* ('tongue'), *mučo* ('tooth'). Communication using the argot is advantageous when the L. are begging in front of outsiders: information related to their "business transactions" can be freely exchanged through the argot without anybody else understanding.

Many Ethiopians believe that L. are condemned to suffer from ↗leprosy if they do not sing, beg and bless for alms. However, this belief is not widely accepted by L. today. Most of them say that they do not know any L. who have contracted leprosy for discontinuing their activities. Many publicly claim that they sing just to earn a living. Nevertheless, the L. are often still stigmatized through the association with leprosy.

Kawase Itsushi

Lambie, Thomas Alexander

L. (b. 1885, Pittsburgh, d. 1954, Bethlehem, Palestine) was a missionary of the ↗Sudan Interior Mission (SIM) and pioneer in medical work. He earned a medical degree from the University of Pittsburgh in 1907. The same year, he and his family moved to the Anglo-Egyptian Sudan, to work among the ↗Nuer and ↗Añwaa people for the United Presbyterian Church of North America (UPCNA).

In 1919, in the wave of a Spanish flu epidemic and at the request of the governor of Wälläga *ras* ↗Nadäw Abba Wällo, L. moved to Ethiopia, at the time almost without Western missionaries and Western-trained doctors. His skills in the latter area became crucial in building his reputation among the authorities (Donham 1999:87ff.). His work was focused in the provinces of Illubabor (↗Gore) and western Wälläga (↗Dambi Dolloo and Sayyoo, where he established a hospital and a school). In 1921, at the request of the regent *ras* Täfäri Mäkʷännən (↗Ḫaylä Śəllase I) for the construction of a hospital in Addis Abäba, L. organized a fund raising campaign in the U.S.A. Construction began in 1922 and the George Memorial Hospital – named after the major donor, W.S. George and today used as the Central Laboratories – became the major modern hospital in the country.

In 1927, having left the UPCNA, L. went to Ethiopia to work as a field director of the SIM. In 1928, he negotiated permission to begin mission work south of Addis Abäba, as far as ↗Sidamo – a delicate procedure since Täfäri was subject to strong pressures from the Ethiopian Orthodox Church. He built a hospital in Wäläytta as well as several clinics. In 1932, he founded a leprosy hospital in the periphery of Addis Abäba, now part of ↗ALERT. A project to build a hospital in Lalibäla in 1934, at the request of *ras* ↗Kaśa Ḫaylu, was prevented by the outbreak of war.

At L.'s request, Ḫaylä Śəllase I granted him Ethiopian citizenship. He also appointed him secretary-general of the new Ethiopian ↗Red Cross to oversee the efforts of Ethiopian and foreign medical teams during the ↗Italian war of 1935–36 during which time he met von ↗Rosen. Later, however, in accord with the occupiers' demand, L. retracted in writing his previous criticisms of the Italian use of poison gas. As a result, with the Ethiopian victory in 1941, L. fell out of favour with the Emperor and could never return to Ethiopia (Donham 1999:97f.). He later worked in Nigeria, Sudan, and built a tuberculosis hospital in Palestine. L.'s evangelizing activities in Wäläytta ultimately contributed to the birth in 1956 of an independent denomination, the ↗Qalä Ḫəywät Church.

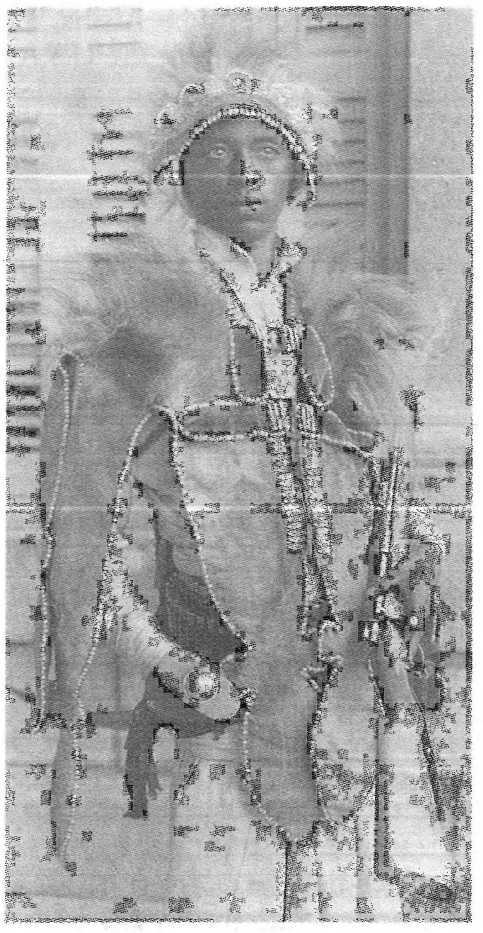
Lämd

L. (ለምድ), the Amharic term for a men's cloak, made either of simple sheep-skin, or, for persons of rank or heroes thus honoured, of velvet or ↗lion or ↗leopard skins (KaneDic 50; THMDic 9). The Təgrəñña equivalent of L. as a parade war attire is ዲኖ (*dino*), likewise made of velvet or animal skin (Parkyns 1853:10; KaneTDic 2121).



A young noble, with an *anfaro* headdress, wearing a *lämd*, which shows the features of the original model of the *lämd*, an animal skin with the paws hanging over the shoulders; photo early 20th cent., from the Carl Haertel collection, courtesy of Johannes Bohnenberger

Wearing L. is an old custom (KWKDic 727). According to a traditional legend, the cloaks were distinctive of clans and dynasties, and the ↗Solomonic dynasty nobles wore lion-skin L. whilst the ↗Zagʷe wore leopard-skin L. (Bälay 1993:73). According to the same tradition, as early as in Aksumite time, special craftsmen produced animal skin cloaks, decorated with gold and precious stones (ibid. 99).

The first recorded eye-witness account of L. is apparently by ↗Alvares who in the early 16th cent. saw lion-skins on noblemen's shoulders (BeckHuntAlvar 116, 269). The term was later cited in the early 19th cent. by Parkyns (1853:10) and later by Cecchi (CecZeila I, 149). *Aṣe* ↗Tewodros II is known to have given L. as a gift to people of status: e.g., he presented Consul ↗Cameron with a gold-decorated L. (FusTeo 98 [tr.]). L.-cloaks are also frequently referred to in the Chronicle of *aṣe* ↗Mənilək II. The source tells of "golden L." being worn by the ↗*ligaba*, or high court official, as well as other important officers of state. *Ras* ↗Arᵓaya Śəllase, son of *aṣe* Yoḥannəs IV, received 30 L. on the occasion of his marriage to Mənilək's daughter ↗Zäwditu in 1882 (GueCopMen 188, 271f., 413, 505). A L. presented by *ras* ↗Mäkʷännən Wäldä Mikaᵓel to his Guadeloupian physician Dr Vitalien is reproduced in Duchesne-Fournet (1908, vol. 2, pl. XIV).

Fentahun Tiruneh

Lämläm

Aläqa L. (ለምለም, b. Bägemdər, d. between 1902–04, Addis Abäba), an Ethiopian clergyman and historiographer, received a traditional church ↗education and studied the ↗*andəmta*-commentary of the O.T. in Goğğam (at ↗Moṭa and/or ↗Däbrä Marqos). His teacher was the famous *mämhər arat ᶜayna* Goššu (d. 29 *Ṭərr* 1861 A.M. [5 February 1869 A.D.]), who produced a number of prominent pupils, amongst whom was *mämhər* ↗Kəflä Giyorgis (s. Cowley in PICES 6, 56; 1974:169). L. served in churches in Goğğam (but also at ↗Maḫdärä Maryam, Bägemdər) until the ↗*Kəfu qän*-famine (1888–92), when he left for Šäwa and made his way to ↗Addis Abäba. There he met ↗Mondon-Vidailhet, who took care of him and for whom L. became, in turn, an informant (after Koriander in *Izvestija* ..., 1904, V) and most likely a teacher of Amharic. Strangely enough, there is no mention of L. in Mondon-Vidailhet's works, though their close relationship is attested by an anecdote narrated by *aläqa* ↗Lämma Ḫaylu (Mängəśtu Lämma 1966/67:175ff.; for a different version of the story, presenting L. in negative light, yet without mentioning him, s. Le Roux 1902:207f.; cp. Rouaud 1997:34, 101).

The literary legacy of L. is poorly studied. His name does not appear in the catalogue of Mondon-Vidailhet's manuscript collection (ChMonV), although one can assume that at

least a few of the books were obtained and/or copied for Mondon-Vidailhet by L. Ms. éth. 259 (ChMonV no. 72) contains important works of ↗historiography partly, if not wholly, authored by L. Among these, his authorship is attested for the lengthy Amharic chronicle of the times of *aṣe* ↗Täklä Giyorgis and *aṣe* ↗Yoḥannəs (**ያጼ፡ ተክለ፡ ጊዮርጊስ፡ ያጼ፡ ዮሐንስ፡ ታሪክ**, *Yaṣe Täklä Giyorgis yaṣe Yoḥannəs tarik*, fols. 15–41, poorly catalogued by Chaîne), written for Mondon-Vidailhet "in 1894–95 at Enṭoṭṭo" (cp. BTafY 16). Occasionally used by scholars, this chronicle provides unique details regarding the reigns of the two 19th-cent. emperors (s. ZewYohan; Orlowska in PICES 15). As the author, *aläqa* L. remarks that this is his second work, the first being a chronicle of the reign of *aṣe* Tewodros II (BTafY 16), which may refer to the narrative about the latter on fols. 5–12 of the same ms. éth. 259.

A further text related to L. is the "short chronicle" in ms. St. Petersburg, Ef. 30 (= Koriander 8, s. Turaiev 1906: 89, with a poor description), a lengthy historiographic compilation in Gəᶜəz encompassing the history of Ethiopia from its beginnings to 1889. The first part, up to the end of Bäkaffa's/beginning of Iyasu II's reigns, belongs to the textual tradition of the "short chronicles" and is similar, e.g., to the text in ms. Paris, BN éth. 142 (ed. in BassÉt; s. Platonov 1966:39). L. may well have been the copyist of this part as well as of the narrative for the events of 1730–55 (s. Platonov 1966:41–45; missing in ms. éth. 142), and the author of the part on the 18th and 19th-cent. history: from Iyoᵓas I to the death of Yoḥannəs IV. Interestingly, the latter portion of the text (published in Turaiev 1910) served as the Vorlage for one of the Amharic chronicles of Yoḥannəs IV, known, again, from a manuscript in Mondon-Vidailhet's collection (éth. 260; s. Ricci 1947:47). Here the Amharic translation, plausibly prepared by the same L., closely follows the Gəᶜəz text, though with a few significant omissions, e.g., in the detailed chronological account of the several ravages of Gondär by the ↗Mahdists in 1888–89 – possibly reduced in order to extenuate the passive role of ↗Mənilək of Šäwa.

Denis Nosnitsin

Lämma Abboyye

Däğğazmač L.A. (**ለማ፡ አቦዬ**, "horse name" **አባ፡ መልካ**, Abba Mälka; d. 1908) was an official of ↗Mənilək II. His father was *afä nəguś* Abboyye, appointed in 1858 by *aṣe* ↗Tewodros II interim governor of Šäwa and his mother was *wäyzäro* Ayahlušəmm, daughter of *nəguś* ↗Šahlä Šəllase of Šäwa. He was the younger brother of *däğğazmač* ↗Bäšah Abboyye and *ras* ↗Wäldä Giyorgis Abboyye and a cousin of Mənilək II.

Like his elder brothers, L.A. participated in Mənilək's military activities (against Kullo [↗Dawro] and ↗Konta, s. BTafA 847, n. 1074) and served for a long time in Mənilək's administration, *inter alia* as governor of ↗Gofa and Šangama (GueCopMen 504). The highest rank he received was *däğğazmač*. L.A. was chief of the servants (*lole*) of Mənilək's palace (↗*Gəbbi*), to whom he repeatedly proved his loyalty. After L.A.'s death, his title and office were bestowed upon his son Ḫaylä Maryam Lämma, who, as a close ally of *ras* Täfäri Mäkʷännən (later Emperor ↗Ḫaylä Šəllase I), was one of the leaders of the Šäwan plot against *ləğ* ↗Iyasu in 1916.

Lämma Gäbrä Ḫəywät

L. (**ለማ፡ ገብረ፡ ሕይወት**, b. 1918 A.M. [1925/26 A.D.], K^{w}ärämaš Sänbäleṭ Maryam, Tägulät-Bulga, Šäwa, d. 22 April 1994, Addis Abäba) was an Ethiopian musician. He started traditional church education at Mäsno Maryam, near his birth place. Soon, the boy was found to have a good voice, and he started to exercise his singing and dancing talent, reciting, e.g., ↗*fukkära*, *qärärto* and ↗*šəlläla* at the popular feasts. He quickly became well-known in his neighbourhood; during the Resistance in 1935–41, he used to sing for groups of patriots inspiring them for the fight.

After the Liberation, L. came to Addis Abäba in 1952 and joined the artistic department of the capital's municipality where he was taught to read musical notation and play both traditional and modern musical instruments. In 1953 he joined Täsfa Kokäb School, with a band of musicians composed of his comrades. In 1955 L. was one of the artists who performed at the opening of the Ḫaylä Śəllase I Theatre (now the National Theatre), an event linked to the anniversary of Ḫaylä Śəllase's 25th coronation. He remained at the theatre for a number of years, working as the head of the theatre's orchestra and as an actor. L. toured a number of countries (including the USA and the USSR), introducing Ethiopian music world-wide. In 1964/65 he moved to the Municipality, became a prominent member of a traditional musicians' team ("Lämma and Companions"), was a frequent guest on television and radio broadcasts, and toured several countries. Apart from stage work, L. was also active as singer. He was particularly popular for his performance of wedding songs, which he gathered and standardized, keeping them, as is commonly accepted in Ethiopia, purely traditional and free from foreign influence.

Lämma Ḫaylu Wäldä Tarik

Aläqa L. (**ለማ፡ ኀይሉ፡ ወልደ፡ ታሪክ**, b. *Ḫamle* 1860 A.M. [July 1868 A.D.], Mäqet, Wällo, d. 22 January 1967, Harär) was an Ethiopian traditional church scholar. His mother was Tarik Aṭqu (hence his matronymic Wäldä Tarik, lit. 'son of Tarik'); his father, Ḫaylu Läwṭe, was a teacher of ↗*zema* and ↗*qəne*.

L. began his ↗education at the unusually late age of twelve when on his own initiative he learned to read and write at the monastery of Däbrä Abunä Aron, in Mäqet. In 1874 A.M. [1882 A.D.] L. was consecrated deacon at ↗Däbrä Tabor. Thereafter, he spent more than 20 years wandering between the centres of traditional education in ↗Bägemdər, ↗Goğğam and ↗Šäwa. He completed the extensive course of studies including, especially, the subjects studied in the ↗*mäṣḥaf bet*, learning from the most renowned teachers of the time, such as *aläqa* Täṭämqo, *grageta* Gäbrä Mädḫən, *mäl'akä bərhan* Wäldä Yoḥannəs, *mämhər* ↗Akalä Wäld, and *aläqa* Wäldä Maryam (Mängəśtu Lämma 1966/67: 160f.; Cowley in PICES 6, 56).

In 1883 A.M. [1890/91 A.D.] L. settled in Addis Abäba, where ten years later he married (also unusually late) Abbäbäčč Yəlma, a daughter of *grazmač* Yəlma. They had nine children, one of whom was ↗Mängəśtu Lämma. In 1907 A.M. [1915 A.D.], L. left Addis Abäba for ↗Harär, where he became ↗*aläqa* at Mäkanä Śəllase church. Before the Italian war of 1935–36 *aläqa* L. participated in the translation of the N.T. into

Lämma Ḫaylu Wäldä Tarik; portrait 1963/64 by Afäwärq Täkle, from *EthObs* 9, 3, 1965, frontispiece

Amharic commissioned by *aṣe* ↗Ḫaylä Śəllase I (Cowley 1974:175), which was printed privately outside Ethiopia in 1939 (s. ↗Bible). During the Italian occupation, nearly the entire manuscript library of L. was lost, though he himself remained unharmed. After the Liberation, L. devoted most of his time to teaching, and generations of his students have become distinguished scholars in their own right. After his death, L. was buried in ↗Qəddəst Śəllase Cathedral in Addis Abäba.

Mängəśtu Lämma spent months recording *aläqa* L.'s memoirs about his life and times, covering a period of about a century (from *aṣe* ↗Tewodros II to Ḫaylä Śəllase I), which he edited and published (Mängəśtu Lämma 1966/67). Being a unique example of recorded oral tradition, this book contains valuable information on various historical personalities and events, and on the traditional way of life and thought. It is set apart by its delightful colloquial Amharic; it also includes 27 *qəne*-poems of *aläqa* L. He was also the narrator of the stories that constitute Mängəśtu Lämma's volume of verse entitled *Yabbatočč č̣äwata* (1960/61).

Lances ↗Spears

Land drainage

L.d. and terracing are two basic and sometimes combined methods of water management. Because of usually heavy rainfall during the rainy season in many parts of the country soil erosion is a serious problem. In areas with uneven terrains Ethiopian farmers often use L.d. and terraces to control runoff.

The purpose of L.d. is the removing and disposing of surplus water from the fields. "The most widely applied is the ridge-and-furrow system whereby crops are grown on narrow ridges between furrows made with the traditional ox-drawn plough [...] Another widely used, although less effective, system is the construction of drainage furrows across the contour at varying distances (3–6 m). Very rarely hand-made raised beds are found [...]" (Jutzi 1988: 154). Furrows with a certain gradient causing the water to flow neither too slowly nor too fast reduce the risk of erosion even more effectively.

Furrows for L.d. are widespread in the highlands, especially in those regions where ↗*ṭef* is a major crop. The sowing of *ṭef* is best done when the soil has become muddy, so the rains are allowed to fall on completely uncovered soil until it is muddy enough for sowing. This is one serious cause of soil erosion. Similar effects can be found in all areas where soils become very hard until the end of the dry season (e.g., vertisols); so the first rains of the rainy season are needed to soften these soils before sowing is possible.

In addition to an ox-drawn ↗plough sometimes a considerable labour input is needed for these practices, as ridges and furrows have to be kept in shape and checked regularly during the rains.

The purpose of building artificial terraces (including bunds) is to slow down water runoff. In the areas with heavy rains terraces are a basic feature for reducing soil erosion by slowing down runoff. This has another positive effect: thanks to a slower runoff there is more time for water to infiltrate the soils, and the crops profit from an increased soil moisture. This effect generally is of value at the beginning and the end of the rainy season, especially in those areas with short and irregular rains, for stabilizing and/or raising the yields, as well as in areas with perennial crops (e.g. Coffee). For the same purposes terraces also are irrigated in some places.

Building and maintaining terraces may need a relatively high labour input, depending on the type of terrace, the topography and the force of water runoff. Terraces and bunds can be made both of stones and soil. Since the 1980s several large areas of the highlands have been terraced by local people, initiated and supported by the government and development agencies. Beyond this kind of large scale campaign terracing, small-level and individually prepared terraces and bunds are widespread, also in historical times. A common type of bund with quite a low labour input is made of stones: in areas with steep slopes and shallow soils the farmers anyway have to pick up stones from the fields again and again, and they

place the stones along contour lines forming simply designed bunds. Some of these bunds remain permanent, others disappear after a certain time.

These water management methods entail a certain loss of potentially productive areas, because of which many farmers reject them. However, this has to be set alongside potential loss of yield provoked by soil erosion and lower productivity of dry soils.

The history of L.d. is mostly unknown. Terraces already existed in the Aksumite period, although it is not clear how the designs of the various types developed. Throughout the centuries, terraces and bunds have been in use in several, but not every suitable area.

Land tenure

L.t. is a complex concept in modern discourse frequently connected to land reform. Here we are concerned with the rules and norms by which people gained access to agricultural land, and to the product of that land, in rural Ethiopia (↗Agriculture). This took place within the context of the Ethiopian state, although the role of the state varied greatly from one part of the country to another, and from one period of history to another. Specifically excluded are the rules under which pastoral peoples regulated access to pasture, or peoples with little contact to the state, and formerly rarely part of the monarchy, regulated access to land such as the southern and south-western populations (in this article we focus on the Ethiopian highlands). These rules and norms trace their origins to classical times and are expressed in contemporary documents dating at least to the beginning of the 13th cent. (CrumLand). Beginning with the first decade of the 20th cent., they became the subject of much debate, which culminated in the sweeping land reforms of 1975, which subsequently swept them aside in the Ethiopian highlands (Bahru Zewde 2002:120–27; *Nägarit Gazeṭa*). In Eritrea, however, a number of traditional forms of L.t. are still practised.

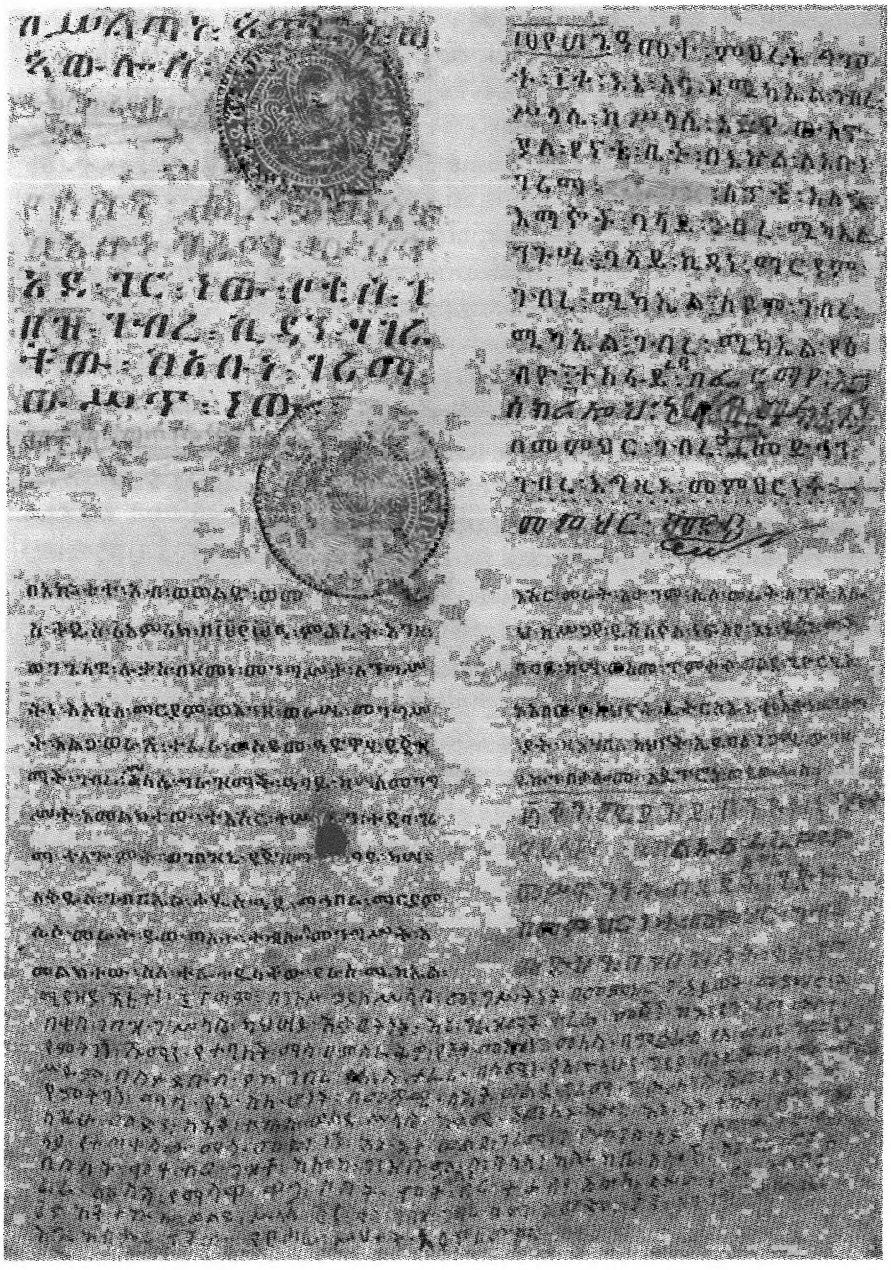
Historical forms of land tenure in Ethiopia

In theory, all rights to land originated from the monarch, although this theory was contested at the local level by *rəst* holders (Conti Rossini 1916:111f.). Conti Rossini records an adage among Eritrean farmers to the effect that "'The land belongs to the government' we say in order to affirm that just as heaven belongs to God, the land belongs to the King. We have recourse to this statement when we intend to exalt the government's power but we do not at all intend to allude to the possession of fields ... no one can take away our lands." It is frequently claimed that the state's rights in land originated in military conquest (TadTChurch 98–103). While we can observe Mənilək's state appropriating land through conquest and subsequently re-distributing it (Bahru Zewde 1991:85–92), it is equally likely that, over the long sweep of Ethiopian history, rights to land have preceded and/or accompanied the formation of the state. Local traditions of land ownership in the highlands, for example, show that such an ownership was practised over generations without any or only slight interference by outside authorities. Nevertheless, one of the characteristic acts of Ethiopian royalty was the granting of ↗*gʷəlt* land. We have comparatively rich documentation of such grants where they pertain to the church (CRAxum; HuntLand; CrumLand; cp. ↗*Wängelä wärq*). Kings also acted as arbiters of final resort in conflicts over *gʷəlt* rights. However, especially in the highlands, the power of monarchs and other local rulers was always limited vis à vis noble *gʷəlt*-holders and local farming communities; local rights and traditions were always taken into account.

All forms of L.t. in historic Ethiopia were conditional. Rights frequently overlapped, several people holding different kinds of rights to the same piece of land. In practice these rights might be held by any or all of three different actors – farmers, holders of over-rights, such as the nobility and holders of appointed offices, and the court – and L.t. practices in imperial Ethiopia

may be approached from the standpoint of each of these actors. The substance of any tenure arrangement was always subject to the ever-changing balance of power between the three actors. The relations between farmers and overlords had a significant dimension of class struggle.

The crucial question for the farmers was whether they were recognized to have transmittable use rights to farm land. Most commonly, such rights were conceived as ↗*rəst*, essentially 'inheritance'. Under *rəst* practice farmers inherited, and bequeathed to their children, and very occasionally sold or mortgaged the lands which they farmed. The *rəst* tenure of farm land was conditional on the payment of taxes or tribute, from the 1940s onwards sometimes directly to agents of the state, more commonly to the holders of over-rights to the same lands. One variant of the *rəst* system, ↗*desa*, was a system of collective, village ownership of land, which prevailed in some of the highland parts of Eritrea. *Rəst* tenure was not universal. In many instances, farmers had no such rights, their access to farm land taking place under terms of tenancy, fundamental rights in the land being held by landlords. Such farmers were *č̣isäññа*, not *rəstäññа*. This was the case in northern Šäwa (Weissleder 1965) under the ↗*mälkäññа* system. It was frequently the case with farmers subjected to the holders of church lands (Villari 1938; Habtamu Mengistie 2004; CrumLand 12), and it was commonly the case for lands brought under the sway of Mənilək's state from the 1880s onwards (CrumLand 222–25), especially after the introduction of *qälad*, or land ↗measurement (McClellan 1988:81–102). One term, applicable to the cultivators in all these varying situations was ↗*gäbbar* ('tribute payer', 'tax payer'). However, it covered a wide variety of social situations.



Land grants in the "Golden Gospel" of Ənda Abba Gärima, Təgray; photo 2005, courtesy of Wolbert Smidt

Over-rights to land were generically known as *gʷəlt*, their holders collectively known as *gʷəltäññа*. Under this system, recipients had the right, metaphorically, to "eat the land", i.e. to collect taxes or tribute from the tributary peasants living on *gʷəlt* property, and also to regularly exercise administrative and judicial authority in the area. *Gʷəlt* is a nominative form of the verb *gʷälläta*, which is frequently rendered by the dictionaries as 'to grant a fief', suggesting some parallels with medieval European practice (GuiVoc col. 707). The substance of *gʷəlt* varied reciprocally as did the substance of *rəst*. Some *gʷəlt*-holders held the rights to farm the land, rights which they distributed to tenant farmers

on condition of the payment of rent, such as the ↗*mälkäññña* of northern Šäwa, or the holders of church ↗*rim* lands in parts of Təgray, Goğğam, Wällo and, probably, Gondär (Weissleder 1965; Habtamu Mengistie 2004). Some *gʷəltäññña* held their lands by hereditary right, in which case the land was known as *rəstä-gʷəlt*, although this hereditary right was also conditional on the payment of tribute or the provision of service to yet another over-lord, to the church, or to the state.

Some of the complexity of (and confusion over) the nature of historic L.t. lies in the variety of types of tribute and service to which *gʷəlt* was subject and to the period of tenure envisaged in the original grant. Land might be expected to pay rent or tribute in agricultural produce, frequently set as a percentage of total yield, but sometimes as a fixed amount. ↗Honey was valued as a tributary good. And much land was given in support of military service, *gʷəlt*-holders being expected to campaign at the command of their overlords, farmers being expected to perform such duties as porterage. Some *gʷəlt* was granted indefinitely, some was given in support of a fixed office, in which case it was known as ↗*madäriya*, the holder's rights lapsing on leaving the office.

The church occupied a special place in the L.t. system, functioning as an overlord with perpetual rights. Overlordship, as in many other instances of *gʷəlt*, generally involved jurisdictional rights to administer justice and to collect revenues from markets and springs and the like. Individual churches and monasteries held lands, which paid tribute in support of different material needs of the church. They also held lands known as *rim* for the support of the clergy, and at least under the Gondär system these lands were held, individually by the clergy, in return for liturgical services. *Rim* lands were transmitted by inheritance, by sale and by gift, subject only, but always, to the provision of service (Bausi – Dore – Taddia 2001; CrumLand).

Historic Ethiopian L.t. came under increasing pressure from the modernizing state, which Ḫaylä Śəllase attempted to construct in the 1940s–60s. His goal was to replace *gʷəlt* with the direct payment of taxes to representatives of the central state. In this he had considerable success, although he left largely untouched the social relations, which surrounded the holding of *gʷəlt* (CrumLand 234–44). Moreover, while he effectively undermined *gʷəlt*, he had little impact on *rəst*, which, as a form of L.t., probably increased during his reign (Tekalign Wolde Mariam 1995). Social tension, arising from the inequitable distribution of land, especially in southern Ethiopia, contributed to the outbreak and subsequent course of the Revolution in 1974. The revolutionary regime, which overthrew the Emperor in 1974, went much farther the following year, abolishing the historic patterns of L.t.

Scholarship on Ethiopian land tenure

The scholarship on L.t. began with Italian observations on the conditions prevailing in Eritrea and northern Ethiopia (Perini 1893; Pollera 1913; Conti Rossini 1916; Villari 1938; Gesiotto 1939), a tradition which continued under British occupation of Eritrea in the 1940s. Meanwhile, a somewhat distinct tradition traces its roots to the writings of two of Ḫaylä Śəllase I's civil servants (Gebre-Wold Ingida Worq 1962; Mahteme Sellassie Wolde Maskal 1957). Both ↗Gäbrä Wäld Ǝngəda Wärq and ↗Maḫtämä Śəllase Wäldä Mäsqäl explored the complex vocabulary of early 20th cent. Ethiopian L.t. with reference to such terms as ↗*balabbat*, ↗*aśrat*, *rim*, ↗*sämon* and the like. Their work underpinned two later works framed within the conventions of modern scholarship (Bernahou Abbebe 1971; Mantel-Niećko 1980). Finally, Hoben (1973) pioneered, on the basis of anthropological fieldwork in Goğğam conducted in the 1960s, the study of then contemporary practices of L.t. and transmission, practices also studied by Weissleder (1965) and Bruce (1976). Hoben studied the *rəst* rules by which Goğğame farmers gained access to land. The study of the historic over-rights to similar lands was the concern of much of the aforementioned Italian scholarship.

Another strand of that scholarship published historical documents illustrating the exercise of such rights (Guidi 1903; CRAxum; HuntLand; Kropp 2004). Ethiopia possessed a remarkable number of documents, dating from about 1200, if not earlier, which record many different aspects of granting and holding of land, primarily, but not always, associated with the church. The number of these documents greatly exceeds those available for other sub-Saharan African countries (CrumLand 255–59; Crummey 2005:1–18). These documents formed the basis for a distinct strand of scholarship, which published, annotated and commented on them. This material was synthesized by Crummey (CrumLand).

Donald Crummey

Land tenure in modern Ethiopia

Under the imperial government until 1974, the agrarian system mainly comprised crown lands, church lands and communal and private peasant lands. The traditional L.t. was already then subject to great changes through reforms starting from the 1940s and through the allocation of large properties to individual land-holders, who had proven to be loyal to the crown. In some regions this led to a considerable increase of the economic power of feudal landlords. Even if it is often claimed that the "archaic" form of L.t. decisively fuelled the revolution, it was rather its specific, very contemporary form which facilitated social dominance and economic exploitation.

Crown lands – often large and of good quality – belonged to the government and the imperial house. Large estates of crown lands were granted to members of the "new" and old aristocracy under the ↗*gʷəlt* system. The church-monastic land ownership system, widespread in the traditionally Christian regions such as Təgray, Goğğam and Bägemdər, remained largely untouched. Church-monastic land, belonging to individual churches and monasteries, was a ↗*rəst*-type of possession (↗*Sämon*), although unrestricted in time and with tax authority, which assured that the Church continued to play a decisive role in the modern imperial state. Churches and monasteries themselves were not required to pay taxes.

In the 1940s, the concept of private land ownership was introduced in the communal land ownership areas, i.e. mainly in the north, and gave rise to a system of tenancy. Sale and purchase of land began to be practised. Such developments led to a process of transformation of communal property into private peasant land ownership (e.g., in new agricultural areas such as at ↗Ḥumera). The onset of market-oriented ↗agriculture accelerated the transformation of communal property into private property.

After the fall of the imperial regime, nationalization opened a new era in the relations between farmer, society, state and land in Ethiopia. The most drastic agrarian reform in the history of the country took place in 1975 by a Land Reform Proclamation, under the new *Därg* regime (↗Provisional Military Administrative Council). Major features of the land reform were: all rural lands were declared public property, and every Ethiopian citizen was given the right to cultivate land sufficient to maintain himself and his family. The form of L.t. consisted of an usufruct right of individuals or groups. The land right was not allowed to be transferred by sale, exchange or

lease, but could be inherited. Previous forms of tenancy were abolished, and the employment of hired agricultural labourers forbidden. While the Land Reform Proclamation bequeathed all ownership of land upon "the people of Ethiopia", the *Därg* later reserved for itself all notions of "ownership" of land. In many cases, land distribution was not done on the basis of equality; several officials or others loyal to the regime profited more than others.

Large private farms were expropriated and turned into state farms. The state farms were expected to play a leading role in agricultural development and to provide the bulk of commercialized food and agricultural produce. Their operational efficiency and performance was, however, rather weak. Peasants who had cultivated land under the former *rəst* system obtained usufruct right, and nomads were given usufruct rights over the grazing land they used.

The individual peasant farms remained the most widely practised type of farming also under the *Därg* regime. Farmers had access to agricultural land through Peasant Associations, institutions created by the state, and on terms determined by the state (s. *Nägarit Gazeṭa* of 1975). They had largely co-ordinating and organizational functions, as well as Agricultural Service Co-operatives for sharing of equipment, common procurement of farm inputs and marketing. One result of these associations was that small-size land plots were integrated into co-operatives, forming huge land parcels managed by one association.

With the take over of the EPRDF-led government, the peasant associations were abolished but state ownership of land continued, as laid down in the constitution of 1995. State ownership of land is reconfirmed by Proclamation No. 456/2005 on Rural Land Administration and Use, as to the use of rural lands, Proclamation No. 456/2005 makes provisions for indefinite usufruct rights, rights to land registration and certification, rights to the property built or produced on the land, intergenerational transfers and the possibility of land lease arrangements. The mandate for implementing the L.t. system lays with the regional governments which are responsible for administering and redistributing land in accordance with their specific laws and regulations. Urban land is leased by regional governments at market rates. Rural farmers have a right to use land indefinitely, free of charge and to temporarily lease it to other farmers as well as to bequeath it to their children. However, they cannot sell or mortgage their land. Land has been relocated in many rural areas, but the land policy is still vague and lacks coherence, resulting in L.t. insecurity, which discourages investments in land and encourages inappropriate and unsustainable land management practices.

Manfred Metz

Land tenure in Eritrea

The three major traditional regimes of L.t. in Eritrea, ↗*desa*, ↗*ṣəlmi*, and ↗*terra demaniale* (in today's Təgrəññа also called *dominalä*), are features of a hybrid L.t., a mixture of local traditional concepts and colonial reforms. The *desa* system is predominant in the Eritrean highlands (called *šəḥenna* in Akkälä Guzay, as in ᶜAgamä in Təgray), *ṣəlmi* (a form of ↗*rəst*) is another similar system practised all over Eritrea, and *terra demaniale* is found in both the Eastern and Western Lowlands and some other areas.

Under the *desa* system, all land within the designated area of the village is conceived as being the common property of the village community. Thus, every male head of household of the village is entitled to a share of village land through periodical redistributions of it, called *wareda*. Redistribution is normally carried out every five to seven years. Villagers are allocated equal shares of land, with both area and fertility being taken into account, so every farmer receives a share of fertile land as well as poor and medium-qual-

ity land. The system provides equitable access to land for all male members of the village and it also provides access to land for young men. However, it does not encourage investments and leads to fragmented land holdings.

In the *ṣəlmi-rəsti* system, land is owned by the lineage community and in some cases owned privately (in local terminology the term *rəsti* is mostly used in the same sense as *ṣəlmi*). Also in this system, land is redistributed every five to seven years. Of the traditional L.t. systems, the *ṣəlmi-rəsti* arrangement can sometimes provide a higher security of tenure rights, as it stays within one family. In addition, it allows land to be mortgaged and also to be sold on some rare occasions (in that case called *märet wärqi*, 'land [purchased by] gold'). This L.t. system, however, does not assure social equity or provide for the land needs of new families.

The colonial government undertook several major changes in land distribution. The first regulation, the *Regio Decreto* of 19 January 1893, empowered the government to carry out a land reform, followed by expropriations all over the country. *Terra demaniale* tenure was created as a form of state land by the Italian Land Statutes of 1909 (*Ordinamento Fondiario*) and 1926 (*Nuovo Ordinamento Fondiario*). Both stated that land belonged to the state except those granted to third parties by the government or owned by the indigenous population. These laws showed a better understanding of the traditional L.t. and revised the former regulations pertaining to *terra demaniale*. The decree of 1926 asserted state ownership over lands below an altitude of 350 m in the Western Lowlands and below 850 m in the Eastern Lowlands, provided they were not occupied by sedentary people, and also over forests and woodlands not occupied by sedentary groups. Large concessions of *terra demaniale* were given to Italians. However, villages did not give up their former claims to their lands, now *terra demaniale*, and lowland pastoralists have never fully accepted it. Since the time of the *Därg*, most *terra demaniale* in effect have been open-access lands for farming and grazing. An important modification the Italians introduced was village ownership in some parts of the country where it had not been in use before. This facilitated the expropriation of land and allowed the colonial administration to have a better control over villages.

L.t. in independent Eritrea is regulated by Proclamation 58/1994, after comprehensive studies of the history and nature of the Eritrean L.t., engaging the concerned ministries, the local administration and researchers. The Proclamation repeals the traditional L.t. systems, declares all land as state owned and grants lifetime usufruct rights to all citizens, men and women alike. The basic idea behind the land law was that the prevailing L.t. systems could not accommodate the population growth, were an impediment to development and the introduction of modern techniques. It differentiates between *ṭesa* (land for housing) and farming land. *Ṭesa* is due to every citizen above 18, providing they have applied for it and have fulfilled their national duties as it is specified in Legal Notice 31/97. Farming land is due to any citizen whose livelihood depends on it. The Land Proclamation, furthermore, allows for leasehold. The Land Reform is criticized for ignoring the pastoral communities and the communities living in the western lowlands. Until the new land legislation is implemented by the Land Commission under the Office of the President, the traditional systems of L.t. remain still predominant.

Manfred Metz – Saba Tesfay

Landor, Arnold Henry Savage

L. (b. 1857, Florence, d. 26 December 1924, Florence) was a British geographer, painter, sculptor and amateur photographer of private means who travelled widely to Asia as well as to North and South America. L. was educated in Italy and devoted most of his life to travel. His contact with the Ethiopian region began on 6 January 1906 when, with pleasure as his "sole object", as he says, he landed at Djibouti, and took the then newly established railway to Dərre Dawa. He then rode up to Harär, where he photographed *ras* Mäkʷännən (together with the latter's son, apparently Täfäri, later *aṣe* Ḫaylä Śəllase I) shortly before the chief's death, and proceeded on to Addis Abäba, where he was given several audiences by *aṣe* Mənilək II, whom he also photographed. The traveller then rode down to the Baro river, before making his way to the Congo, northern Nigeria and Senegal. He thus accomplished a journey of no less than 13,500 km in a mere 364 days.

Landor subsequently published his reminiscences of his African journey in a beautifully bound two-volume work which appeared in 1907. Its narrative is fast-moving, and full of then little-known information of geographical, historic and ethnographic interest, and contains numerous unusual photographs of Härar and Addis Abäba as well as of the ᶜAfar, Oromo, Yämbo, Nuer and Añwaa.

Lang, Martin ↗Prutky

Langano

Lake L. (Laangannoo, also Hora Qoree, 1,585 m A.S.L., 214 km², maximum depth 46 m) belongs, together with ↗Zʷay, ↗Šala and ↗Abyata, to the lakes of the Arsi group in the central Ethiopian ↗Rift Valley. It lies south of Mount Alatu (2,369 m A.S.L.) in today's Arsi-Nagallee *wäräda*, East Šäwa zone of Oromiyaa. Until the establishment of the post-*Därg* administrative division it belonged to the ↗Ḥayqočč–Butağira *awraǧǧa*.

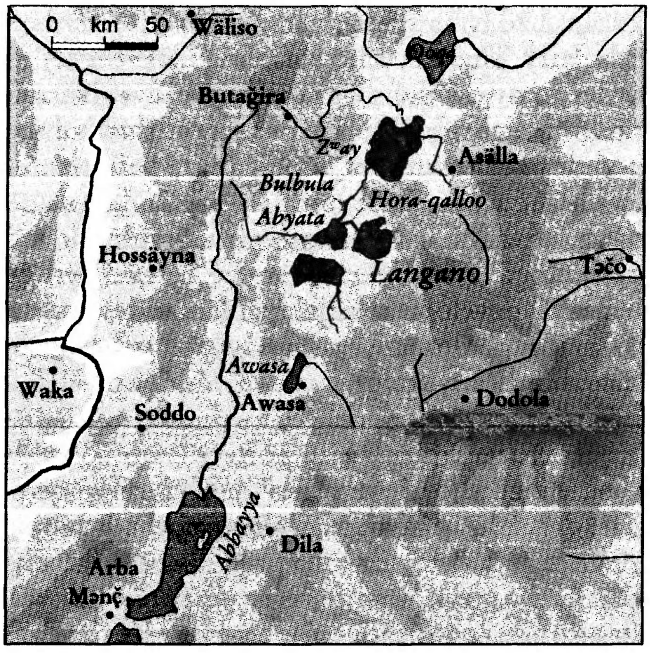
L. is separated from Lake Abyata in the east by a narrow isthmus (minimal width ca. 3.5 km). It is fed by several small tributaries flowing from the slopes of the Muunessa or Arsi mountains. The lake has two small islands and an outflow to Lake Abyata, called Daka or Hora-qalloo. At the northern shore of the lake there is the Aluto-Langano geothermal field with a number of hot springs which recently has been opened up for a geothermal electric power plant.

Geological research suggests that the lakes of the Arsi group formed one lake in the Holocene era. The landscape around the lake is characterized by volcanic deposits, such as obsidian pitchstone, tuff and pumice, as well as lacustrine deposits, such as sand and silt.

Due to the alkaline consistence of its reddish brown water L. is the only Rift Valley lake which is free from ↗bilharziasis. The possibility of swimming in the lake without this danger is probably the main reason why, starting from Ḫaylä Śəllase I's time, the lake attracted members of the foreign community in Addis Abäba for their weekend cottages along the shore. The first hotel to be built at L. was established by Bäqqälä Molla in the 1950s. Tourist attractions are the sandy beaches along the western shore, water sports, the volcanic landscape, hot springs and an interesting bird life (especially *Pelecanus onocrotalus*). The infrastructure for tourism around L. is still being expanded. Since 1991 a new hotel has been built with a new bathing resort.

However, the environment around L. is exposed to degradation and removal of the vegetation and consequently soil erosion. Especially between L. and Abyata the original acacia woodland has been largely destroyed by overgrazing

Lake Langano; photo 2002, courtesy of Susanne Hummel



and clearing for cultivation. The wood is used as fuel in the home and to generate cash income.

Language policy

The term L.p. refers to the measures undertaken by the government or other official institutions with regard to the social status of a language as a means of communication. In a multiethnic and multilingual society, L.p. is closely correlated with state policy towards the ethno-linguistic communities living within its borders. To a growing extent language development and spread is influenced by the L.p. of the state, by government decisions and activities regarding the status of languages in official life, as medium of school instruction or as the preferred language in the mass media. L.p. (the making of alphabets, the creation of a modern terminology, linguistic regulation and standardization) also has a large influence on the internal linguistic development of languages.

In Ethiopia, regulations regarding the use of languages can be traced back to the ↗*Fəṭḥa nägäśt*. This collection of religious and secular laws enforced since the 16th-cent. at least, states that a judge has to be able to speak clearly, and to know the different languages spoken by the people of his jurisdiction when they argue before him (Paulos Tzadua – Strauss 1968:250, 252).

Over the centuries, at least since Gondärine times, ↗Amharic was the *ləssanä nəguś* ('language of the king') and served as the court language of the Ethiopian Christian state, and was sometimes also used as a written language, alongside ↗Gəᶜəz, the language of literature and liturgy. Under the reign of *aṣe* ↗Mənilək II, the Amharic language further grew to become the only widely used written modern language in the Empire. The Amharic language gained high prestige and was supposed to act as a symbol of national identity and distinctiveness.

At the beginning of the 20th cent., when the first government schools opened in Addis Abäba and in the regions, foreign languages (↗French, ↗English, ↗Italian or ↗Arabic) were frequently used as languages of instruction. In the mission schools, local languages were used in teaching.

During the Italian occupation any kind of national language for Ethiopia was rejected. An edict of 1936 decided that teaching should be in the main local languages, namely Amharic, ↗Təgrəñña, ↗Oromiffa, ↗Harari, ↗Käfa and ↗Somali, and, in Muslim areas, in Arabic (which was the language of teaching in traditional Muslim schools; s. Bowen [Pankhurst] in BendLang 322).

After the Liberation, several laws specifying language use were promulgated. An important provision concerning language use was included in the regulations of the Imperial Ethiopian government concerning missionary activities. Missionaries were required to learn Amharic and to teach through Amharic. Teaching through local languages was allowed only "in the early stage of missionary work, until such time as pupils and missionaries ... shall have a working knowledge of the Amharic language" ("Regulations on the Establishment of Missions", 1944).

The most significant provision from the point of view of L.p. is found in the Revised Constitution of 1955. For the first time in Ethiopian history, a statement on L.p. was officially laid down in a constitutional act. Article 125 of the Revised Constitution reads as follows: "The official language of the Empire is Amharic". Even

if this decision was guided by the idea that in a linguistically diversified country like Ethiopia the Amharic language could serve as an agent of unification, such a L.p. was to be perceived by non-Amhara people as discrimination against their own languages and nationalities. The internal linguistic development of Amharic was strongly promoted by the establishment of the National Academy of the Amharic Language (↗Ethiopian Language Academy) in 1972. The preamble of the "National Academy of the Amharic Language Establishment Order" (1972:126) stressed that Amharic "should become a vehicle for the expression of the knowledge, learning and thought engendered by modern civilization".

Accordingly, all official documents and laws were published in Amharic and in English, the latter becoming the official medium for Ethiopia's international communication. In the educational sector Amharic was employed as the single medium of instruction in all government schools throughout the country up to the sixth grade. From grade seven onwards English was used for school instruction. In the governmentally operated press (↗Newspapers) and radio (↗Broadcasting), Amharic became the mainly used language, although ↗ᶜAfar, Arabic, English, French, Oromiffa, Somali, ↗Təgre, and Təgrəññña were used to a certain extent on the radio.

After the revolution of 1974, the strict "Amharic-only" L.p. of the Imperial Ethiopian government was changed. Equal rights of all Ethiopian nationalities were first delineated in the Programme of the National Democratic Revolution of Ethiopia, which stated that "each nationality will have regional autonomy to decide on matters concerning its internal affairs. Within its environments, it has the right to determine the contents of its political, economic and social life, use its own language and elect its own leaders and administrators to head its internal organs" (Provisional Office for Mass Organizational Affairs 1976). This L.p. was emphasized also in the Constitution of the People's Democratic Republic of Ethiopia in 1987, article 2.5: "The People's Democratic Republic of Ethiopia shall ensure the equality, development and respectability of the languages of nationalities."

However, the implementation of these guidelines was confronted with many problems owing to the great diversity of languages spoken in the country and the uneven stages of their internal development. Only very few Ethiopian languages had been studied, analysed and described scholarly. There was no sociolinguistic survey in order to assess the nature and spread of bi- and multilingualism, language use, the attitude of the people or the degree of intelligibility between related languages. Since most Ethiopian languages were unwritten, extensive orthographical and phonological studies had to be carried out in order to develop the principal languages and fit them for their function as means of instruction in the educational sector.

The making of alphabets for hitherto unwritten languages was an important step towards their linguistic description and development. The decision in favour of adopting the Ethiopic ↗script (*fidäl*) for this purpose instead of using the Latin script was fiercely disputed. It was, first of all, a political decision guided by the concept that the centuries old Ethiopian syllabary is unique and could serve as a symbol of national identity. The adoption of this writing system was also expected to facilitate the reading and writing ability of the people, since many of them were already used to it through Amharic.

The linguistic preparatory work for these goals, i.e. the adequate phonological and grammatical description of languages, the creation of new alphabets, the compilation of dictionaries as a prerequisite for language standardization, became an urgent task that had to be assigned to professional experts. This responsibility was delegated to the Ethiopian Language Academy, formerly known as National Academy of the Amharic Language. The members of the Academy contributed greatly to linguistic research on Amharic, Oromiffa, Təgrəññña, ↗Wälaytta, ↗Sidaama and other languages in the areas of lexicography, linguistics, literature and terminology.

The status of Amharic was defined in the Constitution as follows: "Without prejudice to Article 2 subarticle 5 of this Constitution, in the People's Democratic Republic of Ethiopia the working language of the State shall be Amharic." Therefore, the Academy directed great efforts towards the terminological development of Amharic as a modern means of communication, suitable for the expression of new concepts and the dissemination of scientific and technological knowledge. In collaboration with Addis Ababa University and other institutions, an extensive Science and Technology Terms Translation Project for Amharic was carried out by the

Academy. The project mainly used the resourceful structural patterns of the Amharic language for the new scientific terminology.

In formal education, Amharic and English remained the sole media of school instruction; however, in the extensive adult literacy and post-literacy education programmes (called in Amh. መሠረተ፡ ትምህርት, *mäśärätä təmhərt*, 'basic education') about 15 Ethiopian languages were introduced as media of instruction.

The promotion of equal rights for all Ethiopian languages was granted also in the Constitution of the Federal Democratic Republic of Ethiopia adopted in 1994. With regard to L.p., Article 5 of the Constitution declares: "1. All Ethiopian languages shall enjoy equal State recognition. 2. Amharic shall be the working language of the Federal Democratic Republic of Ethiopia. 3. Each member of the Federation shall determine its own working language." The Federal Ethiopian Government decided to introduce nationalities' languages also in the formal educational sector. Thus, about 25 Ethiopian languages were envisaged to be employed as media of instruction in primary education. This was a desirable shift in L.p.; however, without thorough studies in the language situation prevailing in each region, and without comprehensive preparation regarding the teaching material and the training of teachers, the hasty implementation of this L.p. was to cause serious problems. The employment of the Latin script for almost all non-Semitic languages created additional problems and conflicts. The administration at various regional levels, when introducing the new education and training policy, faced a chaotic tangle of regional, local and national languages and communications. This was mainly due to the lack of adequate information on the distribution of the various Ethiopian languages and their status as mother-tongues, second or third languages, and especially on the extent and degree of bilingualism in Amharic among speakers of other mother-tongues. In view of their educational and socio-economic perspectives, minor nationalities often demanded to be taught reading and writing in Amharic instead of their own mother-tongue. A sensible L.p., therefore, should take into consideration stages of bi- and multilingualism permiting an effective deployment of limited material and personnnel resources.

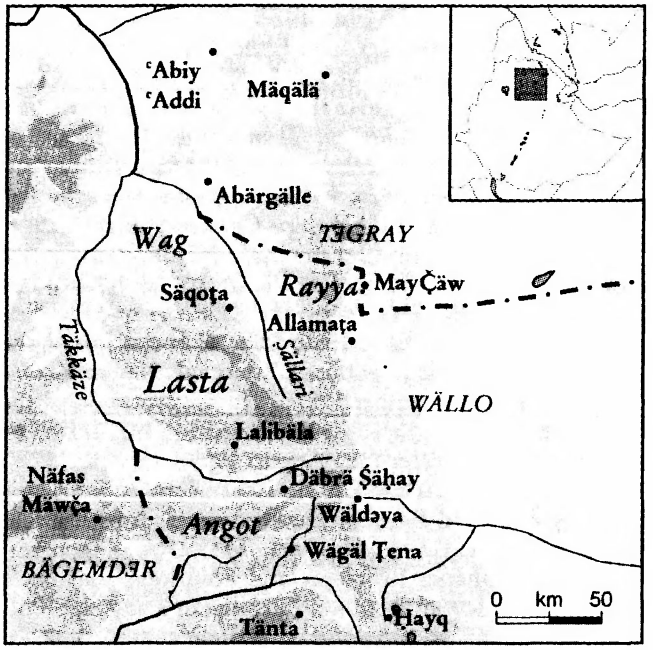
Lasta

The historical region of L. (ላስታ) is located in north-western ↗Wällo. It is a generally lowland region within the Täkkäze drainage system characterized by rugged mountain ranges. The highest mountain ranges include Abbuye Meda (3,900 m A.S.L.), Abunä Yosef and Sela Asfarre. The area has a mild lowland climate with cold weather in the mountain ranges. The land is



highly eroded and farmlands have become infertile and extremely vulnerable to drought and famine. Main towns include Muğğa, Kul-Mäsk, Ayna and Bälbala Giyorgis. L. lies along the ancient ↗salt trade route linking ↗Wag in the north, ↗Yäğğu in the east and ↗Šäwa. It is also bounded by Wadla in the south, ↗Bägemdər in the west, and ↗Angot in the south.

L. and Wag were the ancestral homeland of the Central-Cushitic-speaking ↗Agäw people. L. was the power base of the Agäw ↗Zagʷe dynasty. It was from L. that the dynasty administered the country between ca. 1150–1270. The political court of the dynasty was at ʿAdäfa (or Roḥa), present-day ↗Lalibäla, named after one of the Zagʷe kings.

Christianity is believed to have reached the area as early as during the reigns of ↗Kaleb and ↗Gäbrä Mäsqäl, in the 6th cent. To Kaleb the construction of the rock-hewn churches of Bälbala Qirqos and Bälbala Giyorgis is traditionally ascribed, and Gäbrä Mäsqäl is credited with the foundation of the two churches at ↗Ǝmäkina (Lədätä Maryam and Mädḫane ʿAläm). During the Zagʷe rule, a large number of rock-hewn churches were constructed; King ↗Lalibäla alone is believed to have built twelve in his capital.

Following the decline of the Zagʷe dynasty and the accession to power of the so-called ↗Solomonic dynasty in 1270, the traditional rulers of L. and Wag held the dignified title of ↗*wag šum*, and considered themselves descendants of the Zagʷe dynasty. These rulers developed a tradition that identified themselves as descendants of Adil, son of David and brother of King Solomon. Such a tradition competed with those of the "Solomonic dynasty" and enabled the successors of the Zagʷe dynasty to maintain a high level of respect after they had lost power.

L. gained more importance in the 17th cent. as it served as the main stronghold in the defence of Orthodox Christianity during the reign of *aṣe* ↗Susənyos, who embraced Catholicism. The leader of the rebellion in defence of Orthodoxy, ↗Mälkəʾa Krəstos, conducted his activities in the mountain region of Ǝmäkina, in the heartland of L. Susənyos was obliged to undertake several military expeditions, but was unable to suppress the rebellion, and was later forced to renounce Catholicism after the battle of ↗Wäynä Däga in 1632. The successors of Susənyos led a number of expeditions to bring L. under imperial authority. Most of the Gondärine kings mobilized armies to subdue L. and Wag, which had defied imperial control and religious policy during the ↗*Qəbat* and ↗*Täwaḥədo* doctrinal controversy in the 17th and 18th cent.

The military elite of the region again assumed importance during the ↗*Zämänä mäsafənt* as kingmakers. During this period, the Yäğğu Oromo warlords established marriage relations with the chiefs of L. Also, one of the Yäğğu rulers, ↗Aligaz, symbolically held the title of ↗*wag šum*. This helped them to secure a peaceful corridor for their movements between Yäğğu and Bägemdər. However, there was rivalry between the chiefs of L. and those of Yäğğu over office of the kingmaker. In 1791/92 the chiefs of L. succeeded in removing the Yäğğu from Gondär until the latter managed to return in 1799. Later in the second half of the 19th cent., one of the *wag šums* acceded to the imperial throne as *aṣe* ↗Täklä Giyorgis II.

During the period of *aṣe* ↗Mənilək II, *ras* ↗Kaśa Ḫaylu, a descendant of the rulers of Šäwa and L., was appointed governor of L. This led to rivalry over the control of ↗Bugna, the central and western part of L. The issue was resolved in favour of *ras* Kaśa in the court of *ras* Täfäri (later *aṣe* ↗Ḫaylä Śəllase) in 1919, which formally brought about the separation of L. and Wag.

After the liberation from Italian occupation in 1941, L. became an *awraǧǧa* within Bägemdər province governed first by *ras* Kaśa and later by his son *ras* ↗Aśratä Kaśa. Later it was placed under the control of Wällo, ruled by Crown Prince ↗Asfa Wäsän Ḫaylä Śəllase. Since 1991 it has maintained its *awraǧǧa* status within the North Wällo zone with its capital at Wäldəya.

A. Legal history

Ethiopian L. developed out of a complex interaction between local elements and foreign influences. Legal concepts of local ethnic groups, canon L. and the L. of the monarchs form the different layers of L. and continue to exist and interact. There were also legal concepts regulating the interaction with other states or kings, which have not yet been studied. Public L. in a modern sense, strongly based on Western influences, is a quite recent development and adds a further element.

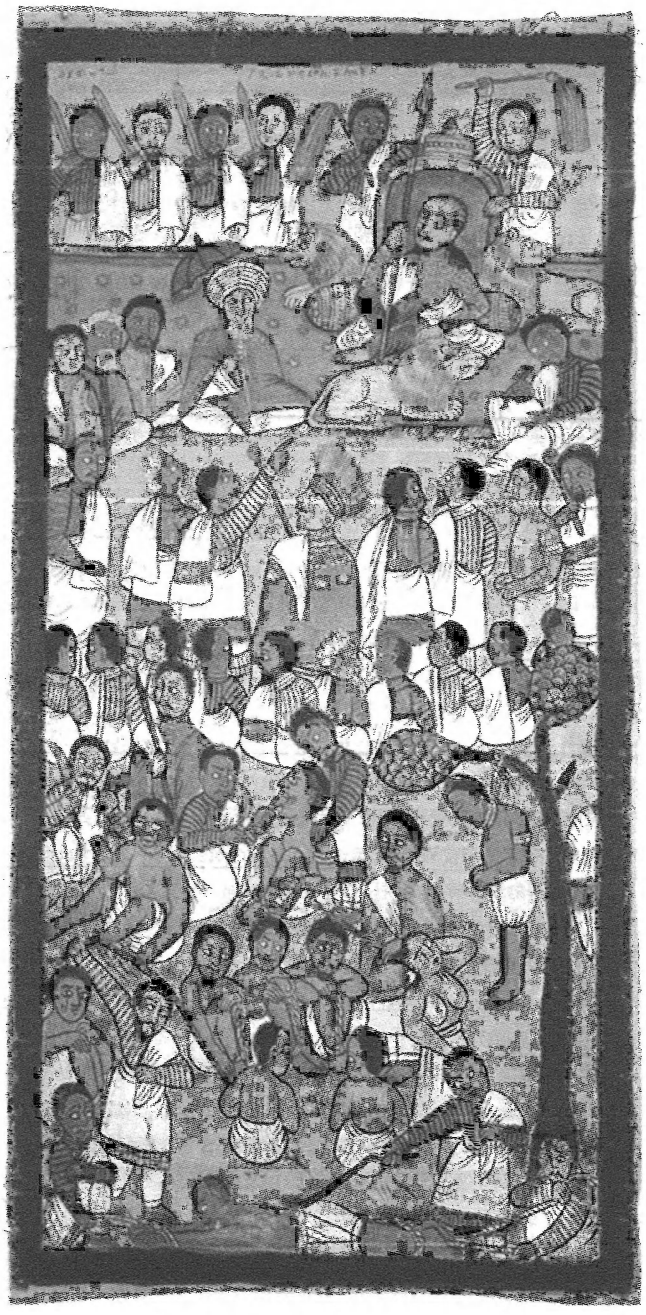
The legal history of the Christian state for the period before the 16th cent. is quite obscure, and needs thorough study and documentation. Legal concepts regulating daily life and the state of that period were mostly based on religious norms, mainly referring to the O.T. and Christian traditions. Of basic importance were the regulations of Canon L. (s. below [F]), references to which are known from the 13th/early-14th cent. The legal concepts that evolved out of the edicts of the O.T. were applied in Ethiopia together with those developed from Christian traditions. In the case of litigations (cp. ↗*Muggət*) the church played a key role, but also the local governor or prince (↗Aristocracy) and the monarch. In Ethiopian tradition, rulership was linked with a judicial function, the king being the highest judge, and also his governors exercising a juridicial function (cp. ↗*Čəlot*; ↗*Daññа*). However, the main part of historical legislation was formed by ↗customary laws of the different ethnic groups of Ethiopia. Their sources are sometimes doubtlessly ancient, even if in most cases not known. In the case of several Təgrəññа L. codes (s. below [E]), traditions point to origins in the 15th cent. Due to the ancient presence of ↗Islam in Ethiopia, the Islamic L. (↗*Šarīʿa*) played a role already at an early stage, later expressed by different Islamic L. schools (↗Ḥanafism; ↗Mālikism; ↗Šāfiʿism).

Preliminary studies conducted so far on the legal history of Ethiopia in the middle period, i.e. from the 16th cent. to the second half of the 20th cent., reveal that the principal L. applied in Ethiopia during that period included religious edicts, natural L., customary L. of all ethnic groups, *aṣe sərʿat* (presidential jurisprudence or judge made L.), enactments (statutes) of different emperors, and the newly codified L., the most important text being, since the 16th cent., the ↗*Fətḥa nägäśt*, which owed its sources largely to Oriental-Byzantine tradition. Another important L. book produced before the 17th cent. was the ↗*Fäws mänfäsäwi*. First attempts to compile Ethiopian L. were undertaken by church scholars. Codification, understood as the systematization and compilation of L. according to their legal regime, marks an important stage in the development of L. of Ethiopia.

In the modern period of Ethiopian legal development, which commenced in 1855, public laws enacted by the L.-making organs and the Heads of State, along with modern codified L. based on Western concepts, constitutional and international laws were added to the laws of the middle period. The modern period is signified by further codification and constitutional development (↗Constitutions).

The first written Constitution of Ethiopia was promulgated by *aṣe* ↗Ḫaylä Śəllase I in 1931 as a transitional L. to accommodate tradition and yet implement new political ideas. Structures and processes as well as the distribution and limitation of power were laid down with the idea of modernization of the administration and the acceptance of Western legal science. This legal instrument marked the first step towards the use of formal L. and legal science to develop the Ethiopian governmental structure and institutions.

The development of a constitutional monarchy was interrupted by the Italian occupation 1936–41 (↗Africa Orientale Italiana [A.O.I.]). From the beginning of the foundation of the A.O.I., L.



Court session of *aṣe* Tewodros II showing different kinds of penalties; traditional painting, canvas, 20th cent., London, British Museum, no. 1947 af 28.3; photo 1995, courtesy of Michael Gervers

signed by ↗Vittorio Emanuele III "Re d'Italia, Imperatore d'Etiopia" were promulgated, the first being the *Ordinamento e amministrazione dell'A.O.I.* of 1 June 1936. The *Ordinamento politico, amministrativo e militare per l'A.O.I.* of 15 November 1937 regulated the administration of the new colony in more detail; for the administration of the Ethiopian, Eritrean and Somalian population, local chiefs were employed, and in this context the existence of customary L. recognized (Cap. V: "popolazioni indigene").

Ten years after the Liberation, in 1955, the Revised Constitution of Ethiopia was promulgated. Like other modern constitutions, it was basically concerned with defining and distributing powers, rights and duties within the Ethiopian state, notably among five major elements: the emperor, the legislative, the executive, the judiciary, and the people. Of these, the emperor was to be a self-sufficient source of political power. The other institutions of the state were made ultimately dependent upon one another. L. were passed by the legislature, enforced by the executive, and applied by the judiciary. The Revised Constitution also guaranteed more human rights, and provided for the doctrine of checks and balances, judicial review, and rule of L. Together with other important laws, it is contained in the *Mäṣḥafä ḥəggəgat ʿabäyt*. Extensive codification work followed in the 1950s and 1960s.

The second-level codification started with the penal L., as the one mostly concerned with the sanctity of the human being and the principle of the rule of L. the ↗Penal Code of 1930 marked a historic step from traditional and customary L. to a modern, written and systematised judicial system. The next stage in the codification process was meant to effect a change from heterogeneous customary L. to codified L. on the basis of a civil L. system, in order to safeguard and advance the existing social system. The major L. that were codified were the Penal Code of 1957, the ↗Civil Code of 1960, the ↗Commercial Code of 1960, the ↗Maritime Code of 1960, the ↗Criminal Procedure Code of 1961 and the ↗Civil Procedure Code of 1965. Through the incorporation of many principles of L. and the creation of various institutions, mainly from the civil L. system, and integrating them with some Ethiopian values and sense of justice, the codes managed to soften the tensions between the old and new L. of the country.

The codes are a complete system of formal, written L. to supplant unwritten custom. The penal code of 1957 emphasised the principle of *nulla poena sine lege*. The Criminal Procedure Code imposed important limitations on police power and other procedural guarantees. The Civil Code provided remedies against government tort feasors and judicial relief against abuse of power. The Civil Procedure Code confirmed due process of L. The commercial code regulated the establishment of business organization and commercial transaction. The maritime code provided a completely new concept of maritime L. As for their sources, apart from incorporating traditional values, the 1957 Penal Code drew from the 1930 code was

inspired by the *Fəṭḥa nägäśt* and European penal codes, and the provisions of Anglo-Saxon L. The other codes also showed pronounced foreign influence, though in the case of civil L., the reception and adoption of western jurisprudence was not outright and complete but rather selective. For example, in the areas of persons, family and succession etc., the contribution of the western legal systems were minimal. In the case of obligation generally, special contracts and registers of immovable property and literary and artistic property, however, the western contribution was greater and in some instances even exclusive.

A relatively autonomous corpus of L. in Sub-Saharan Africa, Ethiopian L. has a unique blend of indigenous traditions and foreign sources. Assimilated as far back as the 16th cent. via the *Fəṭḥa nägäśt* (and earlier, via Canon L. books) and reflected in the six modern codes, these tie it in many respects to the larger legal family of Romano-Germanic L.

The more liberal Draft Constitution of 1974 – which would have made Ethiopia a more democratic state (under a constitutional monarchy with sharply reduced powers) – did not make it to the parliament before it was dissolved on 12 September 1974 (↗Revolution). On that very day the Revised Constitution of 1955 was abrogated by the ↗Provisional Military Administrative Council (*Därg*).

B. Judicial system

Taken together, the federal, regional state and municipal courts now form a complex judicial system, which has undergone various changes in structure, jurisdiction, procedure and court practices in the course of the last century.

In the earlier period, there was a fusion of the judicial with the administrative functions of the state. The court structure, prior to 1936, constituted a five-tier system of regular courts. Besides the "road-side court" (that was not categorised as part of the regular courts), the Crown Court (ዙፋን፡ ችሎት, *zufan čəlot*), the Chief-Justice (↗*Afä nəgus*) Court, the ↗*šaläqa* (Provincial) Court, the የአካል፡ ዳኛ (*yäʾakal↗dañña*; District) Court and the የአፈር (*yäʾafär*) or የስር፡ ዳኛ (*yäsər dañña*; First Instance) Court were operating in Ethiopia. In 1942 the Administration of Justice Proclamation No. 2 of 1942, established a four-tier court system (Supreme Imperial Court, High Court, Provincial [*awrağğa*] Court and District Court) to which later the ጠቅላይ፡ ግዛት (*ṭäqlay gəzat*; Governorate-general) Court, the ምክትል፡ ወረዳ (*məkəttəl wäräda*; sub-district) Court and the አጥቢያ፡ ዳኛ (*aṭbiya dañña*; local judge) Court were added (cp. Scholler 2006:48). Thus, the structure of the courts corresponded with the administrative sub-divisions of the country. Within the same territorial limit, a court exercised both civil and criminal jurisdictions. The High Court and the Supreme Imperial Court, however, were given national jurisdiction. The Governorate-General Court, the Sub-District Court and the Local Judge Court were abolished later.

Although the supreme judicial authority was vested in the Supreme Imperial Court by the 1955 Constitution, the Crown Court continued to operate at the pinnacle of the regular court structure, even after the promulgation of the cited Constitution.

The strong sense of justice among Ethiopians greatly contributed to the creation and development of manifold legal institutions, among which one that was unparalleled by any institution of the time in western legal systems: the "road-side court". Whether a man set out to fetch firewood or a woman to fetch water or any other activity along the road, each had the social obligation to intervene in the settlement of disputes at the request of any interested party. Correspondingly, whoever was alleged to have committed an offence or failed to meet his/her obligations was

required, under pain of penalty, to submit to the authority of such a spontaneously called-upon person. Irrespective of sex and social status, the person who assumed such responsibility could exact coercive obedience. Such a person would, more often that not, try to bring about the settlement of the issue between the parties in an amicable manner. He could also require the assistance of others, usually elders or members of the clergy, to mediate between the disputants so as to settle the case out of court.

If all modes of settlement of disputes available in the community in question did not work, the road-side judge would bring the disputants before the local chief or send them to the court of first instance by tying up the tips of their garments.

The body of L. that was indigenous to Ethiopia and that marked a significant development in the last decades of the 19th cent. and the first three decades of the 20th cent. was the regime of L. known in modern legal science as civil and criminal procedural L. It had been transmitted from generation to generation by ↗oral tradition.

Before the Italian occupation in 1936, procedural L. was comparatively well developed and had attained a high degree of excellence. This L. was more popular among the people than the substantive L., a fact that tends to show how much the people of Ethiopia give due respect and importance to the proper administration of justice. Judges and all other persons engaged in the administration of justice were respected and honoured. They were expected to live up to the then standards of the justice and aspire to the attainment of this lofty goal.

This procedural L. included the L. of evidence, which incorporated techniques of investigation and highly sophisticated interrogation and cross-examination procedures, methods of interpretation of L. and framing of issues, including principal and side issues (*obiter dicta*). All these fell under the administration of justice process of Ethiopia.

The strength of a government in any system largely depends on recognition of and adherence to the principles of L. It is only where there is no mal-administration of justice and where justice is dispensed without delay that one may claim that there is a smooth relationship between the people and their government. It would not, therefore, be surprising to hear people saying: "Let the Almighty God give us a judge who takes the trouble to ascertain whether or not justice is done."

It was immediately after the liberation from Italian occupation that many changes were introduced in the structure of the courts that later served as levers for meaningful innovations to be made. The competing interests of creating an independent judicial system on one hand and establishing centralised administration on the other were compromised in the following two ways: the merging of the executive and judicial functions into the role of governors and centralising the appointment of judges; and detaching the two national courts, i.e. the High Court and the Supreme Court, from provincial influence.

It was this compromise solution that led to the total transformation of the Ethiopian judicial system. Pursuant to the treaty concluded between Ethiopia and Britain in January 1942, a new court system was established by the Administration of Justice Proclamation No. 2 of 1942. The proclamation provided for an integrated hierarchy of courts, the initial jurisdiction of which was to be determined principally by the value of the claims in civil cases and the seriousness of the crime in criminal cases.

The decisive step taken in the development of the structure of the courts in the legal history of Ethiopia was the issuing of Proclamation No. 2 of 1942. This and subsequent legislation together formed a seven-tier system of courts. These courts had jurisdiction over civil cases with limits of the value of the claim and criminal jurisdiction on the basis of the punishment attached to the crime charged. Each court had the power to entertain appeals made to it from the decisions of the court immediately below it.

Apart from the High Court and the Supreme Court that were distinctly above the influence of provincial administrators, the general scheme of the court structure reflected the traditional practice of combining judicial and executive functions in the role of the local chiefs and governors. At the pinnacle of the court structure, one found, until 1974, the emperor dispensing justice in the Crown Court.

Parallel to this structure of regular courts, five distinct quasi-judicial bodies existed prior to 1936, and eleven such bodies were set up between 1941 and 1974.

These moves were a reflection of the general tendency prevalent in Ethiopia to establish special courts for special cases, showing a preference for flexibility over rigidity, and compromise for

a structural solution. The distinctive features of the non-regular courts were, first that their jurisdiction limited their service to a particular sensitive question or to a defined sector of society. Second, they were not part of the regular court structure. Unlike the regular courts, the procedure they followed was simple.

The attempt to introduce the reform of judicial administration in 1942 was meant to progress in the direction of the unification of courts, simplification of structure and balancing decentralisation with centralisation. The independence of courts from the administration was guaranteed by proclamation No. 232 of 1973.

Prior to 1936, procedures in the regular courts were conducted according to the rule of the traditional mode of litigation (**ተጠየቅ፡ ስርዓት**, *täṭṭäyyäq sərᶜat*; ↗*Muggət*). This mode of litigation was unique and indigenous to Ethiopia. After 1942, however, these rules were replaced by Court Rules issued, under the Administration of Justice Proclamation No. 2 of 1942, by the Presidents of the Supreme Imperial Court and the High Court of Ethiopia, with the approval of the Minister of Justice.

The Court Rules were later replaced by the ↗Criminal Procedure Code of 1961 and the Civil Procedure Code of 1965. In the earlier period, cases were adjudicated not only according to the prescribed rules and regulations, but also according to a sense of natural justice, fairness and equity.

The idea of the "Collegiate Bench" was introduced in 1908. At that time, senior judges of the *Afä nəguś* court sat in a panel of two in each division or bench. In lower courts a single judge sat with assessors (*täčč̣iwočč̣* or *əmmañño*č). It was by the Administration of Justice Proclamation of 1942 that the idea of a collegiate of three judges sitting in the Supreme Imperial Court, High Court, and Provincial Courts was introduced. In the court below a single judge heard the cases.

By the Revised Constitution of 1955 judicial independence was guaranteed and judges, in the administration of justice, were to submit to no other authority than that of the L. The nomination, appointment, promotion, removal, transfer and retirement of judges was to be determined by a special L. governing the judiciary. That L. appeared only in 1973. Even though the independence of courts was guaranteed by the Constitution, the interference of the executive branch of the government was evident to a certain extent.

C. Modern law and judiciary

The development of modern L. in Ethiopia, in general, is considered to be framed by the so-called modernist project devised by *aṣe* ↗Ḫaylä Śəllase I after 1930 (Aberra Jembere 2000:27). However, the modernization of the Ethiopian codification, specifically, was pursued mainly at the end of the 1950s and in the 1960s; a period in which six L. books were created (↗Civil Code, ↗Commercial Code, ↗Civil Procedure Code, Penal Code, Penal Procedure Code [↗Criminal Codes] and ↗Maritime Code). Two larger projects in relation to this development were the creation of a Labour Law Code and in more recent times the adoption of the Family Law Code. As to the latter, Title XXI addressed the issue of reciprocation between modern L. and traditional ↗Customary L.: Even though the clause of Art. 3347 (1) intended to limit the operation of diverse customary L., Art. 3348 (2) respected the principle of the *status quo ante* for all legal situations existing before the Code's coming into force. Hence, effects of customary L.-based legal relations prior to 1960 were considered valid (s. Vanderlinden 1966:227, 245). Notwithstanding, it has to be pointed out that this modernisation, influenced by foreign expertise, took the customary L. systems into account, since some parts of customary L. were incorporated into the Civil Code by its creator René David (France) and thus preserved. Beyond the scope of the modern codifications, customary L. as well as religious regulations are still disseminated nowadays, especially in matters of personal status (*Personalstatut*) such as marriage. Disputes in those matters are subjects of so-called Social Courts as well as Customary- and/or Religious Courts, which are allowed to exist and perform traditional tribal/religious administration of justice in accordance with Art. 78 (5) of the ↗Constitution (1995). The former has been established in some States (*kəlləloč̣č̣*), e.g., of Təgray, Amara, Oromiyaa and Harär on the *qäbäle*-level,

the lowest unit within the current federal state structure (↗Administrative division).

The judicial body has been stipulated based on, and pursuant to, the new concept of a decentralized system of ↗Government. The judicial powers at the State level as well as at the Federal level are vested in the courts, Art. 79 (1). Unlike the five-tier system of regular courts prior to 1936, and the four-tier court system from 1942 on (cp. Redden 1968; Aberra Jembere 2000: 219ff.; ↗Judicial system), the new concept stipulates a three-tier Federal and State court system. At the federal level, the judiciary is comprised of Federal First-Instance Courts (*yäfederal mäğämmäriya däräğa fərd betočč*), Federal High Courts (*yäfederal käffətäññaa fərd betočč*) and the Federal Supreme Court (*yäfederal ṭäqlay fərd bet*). At a state level, the system consists of State First-Instance Courts (*yäkəllal mäğämmäriya däräğa fərd betočč*), State High Courts (*yäkəllal käffətäññaa fərd betočč*) and the State Supreme Courts (*yäkəllal ṭäqlay fərd betočč*).

A crucial aspect in federal systems in terms of the judiciary is the courts' competency; more precisely, the concurrent jurisdiction of Federal and State Courts defined by L. The Federal Supreme Court has, e.g., the highest and final judicial power over federal matters; whereas the State Supreme Courts have the same power in their relevant state matters. Moreover, the State Supreme Courts also exercise the jurisdiction of the Federal High Court. State High Courts exercise, in addition to state jurisdiction, the jurisdiction of the Federal First-Instance Court. For example, decisions rendered by a State High Court, exercising the jurisdiction of a Federal First-Instance Court, are appealable to the State Supreme Court (cp. Fasil Nahum 1997:99–103).

Although the judiciary arguably has the power to interpret the constitution, it is important to note that it has no power to review the constitutionality of L. (Assefa Fiseha 2006:414). This power has been expressly granted to the House of Federation (*yäfederešən məkər bet*) as per Art. 62 (1). In contrast to that of the Federal Supreme Court in the United States of America and the *Bundesverfassungsgericht* in the Federal Republic of Germany, the power to interpret the constitutionality of L. lies not in the judiciary, but rather in a state organ that benefits from legal expertise via the Council of Constitutional Inquiry (*yäḥəggä mängəśt guddayočč aṭṭari guba'e*; more precisely s. Hatem Elliesie 2009, n. 177).

Furthermore, this concept begs the question of the doctrine "Independence of the judiciary" at large; specifically, that the decisions of the judiciary should be impartial and not subject to influence from the other branches of government or from private or political interests. This is proclaimed *de jure* in Art. 78 (1) and 79 (2) and should be ensured solely by the [modern] L. as per Art. 79 (3). There are two proclamations that are highly important for the court structure and the administration of justice on the one hand, and the constitutionally guaranteed independence of the judiciary on the other: The *Federal Courts Proclamation No. 25/1996*, as amended by the *Federal Courts (Amendment) Proclamation No. 138/1998* and the *Federal Courts (Amendment) Proclamation No. 254/2001*, as well as the *Federal Judicial Administration Commission Establishment Proclamation No. 24/1996*. The *de facto* state of current affairs has to be critically assessed in some parts of the Ethiopian context: first and foremost, the judiciary never had a separate existence of its own as an institution. It was subject to all kinds of pressure from the other branches. Thus, external pressure on the judiciary has deep roots and is not without some lasting influence on the new federal judiciary (Assefa Fiseha 2006:390).

Finally, in dealing with modern L. and judiciary, it is vital to provide a statement to the ↗*Nägarit Gazeṭa*, the official bilingual L. gazette. In addition to the publication of L., regulation and public notices, senior government appointments were published in it. The role in the Federal Democratic Republic, however, has been limited to publishing only modern L. of the federal government (Fasil Nahum 1997:85). So far, there are no official gazettes, in which the decisions of the judiciary are published. Hence it is, in a lot of cases, difficult for the public as well as for practising jurists and scholars to gain, read and get to know judgements of the judiciary.

Red.

D. Traditional legal institutions

Institutions are sets of social norms which are considered to be permanent and which provide the framework for the self-organization of society. Legal institutions are those sets of norms which are considered as L., i.e. linked with legal obligations or rights. This article focuses on non-state L., created in local context by ethnic or social communities, and its institutions (cf. the article on ↗Customary law, which discusses its legal quality within the legal organization of the state, while this article focuses on legal institutions as part of local communities, from a legal anthropology perspective). These institutions often include ritual, religious and cultural aspects and thus are inseparable from the socio-cultural organization of a society.

In Ethiopia and Eritrea, traditional legal institutions are still quite predominant especially in a rural context, but are even valid in specific cases in cities. There is a multitude of different customary L. traditions, which are as yet widely unstudied and undocumented. Customary L. has a strong socio-cultural component, not only in its coming into existence, but also in the formation of social rules and customs. Ancient legal institutions have often survived, at least as social practices (having formerly been L.); e.g., the "counting" of genealogy, widely practised all over the Horn of Africa, was (and sometimes still is) also a legal institution, as it founded land claims or (legal) claims for mutual support (cp. ↗Genealogy; ↗Kinship; ↗Ǝnda), but in any case it stayed an important custom for the strengthening, consolidation or even invention of social and/or ethnic identity. This confirms the very institutional character of this custom.

There is a general tendency that local customary L. are either given up and replaced by "modern" L. practices of local courts, established by the state, or to be subsequently adapted to the demands of the state and a dominant culture of "modernity". Customary L. tend to be underestimated in their importance for the stability and effective self-organization of local societies and to be identified as backward, or even antagonistic to ideas of modern society hailed by central administration, modern school education and modern legal institutions. However, a number of state institutions in Ethiopia pragmatically make use of customary L., e.g., in order to end smaller conflicts, solve family matters, especially ↗marriage or divorce, and decide about questions of inheritance, of ↗land tenure, and in some regions also penal matters. Customary L. is sometimes further "institutionalised" by its codification as "L. books", thus entering into the institutionalized state apparatus (s. below).

Legal institutions belong to different categories. A large complex is linked to the political self-organization of a society, e.g., through the assembly of elders and/or notables (assemblies: Tgn. ↗*Bayto*, Orom. ↗*Čaffee*, elders e.g., ↗*Šəmagəlle*). They also concern local rulership, often exclusively regulated within a community (Orom. ↗*Abbaa Gadaa*, ↗*Abbaa Bokkuu*, ↗*Abba Seeraa*, 'father of law'). These assemblies were regularly the exclusive instances which had the right to create or change L. The complex ↗*gadaa* system, and other ↗age group systems, are also legal institutions. In a number of different regions, local rulers, administrators or chiefs were appointed according to local custom, not by a central government (cp. Amh. ↗*Čəqa šum*, 'village headman', Tgn. ↗*Käntiba*, ↗*Šum*; Tgr. *käntebay*; Beğa *nabtab*; Beni ᶜAmər *diglal* etc.).

Another large complex of legal institutions is related to conflict resolution mechanisms (cp. Amh. ↗*Muggət* 'litigation'; Oromo ↗*Gumaa*, also known among Amhara and others, a method, which ends a feud through marriage). A conflict might be ended by a ritual submission, the "culprit" carrying a stone on his shoulders (or head), declaring himself culpable (s. ill.; this custom is repeatedly mentioned in chronicles, as it was practised also as a submission ritual during feuds among noblemen; e.g., when the *wag šum* submitted to the victorious Kaśa Mərṣa before the latter's coronation as *aṣe* ↗Yoḥannəs IV; BTafY 118f.; cp. GuiIyas I, 211 [text] = II, 220f. [tr.]). Still today, conflicts are often ended by

The traditional legal institution of submission of a "culprit"; from Annaratone 1911:40/41 (fig. 13)

this ritual. This constitutes a sort of "contractual bond" obliging both not to begin the conflict again. A similar ritual (and also legal) role can be the sending of ↗gifts. The exchange of gifts between rulers was a legal act of establishing a "diplomatic" alliance or an armistice at least.

An important set of institutions regulates the distribution of economic goods, mainly of land, through often complex systems of land tenure: cp. ↗*desa* ('communal land' in Eritrea); ↗*gʷəlt* (i.e. right to land tax); ↗*rəst* (in Tgn. areas *rəsti*, i.e. land right possessed by a kinship group or *ənda*), a special form of it being the ↗*ṣəlmi*, a land right inherited within one family only; ↗*rim* (church land); *šäḥänna* (in Eastern Təgray, 'communal land'). Such institutions also concern taxation, e.g., payment to churches, monasteries and local rulers: cp. ↗*ʿaśrat* ('tenth'); Tgn. *gəbri* ('land tax'); *siso* ('third [of a harvest, to be given to a monastery or governor]'). Even if not formally legal any more in Ethiopia, remnants of these practices can still be observed. In Eritrea, *rəsti* rights are still recognized. Land obligations formed a crucial part of the socio-political structure of the highlands, creating obligations and rights for landholders (↗Aristocracy). This could include the jurisdiction over areas, especially for a *gʷəltäññа*, i.e. the holder of a *gʷəlt* right; in this way also monasteries could exert jurisdiction over wide areas, such as Däbrä Dammo did until the mid-1970s.

Family matters are strongly regulated by legal institutions; a family forms a legal institution by itself, the father being its legal head and speaker. The clan or kinship group, i.e. the extended family, is not only a social, but also a legal reality, as it creates quasi-legal obligations (s. below for more). "Illegitimacy" is a function of the integration or non-integration of an individual into a community. Təgrayan customary L., for example, stipulates that an illegitimate child who did not grow up in his father's village, but is recognized by the family, could only inherit 50 % of the land inherited by his siblings, as he is not part of the community. Customs related to marriage are strong legal institutions (cp. Amh. *ṭəloš*, 'gift' given to the bride, Tgn. *gəzmi*, 'dowry', given by the parents of the female to the couple), and so are rules related to divorce, rape, and inheritance of land and other goods. The range of different marriage customs can only be mentioned here (for details s. the article on Marriage). Except the rather rare church marriage, there is the widespread "civil" marriage, which is the general form practised in the rural Christian highlands. The *dämoz* is an institutionalized form of contractual marriage limited in time. This was especially widespread among soldiers and merchants, and is still occasionally practised in Ethiopia and Eritrea (Hatem Elliesie 2007:403).

There are also legal institutions of customary penal L., some of which have survived until today as customs and in remoter regions still practised as full L., replacing state L. For example, a *bayto* may condemn a thief to walk three times around the settlement, from where he has stolen, calling himself a "thief"; a murderer might be condemned to pay a fine to the family of the victim, as, e.g., observed in Wäğğärat still today. In southern regions, as for example, documented from Səlṭe, a criminal formerly could be convicted to be thrown from a cliff by his own relatives, in order to avoid a blood feud (field notes Bustorf 2003). Penal rules often focus rather on either compensation or exclusion from society (the maximum exclusion being death) than on punishment.

Economic rules are often also related with the stability or peace within the society, less with the idea of justice. A debtor could be bound to the debtee (↗*Qʷəräññа*), until the debtor could pay.

Another category of legal institutions are permanent or temporary functions taken over by individuals. In criminal investigation there was the institution of ↗*leba šay* ('thief seeker'), which does not seem to exist any more (cp. ↗Oracles and divination). A form of communal inquest was the ↗*afärsata*. Functions within the local executive like the *šum* ('headman', lit. 'appointed') and judi-

ciary like the ↗*daññа* ('judge') were often inherited within one family, but not in the feudal sense; the local society could normally choose other persons, if the first "natural" candidate was unfit.

Local legal systems are often very complex. One can sometimes observe elements of separation of power and checks and balances, like in the case of the ↗*Ḥəggi Hab Səllus Gärä Kəstos* of Ḥamasen in Eritrea. A remarkable legal institution are the *ʿaddi ḥəggi* ('law village') in that region; villages, which are not seats of governors, where families not related to the local dynasty keep the L. book, which ensures that the L. remains untouched. A similar institution in most societies in the Horn of Africa are elders who are knowledgeable in L. questions and genealogy, who can check each other during assemblies (in some regions, such a person may now be called *yäqäbäle šəmagəlle*, Amh. 'communal district's elder', and even receive a salary).

There are socio-cultural institutions which may sometimes also acquire a legal quality. One of such institutions is the bond friendship, called in Gurage *gurda* ('ritual covenant', variant: *guda*; s. Shack 1966:166–68). In Təgrəññа speaking areas there is the institution of the *ʿarki räʾəsi* (lit. 'head friend', i.e. main friend). These men-to-men friendships establish very strong relations outside kinship relations, and are the basis for moral (and sometimes even legal) obligations for mutual help. It is also an element of social control, ensuring that a person abides by the L. and customs of the local society. Its obligations are similar to those created by kinship (e.g., in Təgray the *ḥawənnät*, lit. 'brotherhood', i.e. 'kinship group', creates very strong, quasi-legal mutual obligations). A similar inclusion of a person or even a group of persons into such networks of obligations can be the adoption, especially practised by the Oromo (*gudifaččaa*, 'adoption').

Other socio-cultural institutions are local associations, which take over specific tasks within the community. Moral obligations taken over within these associations are often strong, therefore quasi-legal (cp. the ↗*Maḫbär*, ↗*Ǝddər*, ↗*ʿƎqqub*; monthly gatherings are called *mabär* or *məkyər* in Gurage, s. Shack 1966:174). Often these associations are linked with the religious sphere, which assures the strength of the obligations created by them. For example, Təgrayan beer associations (*səwwa sänbät*, lit. 'Sunday beer'), of which one is a life-time member, often call themselves after a saint, and the products consumed by them are considered as ↗*ṣäbäl* (i.e. holy water, holy food, holy item). The Orthodox Church plays a crucial role in the formation and organization of local associations; many are directly linked with the church parish (↗*Aṭbiya*). The priests (↗*Qäsis*) are the leaders of such associations. It is common to all kinds of associations, from the bond friendship to the religious association, in Christian and non-Christian areas, that a break of the obligations is considered as highly dangerous, for both the society and the "culpable". It is generally believed that this may evoke a curse, by dangerous persons, elder family members, God or invite bad ↗spirits. This belief stabilises the system.

Customary L. are by themselves legal institutions and thus subject to change and reinterpretation in cases of fundamental re-organization of a society. Religious and political developments may lead to their transformation or replacement. Somali, ʿAfar, Adäre (Harari) and other Muslim groups generally follow their own customary L., and not the ↗*Šarīʿa* (Mondaini 1941; van Notten 2005). The *Šarīʿa* was first practised only by Muslim communities in a city context, with links to foreign countries, especially Arabia, such as in the port of Massawa, the Somali ports and in Harär. Priestly or "holy" groups, who claimed Arabic origins, sometimes introduced rules from the *šarīʿa* into rural and nomadic groups, such as the ↗ʿAd Šayḫ among the Təgre, *šarīf* (*šayḫ*) families among the ʿAfar etc. The religiously founded legal institutions thus replace local ones (cp. ↗Ḥanafism). This process is not finished yet, the *šarīʿa* is, for example, now started to be practised by *qāḍīs* in Addis Abäba.

Wolbert Smidt

E. Traditional law books

A L. book is a codified collection of customary L., originally transmitted orally (and sometimes linked with the legend that they originate from a lost manuscript), and finally written down for legal use. It is only by exception that some of the customary L. is extant in the form of L. books or codes (Tgn. *ḥəggi*, 'Law'). Especially ethnic groups farther from the political centre often have an elaborated customary L., and as a consequence sometimes possess several customary L. regulations, belonging to different ethnic subgroups or social groups.

One may assume, however, that generally most socio-cultural groups also within the ancient Ethiopian kingdom had their own customary L. (*śərᶜat*, 'customs', Tgn. also *ḥəggindabba* [*ḥəggi ənda abba*], 'L. of the fathers', cp. Oromo ↗*seera*, Səlṭe *sera*), especially regulating land tenure, inheritance, marriage, and minor penal matters (even the ruler's court itself had "its own L. book", regulating the court's titles, ranks etc., the ↗*Śərᶜatä mängəśt*). The ↗*Fətḥa Nägäśt*, being used in affairs concerning the monarch's jurisdiction, had but little influence on local legal developments.

A number of Ethiopian customary L. have been "codified" recently. An overview of all the existing customary L. codes of Ethiopia and Eritrea is impossible, given the scarcity of research and documentation (but cp. Aberra Jembere 2000). The ↗Gurage possess a L. book written in Amharic called *qičä* (in Ǝndägäñ, *qəčа* in Čaha, 'traditional law', LesGurDic 1, 97, 227), printed in the late 20th cent. and thus codified only recently. Similar developments took place in other Ethiopian regions mainly during the last two decades. For example, *derder* ↗Yasin Maḥmoda of the Yaᶜiddi Dahimela, an ↗ᶜAfar politician at ᶜAsäb during the ↗Ethiopian-Eritrean Federation, has documented and published ᶜAfar traditional L. (*madᶜa*), used for jurisdiction today (Yasin Mahamoda 1964). Groups of the south and the west such as the Gumuz, Gofa, Galila and Bodi also know L. books, written down only recently, called *woga* (s. Klausberger 1981; the ↗Oyda's called *zaga woga*). The L. of the former kingdom of ↗Kambaata is not written, as for ↗Hadiyya and other old political entities (resumes s. Aberra Jembere 2000).

Most known older L. books belong to the Təgrəññа speakers (s. ↗Təgrəññа literature), but also to Təgre (in Təgre), Saho (in Arabic) and ↗Bilin. The specific historic developments the northern borderlands have gone through made the appearance of a specific type of written texts possible, i.e. the codification of customary L. by local governors and assemblies of elders (*bayto*). The oldest L. books have their origins in such assemblies from about the 15th cent., according to tradition (e.g., the ↗Loggo Č̣əwa, s. Favali – Pateman 2003:24; ↗Adkämä Məlgaʾ, s. Kemink 1991:40f.). L. assemblies, composed of representatives of different villages, regularly met to amend the L. and to avoid arbitrary changes (ibid.). Important codifiers were *däggiyat* ↗Hab Śəllus of Ḥamasen and his son Gäbrä Ḵrəstos in the 17th cent. Further codifications are reported from the period after the submission of ↗Akkälä Guzay by ↗Säbagadis, who ratified the L. book of Məᶜem Mäḥaza adopted by a local assembly of elders in the 1820s and an earlier version of the ↗Adgəna Tägäläba L.

This process was furthered by Italian colonisation, when colonial L. stipulated that customary L. had to be taken into account in all local affairs. During the Italian period, most L. books were written down. The five main codes were published in 1918 and distributed to the local chiefs (Kemink 1991:37). Several new L. books were created only in the early 20th cent., when sub-groups or districts split from a dominating group (for examples s. Favali – Pateman 2003:22f.). Later, several L. books, applied by smaller sub-groups, were merged to form a new L. book valid for a greater territorial unit (as the ↗*Adgəna Tägäläba*). Eritrea thus possesses a rich corpus of L. books. In Eritrea, the relationship between official state L. and customary L. is regulated by state L. today, it being a relationship of subsidiarity (Proclamation 25/1992, s. Favali – Pateman 2003:53, 55, 65; Kemink 1991a:168). A rural *dañña* is supposed to apply first the local L. in all questions of inheritance, family or conflict. Only where issues can not be settled by him they are transferred to the state court; but also here traditional L. books are still applied.

A one-page version of the *Ḥəggi Läggo Särda*, kept in a church and written in an ancient Təgrəñña (after the 15th cent.), was edited by Conti Rossini (1903; 1904) for scholarly purposes; this edition was not used in local litigation, as the ↗Loggo Särda followed the L. of Məᶜem Mäḥaza. The main L. of Ḥamasen, ↗*Ḥəggi Hab Səllus Gärä Ḵəstos* was published in 1918. The L. book of ↗Loggo Č̣əwa was published in the same year against the protests of the local community, as it went against the exclusive right of the law-holding villages (ᶜ*addi ḥəggi*) to keep all the existing copies of the L. book. Another version was published in the 1940s, for juridical use. The historical district of ↗Karnäššəm also possesses a L. book, published in 1918, the same as that of the Šäwᶜattä ᶜAnsäba, a Təgrəñña-dominated confederation on the borders of Ḥamasen (↗*Waᶜəla Šobᶜattä* [ᶜ]*Ansäba Zämat Taḥtay*). The ancient *Sərᶜat* ↗*Adkämä Məlgaᵓ* of Säraye was published in 1944 for judiciary use, like as the then newly created *Śərᶜat Adgəna Tägäläba* for all of Akkälä Guzay in 1945. A number of L. books remain unpublished and continue to be used locally (e.g., three L. books among the ↗Ǝggäla, s. Favali – Pateman 2003:25f.). The locally-used manuscripts of L. books are often amended up to the contemporary period (Kemink 1991:33, 173 mentions that the Code of Šäwᶜattä ᶜAnsäba was still amended in 1977). The list of the published Təgrəñña L. books is as follows (for a full list of Tgn. L. books s. Favali – Pateman 2003:20–27, 243f.):

Adkämä Məlgaᵓ (Säraye)

ሥርዓት፡ አድከመ፡ ምልጋእ (*Śərᶜat Adkämä Məlgaᵓ*, 'The Customs of the Adkämä Məlgaᵓ'), Aśmära 1936 A.M. CARLO CONTI ROSSINI, "Lo statuto degli Scioattè Ansebà (Eritrea)", in: *Scritti giuridici in onore di Santi Romano*, vol. 3, Padova 1940, 345–66.

Most L. books which are still in use in local courts have been collected in ZÄRᵓA-YAᶜƎQOB ƎSṬIFANOS et al. 1990.

Commentary works are also used in jurisdiction; cp. ZÄWDÄ KAḪSAY, *Ḥaddiš ḥəggi täzkar, zenaᵓun tərgʷəmun məs ab zəḥaläfä arbəᶜa ᶜamätat zänäbärä ḥəggätatən śərᶜat əndabban* ('New *Täzkar* Law, its History and Significa-

tion, Concerning the Laws and Customary Norms of the Past Forty Years'), Asmära 1962 A.M. [1969 A.D.].

A number of L. books of smaller sub-groups existed which have not been published. The major L. of the Bilin, the ↗*Fəṯḥa Mägarəḥ* (also *Fəṯḥəš Mägarəš*), has not been published yet (for an initial scholarly discussion s. Munzinger 1859; s. also Ghebil Temnewo 1999). In the 1960s the Bilin sub-group Bet Tärqe codified their own L. in Təgrəññña, now it is also followed by the Bet Ṭaqʷe, who gave up their own L. (Favali – Pateman 2003:29f.). The L. of the Təgre-speaking ↗Mänsaᶜ (the *Fətəḥ Mäḥari*) was first published in a Təgre text edited by the missionary Rodén (1913; repr. in Zärʾa-Yaᶜəqob Ǝsṭifanos et al. 1990:461–570). In 1953 the Arabic L. book of the Saho was published for judiciary use. During the ↗Ethiopian–Eritrean Federation, codification continued; the ↗Eritrean Assembly published a new customary L. code of the Beni ᶜAmər on 1 June 1960 (Favali – Pateman 2003:28, 245).

Research in oral traditions in neighbouring Təgray (e.g., in ᶜAgamä, Ǝndärta or Aksum) shows that customary L. has not led to the establishment of L. books there, as the provinces of today's Təgray were, with few exceptions always under rather strong control by the institutions of the Ethiopian state. Among the exceptions were Wäğğärat and Rayya, which possess an elaborate oral customary L. (cp. ↗*Gaz*, a ritual "razzia"); in most regions customary L. regulates at least marriage and heritage, but did not develop into legal codes. Legal affairs here seem rather to have been predominantly regulated by the L. book of the kings, the *Fəṯḥa Nägäśt*.

The development of separate L. books might be a characteristic of a periphery, which for its self-organization has to rely on its own legal traditions. In the case of Eritrea, the development of L. books was furthered by the arrival of the Italian colonial administration, which relied on the principle of indirect rule in local affairs.

The already very specific local legal traditions were then subsequently codified as books, which starting from then were used for any legal procedure concerning the "indigenous" population (cp. Cerulli 1918; D'Amelio 1911). This codification was a long process, involving numerous assemblies of elders, representing local leading families and ethnic sub-groups, and continued until the 1970s. There are still a number of customary L. in Eritrea, which remains uncodified, but most of the important "oral L. codes" of the Təgrəññña-speakers and other neighbouring ethnic groups exist as manuscripts or even as printed books and brochures, used both by local *dañña* and by state courts still today. The project of declaring them a national cultural heritage (or world heritage by UNESCO) has not been realised yet.

F. Canon law

The life of the ↗Ethiopian Orthodox Täwaḥədo Church (EOTC) is regulated by ecclesiastic or

Canon L. (ሕገ፡ ቀኖና, *ḥəggä qännona*, lit. 'the L. of canon'), i.e. a jurisprudence received and interpreted as part of the EOTC's tradition. This body of L., which has developed from ancient times as the framework wherein and by which the Church leaders exercise their pastoral government, claimed to be based on authority received from Jesus Christ through apostolic tradition (Jn 20:22–23 as well as Mt 16:19 and 18:18 [cf. Acts 2:38]; Heb 6:4–6; Rev 21:8, 22:15).

Sources of the Ethiopian Canon law

The corpus of canonical texts of the EOTC is large and heterogeneous, and emerged over a substantial period of time. The knowledge of both church L. books and their interpretation has been considered crucial to helping EOTC members retain their identity and mission. The sources of the Ethiopian Canon L. have been mostly studied by scholars as a branch of the ancient Christian literary tradition, and attracted considerable attention as phenomena of Gəᶜəz literature; their proper juridical role within the EOTC and Ethiopian society have not been dealt with systematically.

The Ethiopian Christians must have started receiving canonical texts some time after the elevation of Christianity to the status of state religion in the 4th cent. However, the bulk of the legal books seem to have been introduced beginning in the 13th/14th cent.; the main source being the ↗Coptic Church tradition. As commonly accepted, the relations between Ethiopia and the Alexandrine patriarchate intensified during the period, after the "re-establishment" of the ↗Solomonic dynasty in ca. 1270. The main sources of Ethiopian Canon L. are usually defined as follows (cp. Grébaut 1932:73):

The ↗*Senodos*, a large collection of pseudo-apostolic writings, most of which translated from an Arabic (Melkite) Vorlage by the 14th cent., and encompassing, all in all: I. 1) four different recensions of the "apostolic canons": 71 "ecclesiastic canons", or *Təʾəzazat* (Horner 1904; for canons 22–48, "The Constitutions of ↗Hippolytus", s. also Duensing 1946; cp. ↗*Traditio Apostolica*); 56 "apostolic canons" (BauSen 116–47 [text]); 81 "apostolic canons" (BauSen 148–79); 81 and 82 (according to the recension) "apostolic canons" called ↗*Abṭəlis(at)* (BauSen 180–233, 234–83, resp.); 2) 30 pseudo-apostolic canons received "after the ascension of Our Lord" (BauSen 9–40); 3) two recensions of the canons of Simon the Chananite (BauSen 41–71, 72–115, resp.); 4) the so-called Epistle of Peter (BauSen 284–306). II. Canons of some universal Church councils: 1) 24 canons of Ancyra; 2) 14 of Neocesarea; 3) 20 of Gangra (s. Grébaut 1922–23); 4) 21 of Sardis; 5) 25 of Antioch; 6) 59 of Laodicea; 7) 20 and 84 "canons of the 318 Nicene Fathers" (cp. ↗Nicaea; for 84 canons, s. da Leonessa 1942). III. Some other texts: "indices", penitential canons (Guerrier 1918–19), the so-called *Didascalia of 318 Nicene Fathers*, containing prescriptions and norms regarding the monastic life (s. Bausi 2005), treatises etc. (cp. Grébaut 1932:75f.; BauSen XV n. 2);

The ↗*Fəṭḥa nägäśt*, probably the most important law book of Ethiopians, and the most authoritative as a source of Canon L. (mostly in the part *Fəṭḥ mänfäsawi*, 'Spiritual law', chs. 1–22), which was translated from Arabic in the middle/second half of the 16th cent.;

The (*Təmhərtä*) ↗*Didəsqəlya* (in the Ethiopic version divided into 43/44 chs.), a pseudo-apostolic text ("Apostolic Constitutions") translated from an Arabic Vorlage by the 14th cent. (Harden 1920);

The ↗*Qälemənṭos*, a late-14th–early-15th cent. translation of pseudo-Clementine texts from Arabic, books 3–7 of which contain canonical regulations (Bausi 1992);

The *Mäṣḥafä* ↗*ḥawi*, a 16th-cent. translation from Arabic, a large compendium or Christian ethical norms and prescriptions (for the content s., e.g., Goldschmidt 1897:22–48; ZotBNat 99–106).

Sometimes a few other texts are referred to as sources of the Canon L. of the EOTC:

Deriving from the *Traditio Apostolica* and translated probably from Greek, the ↗*Testamentum Domini* (*Mäṣḥafä kidan zäʾəgziʾənä Iyäsus Krəstos*), contains, besides the so-called Apocalypse (Beylot 1984, chs. 1–9), also a desciption of the Church and Christian life (ibid. chs. 10–60).

The *Mäṣḥafä* ↗*fäws mänfäsawi*, represented in at least two widely different versions, both containing mostly penitential canons.

Further texts can be mentioned as sources providing if not strict legal regulations, then at least broad frameworks and moral principles. Within the context of Ethiopian ↗monasticism, such sources are represented, e.g., by ↗monastic literature (↗*Arägawi mänfäsawi*, ↗*Śərᶜatä mənkʷəsənna*, *The Rules of* ↗*Pachomius*, etc.) and even hagiography. In addition, tradition maintains that the authority of the Octateuch (*Orit*, lit. 'Law'), by ↗Moses, is the most ancient source of law and that has never been superseded in Ethiopia, although today preference is accorded to "the new law", i.e. the N.T.

In the light of the recent discovery of the so-called Aksumite collection of canonical texts (Bausi 2006:48f.), the situation of the sources for the Ethiopian Canon L. appears to be quite complex, since some of the texts included in the *Senodos* are attested to in different, more ancient versions, translated from Greek in the Aksumite and post-Aksumite period (e.g., some 20 "ecclesiastic canons"; 81 "apostolic canons" etc.,

s. Bausi 2006, esp. 54–70). Whatever influence these texts might have exerted, by the 13th/14th cent. they were largely replaced by translations from Arabic.

Different as they are in regard to the date of the composition and reception, arrangement, provenance and origin (Gəᶜəz versions based upon either a Greek and/or an Arabic Vorlage), all these works share common characters, containing precepts on both internal church organization and the believers' behaviour within their community.

Position and application in history

The earliest known identifiable reference to the authority of a canon in an Ethiopian source seems to appear in the 13th/early 14th-cent. *Homily on the Sabbaths* by ↗Rətuᶜa Haymanot (↗*Dərsanä sänbät*) who, in fact, interprets the 29th canon of Laodicea (as it appears in the "Aksumite collection", s. Bausi in PICES 15, 535; further instances in LusStud 164f.), arguing for "reasonable" rest on Saturday (a position dismissed by the Coptic ecclesiastics in Ethiopia).

By the 14th/15th cent. at least, some of the texts mentioned must have been officially recognized as the sources of the Canon L., building a corpus encompassing most of the realms of Christian life. Knowledge of these texts can certainly be assumed within the monastic milieu (s. the list of such texts in the *Mäṣḥafä ↗məśṭir* by ↗Giyorgis of Sägla; YaqMist II, 305f.; cp. Bausi in PICES 15, 536). However, it is not easy to discern what role the Canon L. assumed in Church and society from references appearing in written sources (esp. ↗Hagiography). It is possible that in most of the cases they were part of the literary and cultural background, stimulating theological thinking and writing, but that references to them were primarily a rhetorical device of the hagiographers (cp., e.g., Bausi 1992:23, n. 1; 24–32) than attempts to extract both ethic norms and effctive legal regulations to govern the EOTC and amend its religious practice (cp. Bausi 1990:52–57; s. BauSen, nn. in the translation). However, violations of and, at times, disagreements concerning the interpretation of Canon L. are recurrent topics in the Acts of Ethiopian ↗saints. A few monastic leaders appear to have attempted to impose Canon L. on the Church and the faithful, and to have defiantly fought transgressors of its regulations. *Abunä* Mäṭaᶜ (↗Libanos) was expelled from Aksum because he accused the local bishop Elyas of simony (Bausi 2003, no. 33), the same offence of which ↗Bäṣälotä Mikaʾel accused Bishop ↗Yoḥannəs (referring to the *Senodos*, s. BauSen 109 [tr.], nos. 3–6; cp. da Leonessa 1942, no. 53). There are hints at other violations by the clergy, especially disregarding purity regulations. Among the breaches of Canon L. by monks was, e.g., the widespread practice of moving from one monastery to another without permission of the abbot, contrary to the teachings of the monastic literature and Canon L. (s., e.g., da Leonessa 1942, no. 14). In some communities, nuns and monks lived together without proper separation; Bäṣälotä Mikaʾel told *aṣe* ᶜAmdä Ṣəyon I about this violation using the metaphor of "straw and fire" taken from a Canon L. source (s. Conti Rossini 1905:35 [text]; cp. da Leonessa 1931:250f.). *Abunä* ↗Anorewos is credited with the separation of monks and nuns in ↗Däbrä Libanos of Šäwa, yet this non-canonical practice was retained in other places. Despite the people's deep religiosity and devotion to the Orthodox faith, religious leaders were dissatisfied with the general lack of Christian consciousness and discipline in lay society (e.g., *abunä* ↗Täklä Ḥawaryat severely chastised *aṣe* Zärʾa Yaᶜəqob for the "unlawful" celebration of ↗*Mäsqäl*, s. Getatchew Haile in *EtRicci* 107f.), omnipresent ↗magical practices (severely outlawed, e.g., in the *Qälemənṭos* and other books) and, particularly, transgressions in marital life (cp. Bausi 1992:62, no. 56 [cp. BauSen 244, no. 18 (text)]; 159f., no. 23. On the basis of these canons, Bäṣälotä Mikaʾel blamed ᶜAmdä Ṣəyon that he "took as wife [*awsäbä*] ... a wife of his father", Conti Rossini 1905:29 [text]; the King tried to justify himself replying that the woman "is not his mother", but this sort of union was prohibited by Canon L. as well, cp. TadTChurch 116).

The role of Canon L. was enhanced in the 15th cent., during the reign of *aṣe* ↗Zärʾa Yaᶜəqob. The proper enforcement of only the more or less codified and standardized L. of the Empire, and the extension of its authority over the faithful was one of the substantial elements of this Emperor's internal policy. A number of writings of Zärʾa Yaᶜəqob are meant to provide guidelines for the life of laics and churchmen according to the Holy Scriptures and, especially, the *Senodos* which was used to establish the canon of 81 biblical books (BauSen 279ff. [text]). Elsewhere, Zärʾa Yaᶜəqob ascribes the special recognition of the *Senodos* to the latter's being part of the Apostolic tradition,

and ranks as second and third in importance the *Didəsqəlya* and the *Mäṣḥafä kidan zä'əgzi'ənä Iyäsus Krəstos* respectively (refuting the opinion of some unnamed opponents, s. Wendt in PICES II, 107–13). The *Senodos* itself was checked, and a "royal recension" of the book was prepared. In this, *aṣe* Zär'a Ya'əqob might have been assisted by traditional scholars from well-established monasteries. An important witness to his policy is a copy of the *Senodos* prepared at ↗Däbrä Halleluya before 1442 and sent, by order of the Emperor, to the Ethiopian community in Jerusalem (VatLib Borg. Aeth. 2, GréTisVat 767–79; LusStud 130–74; BauSen XVIII).

Zär'a Ya'əqob also tried to revive ecclesiastic features (so for the Holy ↗Eucharist, cp. ↗*Tä'aqəbo məśtir*; or ↗*liqä kahənat* and, particularly, ↗*näfs abbat*) embedded in Canon L., and to use them in his program of Christian state-building. Many of his policies and decisions were based not only on political or practical considerations, but also justified by provisions of Canon L. as presented in the books mentioned. For example, the basic question of the Sabbath was finally decided in favour of two Sabbath days, i.e. in favour of the ↗Ewosṭateans, but following the "ecclesiastic canons" (Horner 1904:68f., no. 66; cp. Wendt 1962, I, 87f.; cp. TadTChurch 218, 230). Yet, the same monastic movement was severely reprimanded for appointing as the head of Ewosṭatean communities non-ordained monks (in the *Mäṣḥafä* ↗*bərhan*, CRRicBerhan II, 152, quoting a "canon of Simon", BauSen 36, no. 4 [tr.]), a practice which resulted in further grave transgressions. At the council of ↗Däbrä Məṭmaq, the Ewosṭateans gave up this practice, which, however, seems to have been based on a different interpretation of the same canon (Bausi 1990:44ff.).

Although he was undoubtedly a devoted Christian, and perceived himself, like other emperors, the patron and defender of the Church, Zär'a Ya'əqob was ready to breach Canon L., which maintained the equality of all before God, whenever this would limit his power. However, when in 1477 *aṣe* ↗Bä'ədä Maryam came out against the independence of the EOTC from the Alexandrian patriarchate, his position also implied, among others, his respect for the authority of the 42nd "Nicene canon" (da Leonessa 1942:50, 78; on the difficulties of this canon s. ibid 34). Still, the main problems related to Canon L. remained also after Zär'a Ya'əqob's reign: the complexity of the sources, the weakness of the Church hierarchy and the strength of ↗customary laws, the ethnic and cultural heterogeneity of the Ethiopian empire, as well as its isolation from the Christian Oriental world. Indeed, the religious practices enforced by the faithful and the EOTC were often in formal contradiction with Canon L., but could not be rooted out without conflict.

An important landmark in the history of Ethiopian Canon L. seems to have come after the 16th-cent. Muslim wars, with the translation of the *Mäṣḥafä ḥawi* and, in particular, the *Fəṭḥa nägäśt*. Contrary to the *Senodos* and the *Didəsqəlya*, the *Fəṭḥa nägäśt* was a relatively concise compendium, arranged according to subjects, and dealing with both religious and secular matters in a systematic way with references to other sources of the Canon L. (cp. da Leonessa 1931:5–9; GrafLit II, 402f.). It is not clear how, when and why exactly it was translated and promulgated (the earliest mention of it might be in the Chronicle of *aṣe* ↗Śärṣä Dəngəl; CRHist 76, for the year 1578; cp. Guidi 1899:X; further examples are listed in PTz XXI–XVII, yet none relevant to ecclesiastic matters). Eventually it gained by far the greatest authority of any work of Canon L., which it preserved over the centuries.

There seems to be no evidence that after the death of Zär'a Ya'əqob his rigid policies regarding the enforcement of the Canon L. were actively continued, despite the reception of some new sources. ↗Alvares was amazed to see the ↗ordination of a huge number of priests by *abunä* ↗Marqos, in blatant violation of Canon L. (like ordaining handicapped people; BeckHuntAlvar 352–56). Describing the religious life of Ethiopia, ↗Barradas (1996:74) mostly stresses the "errors" of its Church (in the sacramental life, rite and theology) that are considered "deviations" from the universally accepted Canon L. These were the result, in his view, of "Judaic" and "heathen" influences, blind following of customs and traditions, as well as the complete dominance of the power and judgement of the emperors (ibid. 166). Therefore, he believed that a return to the Catholic Church would have entailed an improvement of Canon L. and its application, but the return to the Alexandrian faith was inevitably a "falling back" to old errors (ibid. 174f.).

The role of Canon L. during the Gondärine period is largely unexplored. However, we can assume that during this period the tradition of the study and exegesis of the sources of the Canon L. emerged, with the purpose of bridg-

ing the gap between the reality of the Ethiopian society and the sources. The legacy of that period must have been the ↗*andəmta* commentaries on the main books of Canon L., which are part of the upper level traditional ↗education, the ↗*mäṣḥaf bet*: the *Didəsqəlya*, the *Senodos*, the *Qännona Abulidəs* (i.e., "The Constitutions of Hippolytus"), the *Mäṣḥafä fäws mänfäsawi*, the *Fətḥa nägäśt* (HabTent 223–35).

Major changes regarding Canon L. came with the re-unification of the Ethiopian Empire, strengthening of the EOTC and gradual build-up of a centralised church hierarchy starting from the late-19th cent. The *Fətḥa nägäśt* preserved its leading position as the main (though not the only) source of Canon L. also in the modern EOTC (cp. da Leonessa 1931:5; Dombrowski 1986), additional legal documents being issued by the ecclesiastic authorities to provide some modifications and adjustments. The central position of the *Fətḥa nägäśt* is underlined by the fact that this is the only source of Canon L. that has been published so far by the EOTC (cp. also the translation in PTz). The church edition of the traditional (*andəmta*-based) interpretations of the *Fətḥa nägäśt* (1965/66) seems to have been an important step, as well as the inclusion of the book into Ḫaylä Śəllase I's *Mäṣḥäfä ḥəggəgat ʿabäyt* (1969/70). Below are several basic regulations of the EOTC according to the *Fətḥa nägäśt* are presented.

Norms regarding the Episcopal Hierarchy

Until recent times, the EOTC was not ruled by an Episcopal hierarchy of Ethiopian nationality. This was in observance of the 42nd "Nicene canon" (also included in the *Fətḥa nägäśt*, Guidi 1899:23b–24a; PTz 18), prescribing the appointment of a metropolitan from among the Copts, by the holder of the See of Alexandria. The situation changed completely in 1959, as the rank of the head of the EOTC was raised to patriarch (s. *abunä* ↗Bäsəlyos). The statement of the *Fətḥa nägäśt* became void, yet the other regulations regarding the election of the Episcopal hierarchy, the requirements to candidates, the prerogatives of the patriarch etc., remain valid (PTz 17–42, ch. 4). The candidate for the episcopacy must be a monk who has received the Holy Orders (PTz 25).

The Episcopal (Holy) Synod

The *Fətḥa nägäśt* deals with activities of the Episcopal synod (the ↗Holy Synod of the EOTC was established in 1926; a Permanent Synod, only during the tenure of *abunä* Ṗawlos). In ch. 4, it is established that bishops of "every place" shall gather with their metropolitan twice a year to examine what is to be done (PTz 19). The second provision (ch. 5) suggests a suitable date for the first meeting, such as the fourth week of the 50 days between Easter and Pentecost (before ↗Lent and after the feast of the Holy Cross, i.e. *Mäsqäl*) and 12 *Ṭəqəmt* for the second meeting (s. PTz 37; for the *Senodos*, da Leonessa 1942:50f., 78f., no. 46; BauSen 55, no. 27; 65, no. 36; 80, no. 36; 98, no. 36 [tr.]).

Norms regarding the clergy

The *Fətḥa nägäśt* deals extensively with monks and secular clergy (PTz 37 chs. 6–10; cp. ↗*Kəhnät*). Members of the secular clergy are normally married. Ch. 10 of the *Fətḥa nägäśt* deals specifically with monks and rules of monastic life and administration of the monasteries (PTz 65–75). A resolution issued by the Holy Synod in 1949 declared that the faithful desiring to become monks must acquaint themselves with the rules, complete the noviciate, and be examined in accordance with the provisions laid down in the *Fətḥa nägäśt* (PTz ch. 10.II).

The Resolution of 1949 established the position of the spiritual father (*näfs abbat*) of the faithful dwelling around a church, which is reserved for the priests who serve and celebrate mass at that church. In 1951, the Permanent Holy Synod published a revised edition of the 1949 Resolution ("The First Synodal Issue"). It contains 12 articles which are said to be formulated on the basis of the *Fətḥa nägäśt* and *Senodos*, most of them concerning the clergy. Article 8, e.g., reads: "Any priest who wants to transfer from the church where he serves to another church of different diocese must present to the bishop of the diocese credentials made out by the authorities of his place of origin, testifying that he is allowed to celebrate mass observing his marital or monastic status …". Art. 9 declares that priests are strictly commanded to keep their sacerdotal dignity, reminding that they "will not meet with any difficulty if they observe the provisions of the *Fətḥa nägäśt* and abide by its teaching as contained in the chapter on priests".

Sacraments

The EOTC recognizes the seven Sacraments (ምሥጢራት, *məśṭirat*). Many canonical prescriptions for the administration of the Sacraments are found in the *Fətḥa nägäśt*. Generally, the

canonicoritual discipline of the Sacraments has its roots in the ancient church's practice and in such books as the *Senodos* and *Didəsqəlya*, with one exception being the ↗Matrimony, the canonical discipline depending almost entirely on the *Fəṭḥa nägäśt* (but included in the part "Carnal law", *Fəṭḥ śəgawi*, PTz 130).

A work on the Sacrament of ↗Baptism by a group of Doctors of the EOTC states that in accordance with the provisions of the *Fəṭḥa nägäśt* (PTz 14, ch. III), Baptism must be administered at a running stream, or in water that runs in the baptistery. In case of necessity, water drown elsewhere shall be poured in the baptistery. With reference to the *Fəṭḥa nägäśt*, it is also said that after baptism, the christened shall receive the Holy Communion; men shall not stand godfathers to women, nor shall women stand godmothers to men, but the males shall stand to the males and the females to the females. The Chrismation is prescribed to be conferred immediately after the Baptism.

With regard to the Sacrament of the Holy Orders, of great canonical relevance is the reference to the *Fəṭḥa nägäśt* affirming that physical integrity and mental sanity are required for the appointment of bishops and for the ordination of priests (but cp. PTz 26, ch. 4.ic).

Concerning the sacrament of the Unction of the sick, reference to the *Fəṭḥa nägäśt* is made as commanding the priests to anoint sick persons with consecrated ↗oil. The Sacrament of ↗Penance is defined as spiritual medicine.

Norms regarding fasting, feasts and holy days

The *Fəṭḥa nägäśt* defines fasting in ch. 15 (PTz 93); the mysticism of fasting is often affirmed and taught to the faithful by the EOTC with explicit reference to the *Fəṭḥa nägäśt*. Dealing with holy or festive days, *Fəṭḥa nägäśt* gives precedence to Sunday, the holiday on which Christians must not work, and no suit or judgement shall take place. Besides, the *Fəṭḥa nägäśt* lists the major nine feasts "of Our Lord" (PTz 114–17).

Application of Canon law today

Formerly, the church jurists solving legal problems related to the faith were referred to as *b[ä^{c}]alä Fəṭḥa nägäśt* (lit. 'master of the *Fəṭḥa nägäśt*'). Today, traditional scholars, or Church doctors (*liqawənt*), who have been trained in the *mäṣḥaf bet*, are charged with answering the questions of bishops or colleagues concerning Canon L. They gather together in order to settle doctrinal disputes or matters of discipline relating to the faith, e.g., matrimonial affairs. (The issues of couples married according to customary or civil laws are never considered in this context). A famous jurist of the mid-20th cent. was *mämhəre* Yəheyyəs Wärqe, famous for his wisdom and judgements, under *abunä* ↗Tewoflos.

In order to centralize the resolution of legal issues related with matters of faith (*yähaymanot gudday*), *abunä* Tewoflos established the Council of Scholars ([*yä*]*liqawənt guba^{ɔ}e*, cp. ↗*Liq*) which has since been the highest authoritative body of traditional scholars, advisors to the Patriarch and, through him, to the Holy Synod. When a problem arises, the local ecclesiastic administration at *wäräda* level takes the case to the diocesan bishop. If the bishop finds that the case is beyond his ability or if the plaintiff does not accept his decision and appeals to the authority above (*yəgbañ*), the bishop forwards the case to the patriarch. The latter approaches the Council, which consults the *Fəṭḥa nägäśt* and suggests to the patriarch how to act. The patriarch transmits the advice to the Holy Synod. The latter's decision is the decision of the Church, beyond which there is no appeal. The plaintiff's failure to accept this decision would result in his/her excommunication.

The Council examines all books published by the Church, even those written by the Patriarch. At the same time as he established the Council, *abunä* Tewoflos dealt with the *yä^{ɔ}astädadär gudday* ('the administration matters') by signing the regulations contained in the *Qalä ^{c}awadi* ('the Voice of the Herald'). It was first published in 1972 in order to support the creation of parish councils (↗*Säbäka guba^{ɔ}e*) as part of the Church's almost complete restructuring, and later revised several times (Ancel 2006). For their part, the bishops, either as a body in the Holy Synod or individually in their dioceses, also issue rulings, either of general significance (e.g., allowing Orthodox pastoralists to include dairy products in their Lenten diet) or related to a particular instance.

The discipline and the rite of penance are the object of particular dispositions; it is usually the *näfs abbat* who deals with concrete persons, interpreting Canon L. for them or orientating them.

Catholic canon law in Ethiopia

In the Catholic Metropolitan Church of Addis Abäba, a *sui iuris* particular Church comprising (in 2007) six eparchies in Eritrea and Ethiopia with a degree of autonomy within the Roman

communion, the Canon L. in use is twofold: 1) The "common L.", in the form of the *Codex canonum Ecclesiarum Orientalium*, Rome 1990, promulgated by the Roman pope John Paul II for all Eastern Catholic Churches, with the *Fəṯḥa nägäśt* numbered as one of its sources. 2) A "particular L.", to be prepared in keeping with traditional Ethiopian jurisprudence and a series of practical regulations concerning actual elements of today's context.

Lawḥ

L. (Arab. لوح, 'plank, board, tablet'; possibly from Syr. *lūḥā*; s. Ambros 2004:249, also Jeffery 1938:253f.) is the term used in most Islamic countries for the reusable wooden flat board or tablet of varying size on which pupils of traditional schools write Qurʾānic verses in order to learn, under the guidance of the teacher, to write, read and recite by heart the sacred text (↗ Education, traditional). For Muslims, the use of L. is particularly significant as it is the Qurʾānic term for the Mosaic Tables of the Law (Qurʾān 7:145, 150, 154; s. Ambros 2004:248). The school L. can also be considered a partial earthly replica of the

Students of the Muslim school of Ǝntičč̣o, Təgray, holding *lawḥ* panels; photo 2004, courtesy of Wolbert Smidt

archetypal copy of the Qurʾān kept on the divine *al-lawḥ al-maḥfūẓ* (Qurʾān 85:22).

As a loanword from ↗Arabic, the word is present in most languages spoken by Muslims in the Horn of Africa: Tgr. and Tgn. *luḥ* (Leslau 1990:151, 204); Amh. *läwḥ* (KaneDic 99), also *luḥ* (ibid. 38; Leslau 1990:17) with a more general meanings (e.g., 'blackboard', 'octavo page', 'folio'; s. also THMDic 36, 54 for the derivative *loḥa ṣafä*); Har. *lūḥ* (Leslau 1963:99, 184; 1990:133f.); Səlṭi *luuh* (Gutt – Hussein Mohammed 1997:32); Orom. *lohii* (Hinsene Mekuria 2005:324); Som. *loox* (Yaasiin Keenadiid 1976:282) and *looxa* (Stepančenko – Mohamed Haǧǧi Osman 1969:65). It is also attested in Gəʿəz (*läwḥ*, s. KWKDic 560; Leslau 1990:75), along with the verb *loḥa* ('write', only used by ↗*qəne* writers, KWKDic 560).

In Harär pupils carry L. to school every morning (Leslau 1965:174). To pass the two intermediate exams of the traditional Qurʾānic curriculum (*kaḥfāya* and *abaqāra*) the students are supposed to write the relevant verses of the Qurʾān on the L. which thus receives the specific designation *kaḥfāya lūḥ* or *abaqāra lūḥ* (Hecht 1993:132f.). Those who have worked through the entire text of the Qurʾān carry a distinctive L. (Gibb 1996:235).

To make it suitable for writing, the wood is whitewashed with a kind of white earth (Har. *berāsa*, Leslau 1963:46) and then left to dry in the sun. The text is written with a reed pen, in black ink made out of myrrh (Hecht 1993:132). Once the student has finished to study the holy verses, he licks them off his L. (*lūḥ milḥās*; Gibb 1996:236). The passages can be also washed off by pouring water on the L.; the water sanctified in this way is widely used as a magical remedy for many physical and spiritual illnesses (ibid.; ↗Healing).

Läwṭe Zäwde

Fitawrari L.Z. (ለውጤ፡ ዘወዴ, also Läwṭä, baptismal name Wäldä Mikaʾel; b. Ḥarena near today's ↗Hagärä Sälam, Dägʷᶜa Tämben, d. after 1889) was a courtier and envoy of *aṣe* ↗Yoḥannəs IV. A descendant, through the female line, of the *šum tämben*, and a cousin of the Emperor, L.Z. became a member of his entourage at a quite early stage. During much of his active years he was the ↗*bäǧərond*, responsible for the Emperor's treasury and thus the acting "finance minister".

In 1877, as a special envoy of *aṣe* Yoḥannəs IV, the then ↗*bäläᵐʷal* L.Z. had to arrange the submission of the still independent *nəguś* ↗Mənilək of ↗Šäwa. The important mission was a success, and the kingdom of Šäwa passed under the suzerainty of the Ethiopian state in 1878. In 1880 L.Z. was sent to Jerusalem, carrying funds to ↗Dayr as-Sulṭān (BTafY 171).

In 1881 *bäǧərond* L.Z. was appointed ↗*bäᶜal däräba* of the German envoy Gerhard ↗Rohlfs, who camped in L.Z.'s compound at the foot of Däbrä Tabor. Rohlfs describes him as the most influential court official of the period. The same year L.Z. escorted four new Egyptian bishops (e.g., *abunä* ↗Peṭros), and the Egyptian envoy *nāʾib* ↗Muḥammad ᶜAbdarraḥīm, from ᶜAdwa, where L.Z. was residing, to Mäqälä (ZewYohan 109; Hartmann 1883:111). Following the 1884 ↗Hewett Treaty the troops under command of L.Z. and *wag šum* Gäbru rescued the Egyptian garrison of al-Ǧira in the battle of 4 July 1885, after the garrison had been encircled by the ↗Mahdists. The same year, he received the governorship of ↗Akkälä Guzay. From here he raided Zula in the Egyptian ↗Massawa Governorate (Zula being traditionally considered by the Christian highlanders as a part of Akkälä Guzay). L.Z. was thus competing with *ras* ↗Alula Ǝngəda who was likewise raiding Egyptian territories (Erlich 1996:50, 53).

In 1888 *bäǧərond* L.Z. was appointed ↗*fitawrari* (Tgn. *aftärar*); in this military capacity he led the advance guard against ↗Goǧǧam (BTafA 793). Suspected of conspiracy with *nəguś*

↗Täklä Haymanot, he was put in chains and condemned to death, but rescued through the intervention of *ras* Alula.

L.Z.'s son *däğğazmač* Wähade also rose to high rank. He was appointed governor of Däg^{w}ᶜa Tämben by *aṣe* Yoḥannəs; his numerous descendants held *g^{w}əlti* (↗*G^{w}əlt*) in the area including in the newly-founded ↗Hagärä Sälam. Several churches still keep objects donated by L.Z., e.g., European bells at *aṣe* Yoḥannəs's baptismal church of ↗Mälfa.

Wolfgang Hahn – Wolbert Smidt

Lazarists

The L. (Congregatio Missionis [= CM], also Vincentians) are a congregation of priests and brothers founded in Paris in 1625 by St. Vincent de Paul.

The first L. to go to Ethiopia was Giuseppe ↗Sapeto who, in 1837, began working, without the permission of his superiors, in ↗ᶜAdwa. Shortly after, the ↗Sacra Congregatio de Propaganda Fide formally asked the L. to carry out missionary work in Ethiopia. In 1839 Giustino De ↗Jacobis, as Prefect apostolic of Abyssinia, and his assistant, Luigi Montuori, reached ᶜAdwa. The three L. then split: De Jacobis remained in Təgray, Sapeto went to ↗Šäwa, Montuori to ↗Gondär. In 1841, Lorenzo ↗Biancheri and Brother Giuseppe Abbatini arrived. In 1842, Montuori travelled to Sinnār and founded a small college at ↗Khartoum.

In April 1845, Montuori and Brother Filippini, a new arrival, left Father Serao in Khartoum and reached Gondär. Montuori then headed south, intending to go to the Oromo country, while Filippini stayed in Gondär, where he built a house (OMahPh² 21). A year later, the Holy See divided the huge missionary region of southern Ethiopia into the then established Apostolic vicariate of Sudan and the Apostolic vicariate of the Galla, entrusted to the Lazarists and the ↗Capuchins, respectively. The L.'s jurisdiction in the north was acknowledged with the creation of the Apostolic vicariate of Abyssinia, while De Jacobis was secretely consecrated Bishop by Guglielmo ↗Massaja in 1849.

In 1848, Montuori – who had expected to work under the protection of ↗Śahlä Śəllase – and Abbatini abandoned the mission. The latter died on his way to Cairo. In 1851, the northern mission was inspected by the canonical visitor Father Pussou, who reported on its progress: by that time it administered to 4,000–5,000 Catholics and had 15 Ethiopian priests (OMahPh² 52f.). After 1854, the mission suffered persecution by *abunä* ↗Sälama, and among the victims was ↗Gäbrä Mikaʾel CM. In 1860, Carlo ↗Delmonte arrived, working alone for a few years at Ras Mədər, until the arrival of the new Vicar apostolic, Mgr. Pierre-Louis ↗Bel in 1866. By 1869, the northern mission counted six men and had its main centres in ↗Kärän, ↗Alitena and ↗Hebo. In 1870, Mgr. Jean-Marcel Touvier was consecrated fourth bishop of the Vicariate. At that time, the mission underwent new persecution by *abunä* ↗Atnatewos, supported by Kaśa Mərčа (↗Yoḥannəs IV). In 1878, the first Daughters of Charity joined the wider L. family. Upon the arrival of the new metropolitan *abunä* ↗Ṗeṭros in 1881, persecutions were again renewed. Two years later, however, missionaries were able to return and resume activities; in 1889 the new Vicar apostolic, Mgr. Jean-Jacques Crouzet, arrived.

In 1894, following the establishment of Italian rule over ↗Eritrea, the L. were accused of representing the interests of France (whence most of the missionaries came), and they were expelled from that country. The Apostolic prefecture of Eritrea was thus separated from the Apostolic vicariate of Abyssinia, and entrusted to the Capuchins. In 1900, a struggle occurred between the L. and the Capuchins, both claiming jurisdiction over the area of Šäwa. Eventually, after the intervention of Father Jean-Baptiste ↗Coulbeaux, the L. were granted permission to settle in Addis Abäba. At the turn of the 20th cent., their activities were mostly concentrated in ↗ᶜAgamä, with the aim of attempting to reach the ↗Kəmant. However, after *ləğ* ↗Iyasu's decree of religious freedom, local L. priests also opened houses at Mändida, ↗Däse and ↗Gondär (OMahPh² 344).

L. missionary methods were largely defined by the work of De Jacobis. These were based on respect for the Ethiopian rite (as approved in

1850 by Pope Pius IX and sanctioned by Propaganda Fide in 1912), the use of local languages and the formation of a local hierarchy (cf. *abba* ↗Täklä Haymanot; OMahPh² 24). The activities of the L. often suffered the effects of colonial policies and political instability. In the north, the missionaries were protected by *däğğazmač* ↗Wəbe Ḫaylä Maryam, but also endured the hostility of *abunä* Sälama, ↗Tewodros II and, later, ↗Ḥagos Täfäri, and were later exposed to the consequences of ↗Egyptian colonialism. At the same time, whilst the congregation generally kept apart from colonial policies, a few missionaries such as Sapeto and Giovanni ↗Stella openly worked on behalf of the colonial powers (CrumMiss 106). De Jacobis's cause of beatification was also used for propaganda purposes during the period of the Italian expansion into Ethiopia (Ceci 2003).

More recently, the L. have been working in other areas. In 1956, Dutch L. went to southern Ethiopia. They conducted pastoral activity in ↗Ğimma, built and ran elementary schools, health centres, as well an agricultural resettlement programme. In 1978, at the time of the *Därg*, like all other foreign missionaries, they were expelled and the government confiscated their property. Since 1991, these have been partially returned. On 10 June 1994, the Prefecture of Ğimma Bonga (part in Oromiyaa and part in Southern Nations, Nationalities and Peoples' Region) was established and entrusted to the L. The first Prefect apostolic, from 1994 until 1998, was *abunä* Bərhanä Iyäsus D. Souraphiel CM, now archbishop of Ethiopia. The L. are also in charge of the Apostolic vicariate of ↗Naqamtee (↗Asosa and Kamaši Zones in Beni Šangul/Gumuz Region; East and West Wälläga Zones and a large part of West Šäwa Zone of the Oromiyaa Regional State). The vicariate was once under the charge of ↗Fəqrä Maryam Gämmäčču and today is headed by Msgr. Leonardus Dobbelaar CM.

According to their own tradition, the L. are still engaged in pastoral activities, the training of priests, general education and development. Besides those in the areas above mentioned, they have houses and seminars in ↗Bonga, ↗Dambi Dollo, Amman, ↗Mäqälä and ↗Baḥər Dar, and count about 40 active members.

Andreu Martínez

League of Nations

The victorious Allied Powers of ↗World War I established the L.N. "to promote international co-operation and to achieve international peace and security". The L.N.'s charter, known as the Covenant, was approved as part of the Treaty of Versailles at the Paris Peace Conference in 1919.

Ethiopia's regent *ras* Täfäri Mäkʷännən (↗Ḫaylä Śəllase I) was of the belief that membership would protect Ethiopia from the territorial ambitions of colonial powers. Täfäri overcame opposition from conservative forces in Ethiopia who mistrusted foreign alliances, and formally applied to join the L.N. in 1919. The admission initially was rejected because of concerns about ↗slavery and the arms trade. ↗Italy and the ↗United Kingdom led the opposition. Britain demanded a L.N. campaign against pockets of slavery that continued to exist in Africa, one of which was in Ethiopia. In reply, Täfäri pointed out that his government was making progress in ending slavery and the slave trade. The arms trade in Ethiopia was limited by the St. Germain-en-Laye convention of 1919 that had established Africa as a prohibited zone for the importation of weapons. Italy, in fact, opposed any

action that would lead to membership and protection of Ethiopia's independence and the integrity of its territory. Italy's continuing colonial ambitions in Ethiopia, however, hastened L.N. action on the question of admission.

On 28 September 1923, Ethiopia was admitted to the L.N. by unanimous vote but on the condition that it strictly apply existing conventions prohibiting slavery. On 6 October 1923, in the wake of Ethiopia's entry, the L.N. announced plans for a campaign to eliminate slavery from countries where it still existed. Nevertheless, slavery lingered on for several decades in a few nations.

In March 1925, Täfäri sought to end the arms embargo by appealing to the L.N. for equal treatment of Ethiopia as a member state. The L.N. ultimately found that Ethiopia, as a sovereign state, enjoyed absolute freedom to import arms necessary for its legitimate requirements and approved the "Convention for the Control of the International Traffic in Arms, Munitions, and Implements of War".

In 1926, Täfäri threatened Italy and Great Britain with the possibility of referring the Anglo–Italian accords (a highhanded division of Ethiopian economic spoils) to the L.N. as an infringement of the sovereignty of a member state. In the face of international pressure, Rome and London backed down demonstrating how the L.N. could protect weak states against the machinations of great powers.

This L.N.'s ability to preserve world peace would not endure for long. When Benito ↗Mussolini's dreams of an Italian empire focused on the Horn of Africa, he drummed up a *casus belli* in a disputed boundary area between Ethiopia and ↗Italian Somaliland. The ↗Wälwäl incident in December 1934 produced humiliating Fascist demands for apologies and reparations from Ethiopia. Ḫaylä Śəllase hoped that the dispute could be negotiated, and the Ethiopians took the matter to the L.N. in January 1935 relying upon Article 10 of the Covenant whereby member states were to respect and preserve the territorial integrity and political independence of all members against external aggression. Addis Abäba warned the L.N. that inflammatory speeches by the Fascists signalled imminent aggression against Ethiopia. Meanwhile, on 7 January 1935, France and Italy signed the Rome Agreements that included secret military clauses. France ceded its economic interests in Ethiopia while Italy promised to help finance the Addis Abäba-Djibouti ↗Railway. The actions of the two nations in the crisis that followed were affected by these agreements.

On 17 March 1935, Addis Abäba informed the L.N. secretary general that a dispute existed between Ethiopia and Italy likely to lead to rupture and asked the Council of the L.N. to undertake a full investigation of its charges against Italy. Rome responded that under provisions of a 1928 treaty, all that was required was the mutual submission of documents to establish facts and expedite negotiations, and therefore, implementation of Article 10 was unnecessary. The Council, fearful of alienating Rome, immediately agreed to Italy's proposal. Mussolini maintained that collective security should be confined to Europe, and the controlling powers of the L.N. tried to force concession on Ethiopia so that an appeased Italy might then serve the needs of European politics.

On 3 October 1935, Italian troops under the command of Marshal De ↗Bono invaded Ethiopia. The Council of the L.N. concluded that the Italian Government had resorted to war in disregard of Article 12 of the Covenant, thereby automatically raising the issue of sanctions. The L.N. officially condemned Italy's aggression on 18 November 1935 and imposed economic sanctions including the banning of the sale of arms, rubber, some metals, and other materials to Italy. The sanctions, largely ineffective because the United States, a non-League member, continued to sell oil to Italy, were lifted in the summer of 1936.

Despite strong public opinion against the Fascist invasion, Ethiopia, for the most part, received little help and was isolated by the major European powers and its erstwhile allies Germany and Japan. Only smaller European states and the USSR sided with Ethiopia in the L.N. debates. On 7-8 December 1935, Britain's Foreign Secretary Sir Samuel Hoare and Pierre Laval, France's Foreign Minister, devised a strategy known as the ↗Hoare-Laval Plan, to end the Italian War, avoid allied conflict with Italy in East Africa, and defuse a possible confrontation with Italy in the L.N. The Hoare-Laval pact undermined the effect of the L.N. sanctions. The Plan was rejected by both Mussolini and Ḫaylä Śəllase, and many L.N. members also protested against the Plan because it violated the L.N.'s Covenant by discussing Ethiopia's dismemberment after Italy had attacked that country. In the deliberations that followed, Great Britain and France, fearing that L.N. sanctions might drive the Italians into an alliance with Nazi Germany, gave Mussolini a free

hand in Ethiopia. Many scholars maintain that the Hoare-Laval Plan contributed to the League of Nation's collapse. By May 1936, Italy had conquered Ethiopia, and Emperor Ḫaylä Śəllase I fled the country to exile in Great Britain.

Ḫaylä Śəllase I attended the 16th General Assembly of the L.N. in Geneva on 30 June 1936 to make a final plea for sanctions against Italy. His appeal on behalf of collective security (the speech was written by ↗Loränso Taᵓəzaz) produced no meaningful action by the L.N. This betrayal of Ethiopia was to be well remembered throughout the world. The L.N.'s failure to live up to its idealistic Covenant led to the organization's demise as a meaningful international body, and it passed into oblivion during ↗World War II.

Theodore M. Vestal

Leather

L. is an important ↗clothing material and serves for a wide array of products in daily use. By mechanical treatment and chemical processes (tanning) animal hides, skins and pelts are converted into L. The preparation of skins into parchment for ↗manuscripts plays an important role, and should be mentioned here too, even though these skins are not transformed into L. However, the first steps of treatment (s. below) are similar for both products.

In Ethiopia, mostly skins of domestic animals (cattle, goats and sheep) are used as raw materials, though hides of wild animals are also processed for specific purposes. For example, buffalo, rhinoceros and ↗hippopotamus hides provide solid L. for ↗shields and hoe connections. ↗Monkey skins are suitable for caps. ↗Lion and ↗leopard skins were worn, for instance, by northern Ethiopian military leaders (s. also ↗*Lämd*).

Hide-working belongs to the most ancient known technologies in general and probably to the oldest ↗handicrafts in Ethiopia in particular. This finds expression, for example, in ↗Dullay myths where the tanners are the original artisans who once lived together with God and later taught man the different handicrafts. Ethiopian

L. products are first mentioned in literature at the beginning of the 16th cent. by Francisco Alvares (BeckHuntAlvar 320). However, it is only through 19th-cent. travellers like Rüppell, Parkyns, Johnston that we learn about actual tanning techniques (Rüppell 1838–40, vol. 1, 367; vol. 2, 180f.; Johnston 1844:369–73; Parkyns 1853:13f.).

L. was once used for clothing (capes, skirts, belts, sandals, hats) in all parts of the country. Other objects were sleeping mats, cushions, sacks, cases, packing straps, trappings, saddles, whips, scabbards, drums and bellows. In the centres of the northern highlands such as ↗Gondär, tent-making and saddlery were specific crafts; shield-makers specialized in decorating shields with silver. Another speciality was parchment-making (PankEcon 267ff.).

While L. clothes were common in Ethiopia until the second third of the 19th cent., later the wearing of L. was scorned by the state authorities as being "primitive" and "backward". It was prohibited in southern Ethiopia for all those serving

the imperial authorities. This was strengthened further the end of World War II. The tanners in southern ↗Diraašša were forced to give up this line of production in the early or mid-1950s. The ↗Burği gave up at the same time. In the 1960s police in ↗Konso removed the L. clothes of women at the market place, leaving them naked. Some regions were less affected: in ↗Sidamo L. clothing was still worn publicly and sold in the markets in the late 1960s. The pastoralists in the south ignored the prohibition and different types of L. clothes for women are still in use (s., e.g., VSAe I, ill. 23–26, table 21).

Within the agricultural societies these upheavals had a decisive effect on the economic situation of the tanners and precipitated the decline of L. production. Many left their occupation. Those in the south-west who still work with L. spend most of their time making cowhide sleeping and sitting mats. Some of them are now engaged in the export of hides.

In Diraašša, as in the north, L. sandals have been replaced by sandals made of old tyres – the end of another lucrative L. market. The production of sandals has a long tradition in Ethiopia, even if many have preferred to go barefoot until recently. This attitude, especially with regard to shoes, has radically changed. In Asmära and Addis Abäba there are important shoe industries that serve the home market, but at least in the case of Asmära also the export market. In local shoe factories L. is now produced industrially. Hides, skins and leather are among the four most important export articles of Ethiopia.

In south-western Ethiopia several ethnic groups still produce a variety of L. products in the traditional way. The techniques used in the northern highlands did not differ principally from those described here (Messing 1957 [1985]:92ff.).

Several steps of these well documented techniques are necessary to transform raw hides into L. First, the skin is stretched out to dry. To that end, soon after slaughter, flayed skin is spread out with the flesh layer upward; then, small holes are made along the edge of the hide through which wooden pegs are driven for stretching out the hide slightly above the ground. Drying usually takes several days. Some groups moisten hides with the juice of the ↗*ənsät* plant.

Next, the skin must be freed from the remnants of muscle and fat as well as the subcutaneous cell tissue liable to putrefaction. The Konso and the Dullay pass strings through the peg holes on one of the short sides of the hide to tie the hide, with the flesh layer upward, to a wooden pole fixed horizontally between two trees. About half of the hide remains lying on the ground. The hide worker squats down on it in such a way that the upper hanging part forms an angle of about 50° to the ground. With the weight of the body the hide is stretched and with the horizontal pole it can be adjusted during the work. Other ethnic groups also use wooden vertical frames.

With long downward strokes the hide workers scrape off long shavings from the inner side of the hide. The stone scrapers are fixed in a wooden handle and are usually made from obsidian, agate, chert or quartz by direct percussion techniques. In Konso it is unique that women do the whole task, including the production of the stone tools (Brandt – Weedman in PICES 13). Sometimes iron blades and broken glass can also be used, but stone scrapers are preferred. Constant spraying with water keeps the hide soft and helps to prevent the scraper from cutting into it.

If the hairy layer of a skin is to be treated as well, the hides are wrapped in the leaves of the *Croton macrostachys* tree. This damp leaf-pack is then hung up in the house for a few days for decomposition. With the decay of the epidermis the hairs loosen and can be easily removed.

Without further treatment, the hide would suffer from putrefaction, or in dry areas from cracking. Scraping is therefore followed by two techniques, used sometimes alternatively, sometimes

together: the producing of chamois L. by means of fats and tanning by use of tannin containing plants. At least six different plants are used. Castor oil (*Rizinus communis*) is used commonly today to prepare the tanning liquor (others are *Ximenia americana*, *Ximenia caffea*, *Croton Macrostachys*, *Rumex abyssinicus* and some other as yet unspecified plants). During further processing animal fats including milk and butter are also used (for the chemical process of tanning s. Amborn 1990, appendix 7).

Finally, L. prepared for clothing, shields or saddles can be dyed with plants or ochre in different colours.

Fulltime L. workers usually form a distinct group within the society. Their role and status vary widely in different societies and have always to be assessed in connection with those of other craftspeople, like blacksmiths, weavers, potters etc. (↗Handicrafts).

Among northern Ethopian Christians rough hidework was carried out by the ordinary peasantry, but specialist leatherworkers were from other ethnic groups, mainly ↗Agäw speakers, living endogamously in separate villages. The Amhara called them *faqi*, but they themselves used the term *arabanna*. Also Muslims were engaged in this trade (Messing 1957 [1985]:91f.; PankEcon 227ff.). Shifting crafts to socio-political non-Amhara groups was a common practice in the empire whenever possible. Consequently craftspeople were found at the bottom of the hierarchical order and were looked down upon.

In southern Ethiopia L. workers form district role collectives, in some places together with potters. They obey endogamy rules and avoidance regulations. Usually they are connected with concepts of life and death and thus supernatural powers which give them an ambivalent role: feared, but also capable of and asked for blessings. Consequently, they play key roles at essential socio-religious occasions like childbirth, marriage and other rites of passage, as well as during burials and ritual commemorations for the deceased. In the once sacred kingdoms (↗Kingship, divine) of Omotic-speaking groups they were ritually connected with the ruler ("king"). This relationship was lost after the colonization of the south by the northern empire. As a consequence, frequently only the negative aspects of their ambivalent position survive to the present day, at least on the surface. This is not the case within the polycephalous societies of the south, where even in groups converted to Christianity or Islam tanners perform important rituals more or less openly (Amborn 1990, ch. 4.2; 2000–05).

Leba šay

L. (ሌባ፡ ሻይ, lit. 'thief searcher') was an early institution of ↗law (s. Customary law) enforcement in certain Ethiopian urban centres as well as some rural areas. The institution of L. predominantly prevailed in Šäwa and is most widely described in 19th- and 20th-cent. Šäwa and Addis Abäba. *Aṣe* ↗Yoḥannəs IV abolished the practice in Təgray. As an institution, it was hierarchically structured throughout Šäwa and some neighbouring provinces, and was run as a monopoly by certain privileged families. On certain occasions the elite apparently used it to dominate various minorities, whether ethnic like Gurage and Oromo, or religious like Catholics and Muslims.

The institution functioned in the following way. Once a theft was reported to the L. officials and their assistance was requested in writing, the administrator of the L. would arrive at the scene of the crime on an appointed day with a young boy, the 'thief searcher' (L.) to search for the thief. The prepubescent boy would be given a strong ↗drug, and subsequently fall into a trance in the vicinity of the crime. Imitating the criminal's actions, the boy would lead the offi-

A *leba šay* in action; from Annaratone 1911:460

cials, who followed him by holding a length of cloth tied to his waist, to the property of the culprit. If the boy pointed out the individual thief, it was tantamount to a conviction for theft. The thief was bound to return the stolen goods and pay for the cost of the search. The thief was not subject to the amputation of a hand or foot, as prescribed by the ↗*Fəṯḥa nägäśt*.

Läğ ↗Iyasu attempted to interdict the practice, and it was later (again) abolished by *ras* Täfäri Mäkʷännən (later ↗Ḫaylä Śəllase I) and Empress ↗Zäwditu in 1925. However, according to oral tradition, instances of L. apparently survived until the Italian occupation of Ethiopia in 1935 in different regions and among several ethnic groups (cp., for example, Alexander Naty 1994).

Ləbb wälläd

L.w. (**ልብ፡ ወለድ**, also **ልቦለድ**, *ləbbolläd*; lit. 'heart-born') is the term referring to the genre of novel in ↗Amharic literature. It originates from the title of the novel ↗*Ləbb wälläd tarik* that is commonly considered the first fictional work in Amharic. Authored by ↗Afäwärq Gäbrä Iyäsus and published in 1908 in Rome, the novel was for a while little-known in Ethiopia, and the fictional writing had practically no immediate continuation in early Amharic literature. Until the ↗Italian war 1935–36, most Ethiopian intellectuals were preoccupied with practical issues related to the modernization and future of Ethiopia. A few fictional works were translated into Amharic, yet the idea of fictional writing was largely alien to Ethiopians of that time.

In the pre-war period, a few fictional works, though not designated as L.w., were authored by ↗Ḫəruy Wäldä Śəllase, a prolific writer who is frequently described as the founder of the modern Amharic literature. These works, however, were only a small part of his literary heritage. Addressed to the new readership (primarily young people educated in the European-style schools), they were meant to edify, imparting "modern knowledge" and an "enlightened" way of life, not to entertain, and were marked by the perception of the moralistic-didactic function of writing in a society that is undergoing modernization. E.g., Ḫəruy's allegoric **ወዳጇ፡ ልቤ**, *Wädağğe ləbbe* (1922/23) criticizes anachronistic customary social and religious practices as suggesting a way forward; **የልብ፡ ሐሳብ**, *Yäləbb ḥassab* (1930/31) targets child marriages; **አዲስ፡ ዓለም**, *Addis ʿaläm* (1932/33) advocates reform in some of the cumbersome practices of the ↗Ethiopian Orthodox (Täwaḥədo) Church related to funerals and commemoration feasts. Strong didactic overtones persisted in other writings of Ḫəruy, as well as in later fictional works of other authors; they are still present in Amharic literature to date. Sometimes negatively evaluated by literary critics, these features should be rather perceived in the context of a nascent literature, as a genuine literary product of a society that is in the complex process of transition from tradition to modernity.

After 1941, ↗Amharic literature began to develop more extensively. Fictional narration took root in Ethiopian literary taste and acquired a degree of popularity, L.w. – the novel – taking the position of the leading genre. During the same period, in the context of the country's ↗urbanization, spread of ↗education and intensification of contacts with the rest of the world, the number of potential readers increased, and new writers appeared. Authors of the new generation were mostly from the upper, privileged stratum of society, in many cases holding important positions in the government administration, and being, strictly speaking, non-professional writ-

ers. Mostly well-educated, many of them visited foreign countries. The Italian war provided a catalyst to the literary creative process. In the post-war period, Ethiopian writers moved on from the moralism and didacticism of the earlier period and turned to depicting the individual characters of their countrymen, their lives and personal dramas, and also speaking out about the social problems of the country.

The two major L.w. works of the early post-war period were ↗*Arᵊaya* by ↗Gərmaččäw Täklä Ḥawaryat (1948/49), and ↗Asäffa Gäbrä Maryam's እንደወጣች፡ ቀረች, *Ǝndäwäṭṭaččʼ qärräčč* (1956/57). Both show a remarkable change in their focus away from the old generalized themes to more specific issues and contemporary problems, although cultural clashes with the western world and the values of "western civilization" remain recurrent themes. The term *tarikawi ləbb wälläd*, 'historical L.w.' (e.g., 'historical novel') in the subtitle of *Arᵊaya* is intended to signify that it is a work of historical fiction. An Amharic classic, it shows in a convincingly realistic manner an aspect of urban social life that has emerged as a direct consequence of the occupation period.

Asäffa Gäbrä Maryam's only novel *Ǝndäwäṭṭaččʼ qärräčč* openly addresses, through the depiction of an individual's tragic life, the problem of ↗prostitution (echoed later in the novel by Asäffa's brother Nägaš Gäbrä Maryam, *Setäñña adari*, 1963/64). The novel by Bäᵊəmnät Gäbrä Amlak, *Ləğənnät tämälləso aymäṭamm* (1956/57), also the only fictional work of the writer, depicts through the example of the destinies of several characters the profits and dangers of the "modern" life, where each person is fully responsible for his choice and the results.

In the 1950s, literature contemplating the recent historical past – in particular, the Italian war of 1935–36 – was expanded by a number of works of biographical character but also by historical fictional writings, penned by authors who witnessed the war, one of the most famous being ↗Mäkʷännən Ǝndalkaččäw's *Almothumm bəyye alwašəmm* (1954/55).

↗Beka Nämo's ገልጠን፡ ብናየው, *Gälṭän bənnayäw* (1956/57) is said to be the beginning of the detective novel in Amharic literature. Another interesting development of fictional literature in Amharic was the appearance of Muslim writers (Mähammäd Usman's short novel *Gʷade, əngədih amäčəh näññ*, 1960/61, followed by Säyəd Abägaz, Abdulbari Mähammäd etc.).

Among the most significant Amharic works in the novel genre, ፍቅር፡ እስከ፡ መቃብር, *Fəqər əskä mäqabər*, written in 1966 by ↗Ḥaddis ᶜAlämayyähu, deserves a special mention. This historical love story, set during the Ethiopian feudal era, is probably the only classical novel to have reached a remarkably high technical and stylistic literary standard.

In the 1960s–70s and after the ↗Revolution of 1974 in 1980s, more authors and works written in the genre of L.w. appeared on the literary scene, to name only some: ↗Abbe Gubäñña (*Ələwwälläddəmm* 1962), ↗Bäᶜalu Gərma (*Kadmas baššaggər* 1969/70, and others), ↗Daññaččäw Wärqu (*Adäfrəs* 1970); Mammo Wəddənäh (*ᶜƎqqubtäññoččʼu* 1983/84, and others); ↗Bərhanu Zäryəhun (*Yätangut məṣṭir* 1987); Ḫaylämäläkot Mäwaᵊəl (*Gungun* 1990). Fəqrämarqos Dästa penned successful stories set among the peoples living in South Ethiopia (*Ivangadi* 1997/98).

The term L.w. has also recently been applied to their works by a few authors writing in Təgrəññña (cp. *Wäddi Waᶜəro* by Bərhanä Ačame, 1991/92).

By the end of the 1950s the appellation of L.w. evolved into the *aṭṭər ləbb wälläd*, 'short L.w.', i.e. short story and *räğğəm ləbb wälläd*, 'long L.w.', i.e. novel. This difference was probably established after the publication of Taddäsä Libän's collection of short stories *Mäskäräm* (1956/57). The genre of short story became increasingly popular among the Ethiopian writers in the late 1970s-90s (e.g., ↗Ṗawlos Ñoññо, *Məsqəlqəl* 1966; *Ǝnquṭaṭaš* 1987).

Early studies frequently approached Amharic fictional literature by commenting on the lack of coherence in the plot, the superficial description of human characters or unnecessary profusion of details etc. (This method was not completely abandoned later on.) Since the late 1970s a number of essays devoted to different aspects of L.w. have appeared, yet deeper studies of the genre of the Amharic novel and its place in Amharic fictional literature and Ethiopian society remain a desideratum.

Ləbb wälläd tarik

L. (ልብ፡ ወለድ፡ ታሪክ, lit. 'A Story Born of the Heart') is the title of a novel by ↗Afäwärq Gäbrä Iyäsus. Published in Rome in 1908 (a short preface was compiled by Francesco ↗Gallina), it is considered the first work of Amharic fiction and was, in fact, one of the first novels in an African language (Gérard 1971:282). Consequently, Afäwärq was seen as an innovator.

The title of the work speaks for itself, but *ləbb* 'heart' should be understood as 'intellect', *ləbb wälläd* thus meaning 'made up by the intellect', i.e., 'imagined'. The idea was not unknown to traditional theological thinking; however, picking a title not related directly to the contents of the narrative, Afäwärq probably wanted to stress the difference: his fictitious, "untrue" story with "untrue" heroes who never existed, versus the bulk of traditional (mostly ↗Gəʿəz) writings, whose authors always perceived their narratives as true (s. Fusella 1951:56 n. 1; cp. Chernetsov in PICES 15, 221ff.). Eventually, ↗*ləbb wälläd* became the generic name for all Amharic works of prose fiction and thus came to be commonly rendered as 'novel' (KaneLit 7, 16).

L. is a prose work of proto-epic conception. It starts with a story of a Christian king's general (bearing the title of ↗*däğğazmač*) captured by a pagan king during a war and the efforts of the general's children (his son Waḥəd and his daughter Ṭobya) to liberate him. It further develops into a narrative of the marital union between Ṭobya and the pagan king who had to accept her Christian faith to secure it. The conjugal union of the two brings about the unity of the two warring (on account of the their faith) communities that come to constitute a single Christian nation.

There are still arguments about the place L. occupies in Amharic literature and its literary value, with quite a number of varying opinions expressed on different issues regarding the work, ranging from the influences of foreign and traditional (esp. hagiographic) literature in Gəʿəz to realism. Though written in Europe, the stylistic level of the first Amharic fiction appears remote from "western standards". Remarkably, the appearance of L. was quickly noticed by scholars of Ethiopian studies, but the book remained relatively little-known to Ethiopians for a long time (also after the second edition of 1926/27, Dəre Dawa). Fictional writing had practically no immediate continuation in early Amharic literature. Love and marriage, lying at the centre of the plot of L., were to become recurrent topics in the Amharic literature of later years, particularly after the 1940s.

L. acquired general recognition in 1950s, when several revised and simplified "school editions" were printed under the title *Ṭobya*.

Asfaw Damte - Denis Nosnitsin

Ləbdəyos

L. (ልብድዮስ) was a saintly monk from May Gʷəndi, Šire (Təgray), credited with the foundation of the monastery of Ǝnda Abunä Ləbdəyos during the time of *aṣe* Fasilädäs (1632–67). He is thus believed to have been involved in the re-establishment of Ethiopian Orthodox ↗Christianity after Susənyos's conversion to ↗Catholicism. Traditional local accounts of the conversion of Susənyos mention a monk L., a follower of the rule of the monastic congregation of *abunä* ↗Täklä Haymanot, who by a supernatural intervention "went away to find, with God's help, a bastion of the traditional religion", and choosing for this May Gʷəndi. L. is also considered to be the founder of Ǝnda Abba Ṭaᶜəmä Krəstos of ↗Waldəbba, where a cross that is believed to have belonged to L. is venerated.

The *Gädlä Ləbdəyos*, preserved in May Gʷəndi, has not yet been published.

Ləbnä Dəngəl

Aṣe L.D. (ልብነ፡ ድንግል [occasionally methatesized to ንብለ፡ ድንግል, *Nəblä Dəngəl*, s., e.g. BTafA 96ff.], 'Incense for [or: of?] the Virgin'; this in Latin sources sometimes re-translated as Atana Dingil [for ᶜƎṭanä Dəngəl, synonymous with L.D.], regnal names: Dawit and Wänag Sägäd, cf. below; b. 1496 or 1497, d. 2 September 1540, Däbrä Damo) sat on the Solomonid throne from 1 August 1508, when he succeeded his late father ↗Naᶜod, until his own demise. During L.D.'s minority, however, the kingdom was effectively governed by a group of leading court figures and nobles among whom his step-grandmother *ətege* ↗Ǝleni was paramount. Next in importance came *ras* ↗Wäsän Sägäd and L.D.'s mother ↗Naᶜod Mogäsa (KrLebD 3 [text]). Even after L.D. had come of age in 1515/16 and begun to govern independently, these former regents retained considerable influence, much to the young monarch's resentment. Apparently it was only after the deaths of the two matriarchs in the early 1520s and his ensuing temporary demotion of Wäsän Sägäd that L.D. felt he could exercise his sovereign powers unconstrained (Beck-HuntAlvar 425, 430–33). He was not, however, to enjoy this situation for long, as from 1529 onwards his reign was overshadowed by ↗Aḥmad b. Ibrāhīm al-Ġāzī's ("Grañ"'s) rapidly unfolding ↗*ǧihād* against his realm.

By contrast, the preceding years of L.D.'s rule were mostly peaceful for the Christian Kingdom, and a time of economic as well as cultural prosperity. Agriculture and trade flourished, the itinerant imperial court (↗*Kätäma*) was immense and magnificent, and many monasteries served as centres of literary as well as artistic production. The first decades of the 16th cent. may thus justifiably be regarded as the time when "medieval" Ethiopia reached its climax. Only two major campaigns, both led by L.D. himself, punctuated the first half of his independent reign. In 1516 or 1517, shortly after his coming of age, the Emperor successfully confronted an invading ᶜAdalite army (↗ᶜAdal) under the command of the famed ↗Maḥfūẓ b. Muḥammad (KrLebD 4 [text]; Beck-HuntAlvar 410–15). It may have been his victory over this dreaded adversary that prompted L.D. to adopt his second regnal name of Wänag Sägäd

16th-cent. Portuguese portrait of *aṣe* Ləbnä Dəngəl ("David Atanadi[ngil] Aet[thiopum]: Imp[erator]", i.e. 'Dawit ʿƎṭanä Dəngəl Emperor of Ethiopia'); Galleria degli Uffizi, Florence, copy painted by Cristoforo dell'Altissimo after the original of 1532, from the Paolo Giovio collection; photo from Tedeschi in PICEA 1, fig. 81

('The lion has submitted to him') which tellingly uses Harari *wänäg* for 'lion'. Almost a decade later, in early 1525, L.D. led a campaign against a rebellion in ↗Hadiyya (BeckHuntAlvar 427f., 434ff.). The strategically most significant event of the pre-*ǧihād* phase of L.D.'s rule, though, was the arrival in 1520 of the Portuguese mission lead by Rodrigo de ↗Lima and chronicled by Francisco ↗Alvares. The mission stayed in Ethiopia until 1526 and ushered in a century-long period of intensive and multifaceted Ethio-Portuguese relations.

Grañ's *ǧihād* on the other hand almost immediately made L.D. a fugitive within his own realm. Being chased from Šäwa to Damot to Wäǧ to Amhara to Dämbəya, he within four years lost control of all southern and central parts of his kingdom. In 1539, after eventually having found refuge in the north, L.D. in quick succession suffered a number of severe personal blows. First the Muslims captured his mother-in-law Yodit, then killed his oldest son ↗Fiqṭor, and only a few weeks later apprehended his third son ↗Minas. These personal losses may have contributed to the Emperor's premature death a year later at ↗Däbrä Damo (BassÉt 16; DombrChr 41f., 164f.; KrLebD 16f., 20 [text]).

L.D. was probably Naʿod's only son by *ətege* Naʿod Mogäsa. His numerous brothers anonymously indicated by Alvares (BeckHuntAlvar 241, 243, 245f.) all appear to have been half-brothers by his father only. This is all the more likely as Naʿod had married, or at least had lasting relationships with, quite a few women before his union with Naʿod Mogäsa (BeckHuntAlvar 193, 410), and perhaps also afterwards. Only one older half-brother of L.D., a certain Yoḥannəs, is known by name (BassHist I, 243; II, 342). However, the Emperor also had a younger half-brother by his mother, from a relationship she had entertained with Wäsän Sägäd. Although she presumably only entered into it after Naʿod's death, the fact was strongly resented by L.D. (BeckHuntAlvar 432). In contrast to his brothers, quite a few ofthe Emperor's sisters are known by name: Amätä Dəngəl (BassHist I, 330; II, 439 ConzGal 34f., 142), Amätä Mikaʾel (Kropp 1989:170, 173), ↗Romanä Wärq and Wälättä Qälämsis, of which at least the last two were L.D.'s full sisters (BeckHuntAlvar 404–10). The same may also hold true for another sister whose name the ↗*Futūḥ al-Ḥabaša* transmits as *ʾ-m-t w-ṭ-y-n* (BassHist I, 103, 105; II, 177ff.). While Arabic *ʾ-m-t* obviously represents Ethiopic *amätä*, it remains unclear what underlies *w-ṭ-y-n*. Wälättä Qälämsis and Amätä W-ṭ-y-n were successively married to ↗Dägälhan.

Unlike his father, L.D. married only once, shortly after his coming of age at the latest. After having rejected a Muslim-born Hadiyya princess on account of her looks (BeckHuntAlvar 193, 427), the Emperor chose ↗Säblä Wängel, a beautiful and energetic woman of Christian ancestry, to become his spouse. L.D. appears to have been truly and continuously devoted to her (ConzGal 3f., 122f.), and the couple had many children. For the sons we know the sequence of their birth: Fiqṭor, ↗Gälawdewos, Minas, ↗Yaʿəqob, while for the daughters we only have some certain and some less certain names: Amätä Giyorgis, Wälättä Qəddusan, Säbänä Giyorgis (?), Tewodada (?), Wälättä Ḥanna (?; cf. BassÉt 21; DombrChr 48, 177; Esteves Pereira 1888:58; Kropp 1989:176f., 179f.).

Alvares (BeckHuntAlvar 304), who spent considerable time at the imperial court and had

a number of personal encounters with L.D., describes the Emperor as "not very dark in colour ... of middling stature, ... his face ... round, the eyes large, the nose high in the middle", and adds: "In presence and state he fully looks like the great lord that he is." A contemporary European portrait of L.D., likely created on the basis of Portuguese returnees' sketches or/and descriptions, soon found its way into the collection of the Italian humanist Paolo ↗Giovio (ill.), who had it engraved for his *Elogia* ('Encomiums') a work which includes a chapter on the Emperor. As to the latter's personality, what emerges strongest from Alvares's first hand account is the monarch's Christian piety and devotion (BeckHuntAlvar 290–314, 325–41, 352–66; cf. also KrLebD 6 [text]; BassHist I, 67f., 137, 200; II, 136f., 214, 294f.). At the same time L.D. had a clear understanding of strategic political issues, such as Ethiopia's precarious geopolitical situation half-encircled by expansionist Muslim powers; his country's comparative technological backwardness and the resulting need for "technology transfer" from the Portuguese; and the potential of an Ethio–Portuguese alliance generally (BeckHuntAlvar 287f., 298f., 305, 367f., 478f., 501, 505). These insights, however, did not, despite some steps in that direction (↗Ṣägga Zäᵓab), sufficiently translate into concrete and sustained measures to remedy the recognized ills. Yet given the means of the era, this likely would have been difficult to achieve even for a more focused and persevering Ethiopian ruler. With regard to character, L.D. comes across as basically kind-hearted, but also as endowed with a keen sense of his elevated status, easily irritated, and somewhat unsteady and immature. This disposition occasionally made him take rash, emotional and unnecessarily cruel decisions (BeckHuntAlvar 383f., 423ff., 430-34). Some episodes from the *Futūḥ al-Ḥabaša* suggest that the imperial temperament did not change substantially until at least the early 1530s (BassHist I, 45, 128, 298f.; II, 102, 205f., 392ff.). It seems possible though that under the immense pressure of the *ǧihād* L.D. matured in his later years. In any case an episode from 1538/39 shows his sense of imperial dignity intact (BassÉt 15, 106; KrLebD 16 [text]; DombrChr 40f., 164).

Ethiopian tradition has remembered L.D. vividly, but not uniformly. His piety already soon after his death gave rise to traditions casting him as saintly figure endowed with gifts of prophecy and vision. Evidence for this is found in both the minor and major chronicles of his son Gälawdewos (cf. KrLebD 27 [text]; ConzGal 8f., 125; ↗Historiography), while the 17th cent. **ታሪክ፡ ዘጋላ፡ ወራእየ፡ ልብነ፡ ድንግል** (*Tarik zägalla wäraᵓəyä Ləbnä Dəngəl*, 'History of the Galla and Vision of Ləbnä Dəngəl'; s., e.g., mss. EMML 1126, 1313, 1521) expands on this theme. The so-called ↗*Dərsanä Raguᵓel*, on the other hand, blames L.D. for the ravages wrought first by Grañ and thereafter the ↗Oromo, interpreting both Christian disasters as heavenly chastisements for L.D.'s allegedly overbearing ways (cp. also BTafA 96–101).

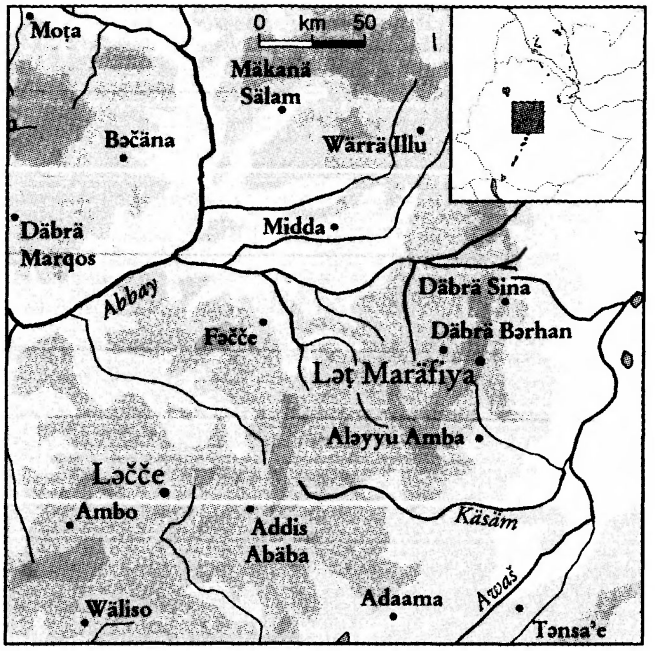
Michael Kleiner

Ləčče

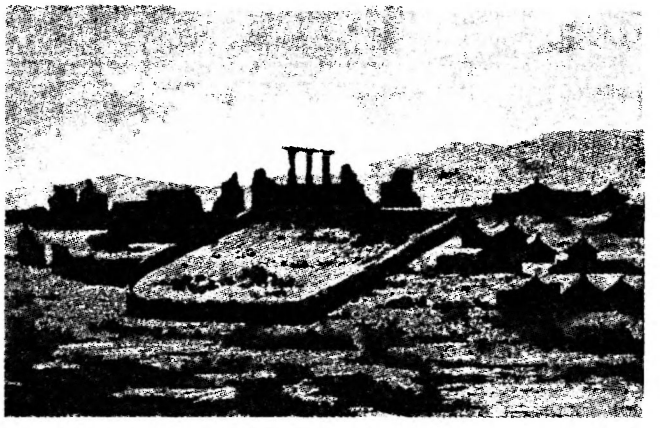
L. (**ልቼ**; 9° 42' N, 39° 33' E) was a town located about 5 km north of ↗Däbrä Bərhan. L. was founded by *nəguś* ↗Mənilək in 1865 (GueCopMen 105; BTafA 589), replacing Däbrä Bərhan, which had probably been ruined, as the capital of ↗Šäwa.



For more than a decade it was Mənilək's principal camp, to which he regularly returned from his various campaigns. L. was a semi-permanent camp rather than a town. It basically consisted of the palace surrounded by a large number of very small huts, "each barely capable of housing two or three persons" (CecZeila vol. 1, 171). It was also the site of the major market in the area.

In 1878 rivalry between *aṣe* ↗Yoḥannəs IV and Mənilək reached a climax. The Emperor invaded Šäwa via ↗Mänz and skirmishes between the armies took place. Mənilək retreated southwards from L. in order to avoid a major confrontation. Negotiations led to the Wadära agreement, which was formally entered into on 20 March 1878. Mənilək accepted the supremacy of Yoḥannəs and in return was formally recognized as *nəguś* of Šäwa (Darkwah 1975:77f.; Marcus 1975:54).

Yoḥannəs also demanded that Mənilək transfer his capital to the ancient site of Däbrä Bərhan.



19th cent. picture of the ruins of Ləčče; from Bianchi 1884:30

This was done, and L. was in ruins within a year (GueCopMen 159). Although Däbrä Bərhan was rebuilt, the next major capital was in fact not Däbrä Bərhan, but ↗Ǝnṭoṭṭo and ↗Addis Abäba, due to the rapid expansion towards southern Ethiopia.

There is scarcely any trace left of the town, and even the place name has disappeared from current maps. The ruins were identified and described by Buxton (1949:164 and map).

Lədät

L. (**ልደት** [፡ **በዓል**], *Lədät* [*bäᶜal*], 'Christmas', lit. 'Nativity, Birth', in full **ልደተ፡ እግዚእነ፡ ኢየሱስ፡ ክርስቶስ**, *Lədätä Ǝgziᵓənä Iyäsus Krəstos*, 'The Nativity of our Lord Jesus Christ'; also **በዓለ፡ ወልድ**, *Bäᶜalä wäld*, 'Feast of the Son') is the celebration of the birth of Jesus Christ. It is one of the nine major ↗feasts of Our Lord in the liturgical ↗calendar of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC; cp. Guidi 1897:134f.).

Unlike Easter (↗*Fasika*), L. belongs to the cycle of feasts with a fixed date. It is celebrated on 29 *Taḫśaś*, or on 28 *Taḫśaś* in the year of John (which follows the leap-year of Luke), a correction made in order to maintain the exact number of 9 months and 5 days of gestation in ↗Mary's womb from the Annunciation (**ትስብእት**, *Təsbəᵓət*) on 29 *Mäggabit* despite the additional day in the leap-year (cp. BudSaint 421). As a result, L. always corresponds to 25 December Julian calendar (7 January Gregorian calendar). Only the "Unctionists" (↗*Qəbat*) still keep to 29 *Taḫśaś*.

Like Easter, L. is preceded by an extended fast (↗*Ṣomä lədät*, s. also ↗Fasting) which ends on Christmas Eve, on 28 (or 27 in the year of John) *Taḫśaś*. Christmas Eve (Amh./Tgn. **ገና**, *Gänna*, Gəᶜəz **ጌና**, *Genna*, from Greek γέννα, *génna*, 'birth, nativity'; also *Amanuᵓel*, 'Emmanuel', *Märᶜawi*, 'Bridegroom'; cp. Fritsch 2001:145) is both a minor feast commemorating the actual fact that the Lord was born a man and an obligatory fasting day (mild if it occurs on a Saturday or a Sunday). Like Epiphany (↗*Ṭəmqät*), L. is

characterized by the transfer of the fast from the day itself onto its eve so that L. is never a fasting day even when they fall on a Wednesday or a Friday; hence the adjective ገሃድ (*gähad*, 'manifest') given to the eve.

The earliest mention of the feast and its date in Ethiopia is found in the post-Aksumite funeral ↗inscription of Ham, commemorating "Giḥo, daughter of Mängäśa", who "died on the 27th of the month of *Taḫśaś*, at dawn, on the day before Christmas Eve [*genna*]" (Fiaccadori 1993:325).

Historical traces have remained of struggles around fasting on Christmas Eve. The Acts of *abunä* ↗Filəṗṗos report a discussion between the Saint and *aṣe* ↗ᶜAmdä Ṣəyon I and his clergy: the Emperor's party was against fasting, but in favour of a two-day feast, on 28 and 29 *Taḫśaś*, corresponding to 28 and 29 *Kīhak* for the celebration of Christmas in the Coptic Church (Turaiev 1908:237f.; cp. Conti Rossini 1940:93f. and n. 4). The reasons behind that, only alluded to in the discussion held by Filəṗṗos and his adversaries, are more explicit in the ↗*Sənkəssar*: on account of both the exact time of Christ's birth ("... for the Nativity took place in the last part of the night of the 28th day, and in the first part of the 29th day") and of the difference between regular and leap years (two feast days were in fact argued for by "our fathers and doctors of the Church"; s. GréSyn IV, 89).

Preceded by the ↗*Wazema* and the night service of the Divine praises (↗*Maḫlet*), a midnight mass (cp. ↗*Qəddase*) is celebrated at L. as at Easter and the Epiphany. The story of L. may be read from the *Sənkəssar*. The appropriate Gospel readings are combined with the ↗hymns provided by antiphonaries of the ↗*Dəggʷa* and ↗*Ziq*, ↗*Mäwaśəᶜət*, ↗*Zəmmare*, completed by the *Nägś* and other collections.

People attend church services and then share a family meal. The giving of gifts is not an important part of this holiday, although children may take bread to their parents and receive in return a blessing and sometimes a gift. The hockey-like game called ↗*gänna*, owing its name to the holiday itself, is traditionally played in the afternoon. L. is also a traditional pilgrimage time, notably to such spiritual centres as ↗Aksum or ↗Lalibäla.

The days and Sunday after L. prolong the feast which is followed on the Monday after and until Epiphany Eve by the lesser liturgical season of *Nazret - Ḥəśnät* ('Nazareth', the 'Up-bringing') and, finally, Epiphany.

L. (Nativity) is a frequent subject of ↗painting. It is always included in the developed Christological cycle, which decorates a group of ↗Gospel books written in the 13th/14th and 15th cent. The scene appears there in two iconographical versions: early Christian and Byzantine and the oldest examples seems to be the miniatures in the so-called Gospels of ↗Iyäsus Moᵓa and ↗Krəstos Täsfanä, both from the ↗Ḥayq monastery scriptorium and executed at the end of 13th and beginning of the 14th cent. respectively. Since the 17th cent. the Gospels applied the iconography of the scene introduced by the First and Second Gondär school of paintings. The representation of L. belongs also to the pictorial repertory of other texts, e.g., the *Mäṣḥafä* ↗*baḥrəy* ms. of ↗Bərbər Maryam (EMML 9084; 15th cent.), the ↗*Nägärä Maryam* and the ↗*Säqoqawä dəngəl*. The earliest examples of painting on wood with L. date back to the 16th cent. (Chojnacki 1974:25) and follow European iconographical models. In the churches, from the beginning of the 17th cent. onward, L. is one of the scenes depicting the life of Christ preferably displayed on the south wall of the ↗*mäqdäs*. The oldest known attestations, representing the First Gondär school of painting are in the churches of ↗Däbrä Sina, ↗Kəbran Gäbrəᵓel, ↗Qoma Fasilädäs, ↗Ǝnṭonəs). In these scenes of L., the Child is sometimes represented lying on a mattress of leaves. The ↗*liqawənt* teach that these are leaves of the *ᶜəḍä sabek* tree, to which the sheep that replaced Isaac in Abraham's sacrifice was attached.

Lədäta lämaryam: Mäṣḥafä lədäta lämaryam

The L.M. (መጽሐፈ ልደታ ለማርያም, 'The Book of the Nativity of Mary') is the Gəᶜəz title of an apocryphal text relating the birth and early history of the Virgin ↗Mary. Together with other apocrypha like, e.g., the *Gospel of Thomas*, the *Birth of Mary* is to be classified as an infancy gospel. The *Birth of Mary* (or *Liber Nativitatis Mariae*) was written in Greek before the 4th cent. in Egypt or Syria, since its content was known to Clement of Alexandria and ↗Origen. It became known under the title *Protoevangelium Jacobi*, given to the text in the 16th cent. by the French humanist Guilliaume Postel.

The authorship of the book is ascribed to James, the brother of Jesus; the actual author was possibly a Christian convert of Jewish descent strongly influenced by the O.T., particularly the stories of the births of Samuel and Samson. The work has three parts. The first tells how Anna, the wife of Joachim, a pious Israelite, after having been barren for a long time, gives birth to Mary, and how Mary is assigned to the Temple, where she spends most of her childhood. In the second part Mary is about to become a woman and because of her imminent pollution has to leave the Temple. She is given into the custody of Joseph, an old widower, who is chosen by a miracle for this task. The third part recounts the Nativity of Jesus (↗*Lədät*), together with the birth of ↗John the Baptist and how the children were hidden from King Herod. The first two parts are probably to be dated earlier than the last part (Gärtner 1972:62, 79ff.). The purpose of the story is to glorify Mary and to underline her perpetual virginity. This becomes especially clear in the passage in which a midwife tests Mary's virginity after she had given birth to Jesus.

The Greek text is preserved in over 30 manuscripts, the oldest extant copy containing the complete text being Pap. Bodmer V (B). The *Protoevangelium* was translated also into Latin, Syriac, Arabic, Georgian, Armenian, Coptic and Slavonic. Of the Latin and Coptic versions only fragments survived. Without further research, e.g., the edition of the Arabic versions of the *Protevangelium* (of which only one manuscript was edited by Garitte 1973), it is not easy to determine whether the immediate source of the Gəᶜəz version is Greek or Arabic. Haase (1913:59) advocates a Greek Vorlage for the Ethiopic translation and states that it is a rather literal translation. In fact, the Gəᶜəz text differs greatly from the extant Greek text (cf. the variants listed in ZotBNat 57f.). According to Strycker (1961:38) it is "de loin la moins fidèle des versions orientales et se rapproche parfois plutôt d'une paraphrase". A later date for the Ethiopic translation, perhaps in the 15th cent. seems *a priori* likely, but actually there has not been any research on the question of the Vorlage or the date of the Ethiopic version (cf. Strycker 1960:361ff.).

The L.M. became an integral part of the Ethiopian Marian literature. It is usually part of the homiliaries for the ↗feasts of St. Mary to be read on 1 *Gənbot*, but sometimes it is also inserted into the manuscripts of the ↗*Täᵓammärä Maryam* (CerMaria 73f.). There are other works on the Nativity of Mary with the same outline and contents but different text (like, e.g., mss. EMML 3580, fols. 72r-78v, or Ṭānāsee 127, fols. 8ra-19rb). It is open to further research how these texts are related to each other.

Leemo ↗Hadiyya

Leeqaa

The L. (Orom.: Warra Leeqaa) are a big group of the ↗Mäčča branch of the ↗Boorana Oromo who live in many parts of Wälläga. There are two main L. groups: the L. ↗Qälləm who live north of Tulluu Walal in the ↗Gidaamii region and the L. ↗Naqamtee who inhabit the area bordered by the Angär river in the north, the Waamaa river in the south, the Gibe river in the east, and the Didessa river in the west. There are also minor L. groups such as L. Biloo and L. Hordaa. Formerly the name Wälläga was applied only to the territory lying west of the Didessa river largely inhabited by the Sibuu groups of the Mäčča Oromo. The area situated to the east of the Didessa was called L. (Triulzi 1986:51f.).

According to tradition the L. settled in the Naqamtee region in the mid-17th cent. Following settlement they started mixed farming which eventually led to increased production. This state of affairs also led to the development of a hierarchy of land rights and stratification of society into more or less favoured classes. The net result of these phenomena generated socio-economic and political transformations with far reaching consequences. The L. eventually developed an agriculturally resourceful polity called L. Naqamtee at the small town of Naqamtee in the mid–19th cent., which successfully established a very strong hereditary dynasty which managed to survive Mənilək's conquest. It should be noted, however, that the site of Naqamtee had served the L. for a long time as an important ↗*gadaa* centre long before the emergence of the polity.

The L., like other Oromo groups, actively participated in the *gadaa* system. Power and authority were in the hands of the elected officials. However, by the mid–19th cent., parallel to similar processes taking place among the Oromo in the Gibe region, the authority of the *gadaa* officials among the L. of the Naqamtee and Qälləm regions was increasingly challenged by the ↗*abbaa duulaa*. One of these *abbaa duulaa* was ↗Bakaree Godaana, a contemporary of *aṣe* Tewodros II (r. 1855-68), who unified the many L. families around Naqamtee in ca. 1851 and challenged the L. *gadaa* leader Fido Bookkisaa. Before the emergence of the L. Nakamtee polity the L. had their ritual centre at Naqamtee under their leader Fido Bookkisaa who belonged to the Waayyuu clan of the L.

After Bakaree Godaana was elected as the *abbaa duulaa* of the Ma'a lineage group of the L., he started to disregard the basic principles of the *gadaa* and undermined the authority of Fido. He eventually forced Fido out of Naqamtee to Diggaa in the west and established his residence at Wača which became the first nucleus of Naqamtee town. He then consolidated his power over the L. between the Waamaa and Didessa rivers. His son and successor, ↗Moroda Bakaree (r. 1868–89) extended his family's influence and power over the L. groups and even beyond to the Sibuu groups and through a blend of diplomacy and conquest, gained supremacy over Gimbi, Haaruu, Arǧoo, Naǧǧoo, Ǧaarsoo, Baabboo, Mandii and other areas. Moroda peacefully accepted the overlordship of *nəguś* Mənilək which helped him to secure special autonomy for L. Naqamtee (Tesema Ta'a 1993:63-66).

The L. of the Gidaamii region, called L. Qälləm, also unified under *abbaa duulaa* Tulluu, established a strong polity. Tulluu founded a dynasty which was further consolidated by his son *däǧǧazmač* ↗Ǧootee Tulluu based on the rich agricultural resources of the region and the transfrontier trade with the Sudan. L. Qälləm was located to the south west of L. Naqamtee beyond the Birbir river and was a relatively large kingdom incorporating Begi, Kono, Daalle, Sayyoo, A'ira, Ganǧii, Noolee Kaabbaa and ↗Anfillo areas (Terrefe Woldetsadik 1968:74). Because of its riches and control over the main trade routes going to Fadasi including Qumbaabii, the biggest trade centre of the L. Oromo west of the Birbir River, the Mahdists invaded Ǧootee's territory at the end of 1886. Although there were Sudanese

Arab Muslims who settled in the L. territory of Ǧootee, the L. were not forced to convert and continued to practice the traditional Oromo religion. Ǧootee himself, though he participated in Muslim folklore and had Muslim advisors, did not convert. The Mahdist invasion of L. territory was unsuccessful as Ǧootee approached *ras* ↗Gobäna, Mənilək's famous general, for help, who forced the former to withdraw. The Mahdist second invasion was finally repulsed by the combined forces of *ras* Gobäna and Moroda Bakare of L. Qälləm in 1888 (Triulzi 1975:66ff.).

The L. Biloo who live near the Gibe state of ↗Guummaa had a powerful leader called Garbi Ǧilo who waged war against Guummaa during the reign of ↗Ǧaawee Ončo (fl. 1841, d. 1879). The L. Biloo crossed Limmu unopposed, defeated the people of ↗Gomma, whose king escaped to ↗Geeraa, and entered the land of Guummaa. ↗Abbaa Ǧobir, the son and successor of Ǧaawee Ončo, persuaded the kings of ↗Ǧimma, ↗Ǝnnarya, and Gomma to join him in a confederacy which came to be known as the *Arfan Nagadota* or 'league of the four traders' to counterbalance the *Arfan Oromota*, or 'league of the four Oromo' which comprised L. Biloo, L. Hordaa, Noolee Kaabbaa, and Hana Gafare (BeckHuntAlm LXXXVI–LXXXVIII). However, there were strong commercial as well as cultural relations among all the L. groups.

Tsega Endalew

Ləfafä ṣədəq

The Gəᶜəz literary work known as L.ṣ. (**ልፋፈ፡ ጽድቅ**, 'Bandlet of Righteousness' or 'Bandlet of Justification') is a collection of ↗magic prayers in book or scroll form (↗Magic scrolls). *Ləfaf* is a loanword from Arab. *lifāfa* 'bandlet, bandage, wrapper, fillet', which is derived from the verb *laffa*, 'to wrap up, to envelop, to bandage' (Dillm-Lex 66; Euringer 1940:81f.). The text, which shows a large number of variants and is included, in many manuscripts, in the Ethiopian ↗funeral ritual or *Mäṣḥafä ↗gənzät* (cp., e.g., GrébGriaule vol. 1, 176–97, 278–81), is also known as **መጽሐፈ፡ ሕይወት** (*Mäṣḥafä ḥəywät*, 'Book of Life') or **ጸሎተ፡ መድኃኒት** (*Ṣälotä mädḫanit*, 'Prayer of Salvation/Redemption'). These titles are connected with both the ideological and theological background of the text and its function.

The main character of the L.ṣ. is the Virgin Mary, who takes on the role of intercessor for those who are damned in hell, and obtains from God, with Jesus Christ's help, the secret Book of Life. Being a copy of the celestial Book of God, the L.ṣ. has the power to protect the soul after death on its journey to the afterworld, the heavenly realm. This power is augmented by the hidden and most effective magical names of Jesus which this text abundantly contains.

Despite the very different variants of the L.ṣ. and the carelessness of the tradition one can distinguish two parts in the work. The first is dedicated to the revelation of the powerful names of Jesus, which are grouped into a large number of prayers. The second contains prayers entitled **ጸሎት፡ ዘመንገደ፡ ሰማይ** (*Ṣälot zämängädä sämay*, 'Prayers of the heavenly journey; ↗*Mängädä sämay*). These invocations are addressed to Jesus who is to hinder the Angels of Darkness from stopping the ascension of the soul to Heaven.

Due to its thematic affinity with apocryphal Mariological literature, which proliferated during the theological controversies that occurred in the reign of *aṣe* ↗Zärᵊa Yaᶜəqob, the L.ṣ. can be dated to the same period. However, the format and some of the motifs of the work can be found in pre-Christian Egyptian books of the dead and, later, in gnostic literature.

The L.ṣ. is usually buried with the deceased. However, it can also be carried as an amulet on the person during an individual's lifetime. In either case, the name of the dead person should be mentioned in the L.ṣ. text.

Bogdan Burtea

Lefebvre, Charlemagne Théophile

Lieutenant de vaisseau L. (b. 5 March 1811, Nantes, d. 1859 or 6 July 1860/61, Marseille) was a French navy officer and explorer. The son of Charlemagne Lefebvre, an artillery officer in the Navy, he joined the same corps after studying at Lorient and Angoulême Naval College. In March 1836, he received permission to participate in voyages of exploration and went to Brazil. On board of the *Andromède* he met Antoine d'↗Abbadie. Later, with the intention of going to Ethiopia, he lived in Cairo, where he studied Arabic and, probably, Amharic as well. In 1837, he joined the d'Abbadie brothers and Giuseppe ↗Sapeto, but on reaching Quṣayr, due to disagreement with the first two, returned to France.

In France, L. obtained authorization and funding for a new expedition. Together with the zoologist Antoine Petit and the botanist Richard Quintin-Dillon from the Museum of Natural History of Paris, he reached Massawa on 6 June 1839 and, later, at ↗ᶜAdwa, met Sapeto and the naturalist Wilhelm ↗Schimper. L. was also received by *däğğazmač* ↗Wəbe Ḫaylä Maryam, who was seeking alliances with European powers. Having been promised by Wəbe that ↗Amfilla bay would be ceded to the French, L. agreed to take a letter to King Louis-Philippe I (1830–48) on Wəbe's behalf.

Together with a Təgrayan delegation, he went back to France and stayed there between April and September 1840. The authorities, however, showed little interest in the project. He again headed for Ethiopia with two new companions: lieutenant Schaeffner and the designer and geologist Vignaud. In the meantime, Quintin-Dillon had died and Petit had fallen ill. L. resumed explorations and Schaeffner died in 1842. After visiting Šäwa with Petit and participating with ↗Rochet d'Héricourt in the treaty signed with ↗Śahlä Śəllase in June 1843, he went back to Təgray. During the journey Petit was killed by a crocodile and Vignaud, ill, left shortly after. L. himself left for France in July.

In France, where, during his abscence, L. had been the target of accusations, he was transferred to the cartographical office of the Navy. Whilst in this post he began to write an account of his explorations. In 1847, he went to Massawa to recruit workers for the Île de Réunion. There he was accused by the French consul at Massawa, Degoutin. The consul's successor Delage, however, defended L., who was able to settle as a merchant in ᶜAdwa until 1853, when he was forced to go back to France. The next year, already retired from the Navy, he was again in ᶜAdwa. However, as he was in poor health, Walter ↗Plowden sent him to Massawa, from where the French Consul Chauvin-Belliard forwarded him to France. He was hospitalized in Marseille.

The summary of L.'s explorations appeared between 1845 and 1851 in six volumes (LefAbyss). L. wrote three of them, those focusing on the itineraries, political and commercial aspects, linguistics and archaeology. The other three volumes were the work of Achille Richard (botany), Florent Prévot, Œillet Des Murs, A. Guichenot and Edouard Guérin-Menneville (zoology), de Rouhaut and Deshayes (geology), who used the notes compiled by Quintin-Dillion, Petit and Vignaud; the latter was also the author of the remarkable drawings for the volume "Album historique, ethnologique et archéologique".

Alain Rouaud

Ləğ

L. (ልጅ), an Amharic word meaning 'child, junior', in the late-19th came to designate the male children of both the nobility and the ↗Solomonic dynasty, whilst the old title *abeto* (↗*Abetohun*) was to be applied only to the male members of the emperor's close family, i.e. the princes. The heir apparent to the throne received the appellation ↗*alga wäraš*. All others had their origin indicated by the title L. which was, thus,

more or less equivalent to Spanish *infante* (cp. ↗*wäyzäro*).

The origin and the early usage of the title are unclear. It is attested in the 16th-cent. Chronicle of *aṣe* ↗Minas by *qaṣ ləğ* Abrəham (s. KrLebD 41); and in other Gəᶜəz historiographic works as early as of the first half of 19th cent., where it is attached, for instance, to the names of *däğğazmač* ↗Kənfu's sons (and also Kənfu's half-brother Kaśa – the future ↗Tewodros II, until he became *däğğazmač*). Though less probably, L. could also be a contracted form of the Amharic የነገሥታት፡ ልጆች (*yänägäśtat ləğočč*, 'royal children'; GueCopMen 74). Some 19th-cent. documents demonstrate cases of the usage of the title which are difficult to explain (cp., e.g., ↗Mərčа Wärqe).

In the late 19th–20th cent., the title was received at birth and could be replaced by another military or civil title as soon as the person became of age. Thus, before starting their careers, many of Ethiopian high military and state officials had only this title (including *aṣe* ↗Ḫaylä Śəllase I – in his childhood L. Täfäri). After *aṣe* ↗Mənilək II raised L. ↗Iyasu to be the heir to the throne in 1909, the latter received the titles *abeto* and *alga wäraš*, L. becoming, in fact, his non-official designation. This curious situation is referred to by ↗Märsəᶜe Ḫazän Wäldä Qirqos (2004:52f.); in his memoirs of L. Iyasu's time, *aläqa* ↗Gäbrä Ǝgziʾabəḥer Elyas mentions that Iyasu was called *abeto* in 1910/11 (GebMolIyas 28f.), from that point on applying to him both titles L. and *abeto* interchangeably. Later, the title L. was widely applied to the representatives of the nobility of different ranks (from members of the minor gentry up to, e.g., L. ↗Ǝndalkačč̣äw Mäkʷännən; or L. Mänbära Yayyähyərad; or L. Mikaʾel Ǝmməru, the son of *ras* ↗Ǝmməru Ḫaylä Śəllase, L. ↗Kaśa Ḫaylu etc.). On the contrary, after 1936 the title *abeto* was bestowed only once (on Śahlä Śəllase, the youngest son of Ḫaylä Śəllase).

Denis Nosnitsin

Leiris, Michel

L. (b. 20 April 1901, Paris, d. 30 September 1990, Saint-Hilaire, Essonne) was a French ethnologist, writer and poet, who combined anthropology with wider cultural movements such as surrealism and primitivism which referred to ethnology. Introduced to surrealist circles in the 1920's, he co-founded with George Bataille and others the Collège de Sociologie, a group of intellectuals who claimed that sociological analysis cannot be separated from subjective experience.

Surrealism brought L. to anthropology. Secretary of the review *Document*, he met Marcel ↗Griaule, a French anthropologist who had just returned from Ethiopia, in 1929. In 1931–33, L. took part as the secretary-archivist in the famous Dakar–Djibouti expedition led by Griaule, which had the principal purpose of collecting ethnographic materials. During the stay of the expedition in ↗Gondär in 1932, L. studied *zar* and spirit ↗possession cults with the help of his translator, *abba* ↗Jérôme, and his informant ↗Mälkam Ayyähu. The central account of the Dakar–Djibouti expedition is *L'Afrique Fantôme*, the diary of the expedition written by L. and published in 1934. Half of the diary concerned his research in Gondär. In this masterpiece of ethnography, diary and intimate reflection, L. combined literary and autobiographical writing with an ethnological research report and other scientific genres. In the book he expresses the subjectivity of the ethnographer and his personal psychological condition. It was due to the publication of this book that Marcel Griaule and L. later fell out.

From 1933, L. studied anthropology under Marcel Mauss in Paris and published two scientific contributions in *Minotaure* (1933) and *Aethiopica* (1934) which deal with spirit possession at Gondär. In 1934 he became head of the Department of Black Africa at the Musée de l'Homme in Paris. In 1958, L. published his monograph about spirit possession in Gondär. During his career, L. wrote essays, *Race et civilization* (1951), and professional monographs, dealing with the Dogon of Sudan (1948) and art in Africa (1967).

Stephane Ancel

Lejean, Guillaume

L. (b. 1828, Plouegat-Guerrand, d. 1871) was a French explorer. Born into a modest Breton family, who quickly made a name for himself with his work on the history of Brittany. He was, for a period in 1848, secretary to the French poet and politician, Alphonse de Lamartine, and then became a journalist during which time he became increasingly interested in geography and cartography. Responsible for official missions to the Balkans (1857–58), then to Nubia (1860–61), he was required to investigate the production of cotton and the mapping of various commercial routes to Ethiopia. At the beginning of 1862 he was sent on a diplomatic mission to *aṣe* ↗Tewodros II. For this new mission (1862–63), he was appointed Consul at Massawa which allowed him to prepare the ground for a commercial treaty between France and Abyssinia. He rejoined the court of Tewodros with whom he quarrelled (ending imprisoned for 24 hours). He was forced to remain in Ethiopia whilst awaiting the return of the French ↗Bardey, who was carrying a message from the *nəguś* to Napoleon III. Being of a curious disposition, he accumulated many biological, ethnological, historical and archaeological observations. Freed on 28 September 1862, after Bardey's arrival, L. returned to the Red Sea coast without having managed to work out the smallest treaty. In July 1863, he handed over the Consulate to the Swiss Werner ↗Munzinger before leaving the region. His numerous publications on Ethiopia had shown the immense economic potential of the country. L. continued his travels in Anatolia and Mesopotamia (1867–68) where, with the help of archaeological evidence, he retraced the steps of Alexander.

Lukian Prijac

Lent

The fast of L. (ዓቢይ፡ ጾም, *ʿAbiyy ṣom*, 'the Great Fast'; ጾመ፡ ክርስቶስ, *Ṣomä Krəstos*, 'the Fast of Christ'; ጾመ፡ አርብዓ, *Ṣomä arbəʿa*, 'the Forty [Day] Fast') is one of the most important periods in the ↗calendar of the ↗Ethiopian Orthodox (Täwaḥədo) Church (cp. ↗Fasting). Perhaps the most interesting designation for the period is ኩዳዴ፡ ጾም, *Kudade* [*Kudade*, *Ḥudade*] *ṣom* or simply *Kudad* or *Kudad*. *Kudad* refers to the labour a person is required to perform on the farm of a superior such as the king or his representative. L., therefore, can be seen as spiritual labour which the believer is obligated to perform for the King, Jesus Christ (Ezra Gebre-Medhin 1957:7).

In the Ethiopian Orthodox Church, L. lasts approximately eight weeks, i.e. 55 days. The precise date on which it begins is based on a complicated calculation derived from the ↗*Baḥrä ḥassab*. Essentially these works begin by setting the date for the fast of *Nänäwe* (Nineveh) which falls on the Monday, Tuesday and Wednesday of the second week preceding L. This ensures that the feast known as Däbrä Zäyt falls on a Sunday in the middle of L. (እኩለ፡ ጾም, *əkkulä ṣom*), and that the final days, which include the Friday of the Crucifixion and the Resurrection, are properly situated.

L. begins on Monday of the fast of ↗Heraclius, which commemorates the recovery of the Cross from the Persians by the Byzantine Emperor. Each of the Sundays of Lent has a special name based upon the passage from the Gospels which is read at Mass:

1. *Zäwärädä*, 'For (the week of) the one who came down' (Incarnation). The first Sunday of L. takes its name from the first word of a hymn sung on this day (at *wazema* in ↗*Ṣomä dəggʷa*, VelSoDe I, 1). This week of L. is said to have been added following a plea by Emperor Heraclius and is called *Ṣomä Hərqal*; also *qäbbäla ṣom*, 'the

encounter of the fast', or Museni, 'Moses [has said ...]', cp. VelSoDe I, 21). This week is also known as *Aśərqot* (from *aśäräqa*, 'to make shine') and special prayers are recited throughout the week to announce the beginning of L. and the coming of Easter.

2. *Zäqəddəst*, 'For (the week of) the holy (day)' (cp. VelSoDe I, 84). During this week people sanctify themselves at the formal beginning of the 40 days of L. (Mt 6:16–24).
3. *Zämək^{w}ərab*, 'For (the week of) the Temple' or 'synagogue'. This week is devoted to Jesus's teachings in the synagogue (Jn 2:12–25).
4. *Zämäśag^{w}ə*ʾ, 'For (the week of) the cripple'. The hymns of this week refer to Jesus's healing of a man who had suffered for 38 years (Jn 5:1–35).
5. *Zädäbrä Zäyt*, 'For (the week of) the Mount of Olives'. During this week, the hymns focus on the second coming (Mt 24:1–35). *Däbrä Zäyt* (mid-Lent) is one of the occasions when the faithful visit their ↗*näfs abbat* and bring him money or grain.
6. *Zägäbər ḫer*, 'For (the week of) the good servant'. This week is devoted to remembrance of the Parable of the Talents (Mt 25:14–30).
7. *Zäniqodimos*, 'For (the week of) Nicodemus', rebirth through water and the Holy Spirit. The week recounts the story of a Pharisee who came to Jesus at night (Jn 3:1–21). This week is concluded by Palm Sunday (*Hośaᶜəna*) in which the hymns recall Jesus's arrival in Jerusalem.

The precise details of the L.-fasting vary according to individual's rank, region and personal piety. As a general rule, people abstain from animal foods during the week days. Many do not eat at all until they have celebrated Mass, usually around three o'clock. Women who have recently given ↗birth, children and the sick are generally exempted from the austerities. Special foods are often consumed during the week as substitutes for forbidden items. Most of these such as *šəro*, *həlbät* (or *əlbät*), *səlǧo* etc. are lentil, bean or chick pea based sauces. Some monks, however, eat only minimally living on a handful of grain. Abstinence is not solely limited to food; and many deny themselves entertainment such as music etc. Those who break the fast are assigned penances.

L. is characterized by increased attendance at daily masses as well as private prayers. The observance of L. in terms of both abstinence and ritual reaches its climax in the final Passion Week (cp. ↗*Fasika*; ↗*Gəbrä Ḥəmamat*). Beginning on Monday after Palm Sunday no heavy work such as ploughing, cutting wood, grinding grain and washing clothes is performed. Prayer, often accompanied by prostration becomes increasingly important as each day comprises ten services called "hours", which include readings from the Psalms, readings from the Octateuch, ascetic texts and a variety of other sources. The *Mäṣḥafä gəbrä ḫəmamat* and other church books are read. ↗Baptisms and absolutions of the dead (↗*Fəṭḥat*) are not performed, nor are saints' days celebrated.

On Maundy Thursday (*Sälotä ḫamus*, 'Prayer of Thursday') afternoon a dish consisting of cooked grains and beans known as *g^{w}əlban* is eaten in commemoration of the Last Supper. Some say it is eaten as a sign of mourning.

On Good Friday (*Səqlät*, 'Crucifixion') a period of total abstinence known as *akfəlot* begins. For some it begins on Friday evening, while others, particularly among the clergy, do not eat from Thursday after the end of Mass onward. (The person who is fasting is called an *akfay*, a term also commonly used for visits paid to close relatives during the week after Easter.) Children too young to fast may go from house to house "trick or treating" and requesting food (the practice called *məšamušo*).

On Saturday (*Qədame śəᶜur*, "the abolished Sabbath") work can be resumed, which permits people to begin the preparations for the Easter feast. Animals are slaughtered (formally, this is prohibited), ingredients purchased, butter prepared. People wash their clothes and themselves in order to greet Easter in their finest garb and best appearance. Green grass is spread over the floors of houses as a symbol of joy, freshness, and fertility. Small quantities of food such as pieces of bread, sugar cane and water known as *täsfa* ('hope') are distributed in the churches.

According to some reports worshippers are given bundles of dry grass which they light and carry as torches as they proceed to the church in the evening. Others report that the priests distribute rushes to the worshippers which symbolize the news of Christ's resurrection. The worshippers also receive candles which they carry around the *mäqdäs* three times. At day break, they rush home to the Easter Feast. Those who have fasted are often given special foods such as *čəlqa* (linseed, honey in water) or *fətfət*, and milk to break their fast as these are thought to ease the digestion. For many this feast is the first time they have had meat in almost two months.

In the ensuing days many marriages are performed. Husbands bring gifts to their in-laws. Normal rules of weekly fasting are cancelled until Pentecost is over.

Leontiev, Nikolaj Stepanovich

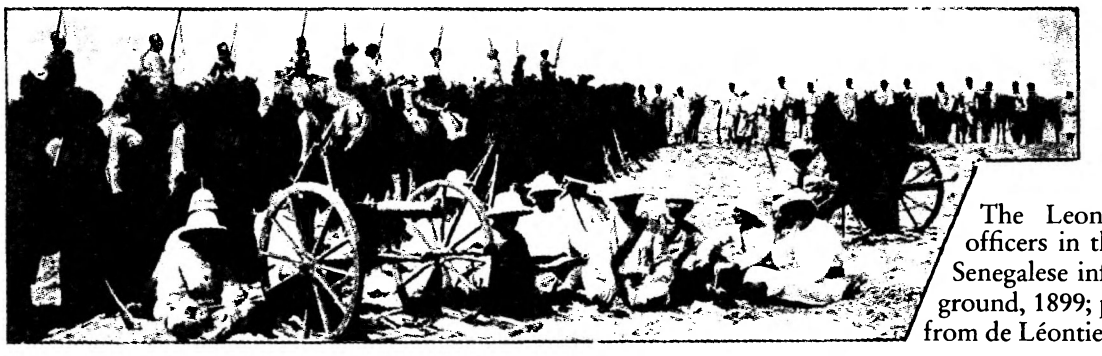
Count L. (b. 26 October 1862, Vasjurinskaja, Kuban, Russia, d. 25 June 1910, Paris) was a Russian explorer, diplomat and adventurer.

A member of the petty nobility, L. was a lieutenant in a reserve regiment. Prior to his Ethiopian experience, he had been involved in a number of confidence schemes and had travelled to India and Persia. His travel experience as well as detailed exploration plans for Ethiopia gave him credibility with the Russian Geographical Society when it organized an exploratory expedition in early 1895. The mission, headed by Professor Aleksandr Eliseev and consisting of L., the astronomer and geographer Captain Konstantin Zvjagin and the priest Father Efrem, had as its eventual target the Mahdist ↗Sudan. While exploring Ethiopia geographically, it was also expected to sound out *aṣe* ↗Mənilək II about closer contacts between the two Orthodox churches.

In Harär, the delegation was met by *ras* ↗Mäkʷännən who cared for Eliseev in his palace after the latter suffered heat stroke. Eliseev eventually returned to the coast. L. assumed leadership of the expedition which was accompanied to ↗Ǝnṭoṭṭo by Mäkʷännən himself. There L. was received by Mənilək who eventually agreed to send a diplomatic delegation to St. Petersburg, not to strengthen ties between the two churches, but rather to secure ↗Russia's support in his struggle with ↗Italy.

On 12 June (30 June Julian calendar) 1895, the delegation, guided by L. and consisting, among others, of Mənilək's generals *fitäwrari* Damṭäw (the father of ↗Dästa Damṭäw), *ləǧ* ↗Balča Safo, *qäññazmač* Gädäme, *däǧǧazmač* Bälaččäw, secretary ↗Yosef Nəguśe, and *abunä* Gäbrä Ǝgziʾabəḥer of Harär, was received by Czar Nicholas II and Czarina Alexandra in Peterhoff. Even though the delegation was not duly announced via the Ministry of Foreign Affairs and was a surprise, the diplomats received a warm welcome. L. was awarded with the order of St. Vladimir; all Ethiopian high officials were awarded with Russian imperial orders and decorations of various degrees. Whilst reporting on valuable geographical results of the expedition, Russian newspapers also commented on L.'s questionable past. These reports and L.'s unauthorized promises of Russian military aid to Mənilək soon eroded his credibility with the Czar's government. The aid was declined (the Czar, however, did send as a gift 30 thousand rifles and 5 million projectiles, but the Dutch ship with the cargo was stopped by the Italians). L. was allowed to accompany the Ethiopian diplomats back as far as Djibouti, and ordered to return to Russia to face a variety of charges made against him. However, L. soon recovered from his temporary disgrace and returned to Ethiopia where he was awarded the *Kokäb* ("Star") order and titled "Count Abbay".

On 2 June 1896, L. met the caravan of Alexander ↗Bulatovich and provided him with advice. L. subsequently tried to interject himself in negotiations between Italy and Mənilək following the battle of ↗ʿAdwa. He travelled to Turkey and to Italy (usually accompanied by Yosef Nəguśe) and was asked by Mənilək to assure the Czar's mediation in these negotiations. However, the



The Leontiev mission: the officers in the foreground, the Senegalese infantry in the background, 1899; photo by Leontiev, from de Léontieff 1900:109

Czar's intervention proved unnecessary as Italy and Ethiopia soon came to an agreement without any Russian involvement.

When L. returned to Ethiopia in late 1896, Mənəlik offered him the governorship of the south-western (so-called Equatorial) provinces (Wəba, Bako [↗Aari, ↗Hamär Bakko]) adjacent to Lake Rudolf (now ↗Turkana) and the title of *däğğazmač*. L. spent several months in Europe buying up arms and obtaining investors for what he told them was one of the richest corners of Africa. After a number of misadventures, L. arrived in Djibouti in March 1898, accompanied by Prince Henri d'Orléans representing a Franco-Ethiopian alliance, and a large military force: Russian and French officers, Cossacks, 130 French Senegalese riflemen, 2,000 Ethiopian cavalry and infantry under *däğğazmač* ↗Täsämma. L. reached the northern end of the lake on 21 August 1899. There, his mixed European and Ethiopian force engaged in wanton pillaging and killing. L. also removed the British flags that had been placed at the northern end of the lake by Captain Herbert Henry Austin in 1898. Mənilək recalled him, fearful of provoking the British and concerned about his international standing in light of L.'s men's behaviour toward local population near Lake Rudolf. Mənilək was especially outraged over L.'s attempts to obtain Belgian investors for mining gold in his "Equatorial provinces". L. had not bothered to inform the Emperor about this proposed mining for gold which was an exclusive monopoly of the crown.

L. left the country without waiting to be expelled and spent the winter of 1902–03 in Djibouti, from where he liquidated all of his interests in Ethiopia. He tried to transfer his material rights to the Russian government by a letter – obviously ignoring the fact that Ethiopian imperial land donations are non-transferrable and subject to certain use conditions. L. returned to Djibouti in 1906 where he set up an unsuccessful arms-importing firm. His attempts to return to Ethiopia were likewise unsuccessful.

L. died, wounded in a duel, in Paris, where he had spent his last years in very reduced circumstances. In the will he made in 1908, L., by that time a member of the Paris Geographical Society, left a part of his assets to the Russian Geographical Society to be used for organizing regular expeditions to Ethiopia in his name.

L.'s younger brother was also an adventurer. He arrived in Addis Abäba in 1902 in the company of the self-styled colonel Evetskij who claimed to have permission to establish a ↗bank in Ethiopia.

Leopard(s)

L. (*Panthera pardus*; Amh. *näbər*, *nämr*; Tgr. *näbri*, *nämri*; Orom. *qeeransa*), as one of the "big cats" to be found in the Horn of Africa, are endowed with great cultural significance in many societies. The main symbolic value of the L. is fortitude and, in some cases, magical power. In both it resembles the ↗lion and, therefore, the L. often has the same symbolic function as an emblematic animal of ↗kingship or chieftainship.

Accordingly, the killing of a L. was seen as a glorious deed, proving the bravery and manhood of the killer (↗Meritorious complex). However, the killing of a L. sometimes counted less than that of a lion. In northern Ethiopia, for example, the killer of a lion obtained a special earring, which could not be gained by killing a L. Among the Dorze killing a L. was equivalent to the killing of one man, while a dead lion was equivalent to four men (Pearce cited in PankSoc 168; VSAe I, 327; VSAe III, 202f.). After the killing of a L. certain rituals had to be carried out and in some cases sexual abstinence was required (for example in Yäm). In Amarro it was completely prohibited to kill L. who were in general symbolically connected to the king (VSAe III, 107, 328).

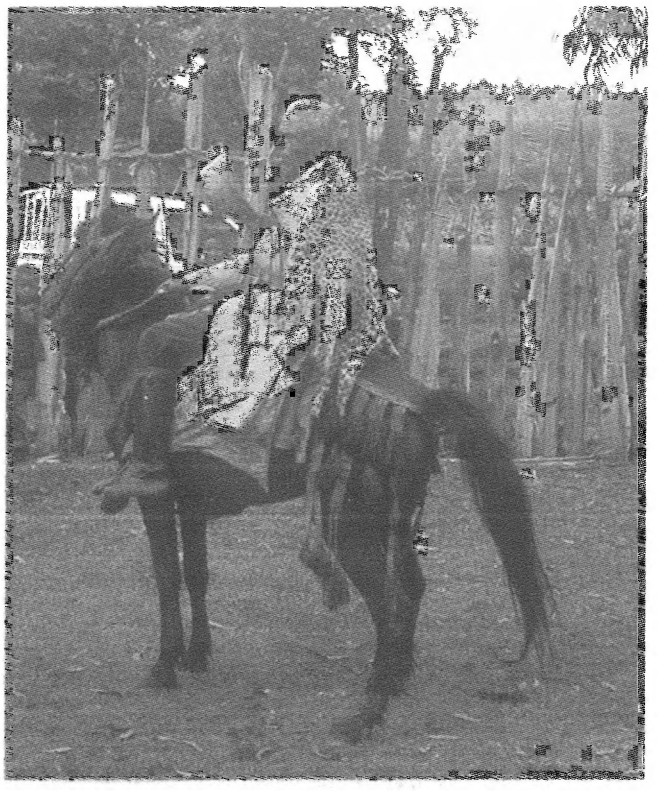
The high symbolic value of the L. is also indicated by the use of its skin as a prestigious garment or part of garment (s. ↗*Lämd*). In many cultures the L.'s coat was an element of the vestments of chiefs, local "kings" (e.g., in Aari, Basketto, Dime and Ṣamay) and religious functionaries. In some cultures it was the garment of warriors in general. In the same context, the teeth of the L. could be used for necklaces (e.g., s. VSAe I, 171, 199, 202, 205f., 242, 245, 376). In some cultures L.'s skin was also worn by women, for example slung around the loins (PankSoc 253).

L. skins formed part of the tribute paid to superior rulers. In the 16th cent., Bermudez reported that the people of Gurage paid tribute not only in gold and silver but in the skins of lions and L. ("ônça" in Bermudez 1875:102).

There are several examples of supposed mythical relations between humans beings and L. For instance, the Melšaf clan of the Dime and the Gulätt clan of the Bäšada were said to be linked with L. In Arbore it was believed that a L. would not enter the compound of a member of the Ris clan. It was not allowed for a Ris to kill a L. or to dance if the killer of a L. was among the dancers (VSAe I, 248, 345, 386).

Among the Azärnät-Bärbäre of Səlṭe (↗Səlṭi), a myth relates that the clan of Abosare, which also exists among the ↗Arsi, descended from a woman who gave birth to a human boy and a L. called *nawro gošto* ('Lord/Master Leopard'). From that day on, Abosare mothers are prohibited from breastfeeding with their right breast, which is exclusively reserved "for the L.". In case this principle is violated it is believed that a L. would come and take the child and attack the livestock. The linkage between L. and the Abosare clan seems to be connected with their original role as one of the ↗Arsi "priest clans". Specialists from these clans functioned as rainmakers (↗Rainmaking; oral informants; cp. BrHad 112)), as did the *iru baab* of Čako (↗Šeko), who was likewise believed to have control over L. (VSAe III, 53).

A mythical relationship between religious personnel and L. can also be found in other cultural contexts. The Gurage female spirit ↗Däm^{w}am^{w}it, for instance, was imagined to be accompanied by a L. and a ↗serpent. In the Bušafo cult in Käfa and Šeka it was believed that the bodies of Bušafo spirit mediums turned into lions after death, whereas those of the Čabero, who have a lower status, turned into L. (Lange 1982:179).



Horseman with leopard skin improvising praises for the deceased; funeral (*wüloo*) of *daann'* Googoo, chief of the Giindo clan of Leemo, Kidigisa in Hadiyya; photo 1999, courtesy of the author

In Orthodox Christianity 60 L. together with 60 lions appear as attributes of St. ↗Gäbrä Mänfäs Qəddus. According to legend, the Saint was able to control these predators and they even worshipped him. In iconography the L. and lions sit to the right and to the left of the Saint's feet.

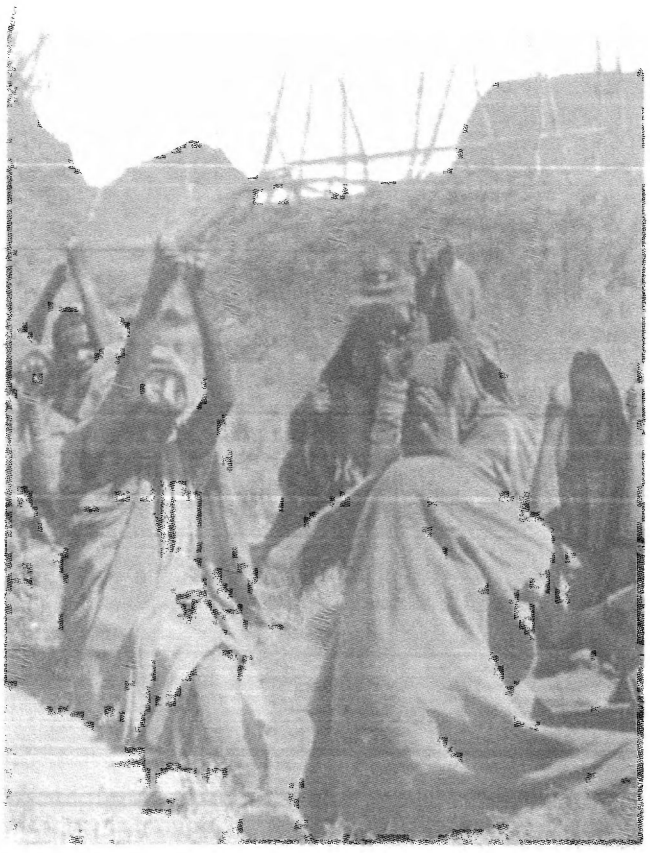
Dirk Bustorf

Leprosy, lepers

L. (also Hansen's disease; Gəᶜəz ለምጽ, *läməṣ*, Amh. ለምጥ, *lämṭ*) is a chronic disease caused by the bacillus *Mycobacterium leprae*. It mainly affects skin and nerves, limbs and eyes. Other, more general, terms for L. are ቍሰለ፡ ስጋ (*qʷəslä səga*, 'ulcerated flesh or body'), ደዌ፡ ስጋ (*däwe səga*, 'diseased flesh or body'), ታላቅ፡ ደዌ (*tallaq däwe*, 'major



Women affected by leprosy; photo early 20th cent., from Annaratone 1911:502/03, fig. 188

disease') and ቍምጥና (*qʷəmṭənna*, derived from the verb *qʷämmäṭä*, 'to amputate').

The Ethiopian highlands have been reputed as one of the world's most seriously affected areas by L. Francisco Alvares, the first to mention it, observed, in the early 16th cent. a high number of lepers in Aksum (BeckHuntAlvar 514). A large number of lepers was later also noted by Nathaniel Pearce (1831, vol. 1, 297), an English resident in Təgray who observed in 1831 that L. was widespread especially among people of the lower social strata. The early 20th-cent. Georgian physician Paul Mérab estimated that there were around 30,000 people suffering from L. (Mérab 1921:164). Victims of the disease, as noted by many observers, were traditionally a common sight at court, in the army and around churches, and leper mendicants travelled widely throughout the land (Pankhurst 1984:63–67). It was therefore not surprising that L., and miraculous cures thereof, figured extensively in Ethiopian Christian literature (s., e.g., Budge 1933:301). Ethiopians traditionally treated L. with a wide range of internal and external herbal cures, as well as by prolonged immersion in hot thermal baths (Pankhurst 1984:68ff.).

Traditional explanations for L. are manifold. While among some other ethnic groups it was believed that L. was a punishment for sins, like incest, the Amhara not always considered sin as the cause of L. (Molvaer 1995). On the one hand the Book of Sirach (Sir) threatens the breakers of the moral law with L., on the other hand it is referred to the biblical legend of Job (Job 2:4–10), who was infected with L. by Satan (↗Devil) in order to test the strength of his faith. Job could resist the temptation and therefore the cause for his sickness was not sin. In the case of children affected with L. the disease was understood as not being caused by sin either, and, if so, it was seen as a trial of the parents. Lepers were normally not marginalized in Amhara culture but could profit from the custom of ↗alms-giving (Molvaer 1995:35, 89; s. also ↗Lalibäla).

The first modern leprosarium, named after St. Anthony and where extensive use of copper was made, was founded by *ras* ↗Mäkʷännən at Harär in 1901. It was run at first by untrained French Capuchin missionaries, and later by the French physician Jean Feron (Mérab 1912:132; 1921, vol. 1, 166). A second leprosarium was established in 1934 at ↗Aqaqi, outside Addis Abäba, by *aṣe* Ḫaylä Śəllase I, who entrusted it to the Canadian physician Ralph Hooper, of the ↗Sudan Interior Mission (ZerÉth 257). Another leprosarium was founded in 1958 in Bisidimo south of Harär by the Deutsches Aussätzigen-Hilfswerk (later: Deutsche Lepra- und Tuberkulosehilfe). Though valuable work was carried out at these institutions, as well as in modern hospitals and clinics, post-World War II hopes for total eradication of the disease have not been realised yet. An important institution for the struggle against L. is also ↗ALERT (s. also ↗Hospitals).

Richard Pankhurst

Le Roux, Robert Henri

L. (Hugues L., b. 1860, Le Havre, d. 1925) was a French journalist, novelist and a supporter of colonization. He began his career as secretary to the poet Alphonse Daudet, who helped him become a journalist. He travelled widely in Europe, Africa, and the United States, met and interviewed Ibsen, Bismarck and the Sultan of Morocco (Anonymous 1902:164) and wrote novels following the "realist school".

In summer 1900, whilst he was working for the daily *Le Figaro*, L. was invited by Alfred ↗Ilg on *aṣe* ↗Mənilək II's behalf to visit Ethiopia and "to write a book to enhance the image of Ethiopia in Europe" (Le Roux 1902:7; Prouty 1986:103). He left France in November 1900 and reached Addis Abäba in February 1901. He established a close relationship with Mənilək, who sent him on an expedition to Wälläga and the Sudan border (Le Roux 1901).

With regard to the Franco–Ethiopian railway (↗Railways), L. was sympathetic with Mənilək's wish to keep the French state at bay. He thus favoured an international administration, like the Suez Canal Administration (Pankhurst 1963), but as an apostle of colonialism he also lobbied for private funds in France to be invested in the advancement of the railway, which was to involve various municipal chambers of commerce (Laffey 1975:15f.). A visit to ↗Addis ʿAläm allowed L. to see and obtain a manuscript copy of the ↗*Kəbrä nägäśt*. In France he popularized the foundation myth of the Ethiopian state, the tale of King Solomon and the Queen of Sheba (↗Makəda), and its human, political and cultural results (Le Roux 1913, 1914). L. also presented Mənilək's politics towards Europe as a renewal of Queen Makəda's journey to the wisdom of King Solomon (Le Roux 1913:42). His travel account *Menelik et Nous* (1902) became a landmark in French–Ethiopian relations (↗France).

Thomas Zitelmann

Leroy, Jules

L. (b. 10 April 1903, Ablis, d. 8 April 1979, Chaptelat) was an art historian specialized in the artistic tradition of Christian Oriental Churches. At the age of 17, he entered the Benedictine abbey of Solesmes. He studied in Rome from 1930 to 1933 where he gained a diploma in biblical theology from the Pontifico Istituto Biblico (↗Vatican). From 1934 till 1954 he taught at several Catholic colleges in Paris.

In 1939 L. started studying Syriac illuminated manuscripts under the guidance of André Grabar. After receiving a diploma from the 5th section of the École Pratique des Hautes-Études he studied Syriac illuminated manuscripts in the Near East and led research missions to Lebanon, Syria, Iraq and Turkey. At the same time L. became interested in Ethiopian art; his first article on Ethiopian ↗painting appeared in 1955. In 1956 he joined the Centre National de la Recherche Scientifique (CNRS); he was then promoted to senior researcher (1961) and eventually to head researcher (1968). In 1959, from March to November, he directed the archaeological section of the Institut d'Études et de Recherches d'Éthiopie in Addis Abäba. In 1964 and 1968 he made field trips to Egypt, to explore Coptic murals and manuscripts. Thereafter, he dedicated much of his time to the project of their study and preservation.

L. was one of the first scholars to pay serious attention to Ethiopian art and its traditions. He contributed greatly to making the scholarly and lay public aware of this particular field, with special emphasis on manuscript illumination. In 1964 he published the first general book on Ethiopian painting, followed in 1973 by a sur-

vey on Ethiopian art and culture. His publications mainly focused on stylistic features and the question of external influences, e.g., his research on ↗canon tables, on the iconographic sources of 17th-cent. illuminated ↗Gospels or on the ↗Syrian influences in Ethiopian painting. Placing Ethiopian art within the framework of early Christian and Byzantine artistic tradition, along the lines of André Grabar's research, L. drew parallels also to Coptic and Armenian art. He can also be credited with establishing one of the first chronologies of Ethiopian painting.

Anaïs Wion

Leslau, Wolf

L. (b. 14 November 1906, Częstochowa, Poland, d. 18 November 2006, Fullerton, CA, USA) was one of the most prominent *éthiopisants* of the 20th cent. Beginning with his first article on Mehri (1931–34) and ending with his last volume on ↗Mäsqän (2004), L. published over 300 books, articles, and reviews. His interests lay mostly in the field of descriptive and comparative linguistics, but also philology and ethnography.

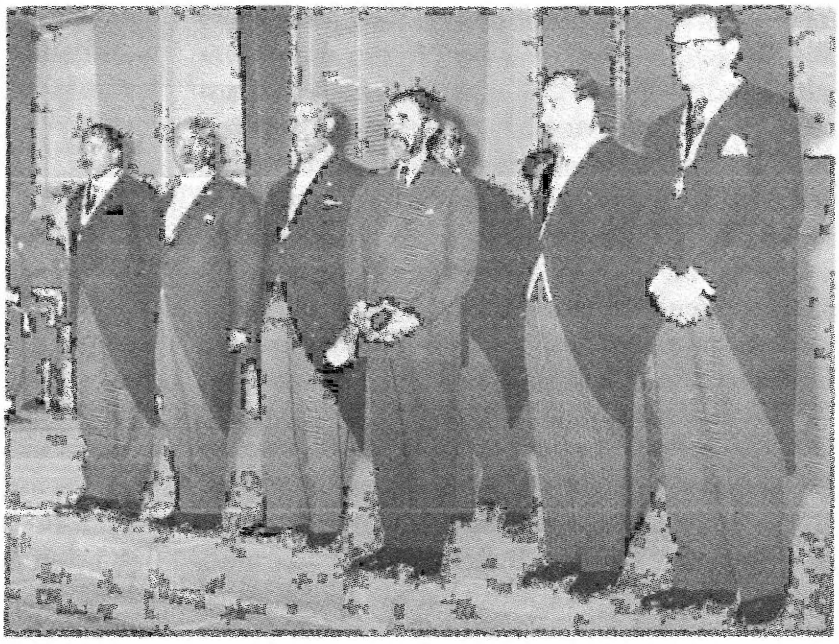
L. began his higher education in Semitic languages at the University of Vienna and at Vienna's Hebräisches Pädagogium in 1926. In 1931, he moved to Paris to continue his studies at the ↗Institut National des Langues et Civilisations Orientales under the direction of Marcel ↗Cohen, where he received his diploma upon publishing his thesis, a comparative lexicon of Soqoṭri (Leslau 1938). Based on the materials of the South Arabian Expedition led by David Heinrich ↗Müller, it remains until today the only comprehensive lexicographic work on this language.

With the outbreak of World War II, L. was arrested and spent several years in camps for foreigners, until, with the assistance of an international rescue organization, he and his wife Charlotte emigrated to the United States in 1942. L. taught in New York at the École Libre des Hautes Études, the Asia Institute, and the New School for Social Research, in 1951 moved to Brandeis University, Waltham, Massachusetts, and finally in 1955 became Professor of Hebrew and Semitic Linguistics at the University of California at Los Angeles, where he remained until his retirement in 1976.

L. was an accomplished lexicographer and philologist in the traditional mold, but his work with native speakers and his insistence on a living cultural context went beyond the scholarly approach of his era. His first experience in this kind of research, carried out in Paris with the Təgrəñña speaker Täklä Gurmu, resulted in a grammatical description and a collection of texts published in 1941 as *Documents tigrigna*, which still serves as a major reference work on ↗Təgrəñña grammar. From 1946 to 1974, L. went to Ethiopia every two or three years, with stays from three to eleven months. He mastered classic linguistic field methodology, collecting texts, vocabularies and material for grammatical descriptions, often for unwritten languages. He carried out field research mostly on Ethio-Semitic, producing grammatical descriptions and/or lexicons of almost all the languages of this group, from major ones, such as ↗Amharic

(1995 etc.) and Təgrəñña (1941), to minor and least-studied ones, including the now extinct ↗Gafat (1956 etc.). Apart from his lexicon of Moča (↗Šakačo; Leslau 1959), Cushitic and Omotic languages of Ethiopia were treated by L. mostly from the position of their interaction with Ethio-Semitic.

The texts gathered by L. during his field research often contained important ethnographic and philological material. L. published numerous text collections and field notes on the folklore and ethnography of Ethiopian peoples (↗Gurage, ↗Harari, ↗Təgre; cf., e.g., Leslau 1982). When commissioned by Yale University to translate the religious writings of the Fälaša (↗Betä Ǝsraʾel), L. also carried out research on the Fälaša's life and rites (s. Leslau 1951 etc.).



Wolf Leslau (right) receiving the Ḫaylä Śəllase I Award in 1965 with other winners; from left to right: painter Gäbrä Krəstos Dästa, the E.C.W.S. president *däğğazmač* Ḫadgu Gilagabər, *balambaras* Maḫtämä Śəllase Wäldä Mäsqäl, *aṣe* Ḫaylä Śəllase I, Tullio Camerino from the Manifattura Sacchi Asmara and Dum Company Limited; from Macreni 1965:20

An important aspect of L.'s activities was comparative Semitic studies: etymology (cf. Leslau 1938, 1963, 1979; LesCDic), morphological reconstruction and classification (cf., e.g., Leslau in PICES 1; in PICES 3).

In recognition of his scholarship, L. received a Guggenheim Fellowship in 1946, the Ḫaylä Śəllase I Award for Ethiopian Studies in 1965, the Medal of the Order of the Blue Nile-First Class in 1983, an honorary doctorate from the Hebrew University in 1994, and the Mark Lidzbarski Medal in 1995, among many other honours. L. has been called the "father of Gurage studies".

L. died four days after his 100th birthday.

Ləssanä säbᵊ

The L.s. (ልሳነ፡ ሰብእ, lit. 'Men's Tongue'), also known as ጸሎት፡ በእንተ፡ ኵሎሙ፡ ልሳናት (*Ṣälot*

bäᵓäntä kʷəllomu ləssanat, 'Prayer Concerning all [Men's] Tongues') is a long hymn and prayer addressed to Jesus Christ. It is meant to protect against "evil words" and cursing of different kinds: slander, calumny or false accusation, envy, malice etc. coming from the human tongue, "which kills and cures".

The whole text is composed of 41 strophes (only eleven of them edited in Grébaut 1935), each comprising five rhymed lines or verses. Each strophe opens with an invocation to Jesus Christ, seen as the shield of the faithful, with the formula: ተማሕፀንኩ፡ በ...ከ (*tämaḥṣänku bä...kä*, 'I place myself under [the protection of] Your ...'). In the body of the hymn the highlights of Jesus's earthly life are recalled: Incarnation, Presentation, Baptism, Resurrection, etc., but also some other persons and episodes from the O.T. and N.T.

The L.s. is frequently referred to as *Mälkəᵓa ləssan* (lit. 'Image[s] of the Tongue'; cp., e.g., ms. EMML 4715) because of its dealing with the character of man's tongue (KWKDic 574), although it is considered a magical text or talisman rather than a ↗*mälkəᵓ*-hymn (THMDic 49; KaneDic 58), since it is ascribed protective power. Thus, many Christian faithful acquire a text of the L.s. in the collection of the prayers ↗*Mälkəᵓa gubaᵓe* (s. Täsfa Gäbrä Śəllase 1966/67) to protect themselves against defamation and to obtain good luck, as well as to succeed in litigation (↗*Muggət*), even if the law is not on the faithful's side.

In the manuscript tradition, the L.s. shows an obvious textual variety, prompted by its magic character. The presence of several Amharic words, such as ምቀኛ (*məqqäññä*), ተንኰለኛ (*tänkʷäläññä*) along with their Gəᶜəz equivalents ሙዴት (*wədet*, 'accusation, calumny'), ረዋዲ (*räwadi*, 'enemy'), suggests the later period of the ↗Gondärine kingdom as the time of its composition. Most of the rather numerous manuscripts with the L.s. are recent and transmit the work within collections of hymns and/or magical texts (but s. ms. Frankfurt N.S. 22876). The work was partially edited by Grébaut after the 19th-cent. ms. Griaule 5 (s. GrébGriaule I, 26f.); but the continuation of the article (Grébaut 1935) never appeared.

From the hymnological composition L.s., a different work should be distinguished, which is also sometimes called L.s. and can be found predominantly on ↗magic scrolls: the so-called *Ləssanä Yaᶜəqob* ('The Tongue of Jacob'), a brief magic text based on Gen 30–31 (e.g., in ms. Berlin Hs. or. 9830; Lifchitz 1940:240–43).

Habtemichael Kidane – Denis Nosnitsin

Lessona, Alessandro

L. (b. 9 September 1891, Rome, d. 1991, Florence) was Italian Minister of Colonies during the Fascist regime and author of several publications on Italian colonialism. After obtaining a degree in Law, L. served as an officer in the army and was a Member of Parliament between 1924–39. In the National Fascist Party L. occupied several posts (federal secretary in Savona, commander of the 34 Legion, general officer of the fascist militia, etc.).

Between 1928–29, L. also became also sub-secretary of the Ministry of Colonies, an office he held until 1936. Between 1934–37 he taught Colonial Law at Florence University and in these last two years was Minister of Colonies. In this capacity he was much behind the shaping of Italian policy in conquered Ethiopia at the formation of the colonial, fascist ↗Africa Orientale Italiana based on ethnic and religious separate entitites. In 1937 he also became a member of the board of directors of the Centre for Colonial Studies, agent of the Agrarian Italian Colonial Institute in Florence and, later, director of the Scuola di perfezionamento in Studi Coloniali at Rome. He was named Senator of the Italian Republic.

Ləṭ Maräfiya

L.M. (ልጥ፡ ማረፊያ, also name of the plant *Crassocephalum macropappum*; 9° 38' N, 39° 45' E; 2,408 m A.S.L.) is a locality in Šäwa, 16 km north

of ↗Ankobär (for location s. Ləčče). The site, in an old volcano crater, was used by the mission of the ↗Società Geografica Italiana as its main station in Ethiopia from 1876 to 1895.

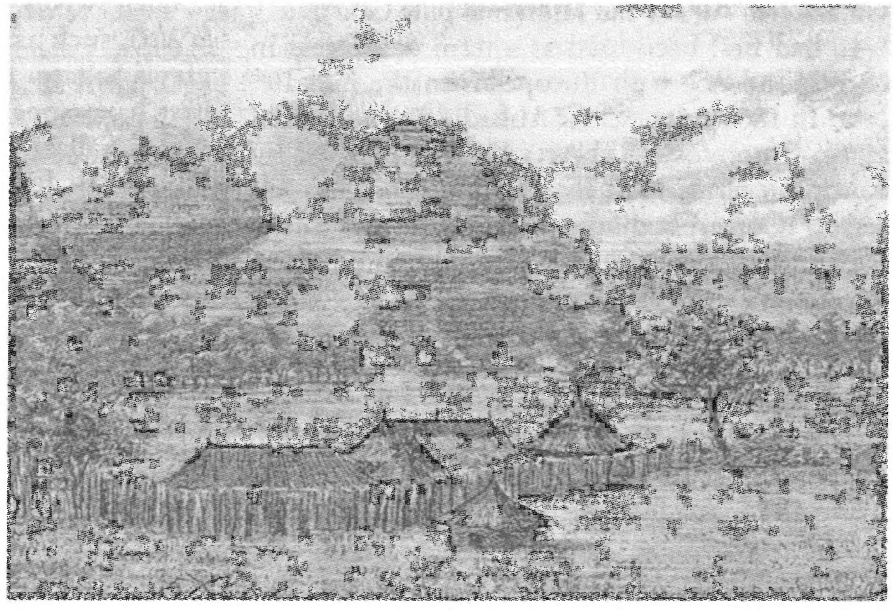
Launched in 1876 and headed by Orazio ↗Antinori, the first mission included Giovanni ↗Chiarini, an engineer and natural scientist from Chieti, Lorenzo Landini from Rome, and Captain Sebastiano Martini Bernardi, a journalist and traveller from Florence (who had to return to Italy and was in 1877 replaced by the geographer Antonio ↗Cecchi), and had as its original aim the exploration of the major lakes of equatorial Africa. It was meant to proceed from ↗Zaylaᶜ or ↗Berbera, via ↗Harär or the ↗Awaš valley, and reach Ankobär, the then capital of Šäwa and the seat of *aṣe* ↗Mənilək II. The party, however, stopped in Šäwa, never reaching its final goal. Instead, it became the first Italian mission in Ethiopia, and Chiarini's tragic fate had a profound effect on the Italians.

Thanks to the mediation of the later Cardinal Guglielmo ↗Massaja, who guaranteed the scholarly nature of the expedition, Antinori and his companions were welcomed by Mənilək, who in December 1876 placed at their disposal 95 ha of land in the crater of L.M. The place had previously been offered as a seat to Massaja himself but he declined it, taking residence at the nearby ↗Fəqre Gəmb. Surrounded by mountains (↗Ǝmmä Məḥrät to the north, Fəqre Gəmb to the north-east and Däns to the east) and rich in water and thus in fertile pastures, the site had a mild climate and was only two hours walk away from the Šäwan capital. Massaja also reported the existence of a "monastery", Məntək Gädam, in the vicinity of L.M. Similar to other *balä əgg* (craftsmen) monasteries of ↗Šäwa (cp. ↗Mugär Gädam; ↗Mänz), its inhabitants confessed a mixture of Christianity and Judaism close to that of the ↗Betä Ǝsraᵓel, though using nearby churches for sacraments and services on feast days; as their means of livlihood they produced agricultural and handicrafts products.

Wounded in a hunting accident, Antinori settled at L.M. and constructed the first buildings of the mission, thus giving a start to the first European scientific post and health station in Ethiopia. He intended it to serve as the base camp for the expeditions to the equatorial lakes; with the arrival of Count Pietro ↗Antonelli in 1879 and his becoming the head of the station upon Antinori's death in 1882, the station, however, became the centre of Italian colonial politics in Ethiopia. The L.M. mission pursued the "Šäwan policy", supporting Mənilək in his aspirations to the imperial throne against *aṣe* ↗Yoḥannəs IV. Antonelli became the official representative of the Italian government in Šäwa; the medical officer Vincenzo Ragazzi replaced him in the post of director of the station. It was Ragazzi who informed the Italian foreign ministry of the ↗coronation of Mənilək and Ṭaytu in November 1889. Earlier that year, in a meeting with the representatives of the Società Geografica Italiana, Mənilək's ambassador *ras* ↗Mäkʷännən Wäldä Mikaᵓel emphasized that the current friendly relations between Mənilək and Italy were mostly due to the mediation of the L.M. station.

In February 1890 Leopoldo ↗Traversi took over the station. His first months were particularly difficult: in 1899 a typhoid epidemic hit L.M., killing one third of the settlement's inhabitants. It was followed by a rinderpest epidemic, resulting in the worst ↗famine of the century (↗*Kəfu qän*). By October 1890, when Augusto ↗Salimbeni visited L.M., order at L.M. had been restored and the granaries were full again.

In 1894 Traversi handed over the leadership to Luigi ↗Capucci. With the deterioration in the relationship with Mənilək, the station was finally



The residence of the "Società Geografica allo Scioa" at Ləṭ Maräfiya; from Bianchi 1884:34

abandoned, Capucci being arrested and imprisoned in 1895, on the eve of the battle of ↗ᶜAdwa. Today, a sycamore tree still marks the site of Antinori's tomb.

Luca Lupi

Ləᶜul

The noble title L. (ልዑል, 'Prince [of the Imperial House]', corresponding to 'Highness', f. ልዕልት, *ləᶜəlt*) is an early 20th cent. invention, following a need for new titles at the court of the modernist ruler *ras* Täfäri (the later *aṣe* ↗Ḫaylä Śəllase I), after its first use by *ləᶜul ləğ* ↗Iyasu for himself. This title was a reinterpretation of the older Gəᶜəz term ልዑል ('the High one', i.e. God).

L. had first been used as a term of address in correspondence with Europeans in the mid-19th cent. In 1865 Antoine d'↗Abbadie was addressed as "L. Ǝnṭonyos" (RubActa II, 247), inspired by European terms like 'His Highness' or 'Son Altesse'. Correspondingly Ethiopian diplomatic letters, in particular starting from the time of *aṣe* Yoḥannəs IV, regularly used this term to address European ministers or other high-ranking figures, who could not simply be addressed as *muse* (↗Titles for Europeans). High personalities were regularly addressed as ክቡር፡ ወልዑል፡ ... (*kəbur wälәᶜul* ...) starting from the 19th cent.: e.g., Enno Littmann addressed the governor of Aksum ↗Gäbrä Śəllase Barya Gabər as *kəbur wälәᶜul däğğazmač* ('Honorable and High General') in 1906.

One of the first Ethiopian documents attesting the use of "L." in combination with an Ethiopian title are those of "*ləᶜul ləğ* Iyasu" of 1914 (a perfect translation of 'His Highness, Prince Iyasu', s. Smidt 2007). After that date this title was regularly used by him. This invention of the young ruler was later taken over by *ras* Täfäri for the needs of his court. During his reign L. became, together with ↗*ləğ* (corresponding to the term ↗*abeto*), the only title which was acquired by birth and meant a personality of Solomonic descent (i.e. the agnates of the Emperor). *Ras* Täfäri, who steadfastly monopolized power in his hands, might originally have been looking for means to distinguish himself from the other *ras*; and so starting from the early 1920s he called himself *ləᶜul ras* following *ləğ* Iyasu's example, possibly due to a suggestion by his advisor ↗Ḫəruy Wäldä Śəllase.

After Täfäri's coronation as *aṣe* Ḫaylä Śəllase I he widened the use of this new term by adding it to the already existing titles of those princes governing the traditionally highly autonomous provinces of Gondär, Goğğam and Təgray who, according to tradition, would have had a legitimate claim to the title of *nəguś* – so, Kaśa Ḫaylu of Gondär, Ḫaylu Täklä Haymanot of Goğğam and Śəyyum Mängäša and Gugsa Arᵓaya of Təgray, were all four of them now called *ləᶜul ras* ('Princely Duke'), which allowed the Emperor to avoid the coronation of any new *nəguś*. In succession, Aśrate Kaśa (s. Mahtämä Salale Wäldä Mäsqäl 1965:19), Ḫaylu Bäläw of Goğğam, Mängäša Śəyyum of Təgray were accorded the title *ləᶜul ras*. The title L. was then also used alone, without any second component.

Their wives received the title of *ləᶜəlt* (Tgn. *ləᶜəlti*), such as also most female descendants of Ḫaylä Śəllase. This female term of address might first have appeared in a text written by Ḫəruy Wäldä Śəllase in 1922/23, on *ras* Täfäri's wife's journey to Jerusalem: *Yälәᶜəlt wäyzäro Mänän mängäd. Bäᵓiyärusalemənna bäməsr* ('Her Highness *wäyzaro* Mänän's Journey, to Jerusalem and Egypt').

The use of the title L. remained very exclusive. Except for the above-mentioned highest-ranking nobles (and in succession to *ləᶜul ras* Kaśa his son *ləᶜul ras* Aśrate, s. Maḫtämä Śəllase Wäldä Mäsqäl 1973:19) it was only accorded to descendants of Ḫaylä Śəllase himself (*ləᶜəlt* ↗Tänañña Wärq, *ləᶜul alga wärraš märəd azmač* ↗Asfa Wäsän, *ləᶜul* Mäkʷännən, *ləᶜəlt* Zännäbä Wärq, *ləᶜəlt* ↗Ṣäḥay, *ləᶜul* Śahlä Śəllase and practically all their children, but not their elder

sister *wäyzäro* Romanä Wärq and her children, s. Maḫtämä Śəllase Wäldä Mäsqäl 1973:28). A son of a L. regularly bears the princely title *ləǧ* (Copley 1998:115).

The religious connotation of the title, linked with the original Gəᶜəz term, enhances its importance and impressiveness (s. LesCDic 304: 'high, upper, lofty, elevated, superior, Most High, exalted'). This term appears in ancient Christian Gəᶜəz names, like Wäldä Ləᶜul ('the son of the High One', i.e. of God). Folk etymology sometimes links the term *lul* ('pearl') with L. (appearing, e.g., in names like Lulit, fem. 'pearl'), but it is rather connected with Arab. *luᵓluᵓ* ('pearl'; s. LesCDic 314).

Asfa-Wossen Asserate – Wolbert Smidt

Ləᶜul Sägäd

Ras L.S. (**ልዑል፡ ሰገድ**, "horse name" Abba Bälay; d. 17 October 1916) was an important early 20th-cent. politician.

A son of *däğğazmač* Atnaf Sägäd, L.S. belonged to the powerful Addisge family of Šäwa. L.S.'s brother *däğğazmač* Wəbe Atnaf Sägäd was the second husband of *aṣe* ↗Mənilək II's daughter ↗Zäwditu. Their brother Abbäbä Atnaf Sägäd was a ↗*liqä mäkʷas*, and his son Abiy was later to marry *aṣe* ↗Ḫaylä Śəllase I's daughter ↗Ṣähay.

After the battle of ᶜAdwa in recognition of his bravery *aṣe* Mənilək bestowed the title of ↗*ligaba* on L.S. Mənilək subsequently made him *ras* and governor of ↗Bale (in 1907) for his important role in the conquest of ↗Sidamo. Later L.S. also governed the province of ↗Käfa. On 31 May 1911, after the death of his cousin *ras* ↗Täsämma Nadäw, L.S. was made ↗*ras bitwäddäd* by *ləǧ* ↗Iyasu. However, he never played an important role in the political scene of Iyasu's court, their relationship being quite cold, and he was better known for his bravery as a soldier.

L.S. was the second husband of *wäyzäro* ↗Mänän. Her separation from L.S. and union with Täfäri Mäkʷannən (later *aṣe* ↗Ḫaylä Śəllase I) led to L.S.'s hostility towards the latter. He also blamed *ləǧ* Iyasu for helping Täfäri in taking his wife from him. Probably this encouraged L.S. to oppose the Prince, and in 1915 the Käfa governorship was taken from him. Nevertheless, L.S.'s negative feelings towards Täfäri were stronger, and he supported *ləǧ* Iyasu when the latter tried to take ↗Harär from Täfäri in 1916.

After the ↗coup d'état 1916 (s. EAE II, 1081) L.S. joined the Šäwan party and died in the Battle of Tora Mäsk which took place on 17 October, just before the battle of ↗Sägäle. At Tora Mäsk L.S.'s troops tried to stop *fitawrari* Sirah Bəzu's soldiers supporting *ras* ↗Mikaᵓel's party from taking ↗Ankobär. L.S. was buried in Däbrä Bərhan Śəllase.

Libän Amäde

Imām L. (**ሊበን፡ አመዴ**, Orom. Liiban Amade, "horse name" Abba Ğirru; b. ca. 1785, Bägemdər, d. 1825, Wärrä Himäno) ruled ↗Wärrä Himäno between 1803 and 1825. He was a son of *imām* Amäde (*alias* Kolase, r. 1788–1803) and belonged to the Muslim ↗Mammädočč dynasty of rulers. He was born a Christian, a fact which is not uncommon as it fits the pattern of inter-religious mix that is characteristic of this dynasty. His mother, Səhin, was a Christian, who descended from the nobility of Bägemdər and was the niece of *ras* ↗Goššu. The latter had taken the 20-year old Amäde "Kolase" into his service, had him baptized with the name of ↗Wäldä Gäbrəᵓel and gave him his niece in marriage. After the death of Goššu, Amäde returned to ↗Islam and took the leadership of ↗Wärrä Himäno. His son, L., stayed in Bägemdər and received Christian education until the death of his mother, when he was

about 15. Afterwards he returned to his father who converted him to Islam and appointed him to the governorship of the buffer zones north of the Bäšəlo river: Wadla, Dawənt, Dälanta.

L. succeeded Amäde after the latter's death during a campaign in ↗Läga Hidda in 1803. After having confined potential rivals from within his family at ↗Mäqdäla and Ləgot, he clashed with other Wällo groups (Täkʷəladäre, Lägambo) and devastated Lägä Hidda to avenge the death of his father and to recover his remains. The reign of L. is characterized by a state of latent warfare against the neighbouring Christian rulers. The fiercest competition was with the Wärrašek faction governing Bägemdər (*ras* ↗Gugsa) and the ↗Yäğğu lords (*däğğazmač* Goği). It was balanced by contextual agreements with other powerful opponents: *ras* ↗Wäldä Śəllase of Təgray and, to a lesser extent, ↗Śahlä Śəllase of Šäwa. L. vigorously championed Islam within Wällo and struggled to overcome the state of fragmentation and infighting between the territorial clans in this part of Wällo.

He married at least three women including Christians. Four of his descendants are known: 1. Amäde "Abba Muğa", his eldest son and eventual successor, who was the child of *wäyzäro* Ṭuma Gaddissa, a name which indicates an Oromo background. 2. By Ṭuma he fathered ↗Mänän, who became famous for her dominant political role in Gondär, as she was married to *däğğazmač* Alula Gugsa the father of *ras* ↗Ali II, and afterwards to *aṣe* Yoḥannəs III (and hence her title of *ətege*). 3. Ali "Abba Bulla", whose mother, *wäyzäro* Sənəddu, belonged to the Christian aristocracy of Wadla, and was the father of Amäde Ali (by ↗Wärqitu) and Muḥammad (*nəguś* ↗Mikaʾel) Ali. 4. Bäšir, his son by *wäyzäro* Wəddət, remembered for having been the father of ↗Amäde Bäšir, who rebelled against Tewodros II.

After 12 years of rule L. died of an intestinal hernia complicated by intensive horse riding. Amäde succeeded him but he had to swear allegiance to *ras* Gugsa. This was the reason for the opposition of his half-brother Ali "Abba Bulla", which led to further infighting among the succeeding generations of the Mammädočč.

Éloi Ficquet

Libanos

Abba L. (ሊባኖስ) or Mäṭaᶜ (መጣዕ), also known as Yəsrin (ይስሪን, cp. Bausi 2003a:XIX, n. 2 [tr.]), was one of the most important saints of the Aksumite period and renowned as one of the early founders of the monasticism and asceticism in Ethiopia.

Not included (apart from later traditions) in the group of the ↗Nine Saints and definitely different from ↗Yəmʾata (with whom he was sometimes confused, cp. ibid. XXIII, n. 16 [tr.]), L. is said to have come from Qʷəsṭənṭənya ('Constantinople') during the reign of ↗Ǝllä Gäbäz or Zägäbäz(ä Aksum) and (according to one recension of his Acts, cp. below) to have been active till the reign of his successor, ↗Gäbrä Mäsqäl (for an attempt at explaining these contradictory references and dating L.'s activity in the 6th cent., cp. EAE II, 262).

Literary evidence, mainly from his Acts (↗*Gädl*) and his Miracles (↗*Täʾammər*), preserves his memory and links L. to numerous ancient historical places (cp. Bausi 2003a:XXVIII, n. 22 [tr.], with references, e.g., to ↗Aksum, Arämo, Fäqada [↗Amba Foqäda], ↗Gʷənagʷəna, ↗Yəḥa). The ancient monastery of ↗Däbrä Libanos of Šəmäzana in Akkälä Guzay, Eritrea, claims L. as its founder, but other places, too, recall his name: in Säraye, Eritrea, among the most important ones, the devotional place of ↗Ǝnda Abba Mäṭaᶜ (cp. Bausi – Lusini 1994:26, n. 51); in Təgray, the small rock-hewn church of Abba Mäṭaᶜ, ca. 8 km south of Aksum, which preserves a fragmentary Aksumite inscription (cp. Anfray 1970:39, n. 6; RIÉ I, 308 [no. 215]); in Lasta, Wällo, L. is the only Ethiopian saint to whom a rock-hewn church (Abba Mäṭaᶜ) is dedicated in the ↗Lalibäla complex; and a wall-inscription in the church of ↗Gännätä Maryam attests that it was originally built in Mäṭaᶜ's name by *aṣe* Yəkunno Amlak (cp. Bausi 2003a:XXIf. [tr.]).

L. is commemorated in the ↗*Sənkəssar* on 3 *Ṭərr* and mentioned in the reading for 2 *Ḫədar* (BudSaint 445 and 205).

There are at least three different recensions of the ገድለ፡ ሊባኖስ *Gädlä Libanos* (G.L.), which are certainly the product of intentional reworking, although all seem to derive from a common literary text, probably a lost homily attributed to (otherwise unknown) Elyas, the Bishop of Aksum, mentioned in the *Gädl* (cp. Bausi 2003a, indices).

(1) The first recension (ed. Getatchew Haile 1990:36–46) is probably the most ancient hagi-

ographic text (pre-mid-14th cent.) devoted to an Ethiopian saint, and is likely to have been composed, or rearranged, at the monastery of ↗Däbrä Ḥayq Ǝsṭifanos. It is attested in three 14th-cent. mss.: EMML 1763, fols. 110rb–113va; EMML 7602, fols. 126ra–128ra; and EMML 8509 (not used by Getatchew Haile), fols. 43r–45v. It relates in the simplest way the events of L.'s life; the narrative is totally devoid of any historical element and follows hagiographic common places (cf. esp. the *Gädl* of ↗Gäbrä Krəstos, i.e., St. Alexis): born of a rich family, following the call of the Archangel Gabriel, L. refuses to marry, leaves one night the house of his parents, Abrəham and Nəgəśt, and spends some time in the (Egyptian) monastery of Däbrä Zäyt, where he receives the monastic habit from ↗Pachomius and is invited by him to go to Ethiopia. After passing some time there, he is called to Aksum by Bishop Elyas, but for his criticism of the Bishop's corruption L. is exiled by Ǝllä Gäbäz. After three years he is reconciled by the monk Adḫanänni (or Adḫani), who receives the name of Bəʾəse Sälam (cf. Ǝdda Bəʾəse Sälam in CRAxum 15 [tr.], no. 10) and becomes his disciple. The two monks build Betä Mäsqäl and live together till the death of Bəʾəse Sälam. Finally, in his ↗*kidan* L. asks for the grace of miraculous healing-springs for all those who will invoke his name. After giving the monastic habit to the mother of Adḫanänni one year after her son's death, L. retires with two of his disciples, performs his last miracle and passes away. Three villages contended for his relics, but he was buried in the place where he had dwelt as a hermit. Bishop Elyas is miraculously invited to write a homily in honour of L.

(2) The second recension (ed. Bausi 2003a; for details on sub-recensions cp. ibid. XV–XIX [text]) is much longer and certainly later than the first one, expanding the narrative in various places, also inserting a long episode on a certain Bartəkoz (present in the third recension too), but following faithfully the same plot; it is attested in five mss. at least: StrANL nos. 26 and 88 (20th cent.), VatLib Cerulli Etiop. 198 (early 19th cent.), and two mss. in Asmära, Library of the Pavoni Social Center (dating respectively to 1674 A.D. and to the 20th cent.).

(3) The third recension is only known (apart from few fragments, cp. BerTarik 14f., 40ff.) from excerpts from one single ms. from Däbrä Libanos of Šəmäzana (ed. Conti Rossini 1903:25–34; Bausi 2003a; for other mss. of the *Gädl*, cp. ibid. XII, nn. 4f. [text]). Abundant in details, place names and local traditions, it is radically different from the preceding ones, but numerous shared passages still demonstrate its strict dependence upon one and the same common pre-archetypal text. In the narrative, L. is credited with staying in numerous places in Säraye and with preaching in ↗Bur, after the foundation of the monastery of Däbrä Libanos where his *Gädl* was written; allusions to traditions collected in the ↗*Kəbrä nägäśt*, to the Holy Fire ceremony in Jerusalem (cp. Fiaccadori in StudAeth), and to L.'s writing of the Gospel (cp. below) are also attested. The third recension is the only one which attributes an important role to King ↗Gäbrä Mäsqäl in patronizing activities (cp. Lusini 2003, 2004:68–73), but the reliability of this as well as of the other (pseudo-)historical traditions is highly questionable. The recension has neither significant connections with what is attested in ancient documentary sources (cp. Bausi 2003a:XXXIf. [tr.]) nor any references to the reliable ancient dedication of churches to L. in Lasta, not to mention the fact that the evocation of the name of Gäbrä Mäsqäl could be a simple reflex of the patronage of King ↗Lalibäla (also named Gäbrä Mäsqäl), who, together with his wife ↗Mäsqäl Kəbra, was very favourably disposed towards the monastery of Däbrä Libanos, as evidenced by its "Golden Gospel" (cp. CRDLib 187–91, nos. 6–7). It is more than likely that this recension of the *Gädl* was composed not later than the 15th cent. on the basis of an earlier recension (more or less faithfully represented by the first and second one), with the addition of elements in order to (re)assert feudal prerogatives upon a new basis, as

Abba Mäṭaᶜ, miniature in the 14th-cent. ms. of *Gädlä sämaᶜətat*, church of St. Mary, Tulluu Guddoo, Zway; photo 1971, courtesy of Paul Henze

the mention of dwelling-places and as the numerous foundations of the Saint would suggest (cp. Bausi 2003a:XXXIf. [tr.]; 2005a:3f.; 2005b:160f.).

The second and third recensions are also accompanied by a collection of Miracles, which amount to a total number of 68 (ed. Bausi 2003a; few of them already in Conti Rossini 1903:34–41). They are only partially repeated in the different recensions and include expansions and resumptions of episodes of the *Gädl*. They provide valuable information on such pre-mid-15th cent. historical characters as *aṣe* ↗Säyfä Arʿad, Wəddəm Säfär, Dawit and his daughter Dəlmä Nəgśa, Yəsḥaq, Zärʾa Yaʿəqob; *səyyumä ʿagame* ↗Akḥadom; *bäʿalä naʿle* Gäbrä Krəstos; *nəburä əd* Gäbrä Iyäsus, Ḥara Zäkrəstos, Zäʾamanuʾel.

At least two ↗*mälkəʾ* of L. are known (cp. ChRép nos. 359 and 377, the latter ed. in Bausi 2003a, with a ↗*sälam*).

Contrary to the widespread interpretation of a passage of the *Gädl* (cp. Conti Rossini 1903:26; Bausi 2003*a*:14 [text] = 13 [tr.], §30), which attributes to L. the translation of the Gospel of Matthew (hence the name Mäṭaʿ, from "Matthew", cf. ibid. XXXIIIff. [tr.]; but the name, MṬʿ, MṬʿN, is attested in Ṣafaitic, cp. Harding 1971:551) in Bäqla, it is likely that the passage records a different tradition, according to which the Saint wrote there some particular sections of the Gospel (Mt 5:1ff. and 25:31ff.), as he did other sections in other places. The sections of the Gospel seem to be indicated in the passage by their *incipits* (probably corresponding to their *tituli*), exactly as in a passage from the Miracles of L. (Bausi 2003a:191 [text] = 110 [tr.], § 497; cp. Bausi 2003b). The alleged tradition of L. as translator of the Gospel has been connected with that of the Vorlage of the Ethiopian ↗Bible and with the traditional attribution of a role to supposedly Syrian monks, recently reaffirmed by some authors (cp. Ricci 2003:76), and strongly contested by others (cf. Marrassini 1999; Knibb 1999:23f.; Munro-Hay in AfrHorn).

One of the most ancient manuscript witnesses to L.'s Acts, ms. EMML 7602, the so-called Homiliary of ↗Tulluu Guddoo, also contains the most ancient representation of L. (Mäṭaʿ) in art, on fol. 125v, immediately before the *incipit* of L.'s Acts (fig.).

Alessandro Bausi

Liber Aksumae ↗Aksum: Mäṣḥafä Aksum

Liberal Progressive Party

The L.P.P. was an Eritrean pro-independence party established in the late 1940s after the British had lifted a ban – in force between 1941 and 1946 – on political parties in the territory. The L.P.P., also known as **ማኅበር፡ ነጻነት፡ ዕብየት፡ ኤርትራ፤ ኤርትራ፡ ንኤርትራዊያን** (*Maḫbär näṣannät ʿəbyät Ərətra: Ərətra nəʾərətrawiyan*, 'Eritrean Independence and Progress Party: Eritrea for the Eritreans'), was founded in February 1947 in ʿAddi Qäyyəḥ, with *ras* ↗Täsämma Asbärom as its president. To some extent the movement was descended from the pro-independence faction of the earlier ↗*Maḫbär fəqri hagär* of the early 1940s. The prominent advocate of independence,

↗Wäldä Ab Wäldä Maryam, had in 1945 broken from that association to establish the clandestine "Eritrea for Eritreans" group.

The L.P.P., which soon established branches in other parts of the highlands, demanded unconditional independence for Eritrea. While it had a predominantly Christian following, it objected to the role of the church in political affairs and developed a largely secular, pan-Eritrean platform in opposition to what it saw as an Ethiopian Church–Unionist Party pro-Ethiopian alliance. Common political aims led to close relations with the ↗Muslim League, with which the L.P.P. differed only in its unwillingness to support the idea of a period of European trusteeship prior to independence. In 1949, the L.P.P. became part of the ↗Independence Block, instigated by ↗Ibrāhīm Sulṭān of the Muslim League, which grouped together several pro-independence parties. Following the ↗United Nations resolution federating Eritrea with Ethiopia in 1950 (↗Ethiopian–Eritrean Federation), the Independence Block, including the L.P.P., became the Eritrean Democratic Front. The nationalist ethos of the L.P.P. continued into the 1950s and indeed grew stronger in response to Ethiopian violations of the federal constitution. Elements of the party later joined the Eritrean liberation movement (↗Eritrean Liberation Front).

Richard Reid

Liberation 1941 ↗War of liberation; ↗World War II

Liberation movements

In traditional Ethiopian politics resistance to established authority was mostly led by individual ↗*šəfta* (bandits or rebels). This continued to characterize politics in post-World War II Ethiopia and Eritrea. However, a new element was added. Groups of *šəfta* were traditionally rather small, but starting from the 1940s there was a rise of mass movements and armed uprisings in several regions, especially in ↗Eritrea, ↗Təgray and later in ↗Goğğam and ↗Ogaden, organized around a common idea or goal.

Several rebel groups, often comprising disbanded soldiers, the Mossazghi brothers being the most renowned, were active in Eritrea from 1941, attempting to drive out the remaining Italians (Trevaskis 1960:55). Resistant groups in Eritrea were often given arms, money and refuge in Təgray (Fernyhough 1986:165). In Təgray the "first" ↗Wäyyane rebellion began in 22 May 1943 and quickly became a mass movement, supported by the local nobiliy and great parts of the peasantr and city population. Quickly the rebels were in charge of the provincial capital Mäqälä and most of Eastern Təgray. With the help of British officers the Emperor regained control by October (Young 1997:52). Another mass movement, comprising great numbers of the peasant population, starte in Goğğam in 1967, the rebels controlling the highlands until 1968.

The late 1950s saw the first signs of political modernization and the transformation from *šəftənnät* to institutionalized movements, adopting an ideology of "liberation from oppression". While the imperial, central regime remained oriented on traditional political culture the gradual change developed mostly in the periphery. Eritrea led the process.

The ↗Eritrean Liberation Movement (ELM) was founded in Port Sudan in April 1958 and disbanded in Asmära in 1970. At its peak it claimed to have 40,000 members and a secret structure comprising cells of seven. After the ↗Ethiopian–Eritrean Federation was dissolved in November 1962, other resistance movements got an increased followership. The ↗Eritrean Liberation Front (ELF) was founded on 10 July 1960 by a group of ↗Beni ᶜAmər notables and young students and commenced the armed liberation struggle on 1 September 1961. The first ELF fighter ↗Ḥamid Idrīs ᶜAwate was an ELM member and a *šəfta* leader in the western Eritrean lowlands, but the two movements fought each other in 1965 (KilHDic 196).

The ELF's most significant and consistent backer was Syria (Erlich 1983:59). Some fighters were trained by al-Fataḥ instructors, but financial and military support dwindled after the June 1967 Arab–Israeli War. Five military zones were established in 1965. The Ethiopians drafted in more men and in 1969 all of Eritrea was under martial law as one of four divisions of the Ethiopian Army was on active service in Eritrea. Internal splits led to the formation of the People's Liberation Forces (PLF) by ↗ᶜUṯmān Ṣāliḥ Sabī within the ELF who was also supported by Saudi Arabia.

Many Christian fighters left the ELF and in 1967 formed *Sälfi Näṣənnät*, which dissolved in 1970 to become the ↗Eritrean People's Liberation Front (EPLF). By 1970 the ELF and EPLF already controlled much of rural Eritrea and had 10,000 men under arms. They fought a bitter civil war between 1972 and 1974. A curfew was imposed on all Eritrean towns in November 1973; by December the EPLF had become effective enough to inflict major defeats on the Ethiopian army, and began its way towards becoming the dominating front in Eritrea during Mängəśtu Ḫaylä Maryam's time (↗Provisional Military Administrative Council).

The emergence of ↗Somalia as a nation state in 1960 had a decisive impact on movements in the ↗Ogaden. The Ogaden Somalis began to organize an active campaign to join with Somalia. Somalia supported the rebellion in ↗Bale from 1963–70 when rebels controlled most of the province. The Western Somali Liberation Front (WSLF) was founded in the 1960s. Its forces were active well before regular Somali troops advanced against Ethiopia in 1978.

The last years of Ḫaylä Śəllase I's regime saw the emergence of institutionalized movements in Ethiopia proper. The formation of the ↗Mäčča and Tulama Association in 1964 ushered in political mobilization in the ↗Oromo regions. On 15 May 1966 it was reorganized as a pan-Oromo movement, but was dissolved in November 1967 after a bomb attack in Addis Abäba was attributed to them (cp. ↗Mammo Mäzämmər). However, in 1974 students from ↗Addis Ababa University and military officers founded the Oromo Liberation Front (OLF), which, however, never controlled wide areas (Mohammed Hassen 1996:74f.; cp. ↗Baro Tumsa). Siad Barre created the Somali Abo Liberation Front in 1976 as a counter to the OLF, which was active also in Somali border regions.

The roots of the ↗Tigray People's Liberation Front (TPLF) lie in student movements at the General Wingate Secondary School and the Təgrayan University Students' Association established in 1971. The latter forms a connection to the Tigray National Organization (TNO) founded after the *Därg* had seized power. Another movement was the Tigray Liberation Front (TLF) under the leadership of *ləʿul ras* Mängäša Səyyum, which began a short lived military campaign in 1975.

The ʿAfar Liberation Front (ALF) was founded in May 1975 by *bitwäddäd* ʿAli Miráḥ Ḫanfade, the 13th *sulṭān* of ↗Awsa (Kassim Shehim – Searing 1980:217). It splintered into a number of factions (Kassim Shehim 1985:334f.). During Mängəśtu Ḫaylä Maryam's regime this process of political modernization introduced and developed by regional and ethnic resistance was enhanced as Ethiopian political culture underwent a radical process of transformation.

Roy Pateman

Libido

L. (Amh. *Maräqo*), together with ↗Hadiyya, belongs to the Hadiyya language group which forms one subgroup of the ↗Highland East Cushitic languages. In spite of 82 % lexical similarities with Hadiyya (Gordon 2005), L. can be considered a separate language because of morphological differences (s. Korhonen – Saksa – Sim 1986a:37). L. is spoken in an area between Butağira and Zʷay, separated from Hadiyya-speaking territory by an area of ↗Səlṭi-speakers. A census published in 1998 numbers native speakers at 36,612 of which 14,623 are monolingual (Gordon 2005:116).

The consonant and vowel systems of L. are identical to those of Hadiyya and have 23 consonants, including ejectives, and five vowels; vowel length is phonemic and stress-accent is grammatically distinctive.

In noun morphology the main difference between Hadiyya and L. is that in L. feminine gender is often marked by the suffix *-ta* (as in ↗Allaaba, ↗Kambaata, and ↗Qabeena), unlike Hadiyya where gender is not as a rule distinguished (Sim 1989:108). The L. number system includes three forms: the unmarked form, singular, and plural. The case system consists of the marked nominative (for subjects of verbal and

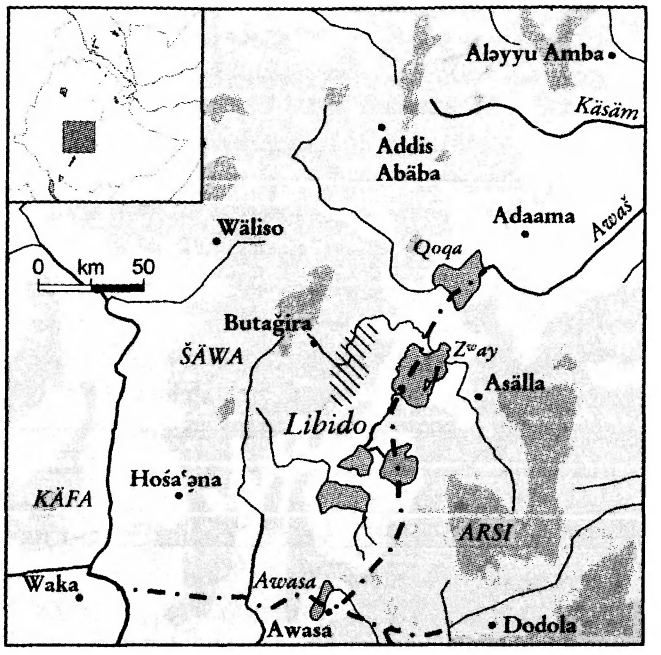
nominal clauses), accusative (for citation and the marking of direct objects and nominal predicates), genitive, dative, instrumental/locative, and ablative. With nouns, instrumental/locative and genitive are always formally identical, being marked with the suffix *-an*. With proper names both the accusative and the nominative are different from the citation form (= proper name). In some inflectional classes of proper names, nominative and genitive are identical.

The citation form of personal pronouns is the nominative, not the accusative. Genitive and instrumental/locative are formally distinguished. Personal and possessive pronouns distinguish gender in the 3rd pers. sg. only:

	Pronouns	
sg.	independent nominative	possessive
1	*ʾáni*	*yaa*
2	*ʾáti*	*kaa*
3 masc.	*ʾíṭṭu*	*ʾiṭṭá*
3 fem.	*ʾísa, ʾíse, ʾísi, ʾíseti*	*ʾísá*
pl.		
1	*nésa*	*naa*
2	*kiʾna*	*kiʾná*
3	*ʾíssa, ʾíssi, ʾísseti*	*ʾissá*

Demonstratives have three degrees of deixis. The masc. demonstrative pronouns in the accusative (= citation form) are *kaa* 'this', *haa* 'that' and *haʾya* 'that (far away)'.

Verbs are inflected by suffixes only. An independent verb in the indicative is composed of four morphemes: verb base – subject agreement marker (plus the pl. marker *-ak* in the 2nd and 3rd pers. pl.) – aspect marker – final suffix. The subject agreement markers are: 1st pers. sg. *ø*, 2nd pers. sg. *t*, 3rd pers. sg. masc. *ø*, 3rd pers. sg. fem. *t*, 1st pers. pl. *n*, 2nd pers. pl. *t-ak*, 3rd pers. pl. *ø-ak*. There are three aspects marked by different vowels: the perfective is marked by *u* (replaced in the 2nd pers. sg. by the epenthetic vowel), the imperfective by *aa* and the perfect by *oo*: *waar-* 'come', 3rd pers. sg. masc. *waar-u-ko* (perfective)/*waar-aa-ko* (imperfective)/*waar-oo-koo* (perfect). (Conversly, in Hadiyya *aa* marks the perfect and *oo* the imperfective). The function of the final suffixes (identical in the perfective and imperfective, and with a long final vowel in the perfect) is unclear. Provisionally, one can consider them to mark independent verbs in the indicative. The distribution of perfective and perfect still needs to be studied.



Further verb paradigms are e.g. the hortative/jussive and several converbs used to describe sequential or adverbial circumstances, all marked by different suffixes following the subject agreement marker: *los-* 'study', 3rd pers. sg. masc. *los-óna* (hortative/jussive)/*los-óone* (negative hortative/jussive)/*los-i* (converb)/*los-óʾni* (negative converb)/*los-éna* (purpose converb). Several verb forms have a vowel *ee* following the subject agreement marker, marking either composed indicative or subordinate verbs: *los-ee-ʾuko* (perfect/perfective past)/*los-ee-ʾáaru* (until-converb)/*los-ee-beqq-éna* (negative purpose converb)/*los-ee-kíra* (apodosis of a conditional clause).

The unmarked word order is Subject–Object–Verb; all modifiers precede the head.

The ten word list for L. is: *mato* 'one', *lamo* 'two', *saso* 'three', *giira* 'fire', *waʾa* 'water', *ʾeelliinčo* 'sun', *ʾagana* 'moon', *ṭiiga* 'blood', *ʾallabo* 'tongue', *ʾinqo* 'tooth' (field notes of the author).

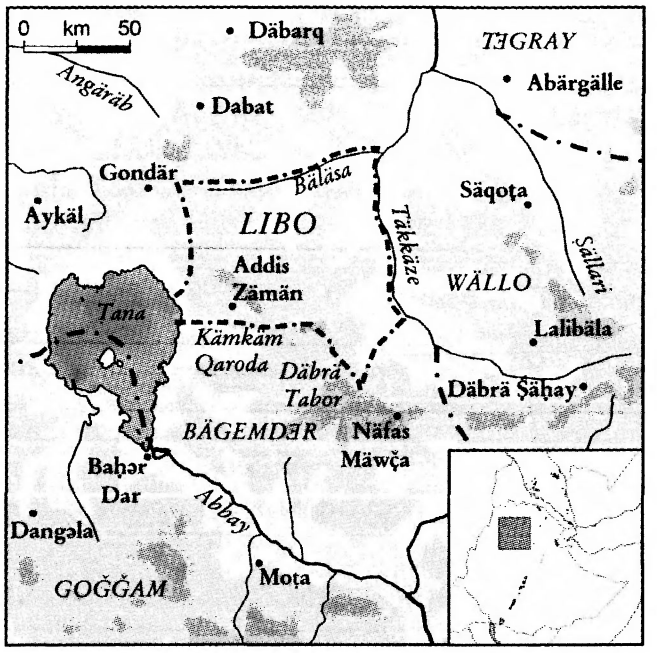
Joachim Crass

Libo

L. (ሊቦ) is a district east of Lake ↗Ṭana and north of ↗Däbrä Tabor. The terrain varies from rolling



plains in the south to mountainous uplands in the north. Its original inhabitants were ↗Agäw, who probably by the 16th cent. had been Christianized and assimilated into the Amhara.

Originally, L. referred to a small area where *aṣe* ↗Susənyos and later *aṣe* ↗Fasilädäs had their camps in the 17th cent. and *ras* ↗Gugsa Märsa at the turn of the 19th cent. At different times, however, parts of ↗Ǝnfraz (particularly the ↗Wäyna Däga area), ↗Fogära, the districts of Käm(ə)käm and ↗Qaroda were considered parts of L. Three historic battles occurred in L.: on 21 February 1543, ↗Aḥmad b. Ibrāhīm al-Ġāzī was killed at Zäntära (Grañ Bär), leading to the collapse of the Muslim invasion of the highlands; on 7 June 1632, a bloody battle occurred between Catholic and Orthodox armies at Wäyna Däga, which convinced Susənyos to restore Orthodoxy; on 18 July 1635, Fasilädäs killed a royal pretender, ↗Mälkəʾa Krəstos of Lasta, ensuring Fasilädas's succession. In the 17th and 18th cents., ↗Wähni Amba (in Kämkäm) was a royal prison. In 1938, Ethiopian patriots were active in L. and neighbouring ↗Ǝbbənat against Italian forces.

The Angäräb river supplying ↗Gondär with water and the ↗Bäläsa find their sources in L. The Amus Wänz forms the district's southern border. Until 1974, L. was an *awraǧǧa* of ↗Bägemdər province containing three *wärädas* – Bäläsa, Kämkäm, and Ǝbbənat. Its capital was Addis Zämän; it bordered ↗Gondär in the west, ↗Wägära and ↗Səmen in the north, ↗Däbrä Tabor and ↗Gayənt in the south. Today, L.-Kämkäm is a *wäräda* of South Gondär Zone, Amhara region. It is densely populated (296,038 inhabitants as of 2004, 189.8 inhabitants/km²), the major towns being Wäräta (25,141) and Addis Zämän (23,740).

Libro del Conoscimiento

The L.C. ('Book of Knowledge [of all Kingdoms, etc.]') is a work compiled towards the end of the 14th cent. (after 1386, according to studies subsequent to the discovery of a new ms. in 1978) by an anonymous author styling himself as a ↗Franciscan of Castile. Written in the form of a series of itineraries, from Western Africa to South-East Asia and Catai (↗China), from ↗Sudan to Scandinavia, it marks a real progress in European knowledge of African regions bordering upon the ↗Red Sea and the ↗Indian Ocean.

The author's claim to have visited all these countries is hard to believe, and fantastic matters play a great role, but most of his information is in fact of the utmost interest, especially for the Horn of Africa, where he is the first to locate the seat of the fabulous ↗Prester John, "patriarch of ↗Nubia and ↗Abyssinia" (ed. Markham 1912:31–40). Within the Horn, he concentrates on three local realms: the kingdom of "↗Dongola" (in Nubia); the empire of ↗Ethiopia with its capital "Graçiona", i.e. ↗Aksum (from Gəᶜəz *hagärä Ṣəyon*, 'city of Zion'), ruled by "Abdeselib", i.e. *nəguś* ↗ᶜAmdä Ṣəyon I (from Arab. *ᶜAbdaṣṣalīb*, 'Servant of the Cross', tr. of his throne name Gäbrä Mäsqäl), protector of the Prester John, whose metropolitan see is "Malsa" (= Malza in ↗Amhara, to the south[-west] of Ambassäl?); and "Magdasor", i.e. Maqdišu (↗Mogadishu [s. EAE vol. 5]), bounded by the sea and the Paradise rivers "Gion" and "Pison" (↗Giyon).

The actual sources of the L.C., partly the same as those of Genoese ↗cartography of the time (cp. the names on ↗Dalorto's map), yet with more reliable details (e.g., the position of Dongola), and a rather indirect impact of Arabic elements, are still to be investigated.

Gianfranco Fiaccadori

Libya, relations with

The name L. was given by the Italians in 1934 to the three ex-Ottoman districts of Tripolitania, Cirenaica and Fezzan, which they had penetrated in late 19th cent., and acquired in 1911–12 as a result of the Italo–Turkish war. A Mediterranean-Saharan entity, L. had infrequent direct contacts with Ethiopia, but its involvement in wider circles rendered these occasionally relevant. The modern connection of L. to Ethiopia and Eritrea was mainly due to their common involvement with Italian ↗colonialism.

The Ottoman *sulṭān* ʿAbdalḥamīd II (1876–1908), in his efforts to check the Italians, initiated contacts in 1904 with *aṣe* ↗Mənilək II that eventually enabled the Ethiopians to purchase more houses in ↗Jerusalem. The Italian Ethiopian–Libyan connection became more significant when ↗Mussolini began his imperial enterprise. His policy vis-à-vis Ethiopia was directly influenced by his war in L. against the local, Islamic-national resistance movement of the *Sanūsīya*. In 1928 Mussolini was ready to stop subversion in Ethiopia and sign a treaty of friendship because he needed to concentrate on quelling the *Sanūsīs*. The oppressive measures the Italians, headed in L. by Marshal ↗Graziani, used against the local population culminated with the public hanging of the *Sanūsī* leader ↗ʿUmar al-Muḫtār in September 1931. However, when Mussolini in mid-1934 decided to conquer Ethiopia (↗Italian war 1935–36), he began a well-publicized appeasement campaign in L., aimed at winning Islamic and Arab public opinion in the Middle East, as well as at recruiting Libyans and other Muslims for his war against the Christian empire. In July 1935 ↗Ḫaylä Śəllase I sent a mission to Egypt tasked with contacting the *Sanūsī*s and encouraging them to re-ignite their struggle. No such contact was however established. Mussolini's anti-Ethiopian propaganda campaign in the Arab world in 1935–36 included distribution of Arabic newspapers from L. praising him as the saviour of Islam. The Italian army invading Ethiopia included ca. 70,000 Muslim recruits from Eritrea, Somalia and L., and a Libyan unit, symbolically, was in the force that occupied ↗Harär. It remained stationed near the town during the coming years to support the Italians' pro-Islamic propaganda. In occupied Ethiopia Marshal Graziani, the veteran of L., implemented much of what he had introduced in L.

After World War II the *Sanūsī* house came to power in L. and king Idrīs's relations with Ḫaylä Śəllase were cordial, especially as of the mid-1950s, when both royal regimes were threatened by Egyptian Nāṣirism. In September 1969 Muʿammar al-Qaḏḏāfī removed king Idrīs and has remained in power ever since.

Al-Qaḏḏāfī perceived himself as an heir to Ǧamāl ʿAbdannāṣir's leadership of pan-Arabism, but was rejected as such by the core Arab countries. He diverted much of his energies to Africa where he invested a large part of L.'s oil money in spreading his blend of revolutionary Arabism, political Islam, and pro-Soviet strategy. Al-Qaḏḏāfī targeted Ḫaylä Śəllase's Christian monarchy and western connections and challenged his leadership of the ↗Organization of African Unity (OAU). Already in late 1969 the Palestinian leader Yāsir ʿArafāt introduced the Eritrean activist ↗ʿUṯmān Ṣāliḥ Sabī to al-Qaḏḏāfī, and the latter became a firm supporter of the Eritrean cause and ʿUṯmān Ṣāliḥ Sabī's wing in the ↗Eritrean Peoples' Liberation Front (E.P.L.F.). As of 1971 al-Qaḏḏāfī financed the E.P.L.F. training camps in Aden and rejected Ethiopia's Prime Minister ↗Aklilu Habtäwäld's pleas to stop this aid. In April 1972 al-Qaḏḏāfī paid Idī Amin of Uganda to cut relations with Israel and intensified his attacks on

Ḫaylä Śəllase. In May 1973 at an OAU summit in ↗Addis Abäba, al-Qaḏḏāfī fiercely denounced the Emperor, threatening to move the OAU's headquarters elsewhere if Ethiopia remained pro-western. His speech, broadcast directly on Ethiopian TV, was said to have a devastating impact on the weary Emperor and his elite.

Al-Qaḏḏāfī was quick to recognize the *Därg*'s regime and develop close ties with Mängəśtu Ḫaylä Maryam. They shared an enmity of the Egyptians, Sudanese, and Saudis who in the mid-1970s united to claim the Red Sea in the name of Arabism and against the pro-Soviets. They drew closer in 1977 when Mängəśtu himself managed to become a Soviet ally. In 1981 al-Qaḏḏāfī, Mängəśtu and ʿAlī Nāṣir of South ↗Yemen signed a tripartite treaty under Soviet auspices. Al-Qaḏḏāfī's relations with Mängəśtu, nevertheless, did not deter the Libyan from continuing to support Eritrean secessionists and some other anti-Mängəśtu liberation fronts. Al-Qaḏḏāfī's involvement in the affairs of the Horn – as elsewhere, never fully consistent – seemed to be motivated also by his belief, expressed on several occasions, that the Ethiopians were originally Arabs: its detailed articulation was presented in Amīn Tawfīq aṭ-Ṭayyibī's book, issued in 1993 by "The centre of the Libyans' *Ǧihād* for Historical Studies" in Tripoli.

Haggai Erlich

Licata, Giovanni Battista

L. (b. 23 June 1856, Naples, d. 9 April 1886, Ǧildessa) was an Italian naturalist. A professor of science and a journalist, he was among the founders of the Società Africana d'Italia at Naples in 1880. He became a council member, in 1882 the director of its *Bollettino* and, finally the vice president of the society. In January 1883, with Ferdinando Borsari, he founded the paper *L'Esplorazione*, which however stopped publication that April. He was convinced of a potential of Italian involvement in Africa, particularly in its commercial perspectives. Encouraged by Neapolitan businessmen, the Società Africana appointed L. to conduct a scientific-commercial examination of the Italian possessions in Asäb.

L. left Italy in March 1883 reaching Asäb in May. He returned to Italy in October and on 16 January 1884 he presented the results of his research in the colony to the ↗Società Geografica Italiana; they were later published in two issues of the *Bollettino*. That same year he tried to join the expedition of Gustavo ↗Bianchi but was unsuccessful. In 1886 L. joined the expedition to ↗Harär led by Count Pietro ↗Porro, on which he died together with the whole expedition.

His two books (*Assab e i Danàchili* and *In Africa*) contributed greatly to informing Italians about their African possessions as they really were, avoiding sensationalism and fantastic descriptions. His reports were supplied with his own illustrations.

Lidia Garbaa

L.G. (born Dimboo Garbaa, b. 1872, Sayyoo, Wälläga, d. 1941, Naqamtee) was one of the first three Oromo female pioneer evangelists, with ↗Aster Gannoo and Febe Hirpe (Abbaa Magaal). Kidnapped by slave raiders at the age of 14, she was taken to ↗Massawa, to be shipped with other slaves to Arabia. Italians patrolling the Red Sea, however, liberated her along with a number of slaves.

In 1886, L.G. and 23 other girls were taken to the ↗Swedish Evangelical Mission at ↗Əmkullu to receive a Christian education. In 1888, she was baptized and chose to be called Lidia (after Lydia, the first European woman who received the Christian faith, Acts 16:11–15). The new

name was understood as a new identity and protection against the Ethiopian law, which forbade the enslavement of Christians. In 1891, L.G. married ↗Onesimos Näsib, by whom she had four daughters and one son.

In 1989 Onesimos went to St. Chrischona, Switzerland, leaving Lidia with the children in Gäläb. On Onesimos's return from Switzerland, the family moved to Asmära. On 17 December 1903, L.G. and Onesimos, accompanied by their three children and co-workers left Asmära for Oromoland. The family settled in Naqamtee, where L.G. was involved in the activities led by her husband, teaching, together with Aster Gannoo, young women reading, writing and handicrafts and later becoming an example to many young women in the church. L.G. outlived her husband by ten years and was buried, like Onesimos, in Naqamtee.

Tasgara Hirpo

Lifchitz, Déborah

L. (or Lifszyc; b. 5 June 1907 Kharkov, d. 1942 Auschwitz) was a linguist and social anthropologist who specialized in the folk beliefs in the Christian literature of Ethiopia and in the oral traditions of the Dogon people of Mali.

In 1927, L. left Poland for Paris to complete her training with Marcel ↗Cohen in Gəᶜəz, Amharic, and comparative ↗Hamito-Semitic studies at the École Nationale des langues orientales vivantes (↗Institut National des Langues et Civilisations Orientales). She also studied ethnology with Lucien Lévy-Brühl and Marcel Mauss. In 1931 she graduated in Persian, Arabic and Amharic.

In June 1932, L. went to Ethiopia to join the ethnologist Marcel ↗Griaule (her classmate in Cohen's lessons), and spent five months from July to December 1932 with the ↗Mission Dakar–Djibouti in ↗Gondär, where she took part in collecting Ethiopian ↗manuscripts that would later constitute the Griaule's collection of the ↗Bibliothèque Nationale of France.

L. studied and published (s. Lifchitz 1940) in particular such texts as the ↗*Təmhərtä ḫəbuᵓat*, the ↗*Ḥaṣurä mäsqäl*, the ዜና፡ ሥላሴ (*Zena śəllase*), the ሳይፈ፡ ሥላሴ (*Sayfä śəllase*) and the ልሳነ፡ ያዕቆብ (*Ləssanä Yaᶜəqob*). Her classification of these works of the Ethiopian magic literature (Lifchitz 1940:11–17) is still useful. The manuscripts she worked on formed part of the collections of Marcel Cohen (built up at the time of his mission of 1910–11 in Ethiopia), the Bibliothèque Nationale (Antoine d'Abbadie's and Casimir Mondon-Vidailhet's collections) and of Marcel Griaule (established at the time of his mission of 1928–29 in Ethiopia). Some came from the collection she herself made at the time of the Dakar–Djibouti Mission in 1932.

She published one book and three articles on Ethiopia, including one published post-mortem, by Marcel Cohen, in 1948. After her return to Paris, L. joined the Africa Department of the Musée de l'Homme, where she met the ethnologist Denise Paulme. In 1935 they conducted an eight-month period of fieldwork in French Western Sudan (now Mali) on Dogon society, again under the direction of Marcel Griaule. L. focused on the language and oral literature and Paulme on social organization. They collected a large number of artefacts for the Musée de l'Homme.

L. became a French citizen in 1937 and worked as the Amharic teacher at the École des Langues Orientales (1937–40). After she had to quit due to the anti-Jewish Laws of October 1940, Michel ↗Leiris, whom she knew from the Dakar–Djibouti

The members of the "Mission Dakar–Djibouti", from left to right (standing): Marcel Griaule, Déborah Lifchitz, Gaston-Louis Roux, *abba* Jérôme, the former slave Dästa, Michel Leiris; photo 1932, from Mercier 2003:40

Mission, hid her in his Parisian apartment in rue Eugène-Poubelle from 1940 to 1942. L. was involved in the clandestine resistance movement of the Musée de l'Homme (according to her records at Yad Vashem, International Memorial of Shoah, Tel Aviv, Israel). Denounced, she was arrested on 21 February 1942 by the French Police in Paris. On 18 September 1942 she was handed over to the Germans and sent to Auschwitz where she was gassed (according to Marcel Cohen). Her name is engraved on the wall of the Memorial of Shoah, 17 street Geoffroy-L'Asnier in Paris, 4°. Leiris dedicated to her memory *La Langue secrète des Dogons de Sanga* published in 1948, acknowledging the value of her contribution. Cohen and Paulme also edited some of her works.

Ligaba

L. (ሊጋባ, also ሊገባ, *ligäba*) is a traditional term designating a courtier who regulated the access of subjects to the monarch on various occasions, who was thus in charge of some of the ceremonies at the royal court. A L. was assisted by ↗*aggafari*-courtiers. In scholarly literature, L. is sometimes loosely referred to as a royal majordomo. He was entrusted with granting entrance to those seeking a royal audience, to complainants during court cases with the emperor as judge, and to the guests of royal banquets (↗*Gəbər*). He had to introduce people according to their rank and dignity, and in keeping with traditional ceremonial regulations. Hence his frequent description as the "master of ceremonies". The term L. apparently originates from the Amharic word *ligäba*, lit. 'let him enter' (with regressive assimilation of the vowels).

The title and the function of L. might go back as early as to the reign of *aṣe* ↗Dawit II (s. Colin 1990: 61). However, the title of L. is mentioned in neither *Śərᶜatä gəbər* nor ↗ *Śərᶜatä mängəśt*, two sources providing an insight into early Ethiopian court life and rituals. It seems that the L. and his office became important in the 17th cent., in particular in the ↗Gondärine kingdom, with the establishment of the permanent royal court within the "closed palace" complex. From the time of *aṣe* ↗Susənyos we know of L. Zädəngəl (the father of *bašša* Ləssanä Krəstos, a relative of ↗Wälättä Ṗeṭros); from the time of *aṣe* ↗Bäkaffa, of L. Məᶜənam (DombrChr 272; later ↗*bäğərond*), of L. Wäldä Giyorgis, L. Səmᶜon and L. Dawit (appointed after the arrest of Wäldä Giyorgis; but later also arrested, s. DombrChr 274, 278; GuiIohan 289); from the reign of Iyasu II, of L. Yosef. A L. was appointed by the emperor personally, and was expected to be close and therefore very loyal to him, which made the L.'s position at the court as important and lucrative as dangerous and unstable.

In the 19th cent., the L. was one of the most important court offices. In ↗Mənilək II's reign, a certain Särawitu is known as his first L. in the Kingdom of Šäwa. Later, the L. was given a "gilded" *zäng*-scepter, equivalent of the stick called *arčumme* (አርጩሜ) of former times (GueCopMen 271f.); in the 1920s the L. was given an elaborate and rich uniform, which included "lion's mane" (MahZekr 665, 669; cp. ↗*lämd*). The title and office of L. was given to the main *däğğ aggafari* of the monarch. Formally, the title of L. was below ↗*däğğazmač*, but sometimes a *däğğazmač* could be appointed L. Although the authority of a L. did not extend beyond the court, he was also supposed to have a military function. In the military hierarchy, the L. was placed directly under the Minister of War and acted, e.g., as liaison officer between him, the Minister of Pen (↗*Ṣäḥafe təʾəzaz*) or the Emperor, and other commanders, passing orders to the latter, including those of higher ranks (MahZekr 643).

As a courtier, the L. had the same function as in the preceding centuries. In the situation of the

concentration of the notables and nobles around the ↗*gəbbi* in Addis Abäba, their rapid growth and fluctuation in numbers, the L.'s task meant careful supervision, and constant checking of the social hierarchy at social court events. Of particular importance were royal banquets, where the L. was in charge of "updating" the disposition of the participants ("the protocol") according to their rank and relationship to the monarch (the work required a good memory and a deep knowledge of the complex court situation). The L. also guided the formal procedure of changing ranks, which resulted in a public announcement (↗*ʿAwağ*). The bearers of the title of L. were then usually promoted to the rank of *däğğazmač* (like ↗Ləʿul Sägäd, Mäkʷännən Täwänd Bälay or ↗Wäldä Gäbrəʾel, or ↗Wädağğe Wəbe), and thereafter belonged to the highest level of the empire's political élite.

Denis Nosnitsin

Liiban ↗Boorana

Lima, Rodrigo da

Dom L. (b. ca. 1500) was ambassador of ↗Portugal to ↗Ləbnä Dəngəl. He was the son of Dom Duarte da Cunha de Lima, of noble origin (Cortesão – Thomas 1938:91). When the embassy of Dom ↗Manuel I to Ləbnä Dəngəl failed due to the death of its leader Duarte Galvão on 7 June 1517, the project to contact the Ethiopian ruler remained dormant for a few years. The rich presents and objects that the embassy was carrying – including Oriental fabrics, precious church paraphernalia, a large collection of printed books and musical instruments – were looted back in Portuguese Cochin by the elusive Governor Lopo Soares de Albergaria (BeckHuntAlvar 63f.; Correia 1992:116f.; for the gifts, cf. Dias 1995; Hook 1973; Aubin 1976, 39, n. 190).

In 1520, however, Diogo Lopes de Sequeira, Governor of India, organized a minor but still ambitious new embassy, providing it with gold, silver and pepper. The embassy, escorted by an "armada" captained by Lopes de Sequeira himself, landed at ↗Massawa on 9 April 1520. The young *fidalgo* L. was chosen as the head of 13 other officials, including the *fidalgo* Jorge de Abreu, second in charge in the embassy, the chaplain Francisco ↗Alvares, the secretary ("escrivão") João Escolar, the painter Lázaro de ↗Andrade, he surgeon *mestre* João ↗Bermudez, the interpreters João Gonçalves (also *feitor*, i.e. 'administrator') and Alexandre d'Ataide, and the organist Manuel de Mares. They were followed by an even longer train (for a complete list, cf. Correia 1976:587; Cortesão – Thomas 1938:43). The presents offered to the Emperor were meager but still important, including a planisphere, pepper, chests, organs and a harpsichord.

The expedition received provisions and protection from the ↗*baḥər nägaš* "Adiby" (Adäbabay?, Abib?) and, after a halt at ↗Däbrä Bizän to leave ↗Mateus there, it travelled through the Ethiopian highlands until it reached the royal *kätäma*, at the time located in ↗Tägulät, in October 1520. There they met a number of foreigners (BeckHuntAlvar 276), including the painter Nicolò ↗Brancaleone, Pêro da ↗Covilhã, several Genoeses as well as a number of Muslims. In the weeks that followed L. had a series of interviews with Ləbnä Dəngəl. Described by Alvares as a mild and prudent man, L. was, nonetheless, involved in a quarrel between two members of his embassy, Jorge de Abreu and Lopo de Gama (BeckHuntAlvar 315–18, 378f.).

The expedition followed the movements of the court for a few weeks: they attended the consecration of ↗Mäkanä Śəllase and visited *abunä* ↗Marqos. In February 1521 they were allowed to leave the court and headed northwards. However, on arriving at ↗Dəbarwa, they found that they had missed the fleet that had come to take them to India. Around April 1523 they went back to the court, then in ↗Gurage. Later, they stayed in ↗Fäṭägar, ↗Därra (1524), Šäwa and Təgray, until they left the country for good on 28 April 1526 with the armada of Heitor de Silveira. On departing, the embassy left behind the painter de Andrade as well as Bermudez and took along the Ethiopian ambassador ↗Ṣägga Zäʾab, who carried letters addressed to King ↗João III,

the Pope (then ↗Clement VII) and the governor of India, letters in which Ləbnä Dəngəl offered friendship and asked for assistance.

L.'s traces are lost after the embassy arrived in Lisbon in 1527. The chronicle of the journey to Ethiopia was written by Francisco Alvares. The military expedition of Christovão da ↗Gama, from 1541 to 1543, counted among its members some veterans of this early embassy such as Abreu, Bermudez, Gonçalves and Ayres ↗Dias.

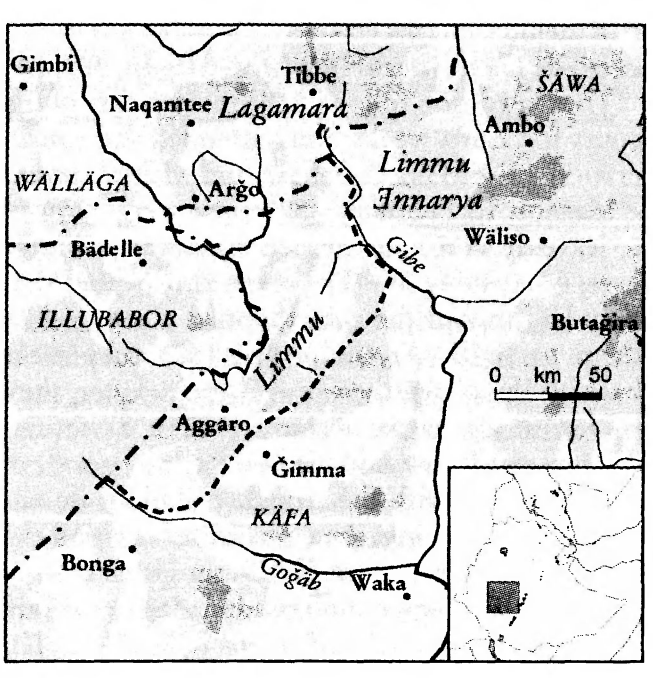
Andreu Martínez

Limmu Ǝnnarya

L.Ǝ. (Amh. ሊሙ፡ እናርያ), also known by its shortened form of Ǝnnarya, was an ↗Oromo political formation founded in the late 17th cent. in western Ethiopia, north of the upper ↗Gibe river. L.Ǝ. derived its name from the earlier ↗Ǝnnarya or Hinnaryo kingdom, which was conquered by the Limmu Oromo, who were part of the Sadača section of the ↗Mäčča Oromo. The old Ǝnnarya political élite then took refuge in ↗Käfa, but the local, originally ↗Gonga-speaking peasant population stayed and mingled with the Oromo newcomers.



The history of L.Ǝ. is replete with legends (well summarized in MHasOr), the exact historical value of which is often difficult to determine. Though first led by local Oromo chiefs, L.Ǝ. became a kingdom under Bofo or ↗Abbaa Gomol I (his "horse name"), who was a son of Abbaa Bokkuu and reigned probably from the 1780s to 1825 from his capital Sappa. Partly for strategic reasons and influenced by growing numbers of Muslim traders (including slave dealers), he converted to Islam and also established a harsh and authoritarian reign (AbPrince 79; MHasOr 163). While the political élite converted to Islam, seeing its political advantages as a unifying rulers' ideology, the ordinary people only followed suit slowly, retaining much of their traditional worldview (MHasOr 153f.). Nevertheless, the kings also practised traditional Oromo ceremonies to retain the support of the people and perhaps to express their own beliefs (cf. MHasOr 171).

L.Ǝ. assumed the form of a kingdom in the early 19th cent., when processes of centralization and state and class formation took place among many western Oromo peoples, giving rise to the five "Gibe states". L.Ǝ. was probably the most important one. In its heyday its population probably numbered about 100,000 to 130,000 people. The king of L.Ǝ., unlike the king of Käfa, was not a "divine" monarch, but certainly an almost absolute ruler (cp. MHasOr 91). He was less bound by advisors or councillors, was politically active as a war leader and the highest judge, and also less shrouded by taboos limiting interaction with his subjects. The king ruled from his court (*massera*), where councillors, officials and army leaders also lived. The extensive powers of the king obviously diminished the role of traditional institutions like the ↗*čaffe* (the local assemblies) and the clan elders. Local representatives of the king were the ↗*abbaa qorro*'s or district rulers, and under them the ↗*abbaa gandaa*s.

Although relatively small, L.Ǝ. came to flourish economically thanks to the rapid development of an intensive peasant economy in fertile lands, a substantial slave population (perhaps one fourth of the total population), and its favourable location on the South-North trade routes. Especially in the reign of ↗*mooti* Ibsaa or ↗Abbaa Bagiboo I, son of Bofo, who reigned from 1825 to 1861,

things went well. While keeping firm control and suppressing dissent (MHasOr 165, 173), he less frequently resorted to violence as a means of rule and improved conditions for traders. Nevertheless, during the formative phase under Bofo and Abbaa Bagiboo I, L.∃. often fought with emerging neighbouring states, e.g., ↗Guummaa, and with the ↗Gudru and the ↗Nonno Oromo, who threatened the kingdom's route to ↗Goğğam. The Limmu state had a standing army and the equivalent of a police force. For political and economic reasons, it kept good relations with Goğğam and Käfa. Abba Bagiboo I had married a daughter of the Käfa king as his first wife. Under Abba Bagiboo I, various neighbouring territories were made tributary to Limmu, e.g., Badi Folla, Botor, Nonno, and ↗Yäm.

L.∃. based its economy on the cultivation of a wide variety of food crops from cereals to root crops and vegetables, as well as cotton, and on the trade in slaves, civet musk (↗Zibeth), ↗coffee, ↗ivory and skins, most of this passing through its territory from the west and south, and therefore taxed. In Saqqa, the kingdom's capital from 1825, the most important market was found. L.∃. maintained its favourable regional market function well into the late 19th cent., when decline set in due to a plague and to the gradual loss of trade routes to ↗Šäwa, Käfa and ↗Ğimma, a rival Oromo state that emerged in the 1840s to the south of L.∃. This ended the kingdom's prosperity, and it dissolved in 1891 after it was conquered by Šäwa. The dominant place in the region was now taken by Ğimma. The last *mooti* ('king') of L.∃. was Abba Dulaa, son of Bagiboo.

Jon Abbink

Lion(s)

The L. (*Panthera leo* or *Felis leo*; Gəᶜəz: **ዓንበሳ**, *ᶜanbäsa*, also *anbäsa*; Amh., Tgn.: **አንበሳ**, *anbäsa*, Oromo: *leenca*) is the largest carnivore in Africa (cat family *Felidae*), and represents one of the flagship species of Africa for research, conservation and tourism.

L. are in some respects peculiar among big cats, because in contrast to other cat species they normally live and hunt in social groups, called prides, and show a pronounced sexual dimorphism, with males developing thick woolly manes.

Historically, L. occurred in most parts of Africa, in all habitats except very dry deserts and very moist forests. It was also present in most areas of Ethiopia, Eritrea, Somalia and Djibouti (Yalden et al. 1980; Kingdon 1997). Wolff (1961) mentioned, for Ethiopia, the occurrence of three L. subspecies: the Abyssinian L. or *P.l. roosevelti* (characterized by a comparatively small size and a black mane), the East African L. *P.l. nubica* and the Massai L. *or P.l. massaicus*. Furthermore, the L. of Djibouti and parts of Somalia have been regarded as a separate subspecies, *P.l. somaliensis*. On the basis of morphological characteristics, it was even speculated that the L. kept in the zoo in Addis Abäba may descend from the extinct Barbary L. (*P.l. leo* [*P.l. berberisca*]) from northern Africa (Melaku Tefera 2003). However, most of the subspecies listed above are debatable (Dubach 2005), and genetic evidence, based on mitochondrial DNA, suggests that modern L. may currently consist of only three geographic populations: north African–Asian, southern African and middle African. Ethiopian L. belong to the middle African group, and are closely related to L. from central Africa and Sudan; nor, most likely, do they represent a particular subspecies (Barnett et al. 2006a, b).

L. have become increasingly endangered in the wild, and they now face rapid population decrease and local extinction caused by human activity (Nowell – Jackson 1996). They have been extirpated from Djibouti and Eritrea within the second half of the last century, their numbers have dropped to less than 1,500 in Ethiopia and less than 250 in Somalia (Bauer – Van der Merwe 2002; Chardonnet 2002). Within the region, L. are mainly confined to protected areas.

Dietmar Zinner

Lions in Ethiopian culture

L. have been of high cultural importance for Ethiopia, and used to be widely spread. Their massive presence was noted by 16th- and 17th-cent. travellers (CrawItin 143; BeckHuntAlvar 513; Lockhart 1984:59, 119). However, extensive ↗hunting and ecological changes have limited their distribution area to the south-west of the country (Pankhurst 1964:244–47). The New York-based Wildlife Conservation Society concluded, in 2005, that L. had vanished from 82 % of their former areas. Owing to diminishing of uncultivated land and continuous poaching, the population of wild L. in Ethiopia is highly at danger. Their number is estimated at about a 1,000 individuals living in ↗National Parks (s. EAE vol. 5).

Lion hunting

L.-hunting was a widespread, and highly regarded, occupation. The cultural motivation was usually to demonstrate bravery and attain trophies; sometimes, however, it was caused by necessity, when communities confronted with particularly ferocious L., demanded their elimination.

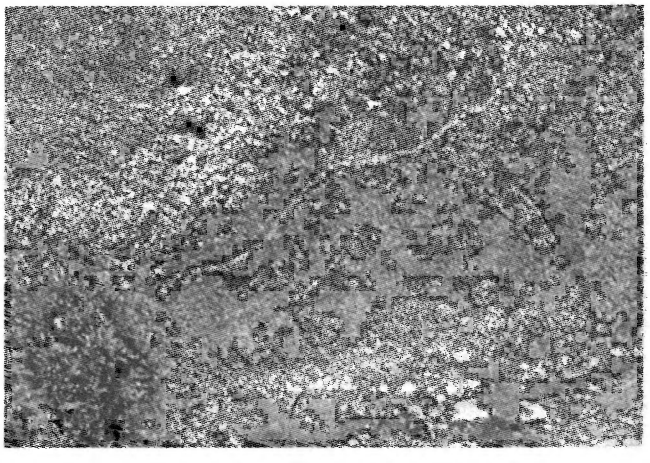
The most craved for hunting trophy was L. skin. It long formed part of military dressing, serving as headdress (*anfarro*) as well as ↗*lämd*, and is reported to have been worn by the noblest (BeckHuntAlvar 116, 128, 269; Whiteway 1902:18). Traditionally, L. and their skins are both items of imperial tribute (e.g., from Gurage and Təgray in the 16th and 17th cent.; s. Whiteway 1902:232; BeckHuntAlm 94).

Hunters would dig a hole or ditch, into which the L. would be driven, and fall, prior to being speared to death (BeckHuntAlm 51; Lockhart 1984:163, 165; Wylde 1901:451ff.). Monarchs honoured the successful hunters, e.g., the 18th-cent. *aṣe* Yosṭos presented two ivory bracelets to the killer of a L., ↗elephant or rhinoceros (BruNile vol. 2, 542). They also undertook organized hunts, *aṣe* Iyoʾas on one occasion in 1754 killing a large L. (GuiIyas 159). In early 19th-cent. Təgray, L.-killers decorated themselves with earrings, or a small stud in the right ear (Pearce 1831:1, 225; Vivian 1901:143; ↗Meritorious complex). The killing of a L. was reported to be as honourable as that of four men (Plowden 1868:62).

The increasing diffusion of improved ↗firearms in the 19th cent. resulted in the rapid depredation of L., beginning in the north and spreading inexorably southwards. While L. were still abundant in ↗Wäğğärat in the early 19th cent. (SalTrav 489), and extensively hunted in ↗Wälqayt during the 1840s by the French scientific mission (LefAbyss vol. 2, part 2, 35), *aṣe* Yoḥannəs IV's envoy to Britain, ↗Mərčа Wärqe, in 1884 mentioned the strenuous efforts to maintain the population of "L. and other beasts" (*The Globe*, 27 August 1884). Wellby (1901:117), Vivian (1901:146) and Wylde (1901:484) all testify that L. had become very rare in central Ethiopia, formerly abundant. Extensive hunting, largely by European sportsmen, was by then taking place in the Somali area.

Lions as symbol of bravery

The L. was long associated with bravery, the term *anbäsa* being used to refer to a courageous and successful person (also in modern usage). Already in the land charters of the emperors Zärʾa Yaʿəqob and Ləbnä Dəngəl, "(noble)men at arms" are referred to by this word (CRAxum nos. 16, 30, 31, 33, 38; BeckHuntAlvar 142 n. 5), conveying indeed the same meaning as Epigraphic South Arabian *ʾsʿd* (Conti Rossini 1910). L. also featured in trials of strength and courage. In the 16th-cent. traditional ↗coronation ceremony at Aksum, the ascending emperor would strike at a L. (BeckHuntAlm 95). In the 18th cent., a large open space existed in Gondär in which L. were freed to attack and kill sundry bulls for the entertainment of the dignitaries and populace alike. On one occasion an Armenian gladiator called Stefan volunteered, and killed a L. with a knife (Thovmadjian, quoted in Pankhurst 1982:88f.).



Relief showing a lioness, Gobədra, near Aksum; photo 1960s, courtesy of Mike Metras

Lions in arts

The carving of a lioness on the rock at ↗Gobədra, as well as the possibly contemporary sculpted L. at ↗Kombolča bear witness to the importance of this animal already in the ↗Aksumite period (DAE II, 73f.; Pankhurst 1955:94; GerKir^2 25, pl. 8ff.). Noted in the 16th cent. by Alvares, the remains of stone gargoyles, or water-spouts, representing L., also at ↗Aksum, date back to the early Christian era (BeckHuntAlvar 152f., 177; MHAksum 20).

Miraculously tamed lions; from a ms. of the *Tä'ammərä Maryam*, fol. 51r, 18th cent., monastery of Tägug^{w}a Yoḥannəs Wäldä Näg^{w}ädg^{w}ad, Tämben; photo 2004, courtesy of Michael Gervers

L. were much depicted in traditional art (ChojPaint 551). They decorated the palace of *ətege* Məntəwwab (↗Bərhan Mogäsa) at ↗Q^{w}əsq^{w}am (Rohlfs 1883, pls.). A frequent motif was the illustration of an episode from the life of ↗Samu'el of Waldəbba, one of the most famous Ethiopian ↗saints, known for taming wild animals – an indication of the role that L. had made its way in Ethiopic ↗hagiography.

Lions as royal symbol

L. were long regarded as symbols of kingship (↗Kingship, divine; Monarchy [s. EAE vol. 5]). In the 15th cent., *aṣe* Zär'a Ya^{c}əqob had a **ቤት፡ አንበሳ** (*bet anbäsa*, 'L. house') at his capital, ↗Däbrä Bərhan (PerrZarY 24). In the 16th cent. there was also one at Aksum; and *aṣe* Ləbnä Dəngəl, who kept L. at his royal camp in Šäwa, was invariably preceded by four L. when travelling (BeckHuntAlvar 153, 324, 337, 442). The palace at ↗Gondär likewise, later, had an *anbäsa bet* or *bet anbäsa* (or *ǧan täkkäl*) where L. were kept (GuiIohan 63, 320). One of the Gondärine royal regiments also bore that name (ibid. and 346; BruNile vol. 3, 310). *Anbäsa bet*, and so *anbäsa mädäb*, also styled "kings' fixtures" within the Gondärine palace compound (GuiDic 465; KaneDic 1220; DTWDic 113).

The Biblical L. of Judah (**አንበሳ፡ ዘእምነገደ፡ ይሁዳ**, *anbäsa zä'əmnägädä Yəhuda*, 'Lion from the tribe of Judah') held a uniquely important place in Ethiopian symbolism. Widely adopted as the symbol of the Ethiopian state and ↗monarchy, it had its basis in Rev 5:5: "… one of the elders said to me; 'Do not weep; for the Lion from the tribe of Judah, the Root of David, has won the right to open the scroll and break its seven seals'". This passage – which had acquired magical value since late antique times (Conti Rossini 1939:6ff.) – was considered relevant to Ethiopia for two reasons: 1) the L. was regarded as a symbol of power in general, and of the Ethiopian monarchy in particular; 2) the Ethiopian ruling dynasty, since at least the time of the ↗*Kəbrä nägäśt*, claimed descent from King ↗Solomon and the Queen of Sheba (↗Makədda), i.e. the "root of David". The concept of Judah being the royal tribe was also affirmed in other Biblical passages: most notably Gen 49:10, "The sceptre shall not depart from Judah …".

The earliest reference to the L. of Judah can be found in the Chronicle of *aṣe* ↗Minas, "terrible Lion of the tribe of Judah, the root of David" (Esteves Pereira 1888:41); in the ↗*Sənkəssar*, *aṣe* ↗Tewodros I (d. 1412) is also called "son of the L." (s. GuiSyn I, 696; cp. Conti Rossini 1939:2ff. and n. 16). The L. of Judah as the symbol of the Ethiopian monarchy appears also in European sources, the first apparently being Ortelius's map (Antwerp 1570), which depicts a L. rampant, facing right, holding a Latin ↗cross. The design bears the insignia "Titulus & Insignia Presbiteri Io(hann)is." i.e. "Title and Insignia of ↗Prester John", and the name of the Ethiopian emperor David, i.e. Ləbnä Dəngəl, who had died 30 years earlier.

The Lion of Judah on the Great Seal of *aṣe* Mənilək II, late 19th cent.; de Salviac 1900:65

Later foreign representations of the L. of Judah found their way into the works of ↗Almeida, ↗Ludolf, ↗Telles and others. Some showed a L. rampant, facing left; others, passant, facing right, with a type of Lorraine cross. The one in Ludolf's *New History of Ethiopia* bore the words "Vicit Leo de Tribu Juda" ('The L. of Judah conquered'), the Gəᶜəz phrase (Rubenson 1965:79), and the words "Insignia Regis Regum Aethiopiae" ('Insignia of the King of Kings of Ethiopia'). Ludolf summed up the prevailing European view: "The king's seal, which they use on sealing their Letters, is a Lion holding a Cross with the motto: 'The Lion of the Tribe of Judah has won'" (Rubenson 1965:75–85).

The first extant L. of Judah ↗seal actually known to have been employed in Ethiopia is on a letter from *aṣe* ↗Yoḥannəs I reproduced by ↗Prutky, who visited Gondär in 1752. This seal bore an indistinctly crowned L. rampant facing right, with a large cross. Written in Arabic, without any specific reference to the L. of Judah, it bore the motto: "Sulṭān Sagad [i.e. Iyasu I], son of Alāf Sagad [i.e. Yoḥannəs I], descendant of Solomon, son of David" (Pankhurst 1986:97–417).

In the 19th cent., L. of Judah seals, once more without written mention of Judah, were used by the emperors ↗Śahlä Dəngəl and ↗Yoḥannəs III and by *däğğazmač* ↗Arʾaya Śəllase Dəmṣu and ↗Wəbe Ḫaylä Maryam. A much larger seal, with a crowned L. passant facing right, and bearing a motto about the Conquering L. of Judah in Arabic and Gəᶜəz, was used by *aṣe* ↗Tewodros II, and served as the prototype for the seals of ↗Täklä Giyorgis and ↗Yoḥannəs IV. The seals of *aṣe* ↗Mənilək II, *ətege* Zäwditu and *aṣe* Ḫaylä Śəllase, all of which omitted the use of Arabic, differed from the above in that the L. of. Judah carried a tall cross in its right paw (RubActa I, XIX–XX, II, XIV–V, III, XIV–XV). This design was also used on coins and postage ↗stamps of the period, and two representations of the L. of Judah, likewise, adorned *ras* Mäkʷännən's early 20th-cent. gates of ↗Harär (Vivian 1901:113f.; Rey 1923:298).

The concept of the L. of Judah evolved further during the reign of Mənilək II (Conti Rossini 1939:1f., 4ff.), who began many of his letters with the unprecedented phrase: "The Lion of the Tribe of Judah has conquered. Mənilək II, Elect of God, King of Kings of Ethiopia". Ḫaylä Śəllase's Penal Code of 1930 similarly opened with the words: "The Lion of the Tribe of Judah hath Prevailed", while the subsequent ↗*Nägarit Gazeṭa*, which began publication in 1942, bore the phrase "Conquering Lion of the Tribe of Judah" (Rubenson 1965:84f.; RubActa I, XIX–XX; II, XIV–V; III, XIV–XV).

Also with their depredation, live L., seen as an embodiment of the L. of Judah, were valued by Ethiopian monarchs. Tewodros kept several at his palace at Däbrä Tabor (thus inspiring at least four European engravings), but was obliged to poison these animals when food became scarce (RasTheo vol. 1, 148; Flad 1868:125f.; Pankhurst 1987:91ff.). Mənilək had a L.-cage at his Addis Abäba palace (Mérab 1922:22), and presented L. to persons he wished to honour, including the United States President Theodore Roosevelt (*The Washington Post*, 23 November 1905; Waldmeier 1886:42, 74), while *ləğ* Iyasu subsequently despatched two L. to the Austrian emperor. Zäwditu later kept L. in cages near the royal reception hall, and Ḫaylä Śəllase I, prior to the ↗Italian war 1935–36, had two rows of cages, as well as two L. that slept in front of the throne room (Rey 1923:147; Powell 1925:309; Farago 1935:23, 73, 86). After the Liberation, L. were housed at the Emperor's ↗Gännäta Ləᶜul Palace and then at the ↗Jubilee Palace – for the public, in a small L. cage.

A strong symbolic relation between kingship and L. (and ↗Leopards) also existed in ↗Meroë (Monneret de Villard 1942:138-42 and pl. i) as well as in several southern Ethiopian cultures. The king of ↗Yäm, for example, is said to have had three

tame L. living in a house at his residential hamlet in Angir (VSAe III, 338). In Čako (↗Šeko) only the king was permitted to own the skins of *felidae*. After a L. was killed, it was forbidden to touch its cadaver, as with the body of the king. Only the despised hunters and potters of the Bandu group could skin the dead animal, which had to be buried in a cave used as "cemetery" for *felidae*. The killer had to shave his head and bring the trophies to the king, who awarded him with hydromel. After that, the king had to stay in seclusion for four days. It was believed, that a deceased king would become a L. (VSAe III, 46f., 52).

Richard Pankhurst

Lion Cub

The L.C. was the organ of the Ethiopian Students' Society (E.S.S.) which was founded on 7 January 1947 in the United Kingdom. The maiden issue of L.C. came out on 27 July 1949, and announced that its task was to advance the aims of the Society by keeping "a lively interest among students in national literature, culture and general affairs" and by "fostering cultural relations with foreign students". Among the contributors to the maiden issue were ↗Ǝndalkačč̣äw Mäkʷännən, Śəyyum Səbḥat, and Richard Pankhurst.

During the period from July 1949 to January 1959, the journal had six editors: ↗Mängəśtu Lämma (for the July 1949 issue), Habtä Ab Bayru (for January 1951), Səbḥat Hablä Śəllase (for Spring and Winter issues of 1952), Asäffa Ṭəlahun (for Summer 1953 and Winter 1954), Bäräkätä Ab Habtä Śəllase (for Summer 1954), Bäyyänä Wäldä Gäbrəʾel (for November 1955) and S. Mässälä (for January 1959). These editors and the student officers of E.S.S. were later to hold important positions in government and among the Ethiopian community.

L.C. was not published regularly for various reasons. The most prominent problems were those of distribution and collecting revenue: the magazine was sent from London to different schools in Addis Abäba and to Ethiopian diasporas all over the world. The financial condition of the Society improved later due to donations received from its patron, Emperor Ḫaylä Śəllase I, from *ras* ↗Ǝmməru Ḫaylä Śəllase (then Ambassador in Washington) and Mr. Wright of the British Consulate in Harär, and the cooperation of representatives in Addis Abäba, Greece, Lebanon and the USA.

The "News in Brief" (later "News and Comments") section of L.C. provides ample informa-

tion about the activities of the E.S.S. in the United Kingdom: reports of its debates, the speeches and lectures delivered on various occasions, and information on the persons participating in these events.

L.C. is a useful source for the political, historical, developmental and scientific interests of Ethiopian students of the time in the United Kingdom. Modernization and Ethiopia's path to economic independence were the central topics. The problems of language standardization, the alphabet, terminology and translation also received a lively discussion.

A separate section (though short-lived), entitled "What they Say", aimed at reproducing "news and opinions on Ethiopia appearing in western publications".

L.C. contains contributions on literature and the arts in general, e.g., Mängəśtu Lämma's essays on Gəᶜəz ↗*qəne*; Afäwärq Täkle's short pieces about painting and dancing; book reviews etc. The journal also published Amharic poems by Mängəśtu Lämma, ↗Gäbrä Krəstos Dästa, Miliyon Nəqənnəq and several other authors. Short stories in English constitute an even greater share of literary works in L.C.

↗Student movement

Fekade Azeze

Liq

The term L. (ሊቅ, 'chief, senior; [church] scholar', pl. *liqawənt* or *liqanat*; contraction of Gəᶜəz adj. ልኂቅ *ləhiq* derived from the verb ልህቀ *ləhqä* 'grow [old]') generally signifies a person of authority, a senior in both the spiritual and secular spheres (though it may also be used to designate the senior among several persons of equal rank). It was used in Gəᶜəz to transpose the Greek prefixes ἀρχι- or πρωτο- ('head of', 'first', used also in Gr. ἀρχιπροφήτης, Coptic, cp. ⲁⲣⲭⲓⲡⲣⲟⲫⲏⲧⲏⲥ [Moses], Gəᶜəz *liqä näbiyat*). This pattern often appears in the Ethiopic Bible, e.g., *liqä kahənat*, 'archpriest' (cp. ἀρχιερεύς), *liqä mälaᵓəkt*, 'archangel' (cp. ἀρχάγγελος), and related contexts – *liqä ḥawaryat*, 'chief of the Apostles', *liqä sämaᶜətat*, 'chief of the martyrs' (in the sense of 'protomartyr', e.g., St. Stephen), etc.

The word L. was likewise combined with other nouns to produce titles or descriptions of a function, both ecclesiastic and secular. A number of titles formed with L. are known from different sources. In some cases, neither the precise function of these officials nor the durability of their offices are known; yet these titles help to form an idea concerning the structure of religious and secular institutions which existed in the Christian empire.

Some of the more ancient terms were known and may have been already in use during the Aksumite period. The 14th-cent. ↗*Kəbrä nägäśt* lists the "high officials", sent by Solomon as companions of ↗Mənilək I and representing the court and state structure thus inherited from the biblical ↗Israel: ↗*liqä kahənat* Azariah, *liqä diyaqonat* (cp. ↗*Diyaqon*) Elijah, *liqä ḫara* ('chief of the troops'), *liqä mäśbəᵓət* ('head of the army'), *liqä ḫara läᵓafras* ('chief of cavalry'), *liqä ḫara läᵓaggar* ('head of infantry'), etc. (BezKebr 44f. [text]). The ↗*Śərᶜatä mängəśt* includes a *liqä saf* (could be a shortening for *liqä asaf*, 'head of the singers' or for *liqä mäsafənt*, 'head of the nobles'; Varenbergh 1915/16:11 [text]) in the same list.

The land charters from the "Golden Gospel" of ↗Däbrä Libanos of Šəmäzana, ascribed to King ↗Lalibäla (s. CRDLib 187–91, nos. 6, 7) and possibly dating back as early as the 13th cent. (known through a 16th-cent. copy), attest the prominence of such titles as *liqä kahənat* and *liqä diyaqonat* (also in the forms *liqä kenot* and *liqä zəyaqonat*, cp. Kropp 2005:133f.) which retained their importance throughout the entire history of Ethiopia (cp. also CRAxum nos. 20, 24b, 28–37, 44; BeckHuntAlm 93). Another title to survive throughout the centuries is the Ethiopic term for the archbishop *liqä ṗaṗṗasat* (CRDLib no. 11, document ascribed to the 13th cent. and copied no later than 14th/15th cent.; ↗*Ṗaṗṗas*).

Most other functions listed in these ancient land charters, such as *liqä ᶜaqqabe dede* ('chief of the entrance guards'; CRDLib no. 6), *liqä bariya* ('chief of/over slaves'; ibid.), *liqä betä qäṭṭin* ('head of household, servants', cp. *liqä mänabərt*; ibid.), *liqä ḫadar* (or *ḫədar*, of unclear meaning, could be a type of military unit; nos. 6, 7), *liqä mäsänaqut* (or *mäsänqo*, 'head of ↗*mäsinqo*-players'; nos. 6, 7) have to a large part disappeared.

In the course of time, the term L. grew to be associated predominantly with a wide array of functions within the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC). The Chronicle of *aṣe* ↗Zärᵓa Yaᶜəqob reports that the King bestowed the title L. of ↗Aksum (*liqä Aksum*) on the head (*mämhər*) of a new monastic community

he founded there after his coronation (PerrZarY 52; DillmZarY 20), and endowed him with the land of Naʾəder. The *liqä Aksum* was supposed to be equal in rank with the ↗*nəburä əd* and be in charge of the night Canonical hours of ↗Aksum Ṣəyon (CRAxum 73 [text]; BeckHuntAlvar 557f.). The *liqä Aksum* was probably the official referred to by Alvares as "nebret [*nəburä əd*] of the monks" (cp. BeckHuntAlvar 557). The title is also mentioned in the land grants attached to the *Mäṣḥafä* ↗*Aksum*, by *aṣe* ↗Ləbnä Dəngəl (*liqä aksum abba* Səmᶜon, s. CRAxum no. 41, *liqä aksum* Ḥabtay, no. 43), ↗Susənyos (no. 60), up to *ras* ↗Wäldä Śəllase (no. 70).

As men of learning, the *liqawənt* played an important role in traditional ↗law and the judiciary (cp. GuiVoc 22f.). *Liqä däbtära* ('head of the ↗*däbtära*' [originally, those in Aksum Ṣəyon], attested at least for Zärʾa Yaᶜəqob's time; PerrZarY 29; DillmZarY 59ff.; CRAxum no. 27) was also one of the "four supreme judges" (cp. ↗*Daññа*; ↗*wämbär*), the others being *liqä aqäytat* (already listed in the 13th-cent. CRDLib nos. 6, 7; cp. CRAxum no. 70); *liqä maʾəməran* ('chief of the learned', CRAxum nos. 41f., 44; the same function is sometimes called *liqä ṭäbbäbt*, 'chief of the wise') and *liqä mäṣani* (*mäṣane* or *mäṭani*, 'master of measure', cp. also ↗*mäčäne*). We know names of at least two consecutive *liqä mäṣani* from Ləbnä Dəngəl's reign, Särgis (CRAxum no. 30) and Gərma Zan (ibid. docs. 35, 41f., 44; s. further doc. 57; cp. PerrZarY 33, 38 [text]). Also the *liqä aʾərug* ('head of the elders', CRAxum doc. III.14, cp. p. 103) could be called to be a judge in a civil case. *Liqä däbtära* and *liqä maʾəməran* are listed in the *Śərᶜatä mängəśt* among the very first official functions in the Solomonic administration (Varenbergh 1915/16:12 [text]); the two, together with the ↗*ṣərag masäre* (master of the ceremonies), were in charge of crowning the queen (ibid. 16). The *liqä däbtära* was also involved in the ceremonies of royal mourning and the church celebrations. The *liqä mäṭani* had important functions at the coronation in Aksum and also in the appointment of such high officials as, e.g., ↗*däğğazmač* (ibid. 16, 18f.). In later practice, he was also the one to assist the ↗*gäbäz* during banquets, assuming the responsibility of welcoming guests.

Among the functions described with the help of L.-compounds was also ↗*liqä mäkʷas* (cp. CRAxum no. 70; Kropp 2005:135; ZanLitTheo 18, 30, 43). For 32 years *liqä mäkʷänənt* was a position of high juridical power (RicEnbYoh v, 129).

In addition, there are such ecclesiastic titles as *liqä maḫbär* ('head of [monastic] community', CRAxum no. 24b); *liqä märaḫt* (possibly the same as ↗*märigeta*; ibid. nos. 30, 41); *liqä däbr* ('head of a *däbr*', no. 84, possibly equivalent to *rəʾəsä däbr*), *liqä ardəʾət* (also *mäggabe ardəʾət*, s. ↗*Mäggabi*; e.g., RicEnbYoh III, 76 and n. 98), or *liqä mäzämmərаn* ('head of cantors [of the church choir]').

In the context of traditional church ↗education, the honorary title of L. is given to those who have reached its highest degrees and become recognized experts, among others, in the following works (apart from the ↗*Qəddase*, the ↗Old and the ↗New Testaments): ↗*Qerəllos*, *Afäwärq* (writings of ↗John Chrysostom), ↗*Haymanotä Abäw*, ↗*Fəṭḥa nägäśt*, ↗*Abušäkər* and ↗*Märḥa ᶜəwwur*. The term *liqawənt* can also be used as collective title referring to the writings of the Church Fathers (cp. the term *mäggabe liqawənt*, 'expert in the interpretation of the [books of] Church Fathers', i.e. in patristics).

Yäliqawənt gubaʾe ('the scholars' council') is the supreme censorship body of the EOTC. Today under the Holy Synod, it is responsible for the revision of translations into Gəᶜəz and controlling the original publications, ensuring the exact adherence to Church doctrine; any book appearing under the auspices of the Church must be approved by the council. It is also responsible for settling religious disputes interpreting Canon law. The recently created body traces its roots back to the times of *aṣe* ↗Śärṣä Dəngəl, when an assembly of the "doctors of the Church" already existed (s. Conti Rossini 1893:805).

Finally, the term L. is part of some other honorary titles bestowed on the heads of important churches or monasteries. The title *liqä liqawənt* ('head of the scholars', used already in the Life of ↗ᶜƎnbaqom as an equivalent to *qāḍī al-quḍāt*) was given to the head of the Bäʾata Maryam church, built by order of Zäwditu as a mausoleum for ↗Mənilək II, and to *aläqa* Mänkər Mäkʷännən of Mädḫane ᶜAläm in Gondär by *abunä* ↗Täklä Haymanot for excelling in his profession. The abbot of ↗Däbrä Bərhan Śəllase of Gondär bears the traditional title *liqä bərhanat* ('head of lights'). *Liqä səlṭanat* ('chief of the authorities') is the title coined for the head of ↗Qəddəst Śəllase cathedral in Addis Abäba – formerly a member of the imperial cabinet (↗Government), he has assumed most of the power wielded by the ↗*əččäge*.

Liqä kahənat

L.k. (**ሊቀ፡ ካህናት**, 'arch-priest', pl. **ሊቃነ፡ ካህናት**, *liqanä kahənat*) is a term which has been known in Ethiopia at least since the time of the translation of the Bible, in connection with the personality of Aaron and other chief priests of Israel; further on, also in the O.T. sense, in connection with Azariah, son of Zadok, in ↗Mənilək I's entourage in the 14th-cent. ↗*Kəbrä nägäśt* (BezKebr 44 [text]). Two land charters of the "Golden Gospels" of ↗Däbrä Libanos of Šəmäzana, ascribed to the 12th/13th-cent. king Lalibäla, contain the term *liqä kenot*, which may be a colloquial or corrupted form of L.k. (*liqä kenot* Zäʾamlay; s. CRDLib nos. 6, 7).

Certainly, the ecclesiastical office of L.k. existed by the second half of the 14th cent., after the "restoration" of the ↗Solomonic dynasty. References to the L.k. appear in the texts that comprise the Ethiopic ↗*Senodos*, compiled around that time: e.g., the theological interpretation of the L.k.'s position within the ecclesiastic hierarchy (Jesus Christ, *qädami qäsis*, 'the chief priest', is the L.k. appointed by God, but he does not grant the priesthood to everyone believing in him, cp. Horner 1904:77 [text]; BauSen 62 [text]); and the detailed and practical instructions concerning the L.k.'s duties (BauSen 29 [text], no. 48) which endow him with a specific function and jurisdiction of controlling the clergy, i.e. different from a L.k. – "head of priests" – of a church with many ministers (e.g., BauSen 195f. [text], no. 29).

Hagiographic sources tell that L.k. were formally appointed by the metropolitan (possibly, after the candidates were proposed locally and approved by the monarch). They were high-ranking ecclesiastics, recruited apparently from both monks and secular clergy (cp. ↗*kəhnät*). The L.k. were mainly supervisors of the latter's discipline and behaviour and proper execution of their duties, and had to deal with, or report to the metropolitan (↗*Pappas*) about their transgressions and misdeeds (cp. also BTafA 938). The Vita of *abba* ↗Filəppos of ↗Däbrä Libanos of Šäwa preserves a rare description of a function executed by the L.k.: selecting the candidates seeking ↗ordination and introducing them to the metropolitan (Turaiev 1905:199 [text]; cp. CerDLib I, 244f.).

From the time of *aṣe* Zärʾa Yaʿəqob we know that there were quite a number of L.k. in Ethiopia (whose authority the Emperor once wanted to reduce, PerZarY 101; cp. also Conti Rossini 1943:155f., 163f.). L.k. were heads of important churches (cp. ↗*Aläqa*) as in the cases of Märṭulä Mikaʾel and of Aṣädä Mikaʾel (s. PerZarY 91f.). We also know of some other L.k., such as Täklä Mikaʾel of Ǝnda Abba Gärima (?) and Däbrä Mikaʾel (CerMaria 117f.); Minas and Gäbrä Iyäsus of ↗Däbrä Nägʷädgʷad (ibid.; Kropp 2005:199 [text]; possibly the same Gäbrä Iyäsus mentioned in PerZarY 29; s. also DerDom 240). Francisco ↗Alvares tells of L.k. in churches of Angot and elsewhere (BeckHuntAlvar 199, 203). It is not quite clear whether they were "heads of the priests" in the narrow sense of the term or performed other broader (judicial) functions; probably, the first type of prerogatives could develop into the second one, with the authority of a L.k. expanding over the clergy of other churches in their respective regions.

Apparently, there were L.k. linked to the ↗Lalibäla churches, in ↗Lasta: the 16th-cent. Ethiopian messenger to Europe, ↗Ṣägga Zäʾab, was a L.k. of ↗Bugna (Bəgʷəna) (for a document mentioning "L.k. Gərma ... and L.k. of Wärwär Qäläm" together with Bädəl Ǧan, the *ras* of Bəgʷəna, s. Conti Rossini 1944–45:28, cp. CRAxum no. 29). Under *aṣe* Gälawdewos, the head of the major church of ↗Tädbabä Maryam

in Amḥara Sayənt (placed under the administration of Däbrä Libanos of Šäwa) was a L.k. holding in addition the honorary title of *bäträ yark* (from Arab. *baṭriyark*, 'patriarch'; ConzGal 53f.). A tradition of Däbrä Libanos of Šäwa claimed that, due to the merits of *abunä* ↗Täklä Haymanot, this monastery had the right to reserve the office of L.k. for its monks (Conti Rossini 1922:306 [text], 310 [tr.]). Indeed, some of the later heads of the "house of Täklä Haymanot" (↗*Ǝṣṣäge*) are known to have been L.k., or L.k. to have been their deputies (cp. GuiVoc 22). However, the office was also held by the representatives of ↗Däbrä Ḥayq Ǝsṭifanos (at ↗Mäkanä Śəllase; s. BeckHuntAlvar 378; DerDom 240) and other important monasteries or churches as early as the 16th cent.

There is at least one example when the title of L.k. was taken by a laic ruler, in the late 17th cent. (cp. "*azzaž* of Bägemdər ... L.k. of Wärwär", GuiIohan 145 [text]). In the 18th–19th cent. L.k. was most probably more an honorary title than an acting office. However, a revival of the office came with the rise of Šäwa and the subsequent creation of a centralized Ethiopia. In the first half of the 19th cent., *aläqa* Wäldä Kiros was L.k. of Šäwa (AWTarik 94; GueCopMen 66); later, under *märəd azmač* ↗Ḫaylä Mikaʾel, the L.k. of Šäwa was *aläqa* Kidanä Wäld who resided in ↗Ǝnnäwari (GueCopMen 112); in 1893, the office was overtaken by ↗Ǝsṭifanos.

In the 20th cent., there was for a while "a L.k. of Ethiopia" (MahZekr 653f.), assisted by his own "chancellary" – *betä kəhnät*. Since the number of clergy and churches was growing, so did the number of L.k. and their assistants, until the *betä kəhnät*, headed by a L.k., became a parallel institution to the civil administration at the level of *wäräda*.

Denis Nosnitsin

Liqä mäkʷas

L.m. (ሊቀ፡ መኳስ, 'chief of *mäkʷas*') is a historical court title. Its etymology is not altogether clear. It could be a contracted pl. of Gəʿəz መኵሳይ, መኵሲ (*mäkʷəsəy*, *mäkʷəsi* [Acc. *mäkʷəse*]), 'homonym' (cp. Amh. *mokše*), from ኰሰየ (*kʷäsäyä*, 'have the same name'); however, this could be a later etymological reinterpretation. In any case, the title's attributions underwent considerable changes over time, from the head of the muleteers to an official close to the monarch. The earliest mention of L.m. (*liqä mähʷašo*) can be found in the text entitled *Śərʿatä gəbər* ('Rule of the banquet/tribute'). As established by ↗ʿAmdä Ṣəyon I, ten L.m., helped by ten *ḫədug*-assistants, supervised breeding, selection, dressage, grazing and loading of mules. They controlled the activity of the itinerant royal camp, giving orders to, among others, the ↗*aqetzär*, the ↗*däggafi*, and the ↗*mäčäne* (Kropp 1988:84ff.).

Although vital throughout the 15th and 16th cent., the royal camp (↗*Kätäma*) being always on the move, the function of L.m. was probably too mundane to be mentioned in the royal chronicles. It is only in the history of *aṣe* ↗Iyasu I that the title reappears, with a new meaning: the official leading the way for the *aṣe* during public appearances; the only one allowed to be physically close to the *aṣe*. The rule (*śərʿat*) forbids the L.m. from girding up his clothes (GuiIohan 248 [tr.]). The L.m. also went ahead of the ruler on the battlefield (GuiIohan 296) and, at the end of the 18th cent., carried his ceremonial silver weapons after the battle (Bruce 1791:559f.). In court, the L.m. spoke after the ↗*šaläqa* and the *ṣağ* ↗*azzaž*, though before all the other dignitaries, governors of provinces and prelates (GuiIohan 151, confirmed in GuiIohan 313 and, with minor differences, by Bruce 1791:559f.). A L.m. with a mule attended to the ↗coronation ceremony (s. the ms. quoted in DillmZarY 18, n. 1).

During the Gondärine period, some L.m. were involved – or accused of being involved – in

The *liqä mäkʷas* Abbäbä (left) at Mənilək II's court; photo early 20th cent., courtesy of Peter the Great Museum of Anthropology and Ethnography of the Russian Academy of Sciences, St. Petersburg

plots against the monarchs, a fact testifying to their potential involvement in political intrigue. This was, for example, the case with *liqä mäkʷas* Gäbrä Ləʿul. He succeeded *liqä mäkʷas* Mammo at the very beginning of *aṣe* Bäkaffa's reign in 1721 (BegCron 108) and accompanied the latter on the battlefield in 1723 (GuiIohan 296). Soon afterwards he was commissioned to bring a new *əčč̌äge* from ↗Azäzo to Gondär (GuiIohan 307). A version of the "short chronicles" states that, during the first two years of his reign (1730-32), *aṣe* ↗Iyasu II had *liqä mäkʷas* Gäbrä Ləʿul imprisoned for rebellion. The first versions of the "short chronicles" actually bear witness to this *damnatio memoriae* and replace Gäbrä Ləʿul in the account with *azzaž* Bənyam, another important personage of Bäkaffa's reign (BassÉt 346; DombrChr 272, 275f.). During *aṣe* ↗Iyasu II's reign, the L.m. Wälwağo betrayed the monarch by joining the rebellion of ↗Tänśe Mammo, ca. 1731 (GuiIyas 59).

From that time and until the end of Iyoʾas I's reign in 1769, the L.m. seem to rotate more quickly (this impression, however, may also result from the increasing number of details provided by the sources). The Chronicle of Iyoʾas records the careers of five L.m. within ten years and shows how becoming a L.m. could be a step on the way to higher positions. During the late 18th cent., when the monarchs themselves were little more than puppets, the L.m. became an empty requirement of court etiquette.

Some 19th-cent. local rulers are known to have had a L.m. This may have also been the case previously, but was not recorded in written sources. These L.m. might have retained some of the original functions since d'Abbadie (1881:102) defines L.m. as "an officer who tries mules and horses meant for the personal use of the king" (same definition in GuiVoc 96). *Ras* ↗Wäldä Śəllase of Təgray had a L.m. (*liqä mänkʷäs*, CRAxum doc. 70 = ms. BN d'Abbadie 152, fol. 67v).

Aṣe ↗Tewodros II, perhaps in order to outbid local rulers, had four L.m. Among them was John ↗Bell, who, according to the account of Krapf (1858 vol. 2, 352) who met him in April 1855, wore the same clothes as Tewodros on the battlefield to confuse the enemy. For this dangerous undertaking, Bell received large grants of land. This is the first mention of a L.m. as the "king's double". This understanding, repeated by foreign travellers (e.g., Le Roux 1901:246), was also supported by the (re?)interpretation of the etymology of the term (from *kʷäsäyä*).

Aṣe ↗Yoḥannəs IV also had four L.m. who were present at his coronation (BTafY 127). In 1876, *liqä mäkʷas* Wärqu acted as his messenger to the Egyptian authorities (ZewYohan 77ff.). From then on, whilst some L.m. were nothing more than representative officials, reinforcing the kingship by their mere presence, others seized the opportunity to participate more actively in politics, whether as an emissary or a military leader.

Aṣe ↗Mənilək II nominated his first L.m. for his coronation as *nəguś* of Šäwa, in 1878. During his coronation as *nəguśä nägäśt* in 1889 two L.m. led his way; they would later flank him during official ceremonies (GueCopMen 160, 270ff., 339). *Aṣe* ↗Ḫaylä Śəllase I also had L.m., among them Aṣnaf Sägäd (d. 1918) and ↗Kätäma Yəfru. During the 20th cent., the *nəguśä nägäśt* could have two L.m. while a *nəguś* could only appoint one. Richly dressed, L.m. flanked their sovereign during ceremonies, and took care of his agenda. A L.m. could be promoted to a ↗*däğğazmač* (MahZekr).

The ↗*azmari*, particularly around Gondär, use the term L.m.; the young ones as a term of derision, the old ones as a term of respect remembering that it was the way the most famous amongst them were called, those who could sing

in front of dignitaries. An oral tradition honours in particular *liqä mäkʷas* Märša, who sang for the greatest but then lost his patrons. Born in the region of Ṭägäde in Wälqayt he began to sing for *däğğazmač* Wəbe Ḫaylä Maryam, who gave him the title of L.m., and followed him until his defeat by Tewodros at the battle of Däräsge in 1855. The *azmari* tell that ten years later he was singing for ↗Ṭəso Gobäze, against his main opponent *wag šum* Gobäze (*aṣe* ↗Täklä Giyorgis II), until the final confrontation in 1865 when Ṭəso Gobäze died. The older *azmari* frequently use the term L.m. to define musicians who played for powerful people, which does not mean these were the actual bearers of the title.

Anaïs Wion – Anne Bolay

Liqanos

Abba (or *abunä*) L. (ሊቃኖስ, nicknamed ኮኮበ፡ ገዳም, *Kokäbä gädam*, 'Star of the Desert', like St. ↗Antony) was one of the ↗Nine Saints, a half-legendary group of non-Ethiopian monks who came to the kingdom of ↗Aksum in the 5th/6th cent.

The story of L.'s life is known from his Vita, which is nearly devoid of historical information, and to a better extent from the ↗hagiographies of his fellow saints. According to these, L. was a native of Qʷəsṭəntəya, i.e. Constantinople (not mentioned in his Vita), and came to Ethiopia "from Rom and from Egypt" with the Nine Saints under King ↗Ǝllä ᶜAmida (II). After L. prayed for a night "in the sanctuary", before the Tablets of Moses (↗Aksum Ṣəyon's Ǝnda Ṣəllat?), the angel revealed to him his destination: Däbrä Qʷänaṣəl (lit. 'Mount of the Foxes'), on top of a hill near ↗Aksum, opposite to that of Ǝnda Abba ↗Ṗänṭälewon. There he had his cell made, and there he led an ascetic life. In particular, an excerpt from his Vita – passed into the Vita of Ṗänṭälewon (Conti Rossini 1904:45) – has it that L. passed away after 21 years, "during the reign of ↗Kaleb, before he waged war to the land of Saba, on the 28th of the month of *Ḫədar*, (and) was buried there". He is also commemorated on this day in the ↗*Sənkəssar* (ColSyn VIII, 390f.).

A tentative Syriac etymology of L.'s name was proposed by Guidi (1888:33 n. 1; cp. Conti Rossini 1897:140, and CRStor 161), who compared it with the name of the Syrian monastery of Liqinyâ. The issue has been further discussed in the context of the ↗Syrian influences on Aksumite Ethiopia by Marrassini (1990:38, 1999:328), with reference, however, to such names as *Likianós*, *Likínios* and *Loukanós* in Greek papyri from Egypt.

The only specific source on L. is the unpublished *Gädlä Liqanos*, attested in three copies: two from Däbrä Qʷänaṣəl, one from Aksum Ṣəyon. These manuscripts, dating to the reign of *aṣe* ↗Yoḥannəs IV, include a colophon according to which the *Gädl* was written under Gäbrä Mäsqäl "in the 114th year of mercy", was lost in the time of *aṣe* Ləbnä Dəngəl during Grañ's (↗Aḥmad b. Ibrāhīm al-Ġāzī) ravages, and was then recovered under *aṣe* Yoḥannəs IV by monks of Däbrä Qʷänaṣəl, and copied again. Whatever the credibility of the colophon, aimed at confirming the antiquity of the text, the *Gädl* is in fact more recent, as shown, e.g., by a quotation from the 16th-cent. ↗*Haymanotä abäw*.

In the *Gädl* of L. a segment of text appears that is common to the Vita of *abba* Ṗänṭälewon (Brita in preparation), possibly on account of the proximity of their respective dwelling places.

The *Gädl* of L. differs in style, language and content from the Nine Saints' Vitae hitherto known. It seems to have an intellectual bias for theological digressions rather than the actual story of L. The narrative swarms with quotations from the *Mäṣḥafä* ↗*kidan*, *Haymanotä abäw*, ↗*Qərəllos*, *Mäṣḥafä* ↗*bərhan*, ↗*Senodos*, *Zena abäw*, *Mar Yəsḥaq* (↗Isaac of Nineveh), the Book of ↗Enoch. Some of the qotations are loosely identified as being from Abba Yoḥannəs Metropolitan of Alexandria, Gorgoryos Gäbare Mänkərat (Gregory the Thaumaturg), Abba Kirakos (cp. ↗Cyriacus of Antioch), Mänase the

Prophet. The author(s) speak(s) at length of O.T. and N.T. figures, but very little of L.'s origins, his parents, childhood etc., and also omits other common hagiographic themes.

The *Gädl* contains a remarkable miracle: once, while L. was praying, all his fingers shone with light. As recently indicated by Beylot (2005:134ff.), the same miracle, also found in a number of Ethiopic Vitae, has parallels in Arabic texts of Christian Egyptian and Islamic Persian origin, as well as in Latin hagiographies (Delahaye 1955:48). The greater part of the miracles (↗*Tä'ammər*) of L. attached to the *Gädl* are posthumous. One of them also involves an Ethiopian "Yoḥannəs King of Kings".

At least two ↗*mälkə'*, in mss. BritLib Orient. 577, fol. 53v (WrBriMus 128), and Paris, BN Éth. 350, fols. 40r-48v, both of the 18th cent. (GrébGriaule II, 60), a few ↗hymns, from the Littmann collection (Kamil 1936:22f., no. 18), and a fragment of the ↗*Wazema*, from Däbrä Qʷänaṣəl, all dedicated to L., are known.

Abba Liqanos with burning fingers; mural on cloth, 20th cent., Abba Liqanos church near Aksum; photo 2006, courtesy of Michael Gervers

The oldest witness to *abba* L.'s cult seems to be his own church (known as Abba Liqanos), to the north-east of Aksum, within walking distance (half an hour) of the town, which overlooks the so-called Abba Liqanos plateau (↗Ənda Kaleb standing a few hundred meters north-east). The church, which is the burial place of L., was mentioned by ↗Alvares as a remarkable place of pilgrimage in ca. 1520 (BeckHuntAlvar 161f.). The same building was then briefly described – as being rectangular and possibly standing on an Aksumite sanctuary – by the ↗Deutsche Aksum-Expedition in 1906 (DAE III, 67). A mention of Abba Liqanos church is found in the Vita of Yared (Conti Rossini 1904:23).

Antonella Brita

Lishin, Konstantin

L. (Konstantin Nikolaevič Lišin, b. 1851, d. 16 January 1906, Addis Abäba) was a Russian diplomat. He served in the Russian diplomatic missions in Turkey, was consul in Beirut and general consul in Adrianople, and became the first head of the Russian diplomatic mission in Ethiopia.

In 1902, the Russian government decided to establish a permanent diplomatic mission in Addis Abäba, and L. was appointed its minister plenipotentiary. However, he was instructed that Ethiopia should be primarily considered as a means of influencing European countries in favour of ↗Russia's interests. Besides, L. was to seek an

alliance with *ətege* ↗Ṭaytu, known for her anti-European stance, to deter *aṣe* ↗Mənilək II from taking unfavourable steps in his relations with foreign countries, as well as continue consultations with him concerning the proposal of a Russian–Ethiopian military treaty.

On 12 March 1903 the Russian diplomatic mission was received with honours in Addis Abäba. Soon L. was approached by *abunä* ↗Matewos, who sought a response to his the request for a loan submitted through ↗Vlasov, but L. was not able to say anything definite (Hrenkov 1998:432ff.). At the behest of the French foreign minister Delcassé, L. spoke in favour of the agreement according to which the Djibouti–Addis Abäba ↗Railway was to become a French concession (as a result, the French were allowed to continue the construction of the railway). In August 1903 Mənilək asked for Russian engineers to be sent to ↗Wälläga to examine veins of ↗gold (Hrenkov 1998:438) which were supposed to be exploited by the Ethiopian government, and in 1904 the area was investigated by the expedition led by N. Kurmakov. Mənilək suggested a Russian concession of some 40 km² in the most promising area. It was taken over by A. Orlov and later bought by General V. Davydov, yet all efforts to find anyone in Russia interested in exploiting it remained fruitless. L. did not reach a trade agreement with Ethiopia either; his projects concerning the establishment of a Russian–Ethiopian bank and supplies of Russian equipment and goods were not supported by the government. Engaged in a difficult war with ↗Japan (February 1904–September 1905), Russia was not ready to make any substantial investment in Ethiopian affairs.

In October 1904 Mənilək donated 100,000 Francs to the Russian Red Cross, for the wounded in the Russo–Japanese war, and assured L. that Ethiopians would pray for a Russian victory over "pagan" Japan (Hrenkow 1998:475). On 30 March 1904, Ṭaytu asked L. about the progress of the war, and thanked him for Russian help in the construction of a bridge over the Qäbänna River in Addis Abäba. However, relations cooled when Colonel Strelbitskij, who was supposed to join the British–Ethiopian boundary commission as an official representative of Ethiopia, was not accepted upon his arrival by Mənilək, due to the machinations of the British (ibid. 469–73; the Emperor's move was denounced by *ras* ↗Mäkʷännən, ibid 482f.). The image of Russia was damaged after its spectacular defeat in the Japanese war, which, together with internal instability (the Revolution of 1905), marked the end of ative Russian politics in Ethiopia. In addition, L.'s activities met opposition from ↗Harrington; the establishment of the Entente Cordial in 1904 chilled relations between L. and ↗Lagarde. In the end, L. found himself isolated among the European representatives who were preparing the ↗Tripartite Treaty. L.'s death was nevertheless mourned by the Ethiopians. In the mission he was succeeded by Sergej Lihachov.

↗Chronography; ↗Historiography

Litanies

L. are intercessory prayers, or supplications in the form of set petitions and responses. In the tradition of the ↗Ethiopian Orthodox (Täwaḥədo) Church, there is a large variety of L. employed for different needs, and, as in many other Oriental traditions, their usage in the Eucharistic liturgy (↗*Qəddase*) has undergone considerable development over time.

These supplications can be classified into four categories according to their use: 1) those used on different occasions, mainly in the office (**መስተብ ቍዕ**, *mästäbqʷəʿ* [lit. 'intercession, supplication'] and **ዘይነግሥ**, *zäyənäggəś*); 2) those said on a fixed day, the so called **ሊጦን** (*liṭon*, 'litany'); 3) those said at the *Enarxis*, i.e. the beginning of the liturgy (↗*Bäʾəntä qəddəsat*); 4) those said after lessons (*səʾəlätat*, 'ectene': **ወንበል** ..., *wänbäl* ..., 'let us all say ...'), the "three (Egyptian) prayers" of intercession (i.e. for the peace of the Church, for the authorities, and for the Congregation) said before the anaphora and **ጸልዩ፡ በእንተ፡ ጽንዓ፡ ዛቲ፡**

መካን, *ṣälläyu bäʾəntä ṣənᶜa zatti mäkan*, lit. 'pray for the strengthening of this place'); 5) ጸሎታተ፡ ምህላ, *Ṣälotatä ↗məhälla*, 'Intercessory Prayers'. Most L. follow the Alexandrian or Egyptian tradition, except for some of the short prayers in the last two groups.

Mästäbqʷəᶜ

Mästäbqʷəᶜ consists of a series of invitations to prayer addressed to the congregation selected according to requirement and the liturgical period. They are also called *ṣäwatəw* (lit. 'categories') because they each correspond to specific needs or groups of the faithful for whose benefit the prayers are performed. The celebrant must sing the *mästäbqʷəᶜat*, choosing those suitable for the time and occasion (BKṢ 32). The most frequently concerned "categories" are: the sick, travellers, the swelling rivers (በእንተ፡ አፍላጋት, *bäʾəntä aflagat*, lit. 'for the rivers'), rulers, the dead, offerers, crops, catechumens, peace, the unity of the Church, and rain. Although usually translations from Greek or Copto-Arabic texts, *mästäbqʷəᶜat* have been enlarged in the Ethiopian tradition.

A *mästäbqʷəᶜ* typically invites the community to pray to God for a precise need with the formula "And again beseech the Lord, the Almighty God, Father of our Lord and Saviour Jesus Christ". It opens with an *Oremus* recited by the priest (ወካዕበ ..., *wäkaᶜəbä* ..., 'and again ...'). The prayer uses the form of the 3rd pers. sg. The deacon then intervenes inviting the community to pray (ጸልዩ፡ በእንተ ..., *ṣälläyu bäʾəntä* ..., 'pray for the sake of ...'), and from this point the prayer continues using the form of the 1st pers. sg., i.e. the speaker directly addressing God the Father. The priest continues the prayer until another deacon's intervention (ንበል፡ ኵልነ ..., *nəbäl kʷälläna* ..., 'let us say all ...'). The assembly chants እግዚኦ፡ ተሣሀለነ, *Ǝgziʾo täśahaläännä*, 'O God have mercy on us' (the translation of the *Kyrie eleison*). The priest's prayer is concluded by the congregation's *Amen*.

Most *mästäbqʷəᶜat* are taken from the ↗*Senodos* (cp. Horner 1904:223-32), though their structure in this collection differs slightly from the one in current use: here they consist of the invitation or exhortation to pray (thanksgiving); the deacon's invitation ("pray!"); and the conclusion of the collect. (They are also found in the Coptic missal as "Prayers of the faithful"). The invitations *ṣälläyu bäʾəntä*, *nəbäl kʷälläna* or the chant *Ǝgziʾo täśahaläännä* are absent from the *Senodos* (cf. ms. Vat. Borg. aeth. 2, fols. 41r–44r). There are also some *mästäbqʷəᶜat* (of Mary and of the Cross) of local redaction (Getačč̈äw Ḫayle 2004:36–41), which are considered as "apocrypha" (አዋልድ, *awaləd*), because their author's name is unknown (ms. EMML 1206, fol. 140a).

Zäyənäggəś

Zäyənäggəś are supplications traditionally attributed to St. ↗Yared. They are called *zäyənäggəś* (lit. 'who governs, rules' or 'who is the king, the ruler') because such prayers start with this word. The *zäyənäggəś* are prayers for the sick, for travellers, for the swelling of rivers, for the ruler, for the fruits of the earth, for peace, and for rain. They are prescribed during the offices of Lent (*Zämänä kərämt* and *Zämänä astämaḥaro*; cp. ↗Calendar).

Zäyənäggəś are often recited or chanted in alternation with the *mästäbqʷəᶜat*. Like the latter, they are addressed in the first part to God the Father who is seen or considered far from the speaker/orator/assembly because the verbs are put in the 3rd pers. sg. Ethiopian Church scholars (*liqawənt*) interpret this with reference to the *status* of humankind in O.T. times. In the second part, the verbs are in the 2nd pers. sg. ('thou'), likewise seen to refer to N.T. times when God moved closer to people through his Son.

Liṭon

The term *liṭon* (or *liṭan*) is derived from Greek λιτανεία ('procession[al prayer]'; DillmLex 63; LesCDic 320; KWKDic 565a) and is a synonym for *mästäbqʷəᶜ*. Originally it may have been linked to *məhälla*, especially when performed outside a church building. Prayers that belong to this group are: 1) ሊጦን፡ ዘንግህ፡ ዘሰብዓቱ፡ ዕለታት (*liṭon zänägh zäsäbᶜatu ᶜälätat*, 'Morning litany of the seven days'), called also *liṭon zäzäwätr* ('everyday litany'); 2) ሊጦን፡ ዘተናገሮ፡ ቅዱስ፡ ባስልዮስ (*liṭon zätänagäro qəddus Basəlyos*, 'Litany said by St. Basil [the Great]'; BKṢ 757), included in the morning office (matins); 3) ሊጦን፡ ዘሠርክ (*liṭon zäśärk*, 'Evening litany' for feast and workdays), included in the vespers; 4) ሊጦን፡ ዘአርያም (*liṭon zäʾaryam*, 'Litany of Aryam'), also called ሊጦን፡ ዘሊቃውንት (*liṭon zäliqawənt*, 'Litany of the [church] doctors'), as it must be sung or recited by the priests.

All *Liṭon*-L. have the same form: the priest addresses God in the name of the congregation, and the people pray in silence. When the deacon intervenes, he addresses the congregation saying

ጸልዩ (*sälläyu*, 'pray!'). The congregation gives no response and continues to pray silently. L. is said in the pre-anaphora of the *Qəddase*.

Shorter forms of litany

In the Ethiopian liturgy, besides the "three prayers" of Coptic origin, short intercessory prayers are known, employed before or, more frequently, after the lessons. They are the በእንተ፡ ቅድሳት (*Bäʾəntä qəddəsat*), ጸልዩ፡ በእንተ፡ ጽንፀ፡ ዛቲ፡ መካን (*Ṣälläyu bäʾəntä ṣənʿa zatti mäkan*), and ወንበል፡ ሞልነ (*Wänəbäl kʷəllənä*).

The *Bäʾəntä qəddəsat* is a diaconical L. (originating probably from the ↗*Testamentum Domini*, s. Beylot 1984, ch. 33; Brightman 1896:206ff.) which follows the Absolution of the Son (↗*Fəṯḥat zäwäld*).

The *Ṣälläyu bäʾəntä sənʿa zatti mäkan* (Täsfa Gäbrä Səllase 1990/91:48f.) starts with the invitation to "pray for", to which the people answer "may [God] forgive our sins". It is said at each Hour of Holy Week.

Wänəbäl... (*Səʾəlätat*, 'ectene', or "litany of the deacon"; Täsfa Gäbrä Śəllase 191983/84:196f.; VelMe I, 386f., II, 582, 612ff.) is a short litanic form which, unlike the other two intercessory prayers, is directly addressed to God. This ectene (Gr. ἐκτένεια) begins with an exhortation proposed by the presbyter: "Let us all say, Lord have mercy, with our heart and with all our soul". To each petition the congregation makes some response: e.g., "We beseech you", "hear us" or "Lord have mercy" (*Kyrie eleison*). These short prayers comprise invocations for sinners, for the peace of the world and of the Church, for all the Churches, the bishop, priests, deacons, for the people, governors, the king, armies, the air (i.e. for a favourable climate), prisoners, those who are put to hard labour, the sorrowful, the harvest, for all Christians, travellers, the sick etc. This form of L. is seldom used, except in the 9th hour of the *məhəlla* office after the lessons (VelMe II, 582; HabUff 302). The ectene is sung only in the long and the short *məhəlla*. This L. type seems to be related to the Byzantine rather than the Coptic tradition. In the former, ectene, too, are employed for the stational liturgy, follow the lessons, use similar verbs and have or more less the same invocations. No clear equivalent to these *səʾəlätat* can be found in the Coptic liturgy. The Ethiopian tradition has another kind of short intercession, for the bride and bridegroom, said after the reading of the Gospel during the celebration of ↗matrimony. Each invocation which starts with "O God, the almighty ..." is followed by *Nəsʾaläkkä Ǝgziʾo səmʿannä wätäśahalännä*, 'We ask you, Lord, hear us and have mercy on us' (*Mäṣḥafä täklil* 1973/74:80ff.).

Habtemichael Kidane

Literacy

Traditionally, in Christian Ethiopia it was the responsibility of the Church to provide elementary ↗education. In nearly each village church the first-level school (↗*Nəbab bet*) is found, where children are taught to read and write in ↗Gəʿəz (the L. skills in ↗Amharic or ↗Təgrəñña are supposed to be acquired at the same time). The *nəbab bet* also serves as a form of adult education programme to transmit L. to those in the community who are unable to read and write.

In the Muslim regions of eastern and southern Ethiopia, Islam has developed its own system of education, based mainly on the teaching and

memorization of the ↗Qurʾān. At the primary stage the students learn reading and writing in ↗Arabic. The Qurʾānic schools are not attached to mosques. They are usually established in a Muslim community by a ↗*šayḫ*, well-versed in Islamic studies. In comparison with the church schools, the Muslim influence on education has been relatively limited.

Since the early 19th cent., European Catholic and Protestant missions were active in running missionary schools, where elementary reading and writing skills were taught, as a rule, in a European language and/or in Amharic, sometimes in other local languages.

In Eritrea at the end of the 19th cent. a considerable amount of missionary education work was done by the ↗Swedish Evangelical Mission and the Roman Catholic ↗Lazarists. A few hundred children were taught to read and write. Education was partly in Təgrəñña, in French, Italian, Arabic and Amharic. Later on the Italians established some small elementary schools in provincial towns, but school attendance was very poor and the rate of drop-out quite high (Bowen [Pankhurst] in BendLang 322).

Despite the efforts of church schools, the Qurʾān and the missionary schools, education in Ethiopia never achieved mass level.

The opening of the ↗Mənilək II Secondary School in Addis Abäba in 1908 marked a significant step towards modern education in Ethiopia. During the following decades, other governmental schools and about a hundred private schools, among them several boarding-schools, were opened in the capital and in other big cities of the country. The introduction of the printing press in 1911 and the founding of newspapers were further steps towards the dissemination of literacy and knowledge (Bowen [Pankhurst] in BendLang 316). After establishing the Ministry of Education and Fine Arts in 1930, Ḫaylä Śəllase I took measures for the expansion of childhood education and for the elimination of illiteracy among soldiers. By 1935, there were 21 governmental schools with a total enrolment of about 4,200 students. A general rise in L. among the urban population was observed for this period.

During the Italian occupation, government schools were closed and the level of education for Ethiopians was systematically reduced. Primary school attendance was poor, and even among Italian "native" troops, the level of L. was extremely low.

After Liberation, the Ethiopian education system had to be organized anew and the curriculum redesigned. By 1950, despite the great disparity in the educational facilities of urban and rural areas, approximately 56,000 students were enrolled in more than 500 primary and four secondary schools. A number of L. campaigns for adults were undertaken by churches and missions. In 1955, an imperial edict was issued demanding everybody's pursuit of L. and the National Literacy Campaign Committee was set up. Still, by 1965, the level of illiteracy among the male population over 15 years was ca. 92 % (Brooks in BendLang 521).

After the ↗Revolution of 1974, a Programme of the National Democratic Revolution of Ethiopia was put in place. With regard to education, it stated: "There will be an educational programme that will provide free education, step by step, to the broad masses [...]. All necessary measures to eliminate illiteracy will be undertaken." As a result of this policy, the 1970s and 1980s were marked by a significant expansion in educational opportunities and students' enrolment in the formal education sector. Between 1974 and 1984 the number of primary schools had more than doubled. By 1982/83, more than 3,000,000 children were enrolled in primary and secondary schools staffed by nearly 50,000 teachers.

Since formal education alone could hardly meet the requirements to reduce significantly the high rate of illiteracy amounting to 93 % in 1973, the *Därg* (↗Provisional Military Administrative Council) launched the "National Work Campaign for Development Through Cooperation", known as ዘመቻ (*zämäča*, lit. 'campaign'), in December 1974. The two-year campaign used several Ethiopian vernaculars, namely Amharic, ↗Oromiffa, Təgrəñña, ↗Somali and ↗Wälaytta, for L. instruction. Out of the 756,200 persons registered for the L. programme 158,065 completed the whole programme, 202,692 participants were still in the process of learning by summer 1976. The remaining did not complete their courses (*Development through Co-operation Campaign's Summary Report* ... 1976:74).

The experience of the 1974 campaign was pivotal in the design and implementation of a more extensive adult L. drive undertaken by the government of the People's Democratic Republic of Ethiopia between the years 1979 and 1991. The Ethiopian National Literacy Campaign (ENLC)

was primarily directed toward the elimination of illiteracy among the economically active part of the population between the ages of 15 and 65. To facilitate an effective spread of L., 15 Ethiopian languages were designated for use in the ENLC: Amharic, Oromiffa, Təgrəññña, Wälaytta, Somali, ↗Sidaama, ↗Hadiyya, ↗Səlṭi, ↗Kambaata, ↗ᶜAfar, ↗Təgre, ↗Gideᵓo, ↗Käfa, ↗Sāho and ↗Kunama. These languages encompassed the mother-tongues of more than 90 % of the Ethiopian people and were widely known as second or third languages by the remaining population. Text-books in these 15 languages were prepared, many of them for the first time, employing the Ethiopian syllabary (↗Script, Ethiopic).

A community reading room; from NLCCC 1981:46

During the campaign, participants were taught reading, writing, arithmetic and political education. The course texts covered basic educational topics. Those who had completed classes in basic L. could also take post-literacy courses. Follow-up material in the same 15 languages had been prepared for this purpose.

The organizational set-up of the ENLC was highly centralized and quite complex. The ENLC launched in July 1979 was organized into two six-monthly rounds a year. By August 1983, nine rounds had been completed and a total of 9.57 million adults had been made literate (MOE 1984:42).

By August 1986, 14 rounds had been completed. Up to that time, 18,209,779 people had registered of whom 13,770,894 were certified with 1,521,489 campaigners in 278,396 centres. During the same period out of the 10,427,011 who registered, 7,948,705 had followed the programme in the post-literacy stage. At that time, the national L. rate had grown to 62.4 %. The L. rate in the urban areas was then 84.5%, while that of the rural areas was 59.6 % (NLCCC 1986:17).

The large and varied investment in the L. campaign was mainly devoted to the teaching materials. In the rounds 1-14, the number of books distributed in 15 nationality languages reached a total of 43,327,615 (28,623,822 for L. and 14,703,793 for post-literacy). Over 2,964,399 exercise books, 3,027,829 pencils, 1,719,327 gross of chalk and 183,761 blackboards were distributed from the central level. A large quantity of teaching aids had also been produced at the local levels (NLCCC 1986:11).

Among the means used to sustain and promote L. skills were reading centres, adult and rural newsletters, community skill training centres and radio programme support (NLCCC 1986:14).

Despite the many problems and inefficiencies, this twelve-year campaign represented the first sustained and comprehensive effort in Ethiopia's two thousand years of literate history to prepare scripts and teaching materials for the major languages spoken in the country. These efforts gained high international recognition. Several awards, e.g. the Unesco's International Reading Association Literacy Prize, positively recognized Ethiopia for the effective mobilization of the resources of the society, the systematic planning of L. work conceived in a perspective of life-long education, the preparation of innovative L. materials in several Ethiopian languages, and the positive impact of the L. campaign upon the national life of Ethiopia.

The use of local languages as an important prerequisite for the successful L. campaign, however, was not translated into action in the formal educational system. Here Amharic and English remained the medium of instruction at the elementary and secondary grades. Other factors aside, this might have led to a decline in enrolment at both the primary and secondary levels in the late 1980s.

In the 1990s, the government of the Federal Democratic Republic of Ethiopia adopted a new policy, deciding to introduce the Ethiopian languages other than Amharic also in the formal educational sector. The Regional Education

Bureaus were responsible for the preparation of teaching material in the various mother tongues for grades 1 to 8. Non-Semitic languages were to be written in the Latin script, instead of using the Ethiopic syllabary.

However, the implementation of this strategy met with major problems: an enormous growth in the student population; a completely inadequate supply of primary and secondary schools across the different regions and, again, urban and rural areas; insufficient information on the distribution and use of the various Ethiopian languages; the lack of appropriate teaching materials and equipment; unsuitable curricula; poorly trained teachers; high costs and wastage through drop-outs and repetition. According to the 1994 census, only 23.4 % of the population aged 10 years and older were literate (Jelaludin Ahmed et al. 2001:27). In view of the rapid growth of the Ethiopian population, a lasting eradication of illiteracy requires the sustained efforts of the Ethiopian government and all related institutions to be focused on the formal system of education as well as on comprehensive adult L. programmes.

Renate Richter

Littmann, Enno

Richard Ludwig Enno L. (b. 16 September 1875, Oldenburg, Lower Saxony, d. 4 May 1958, Tübingen) was a German Semitist and Orientalist who during his lifetime ranked among the leading scholars in these fields.

While L. covered virtually all major branches of Semitics (excepting only Akkadian) in his research, the study of ↗Ethio-Semitic languages and literatures (mainly ↗Gəʿəz, ↗Təgrəñña and, especially, ↗Təgre) was, together with Arabic philology and Semitic epigraphy, one of his major areas of interest. In addition, he studied ↗Oromiffa thoroughly enough to be able to write on poetry in that language (Littmann 1925), and on several occasionsalso published on Ethiopian historical or cultural topics. L.'s contributions to ↗Ethiopian studies overall number more than 100 monographs and articles, as well as over 30 reviews (cf. Paret – Schall 1955:177–89; Schall 1959). L. is most widely known, though, for his leading role in the ↗Deutsche Aksum-Expedition [DAE] of 1906.

Already in secondary school, in addition to the classical and modern western European languages offered there, L. taught himself the basics of Arabic, Italian, Persian, and Syriac. In 1894 he went to Berlin to study Oriental languages academically. There L. attended a few classes taught by ↗Dillmann shortly before the latter's death. In 1895 he continued his studies in Greifswald, and in 1896 in Halle where ↗Praetorius developed his interest in Ethiopian studies. In 1898 L. submitted a Ph.D. thesis on the verb in Təgre. After an additional postgraduate semester in Strassburg under ↗Nöldeke (whose granddaughter he was to marry in 1921), L. was invited to participate, thanks to an American acquaintance he had made in Halle, in a University of ↗Princeton expedition to the Levant. In 1899/1900 he therefore spent about ten months in Syria and Palestine. While mainly doing epigraphic work, during this period L. also made contacts with the

Ethiopian monastic community in ↗Jerusalem and catalogued Ethiopian ↗manuscripts there.

In spring 1901 L. became Instructor in Semitic Languages at Princeton University. In 1904 he returned to Germany, but subsequently participated in another Princeton expedition to Syria. In October 1905, within the framework of still another Princeton expedition, he came to Eritrea for the first time, then an Italian colony. There L., in collaboration with ↗Sundström and with the assistance of his informant ↗Näffaᶜ Wäd ᶜƎtman, again worked on Təgre (the collected texts with English and German translations were published in four volumes, 1910–15, LitPEA).

Enno Littmann, photo 1950s, by Photo-Gröger, Tübingen, courtesy of the family

Whilst in Eritrea, L. was asked to lead the imperially-sponsored DAE to Ethiopia. His Princetonian sponsors did not object, and from mid-January to early April 1906 L. and his DAE colleagues (↗Kaschke, ↗Krencker and von ↗Lüpke) thus worked in ↗Aksum and other sites in the vicinity where L. comprehensively recorded the Epigraphic South Arabian, Greek and Gəᶜəz ↗inscriptions they found. The bulk of the enormous amount of invaluable data collected in the field was published in 1913 in DAE I–IV. L. was solely responsible for the epigraphic vol. IV, containing such crucial inscriptions as those by ↗ᶜEzana which document this monarch's conversion to Christianity. L. also was the lead author of vol. I and contributed to vol. III.

After his return to Germany in 1906, L. became Nöldeke's successor in Strassburg. In 1914 he then accepted a call to Göttingen. From 1916 to 1918 the German general staff made use of his Orientalist skills during ↗World War I, after which L. took up a professorship at Bonn. In 1921 he moved to Tübingen, where he taught until his retirement in 1949.

After World War I, Ethiopian topics receded in importance in L.'s work, with Arabic philology, particularly Arabic folk literature, becoming the main focus of his scholarly endeavours. L.'s translation of the entire *Arabian Nights* (six vols., 1921–28) is still widely considered the finest German rendition of this Oriental classic. L. had especially close ties to Egypt, where from ca. 1910 to 1950 he regularly gave lectures at the Universities of Cairo and Alexandria. In 1934 King Fuʾād of Egypt invited him to become one of the five European members of the newly founded Arabic Language Academy of Cairo.

However, L. never completely lost sight of Ethiopian studies until the end of his life. L.'s last major Ethiopianist work was, like his first, devoted to the Təgre language: In collaboration with Maria ↗Höfner he compiled a Təgre–German–English dictionary which, however, was only published posthumously in 1962.

Lobo, Jerónimo

L. (also Brandão, b. 1595, Lisbon, d. 29 January 1678, Lisbon) was a Portuguese ↗Jesuit missionary. Born to a noble family, he joined the Jesuit noviciate at Coimbra in 1609. Later, he taught Latin in Braga and studied theology at Coimbra. In 1621, he left for ↗Goa, where he pursued the study of theology.

After a failed attempt to reach Ethiopia following the river Juba (↗Ganaalee) upstream in 1624, L., together with Patriarch Afonso ↗Mendez and other companions, embarked for Ethiopia in 1625. They took a then unusual route in order to escape the ↗Ottoman control at ↗Massawa: on 3 April, they left ↗Diu and on 1 May landed at ↗Baylūl, from where they proceeded inland, through ↗Dankáli territory, reaching ↗Fəremona on 21 June. L. spent most of the time in this residence, engaged in pastoral duties, but also preaching in ↗Šire; he then went to ↗Wäfla with ↗Täklä Giyorgis to recover the remains of Christovão da ↗Gama's body and preached for some months in ↗Damot – where he also helped build a church (Lobo 1971, chs. 17, 19). On 5 January 1629, at ↗Ǝnfraz, he made solemn profession.

Following the downfall of the mission, in 1633, he met with the patriarch and 18 other companions at Fəremona (Lobo 478). After a difficult stay there for about a year, the worsening conditions made the group go into hiding. However, following ↗Fasilädäs's decree of expulsion and the hostility of the notables of Təgray, on 20 May 1634 the local lord Yoḥannəs Akay handed the Catholic group over to the Turks in Massawa, from where the missionaries were sent to ↗Sawākin. After imprisonment of one month, they were released with the help of the ↗*banyan* and on August were able to leave for Diu.

In February 1535, L. headed to Europe to reorganize the mission and to lobby for a project to send an army to Massawa. After a shipwreck in Natal and a halt in Cartagena de Indias, where he inspired Alonso de Sandoval's work *De instauranda Aethiopum salute* (Madrid 1647), he arrived in November, visiting Lisbon, Madrid and Rome. Back in Goa from 1640, L. occupied there prominent positions within the Jesuit Indian hierarchy: superior of St. Paulo velho, rector at Baçaim, preposito da casa professa, viceprovincial. After an argument with the political authorities in Goa who had him put in prison, in 1657 he left anew for ↗Portugal. He spent the last 18 years of his life at the college of S. Roque, Lisbon, where he advised Balthazar ↗Tellez.

L. became famous for his *Itinerario*, of which he produced two copies: the first during his visit to Lisbon around 1639–40, and the second in the 1660s. The text recounts his travels, offering lively geographic and ethnographic descriptions (Dankáli, ↗Nile, ↗Oromo, ↗ᶜAfar, ↗Damot, ↗Agäw, ↗*Ǝnsät*); information on the mission is, however, scarce. The text of the second manuscript – today lost – was first published in French by the abbé Joachim Le Grand (1728) and from it translated into English by Samuel ↗Johnson and German by Theophil Ehrmann. Johnson was also largely inspired by it in writing his novel *Rasselas*. The text of the first manuscript was published in 1971 by Manuel Gonçalves da Costa (Lobo 1971). Thanks to the interest of 19th- and 20th-cent. colonial scholars L. became one of the best known Jesuits in Ethiopia.

Andreu Martínez

Lockot, Hans Wilhelm

L. (b. 19 September 1910, Riga, Lithuania, d. 31 December 1995, Fürstenfeldbruck, Bavaria) was a German librarian who contributed significantly to Ethiopian bibliography.

After attending the Latina (Franckesche Stiftungen) school in Halle (Saale) he returned to Riga where he completed his secondary education and studied history and philosophy. From 1938 to 1945 he was employed by various museums and libraries. In 1951 he was invited to take over the post of the Chief of Research Division at the National Library of Ethiopia in Addis Abäba. He remained in this position until 1972 (from 1970 to 1972 with the additional title of "advisor"), concentrating his efforts on the completion of the library collections, mainly in the areas connected with research on Ethiopia. From 1972 to 1975 he worked for the libraries of Ḫaylä Śəllase I University (↗Addis Ababa University) and of the ↗Institute of Ethiopian Studies.

Back in Germany, L. started working on the ↗bibliography of publications on ↗Ethiopian studies. The first volume, *Bibliographia Aethiopica: Die äthiopienkundliche Literatur des deutschsprachigen Raums* (Lockot I), which listed ca. 8,000 German-language titles, appeared in 1982. Subsequently L. turned to compiling a bibliography of English-language literature, which contained ca. 24,000 titles and was published posthumously under the title *Bibliographia Aethiopica II: the Horn of Africa in English Literature* (Lockot II). L. died before he could start working on his other desiderata, such as French and Italian bibliographies.

Thanks to their detailed manner of representation, complete inventory and helpful structure (96 thematic sections in Lockot II), both bibliographies have proven important tools in ↗Ethiopian studies.

Siegbert Uhlig

Locusts

L. (Gəᶜəz **አንበጣ**, *anbäṭa*, Tgn. **አንበጣ**, **አምበጣ**, *anbäṭṭa*, *ambäṭṭa*, Amh., Argobba, Gafat **አንበጣ**, *anbäṭṭa*, Oromo: *hawwaaniisa*) are insects of the Acridadae family. Plagues of L. have been threatening agricultural prouction in Asia, Africa and the Middle East for centuries, the most harmful species being the Desert L. (*Schistocerca gregaria*). and the Migratory L. (in Africa *Locusta migratoria migratorioides*). L. scourges are referred to in the Bible and the Qurʾān, and have been held responsible for epidemics of human pathogens and contributing factors to ↗famines.

L. outbreaks typically form after periods of drought, when vegetation flushes occur in major desert L. breeding areas. L. swarms can vary from less than one km² to several hundred km² (40–80 million L. per km²) and can travel more than 100 km in a day. Nearly all crops, and non crop plants, are at risk, and L. droppings are toxic.

Large parts of Ethiopia and Eritrea are affected by periodical outbreaks of both Migratory and Desert L., breeding areas also existing in the north and east. Plagues were first described in the early 16th cent. by Francisco Alvares, who devoted many pages to their depredations in ↗Təgray (BeckHuntAlvar I 132–36). Later, Manoel de Almeida stated that in such areas as Təgray L. were "very constant" and did not leave a "grain of food", for they consumed stalks of grain even before they were ripe (BeckHuntAlm 46).

One cannot be sure for the Aksumite period, but L. scourges are noted, with cattle plague, among the natural disasters that in later times contributed to reducing the agricultural and animal yield in Ethiopia, prompting the kings to remove their capital to some better provided regions (MHAksum 258f.).

The historic prevalence of L. is likewise reported in Ethiopian sources. Among hagiographies, mention should be made of a miracle appended to the Vita of ↗Anorewos of Segaga. The chronicle of *aṣe* Iyasu II tells of these insects covering in 1746 the land "like a fog", and producing a "great famine" in the following year, when the inhabitants of the highland and lowlands both perished (GuiIyas 150, 154). Later, in 1813, the ruler of Təgray, *ras* Wäldä Śəllase, wrote to the British envoy Henry Salt: "for three whole years L. have consumed my country" (Appleyard – Irvine 1995:27). There is ample evidence as to the extent of such L.-induced famines (Pankhurst 1966:62–68; PankEcon 220f.).

The local responses to L. differed significantly. In Təgray, according to the missionary Samuel Gobat, Muslims collected them, eating them with relish, whereas Christians would consume them only in time of famine and having done that they would be subject to "terrible penance". The result was that the term "L.-eater" was widely applied to Muslims as an insult (Gobat 1847:242). While L. eating is not accepted in the Ethiopian highlands, peoples in other regions, in northwestern Eritrea as in southern and south-western Ethiopia include L. in their diet due to their high nutritious value (e.g., ↗Maale; VSAe I, 307).

Hardboiled locusts, in a Maale village; photo 1950/52 by W. Schulz-Weidner, courtesy of the Frobenius-Institut (no. 23–Wd025–10)

Rituals are also practiced against L. plagues. In southern Ethiopia ritual experts, such as the *godimi*-priest of the Bakko (↗Aari) and the goda-priest of the Maale, carried out ceremonies against L. Among the Bakko, ↗Banna, ↗Ṣamay and others a typical ritual instrument used for this purpose was an Y-shaped stick and a two-pointed spear among the Maale; its magic force should repell the insects or make them "eat only stones and soil". Among the Bakko, the *babi* ('king') would have meat offered to the L. on the place of the first outbreak of the plague. It is said that the L. eat the meat and then leave the country (VSAe I, 44f. 48, 270, 326).

L. control in Ethiopia and in neighbouring countries developed during World War II with the establishment of a Nairobi-based Middle East Anti-Locust Unit, which estimated that a L. ate its own weight of food every day for a month. The UN Food and Agriculture Organisation (FAO) subsequently launched a multi-national campaign against the desert L. in 1952. The outbreak of a major L. plague in Ethiopia in 1955 resulted in the setting up of a FAO-supported national Anti-Locust Control organization. This carried out extensive aerial spraying and ground operations, based largely in ↗Asmära and ↗Dərre Dawa. This brought a halt to major L. plagues, though natural and human factors still make it a regular occurence in Ethiopia, especially in the north-east (ᶜAfar area). Major recent L. upsurges were in 1986–89, 1992–94 and 2004.

Richard Pankhurst

Löfgren, Oscar Anders Valfrid

L. (b. 13 May 1898, d. 23 April 1992, Uppsala) was a Swedish scholar. He studied Classical and Semitic languages at Uppsala, where he obtained his Ph.D. in 1927 (with a text edition of the Ethiopic Book of Daniel, s. Löfgren 1927). Various appointments at Swedish schools and universities (teacher in Johanneslunds missioninstitutet 1920–23, superintendent for gymnasium in Gothenburg for prospective priests 1953–56, gymnasium lector in Greek and Latin in different Swedish schools 1939–51) led to a professorship in Semitic languages in 1951 at Göteborg and in 1956 at Uppsala. In 1971 he was awarded Doctor honoris causa degree, and in 1977 a Jubileum Ph.D. degree at Uppsala University.

L.'s main field of research was Arabic, esp. Yemen studies. Among his most important contributions are the catalogue of Arabic manuscripts of Biblioteca Ambrosiana in Milan (Löfgren – Traini 1975–81), and critical editions of such sources for the historical geography as Abū Maḫrama's (d. 947 H. [1540 A.D.]) *Taʾrīḫ ṭaġr ᶜAdan* (1937–50) and al-Hamdānī's *Iklīl* (1953, 1954–65). He contributed 28 entries to the *Encyclopaedia of Islam* (EI²).

Ethiopian studies occupied an important place in L.'s scholarly interests. His critical editions of Book of Daniel and a large portion of the Dodekapropheton (Löfgren 1927, 1930) set a high standard in Ethiopian philology, and were an important contribution to the Ethiopian ↗Bible edition; he also brought forward new arguments in the discussion of the Ethiopian Bible Vorlage (cf. Ullendorff 1968:48ff.). In colloboration with Sebastian ↗Euringer, L. edited liturgical texts (Anaphoras of Cyril, Dioscorus and Gregorius). L. also catalogued Swedish collections of Ethiopian manuscripts (Stockholm and Uppsala, s. LöfUpp). L. extended his studies in Biblical and

apocryphal textual criticism also to Christian Arabic studies, working in particular on the Arabic version of the Book of Daniel (Löfgren 1936b).

During his life, L. collected an immense library containing a few manuscripts and several ↗incunabula, and which was sold after his death (cf. *The Library of Oscar Löfgren*).

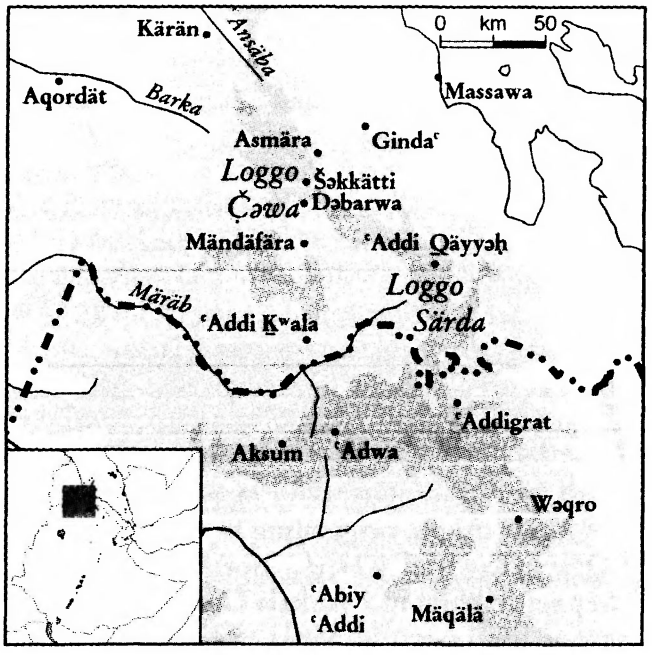
Loggo Č̣əwa

The Eritrean historical district of L.Č̣. (ሎጎ፡ ጭዋ) lies in the ↗Ḥamasen region, south-west of Asmära. The historical centres are Šəkkätti, along the national road from Asmära to ↗Mändäfära, and ↗Ḥəmbərti. During the Italian occupation, the name L.Č̣. designated another territory: it included the Ṣəlləma, the district of ↗Dəbarwa, while L.Č̣. proper was then called Zawəl Qälqälti.

Though the common pronunciation of the name is Loggo, the more correct spelling is Läggo (ለጎ), probably deriving from an original form *Lägg^{w}o, of unknown etymology. According to local traditions, the Loggo were a people of ↗Agäw origin, originating from the region of ↗Q^{w}ara (KolTrad § 24:1f.), north of Lake Ṭana. They settled first in ↗Akkälä Guzay, where they formed the Loggo of Särda (↗Loggo Särda). A part continued northwards, until they established themselves at their present location. This reconstruction can be confirmed by linguistic evidence, since such place-names as Bambəqo (in Säffəʿa) or ↗Wägariqo (in Liban) can be explained through Agäw etymologies, respectively, as "village of the sycamore tree" and "village of the olive tree".

The second part of the name L.Č̣. is connected to the Gəʿəz word ጹዋ (*ṣewa* [Amh. ↗*č̣äwa*], 'army', hence Tgn. *č̣əwa/č̣uwa*, 'freeborn, noble'). As in other cases, e.g., the neighbouring district of ↗Käbäsa Č̣əwa, it refers to the military origins of a part of the people. From the 15th cent. onwards, under the initiative of the rulers of Ethiopia, groups of different origins were settled in Eritrea with the aim of creating a "network" of outposts for the defence of the northern boundaries of the Christian Ethiopian state. The side-by-side presence of the two groups, the first of Agäw origin, the second transferred from elsewhere, gave rise to periodic conflicts. Consequently, the people of L.Č̣. – like those of Käbäsa Č̣əwa – never had their own political ruler. The administration was in the hands of a ↗*məsläne*, a district chief appointed from outside.

The *Law Book* (*ḫəgg*, Tgn. *ḫəggi*) of the L.Č̣., i.e. the rules of ↗customary ↗law regulating the different aspects of economic and social life, was published in 1910 in Asmära by the Catholic Printing House (*Maḫtäm Katolikawəyan*) on the basis of a text transcribed by Enrico Macchia, head of the *commissariato* of Ḥamasen. The *Law Book* claims to be "the one established in ancient times, renewed in the Council of May Laḥam,



written down after a valid agreement". Recently, a manuscript of this text from the Angelo Lauro Collection, collected in the 1940s and now kept in the University of Naples "L'Orientale" (↗Istituto Universitario Orientale), was photographically reproduced and translated (Yaqob Beyene 1995). Even if the text is almost identical, some minor differences allow one to state that the two "editions" are made from different copies of the document.

A longer text called *Statute* (*Śərᶜat*), apparently developed from the short and older *Law Book*, was published in 1938 A.M. [1944 A.D.] in Asmära by the Printing House of Pietro Silla.

Gianfrancesco Lusini

Loggo Särda

The law of the Loggo of Särda (cp. also ↗Loggo Č̣əwa), called the law of L.S. (**ሎጎ ፡ ሰርዳ**), is probably the oldest written consolidation of traditions of ↗Akkälä Guzay (↗Təgrəññña literature). It was kept in a gospel book in a church of the village of Särda along with another document that records donations to the church from the nine clans of the L.S. Conti Rossini claims that the latter document dates back to the end of the 15th cent., while the law would be of a more recent date. This one page document is very difficult to translate; the Təgrəññña is written in an archaic form and often employs words in a sense very different from today. The Təgrəññña text of the law was published and translated by Conti Rossini (1903, 1904).

The code includes rules which are in general use throughout the ↗*käbäsa* highlands, such as those that prevent the permanent transfer of common land to descendants and women, and sale to non-qualified individuals, especially foreigners (↗*Maᵓkälay ᶜalet*). Several examples concerning ↗land tenure follow: "whoever wants to transform common land into hereditary land must be expelled from the village"; in the case where a woman had bought a parcel of land: "she must be given back the price she has paid because she cannot continue to possess it"; also "a foreigner who lives among the Loggo, cannot buy *rəsti* [↗*Rəst*]" and "whoever has received by allotment common land of Loggo to cultivate, cannot sell it" (Conti Rossini 1904:12f., 45). Conti Rossini also mentions that at the beginning of the 20th cent., the L.S. were forced to sell communal land (*rəsti* and *šəḥənna*) because of an unprecedented economic crisis (ibid. 9).

The law also expressly regulates the *məzərraf*, the practice of kidnapping a girl in order to marry her, which was routinely practiced among Təgrəññña speakers. It was typically carried out when the girl's parents had denied a man's request for marriage; when the parents could not afford a dowry; or when the girl was considered to be older than the proper marriageable age. Without a recognized ritual largely agreed by those con-

cerned, kidnapping could easily cause a feud between different groups (Conti Rossini 1904:12). With regard to *dämoz*, a union by contract, limited in time, in which the woman received a regular salary for fulfilling certain marital and domestic duties, the law of the L.S. indicates that the prerogative to end the contract before the expiration date was given only to the man, who could exercise it by expressly declaring to the woman, in the presence of the guarantor, that he did not want to live with her anymore. Afterwards, they were both free to contract new marriages (ibid. 28).

London Conference of Allied Powers

The L.C. (also known as the London Council of Foreign Ministers, 11 September–2 October 1945) brought together the foreign ministers of the victorious powers in ↗World War II: Ernest Bevin (↗United Kingdom), James Byrnes (↗United States), Vjačeslav Molotov (Union of Soviet Socialist Republics, s. ↗Russia) and George Bidault (↗France). The meeting, which was in the nature of a sequel to the Potsdam Conference, was held with a view to determining the fate of the former Italian colonies: ↗Eritrea, ↗Italian Somaliland and the Libyan territories of Cyrenaica and Tripolitania. ↗Italy, one of the two concerned parties, was allowed to send a delegate to present her case, while Ethiopia was denied that privilege and had to be content with sending memoranda justifying her claims.

The Four Powers came up with divergent recommendations on the matter. The US recommended a ten-year ↗United Nations trusteeship, after which the colonies, with the exception of Italian Somaliland, would attain independence. In the meantime, Ethiopia was to be granted access to the sea through ʿAsäb. France, which saw the trusteeship idea as a dangerous precedent for its own colonies, opted for the return of the colonies to Italy. The U.S.S.R., while agreeing in principle with the trusteeship idea, preferred trusteeship by individual powers rather than the collective trusteeship envisaged in the US recommendation. It further argued that, as a multi-ethnic state, it was eminently qualified to exercise such trusteeship over Tripolitania as compensation for the damages allegedly inflicted by an Italian Black Shirt division. The Soviet proposal was strenuously opposed by the United Kingdom on the grounds that the Soviet Union had played no role whatsoever in the liberation of Italy's African colonies. The United Kingdom accepted the American trusteeship idea for ↗Libya but remained non-committal when it came to Eritrea and Italian Somaliland.

The meeting finally broke up over a point of procedure. The matter was deferred until the Paris Conference, which was held in July 1946. In the end, the Powers failed to come up with a formula acceptable to all and the issue was referred to the United Nations.

Bahru Zewde

London Society for Promoting Christianity amongst the Jews

The L.S. (later Church Ministry to the Jews) was established in 1809 for the purpose of spreading Christianity to the Jewish people. Its activities encompassed parts of Europe including Russia and Poland, North Africa and the Middle East. Eastern Europe was probably the largest area of the ministry with at one time several hundred agents active. In 1841 the Christ Church was founded in Jerusalem.

In 1860 Henry ↗Stern and Stephen Bronkhorst were sent to Ethiopia by the L.S. where they joined Johannes Martin ↗Flad, who had been in the country as part of the Protestant mission headed by Samuel ↗Gobat of Jerusalem and spiritually guided by the ↗St. Chrischona-Pilgermission. Despite receiving the permission of *aṣe* ↗Tewodros II and *abunä* ↗Sälama to operate, the missionaries quickly encountered problems. In 1863, the Emperor imprisoned the missionaries and other Europeans, who were only freed in 1868. This effectively put an end to direct European involvement in L.S. activi-

ties in Ethiopia. Because of the limits placed on European missionaries, much of the actual work of the L.S. was done by native agents beginning with *däbtära* ↗Bərru Wəbe who was Scripture Reader and Superintendent of all the converts, a position he held until his death in 1890. He was succeeded by *aläqa* ↗Mikaʾel Arägawi. Due to *aṣe* Yoḥannəs's restrictions the presence of Flad in Ethiopia, European leader of the "Falasha Mission", was limited to occasional visits.

The missionaries of the L.S. sought not only to convert ↗Betä Ǝsraʾel, but also to reform the ↗Ethiopian Orthodox (Täwaḥədo) Church. Converts were baptized into the Ethiopian Orthodox Church, but despite their formal affiliation were often viewed as a separate community (called *däqqä Flad* locally, named after Flad). The number of converts achieved by the L.S. was never large, but it operated as a major agent of change in Betä Ǝsraʾel society by challenging the authority of traditional religious leaders, and dividing the society. Others influenced by the L.S. appear to have entered directly into the Orthodox Church.

The L.S.'s activities were well publicised in Jewish communities around the world who responded by sending counter-missions. Joseph ↗Halévy's journey to Ethiopia in 1868 was in response to such reports. His successor and student, Jacques ↗Faitlovitch saw combating the L.S. and other Christian missions as one of his primary tasks. Indeed, throughout the 20th cent. much of the Jewish activity in Ethiopia focused on countering the works of the missionary.

Flad was succeeded by his son, Friedrich Flad, who had been a missionary of the then Church Ministry to the Jews in Tunis. After World War I he turned his attention to Ethiopia, but was able to arrive in Addis Abäba only in 1922. At the time, approximately 500 of the L.S.'s 2,000 converts survived.

Wilfred Heintze and Bauer arrived in Addis Abäba in 1926. Heintze married Friedrich Flad's daughter Lola and Bauer was to be engaged to yet another of Flad's daughters. The two missionaries differed in their approach with Bauer favouring a mission directed to the common people, while Heintze thought efforts should be focused on the priests, nobles and other educated Ethiopians. Bauer established a missionary station in Č̣əlga and directed his efforts toward the ↗Kəmant, who the L.S. viewed as a "Judaized" people. He died in 1932 of dysentery. Heintze left Ethiopia in 1934, prior to the Italian invasion.

Eric Payne of the Church of England ministry was recruited to join the L.S. in 1944. In order to reach Ethiopia he joined the British Army as a chaplain and arranged to have himself posted to Ethiopia, where he arrived in 1946. His mother and sister later joined him as matron and nurse of the hospital in Gondär. Payne chose to focus his activities in ↗Dabat.

In July 1951 Payne married yet another daughter of Flad, Christine. During the 1950s the mission faced many difficulties. Their activities were largely restricted to their compound. Moreover, they were forced to compete with Jehovah's Witnesses and Seventh Day Adventist missions which had more resources. Moreover, the organized Jewish counter-mission received for the first time tangible support in the form of emissaries sent by the Jewish Agency for ↗Israel as well as the first young Betä Ǝsraʾel sent to Israel to study. Finally, divisions took place among the missionaries, particularly over the issue of infant baptism.

Although the number of converts was not great, the conversion of a priest, *qes* Aśres created a sense of crisis among the Betä Ǝsraʾel.

Roger ↗Cowley and his wife Jean arrived in 1963 and continued to work in Ethiopia among the Betä Ǝsraʾel where he remained until 1978.

Many of the converts of the L.S. and their descendants have migrated to Israel as part of a rather indiscriminate policy of bringing "Ethiopian Jews" to Israel.

Steven Kaplan

Longrigg, Stephen Hemsley

Brigadier L. (b. 7 August 1893, Sevenoaks, Kent, d. 11 September 1979, Kingsley Green, Sussex) was military governor of ↗Eritrea between 1942 and 1944. The son of William George Hemsley Longrigg he attended Oriel College, Oxford. Between 1914 and 1931, he served in the British administration in Iraq, achieving positions of responsibility and, from 1931 to 1951, he was senior executive of the Iraq Petroleum Company. On May 1942, he was appointed Chief Administrator of the ↗British Military Administration (B.M.A.) in Eritrea.

L.'s primary goals were immediate relief of the population, as well as the adaptation of the Italian military and civil installations to the needs of the B.M.A. Throughout 1942 and 1943, the war projects set up in Eritrea by the Allied troops relieved widespread unemployment and the economic policies promoted by L. stimulated internal production for both domestic needs and the Middle Eastern Market. However, employment of Eritreans was limited by security considerations, as well as restrictions on movements and activities throughout the country. L. faced mounting social and political problems (communal and private conflicts, numerous casualities from banditry and dynastic disputes) and tried to restore law and order.

L.'s main concerns were also to curb expenses and restructure the administration. However, as the British were understaffed, he did not immediately dismiss the Italian colonial staff and maintained the discriminative Fascist legislation towards Eritreans, officially because of International Law obligations. He thus failed to curb racism and so the colour bar lasted until 1944, following the fall of Mussolini.

L. retained the earlier Italian colonial services and improved them, ranging from public health to administrative services – into which they slowly began to recruit native clerks – and the school system. On his personal initiative, an Eritrean Children's Welfare Society was established in 1943. He stimulated the freedom of the press, with the B.M.A.'s controlled ↗*Eritrean Weekly News*, printed in English, Italian and Təgreñña, which was soon followed by other newspapers.

Although his officially positive attitude increased the political awareness of Eritreans (↗*Maḥbär fəqri hagär*), L. believed the vast majority of Eritreans were "non-politically minded". In accordance with the colonial authorities of the Anglo–Egyptian ↗Sudan, he upheld the idea of the partition of Eritrea because of the inhabitants' ethno-cultural differences and the alleged non viability of Eritrea, considering it an artificial entity carved out from Italian colonialism. He believed the country could be easily divided along ethnic lines, assigning the western lowlands to the Anglo–Egyptian Sudan and leaving the rest to Ethiopia. This solution would have guaranteed both the retention under effective British control of strategic areas of communications (such as the port of ↗Massawa, part of the ↗Asmära plateau and free communications with the Sudan) as well as Ethiopian political claims over Eritrea.

From 1943, L. devoted special attention to the Moslem ethno-linguistic groups of the western lowlands. He thus began to dismantle internal territorial structures, creating the Red Sea Division by linking the Massawa and ↗^{c}Asäb districts, thus sowing the seeds of social and political discord. In parallel, although firmly recognizing the existence of strong ties between the Christian Təgrəññaspeakers living on both sides of the Ethio–Eritrean frontier, he covertly encouraged the birth of a separatist Movement in ↗Akkälä Guzay, in order to counteract pro-Ethiopian irredentism. In view of the post-war settlement of Eritrea, L. favoured the formation of a united ↗Təgray – composed of all the Təgrəññaspeakers of northern Ethiopia and central Eritrea – under Ethiopian sovereignty but administered by a British trusteeship.

L.'s plan to the partition of Eritrea became the official policy followed by the British government, even after November 1944, when he left the country. Acting as Chief Adviser on Eritrea for the British government, he continued to follow political events regarding the disposal of the former Italian colonies. He published articles in the British and foreign press, always advocating the partition of Eritrea. In 1945, L. issued his *Short History of Eritrea*, an important historical synthesis of the country. Historiography mainly agrees with the words of Gerald ↗Trevaskis, who honoured L. as "the author of the British Policy and the architect of the Administration itself" (Trevaskis 1960:36).

Federica Guazzini

Loᶜoyta ↗Húmmad b. Loᶜoyta

Loränso Taᵓəzaz

Blatten geta L.T. (ሎረንሶ ታእዛዝ, in European sources written "Lorenzo"; b. 30 June 1900, ᶜAddi Qagi, Akkälä Guzay, d. 23 June 1946, Stockholm) was a prominent mid-20th-cent. Ethiopian politician.

He received his early education in Italian schools in Asmära and Kärän, and started his career with the Italian colonial administration. In 1924, in Yemen, where L.T. was working for the Aden Salt Works, he met *ras* Täfäri Mäkʷännən (the future *aṣe* ↗Ḫaylä Śəllase I), who encouraged L.T. to go to Ethiopia. L.T. completed his secondary education at the Täfäri Mäkʷännən Secondary School in Addis Abäba and was subsequently sent, along with a few other Ethiopians, to France on a government scholarship. He completed his Law studies at the University of Montpellier in 1933.

Blatten geta Loränso Täᵓəzaz; from ZRErtra 585

L.T. returned to Ethiopia and started his career as an Assistant in the Ministry of Justice (1933). He served as a member of the Anglo–Ethiopian Boundary Commission which demarcated Ethiopia's borders with former ↗British Somaliland (1933–34), surveyed the grazing grounds of the ↗Ogaden, and investigated the causes of the ↗Wälwäl incident of 1934 which led to the ↗Italian war of 1935–41 (1935–36). Appointed Private Secretary to Ḫaylä Śəllase, in May 1936, L.T. accompanied him in exile. L.T. was the writer of the Emperor's historic speech to the ↗League of Nations. In his capacity as Permanent Delegate of Ethiopia to the League, L.T. stayed in Geneva while Ḫaylä Śəllase settled in Bath, England.

In 1938, Ḫaylä Śəllase dispatched L.T. on a secret visit to Ethiopia to explore the possibilities of his return to lead the ↗resistance. During the several months L.T. spent in Ethiopia, he mediated the disputes amongst the resistance leaders and helped to integrate them into a cohesive fighting force. Ḫaylä Śəllase was so impressed by what was reported to him, that he decided to move, but the British strongly objected to the plan, contending that it was premature for the Emperor to move to Africa.

L.T. again went to Ethiopia in 1939. He distributed arms to the resistance in Gondär and Goğğam. He established an Ethiopian Intelligence Bureau in ↗Khartoum and proceeded to give full account of the extent of guerrilla operations in the country, and the poor morale of the Italians, to the British Middle East Headquarters in Cairo. Again, Ḫaylä Śəllase wanted to make a military move, but the British were not convinced that he had support inside the country, because at a 1938 meeting of patriots in Gondär, the need to abolish the monarchy and declare Ethiopia a republic had been discussed, and a document had been prepared for the League of Nations touching on the form which a future government of the country might take.

L.T. was sent back to Ethiopia, this time to provide evidence that important members of the resistance affirmed their allegiance to the Emperor. He quickly collected 10,000 signatures which persuaded the British. On 10 June 1940, Italy declared war on France and

Britain, and Ḫaylä Śəllase was allowed to organize a liberation army. L.T. was sent to Kenya to win over the battalion of Eritrean soldiers which had deserted from the Italian army in 1937 and had since been interned. L.T. prepared the Emperor's decrees and military mobilization orders, which the British Royal Air Force effectively utilized in the propaganda war against the Italians.

After the liberation, L.T. was appointed Minister for Foreign Affairs (1941–42). He played an important role in preventing the British from making Ethiopia a Protectorate. Subsequently, he became Minister for Posts, Telephones and Telegrammes (1942–43); President of the Chamber of Deputies (1943–44); Ambassador to the U.S.S.R. (1944–46), and Delegate to the Paris Peace Conference (May 1946). A month later, he died in Stockholm, Sweden, of intestinal adhesion. He was buried in the grounds of the ↗Qəddəst Śəllase Cathedral, Addis Abäba.

L.T. was married to ↗Sənəddu Gäbru, and later to Yäməssərač Ǝmməru, daughters of *käntiba* ↗Gäbrä Ǝgziʾabəḥer Dästa and *ras* ↗Ǝmməru Ḫaylä Śəllase, respectively.

Daniel Kendie

Loring, William Wing

General L. *bāšā* (b. 4 December 1818, Wilmington, North Carolina, d. 30 December 1886, New York) was an American soldier, legislator, and businessman.

L. spent his early years in the Florida Volunteers (1835–36). In 1842, he received a law degree from Georgetown College. L. then served as a legislator in Florida (1843–46) and as an officer in the US Army (1846–61). At the outbreak of the American Civil War (1861–65), he resigned from the US Army and joined the Confederate Army as a Brigadier General. After the war, L. worked as a banker in New York City.

In December 1869, he joined the army of the Egyptian *ḫidīw* ↗Ismāʿīl *bāšā* as Inspector General with the rank of *liwāʾ* (Brigadier General). Shortly thereafter, L. became commandant of Alexandria, with responsibility for defending the city and the coast to the mouth of the Nile River.

Portrait of Loring *bāšā*; from Loring 1884

On 10 December 1875, the *ḫidiw* appointed him army chief of staff and ordered him to accompany *sirdār* (commander-in-chief) ↗Muḥammad Rātib *bāšā* on a 16,000-man military expedition to Ethiopia (↗Egyptian–Ethiopian War). Their mission was to avenge the Ethiopian victory at the battle of ↗Gundät by defeating *aṣe* ↗Yoḥannəs IV's army and by restoring Egyptian prestige. The match proved to be unworkable as Muḥammad Rātib, who was a weak commander, ignored the counsel of the more experienced L. As a result, the Egyptian army suffered disastrous defeats at the battle of Qäyyəḥ Ḵor and the battle of ↗Guraᶜ. Nevertheless, the *ḫidiw* promoted L. to *farīq* (general of a division) and conferred upon him the imperial orders of the ᶜUṯmānīya and Mağīdīya.

In 1879, L. was mustered out of the army, returned to the United States, and settled in Florida before relocating to New York City. In 1884 he published his book, in which he blamed the Egyptians' inefficiency for their defeat by the Ethiopians. This publication was partially directed against previous publications on that War (cp. William McEntyre ↗Dye).

Thomas P. Ofcansky

Lowland East Cushitic

L.E.C. is a group of East Cushitic, one main branch of the ↗Cushitic language family. According to the traditional view, L.E.C. is classified into three subgroups, namely 1) ᶜAfar-Sāho, 2) Oromoid and 3) Omo-Tana. The first group includes the closely related languages ↗ᶜAfar and ↗Sāho. The second group consists of ↗Oromiffa proper with its numerous varieties and the ↗Konso cluster. Omo-Tana is established as a genetic unit based on such arguments as common imperative singular ending of middle verbs in *o-*, with loss of final *-t* (Tosco 2000:95). It is divided into three subgroups: western (↗Arbore, ↗Đáasanač and Elmolo), eastern (Boni, Rendille and ↗Somali), and central (↗Bayso).

Black (1974) regroups the traditional classification, dividing L.E.C. into ᶜAfar-Sāho and Southern L.E.C. In Hetzron's (1980) tentative classification, L.E.C. is also divided into ᶜAfar-Sāho and Southern L.E.C.; the latter, however, includes, according to Hetzron, not only 1) Oromoid and 2) Omo-Tana, but also 3) the ↗Dullay cluster, 4) Yaaku and 5) South Cushitic (Dahalo, Maʾa, Qʷadza, Aasáx, Iraqʷ cluster, i.e., Iraqʷ–Gorowa, Burunge, Alanga). According to the traditional classification the Dullay cluster and Yaaku are considered independent East Cushitic branches, and South Cushitic forms an independent Cushitic branch. Hetzron's arguments for uniting L.E.C. and South Cushitic are common innovative features attested in L.E.C. and the Iraqʷ cluster: 1) redundant subject marking and 2) preverbal case marking. The most recent classification is provided by Tosco (2000). He characterizes L.E.C. as "what is left from East Cushitic after Highland East Cushitic underwent its specific developments in the verbal system" (ibid. 98). Tosco retains Hetzron's two branch-division of L.E.C. into ᶜAfar-Sāho and Southern L.E.C., mentioning for the former such innovative features as replacing of some common East Cushitic elements in the basic vocabulary, and for the latter the common innovative preverbal clitics (selectors): **Vn* for the 1st pers. (found in Oromoid, Dullay, Yaaku), **t* for the 2nd pers. Tosco subdivides southern L.E.C. into a Nuclear (consisting of Omo-Tana and Oromoid) and a Transversal group (the Dullay cluster and Yaaku). The Nuclear group is characterized by a shared innovation: an invariable negative past marker *-Vn* or *-nV*, which is opposed to the negative non-past, fully conjugated with the same affixes as the dependent non-past (Tosco 2000:96f.). The common genetic origin of the Transversal group is less secure (for the common features s. Hayward 1978; in Hayward 1989 the most striking argument, loss of voicing distinction, is rejected since the distinction is preserved in Ṣamakko). Concerning the Iraqʷ cluster, Tosco accepts Hetzron's argumentation of including it into L.E.C., but does not share "Hetzron's confidence that Iraqʷ could 'drag along' all the other Southern Cushitic languages" (Tosco 2000:99; cf. also Kießling 2001).

The status of L.E.C. as a separate entity is disputed by Sasse (1981), who does not mention L.E.C. at all and classifies East Cushitic into 1) ↗Highland East Cushitic, 2) Burği, 3) ᶜAfar-Sāho, 4) Yaaku, 5) Dullay, 6) Oromoid and 7) Omo-Tana.

Most L.E.C. languages are spoken in Ethiopia. ᶜAfar and Sāho are also spoken in Djibouti and Eritrea. Oromiffa varieties are also spoken in Kenya, and Somali is by far the most important language of Somalia. Boni is spoken in Kenya and Southern Somalia; Rendille, Elmolo and Yaaku exclusively in Kenya.

Regarding the number of speakers, Oromiffa is the most widely spread language: its speakers total probably more than 20 million. Somali has ca. 12,000,000 speakers followed by ᶜAfar (1,500,000), Sāho (200,000), Konso (150,000), the Dullay cluster (45,000), Đáasanač (35,000), Rendille (32,000), Arbore (5,000), Boni (3,500) and Bayso (1,000). Elmolo and Yaaku are nearly extinct (s. Gordon 2005:111-20, 185, 132).

Typical features of Cushitic which are found in L.E.C. are, e.g., a five vowel system (*i*, *e*, *a*, *o*, *u*), a phonemic distinction between short and long vowels and consonants, and a three-number system in nouns (unmarked, singular, and plural).

However, due to the huge geographical spread of a relatively large number of languages, L.E.C. is less homogenous grammatically than Highland East Cushitic or ↗Agäw. Some L.E.C. languages preserved the pharyngeal fricatives (ᶜAfar-Sāho, Somali, the Dullay cluster) while the others have lost these sounds after partially affecting the sur-

rounding vowels. Glottalic consonants are found in all L.E.C. languages. However, in some languages only implosives occur, the latter sometimes realized as retroflexes (ᶜAfar, Sāho, Đáasanač, Somali). In a second group of languages only ejectives are attested (Bayso), whereas other languages have both implosives and ejectives (Arbore, Oromo, the latter with the rare case of an implosive and an ejective at the same place of articulation, cf. Lloret 1994/95, 1995). Most of the L.E.C. languages have a stress-accent system, whereas Arbore, the Dullay cluster, and Rendille are languages with two register tones. In verb morphology some languages (ᶜAfar, Sāho, Omo-Tana group) preserved the so-called prefix conjugation in a small number of verbs, whereas the other L.E.C. languages use exclusively suffixes. Non-concatenative morphology, a typical ↗Semitic feature, is present in ᶜAfar-Sāho. Traces of this feature are found also in Arbore and most of the Omo-Tana languages. Some L.E.C. languages are marked nominative languages, whereas others are not. The latter seem to have lost this feature since the marked nominative system may be reconstructed for Cushitic (Sasse 1984).

As to word order, L.E.C. must be divided into rigid S[ubject]–O[bject]–V[erb] languages (ᶜAfar-Sāho) and all other languages "giving up a rigid SOV syntax – or, rather, failing to implement it, if Tosco's (1994) preliminary reconstruction of Proto-East Cushitic syntax is accepted" (Tosco 2000:95f.).

Joachim Crass

Luba ↗Gadaa

Lubo

Däğğazmač L. (ሉቦ, fl. 1759–83) was an official of *aṣe* ↗Iyoᵓas. The brother of Iyoᵓas's mother, Wəbit (GuiIyas 175 [tr.]; BruNile vol. 2, 659), in the 1760s he acted, along with his brother Dulo, as principal protector of the Emperor. Iyoᵓas inherited the throne when he was seven years old and much under the sway of his grandmother, *ətege* ↗Bərhan Mogäsa and her party, the *Qʷarräññočč* (↗Qʷara). Therefore, he turned to his uncles to establish his independence from his grandmother. L. first appears in the historical record in October 1759, with his appointment as ↗*šaläqa* of the Kanisa troops (GuiIyas 203 [tr.]). Five years later, at the end of September 1764, he was appointed *däğğazmač* of Amhara. Towards the end of 1767, the Emperor appointed his uncle as *balambaras*, and, early the following year, *ṭəqaqən* ↗*blatten geta* (GuiIyas 234, 237 [tr.]).

L. became the principal rival of *ras* ↗Mikaᵓel Səḥul of Təgray, to whom Bərhan Mogäsa turned to buttress her power. He was very active in the complex shifting coalitions which marked the late 1760s and early 1770s (BruNile vol. 2, 667ff., 675–80, 691–95), but the assassination of Iyoᵓas by Mikaᵓel in 1769 undercut his position and he soon dropped out of contention. L. made one notable re-appearance, when, in February 1783, he met with *aṣe* ↗Täklä Giyorgis and was baptized (most probably being earlier a Muslim), along with many of his followers (BlunChr 56f., 282f.).

Donald Crummey

Lucy ↗Australopitecus afarensis

Ludolf, Hiob

L. (older form Job Leutholf, b. 24 June 1624, Erfurt, d. 8 April 1704, Frankfurt on the Main) was the founder of ↗Ethiopian studies as an academic discipline. His parents were Hiob L. and Judith, née Brandt. He entered Erfurt University in 1639 to study medicine and law, but also music as well as Oriental languages and literature, including Gəᶜəz, Hebrew, Syriac and Arabic. Among

The only known portrait of Hiob Ludolf, 1652, published in his *Historia Aethiopica*; from Uhlig 1983, part a, frontispiece

his teachers were the theologian Bartholomaeus Elsner and the Orientalist Karnrad, whose Gəᶜəz grammar L. would later correct. He graduated in Law in 1645 and thereafter continued his philological studies in Leiden. In addition to familiarizing himself with a considerable number of Oriental languages, L. also acquired an extensive knowledge of many European tongues. He completed his studies by travelling widely across Europe, from 1646 accompanying a Dutch nobleman to France and England, and while in Oxford in 1648 he was briefly able to study the Ethiopian manuscripts of the ↗Bodleian Library.

In 1648 L. became private instructor at the house of Baron von Rosenhahn, the Swedish envoy in Paris, who soon, at the behest of Queen Christina of Sweden, sent his new employee to Rome to search for Swedish documents. Whilst the documents remained untraceable, this voyage became fundamental for L.'s interest in Ethiopia. In 1649 in Rome he met four Ethiopian monks from ↗Santo Stefano dei Mori, and one of them, *abba* ↗Gorgoryos from Mäkanä Śəllase, became L.'s teacher of Gəᶜəz and main informant. Their regular meetings between March and May 1649 formed the basis for L.'s subsequent research into Ethio-Semitic languages as well as Ethiopian history, culture, literature and Christianity.

In 1651 L. returned to Erfurt, and in 1652 he entered the service of Ernst I, Duke of Saxe-Gotha-Altenburg. The Duke, who was particularly interested in the land of ↗Prester John which at that time was still supposed to be in Ethiopia, suggested that L. invite Gorgoryos to Ernst's castle Friedenstein in Gotha. L. used the three months of Gorgoryos's stay to continue his work on Gəᶜəz and Amharic dictionaries. L. recorded his conversations with the monk and used them later for his *Sciagraphia historiae Aethiopicae* (1676), *Historia Aethiopica* (1681) and, especially, *Theologia Aethiopica* (ed. Uhlig 1983). Back in Rome, Gorgoryos continued to act as L.'s informant through their correspondence (for the letter exchange s. Flemming 1890–94).

In 1652 L. was appointed a counsellor to the Reichstag in Regensburg, and in 1653 he started teaching the Duke's son Frederick. After receiving doctorate in jurisprudence in 1658 L. was appointed court counsellor, in which function he thereafter advised several German royal courts on questions of politics, diplomacy and finance (Uhlig 1983:40).

L. married Emilia Maria Dimpler in 1661. In the same year his Gəᶜəz dictionary and grammar (modelled upon Thomas Erpenius's *Grammatica arabica*, 1613) were published in London, somewhat carelessly edited by L.'s student Johann Michael ↗Wansleben (in 1699 a revised edition appeared in Frankfurt [Main]). In 1663 L. gained Duke Ernst's consent to finance a mission led by Wansleben to Ethiopia; the latter, however, only got as far as Egypt. From 1664 to 1670 L. was the court director of the Duke, a position he resumed in 1675 under Frederick.

After the death of his wife in 1676, L. retired from political office and moved to Frankfurt where he devoted himself to Ethiopian studies. However, he continued to serve on individual missions when his expertise was requested for the public good, and in 1679 Emperor Leopold I called him to Prague to try to achieve alliance with Ethiopia against the ↗Ottoman empire. L.'s "letter to the Ethiopian Nation" was written in Gəᶜəz after the siege of Vienna in 1683 (van Donzel 1974, passim; Uhlig 1983:284–90). For his help, L. received the title Kaiserlicher Rat ('Imperial councillor'; Hammerschmidt 1987). From 1681 to 1685 he was senior advisor to Kurfürst Carl of Palatia. In this capacity he participated in negotiations between Germany and France in 1682. That year he also married his second wife, Anna Katharina Müller.

Whereas L.'s attempts to establish a diplomatic contact with Ethiopia in the early 1680s were unsuccessful, his two letters, to the Ethiopian Nation and the ↗*baḥər nägaš*, remaining unanswered, the same cannot be said about his scholarly endeavours. In 1683 he composed a 13-point questionnaire which, through his Dutch contact Nicolaas Witsen, was delivered to al-Muḫa two years later for *ḫoğa* ↗Murād to complete. The answers were provided by the Ethiopian envoy during his second visit to Batavia in 1692 and were used by L. in his *Relatio nova* (1693). In 1696 Murād provided answers to another 24-point questionnaire by L. (DonMurad 54–60, 71–81f., 89–98, 154–58). In 1690 L. was appointed President of the *Collegium Imperiale Historicum*, at the recommendation of Gottfried Wilhelm von Leibniz, one of the many prominent scholars of L.'s time with whom he entertained a lively correspondence. In this function he published the first two volumes of the *Schaubühne der Welt* (1699, 1701), a survey of the contemporary global events of the time, which due to L.'s interests had Ethiopia as one of its main foci (Uhlig 1988). In 1698 L. published his grammar and dictionary of ↗Amharic, one of the earliest European studies on the language.

After the death of his second wife, L. married Maria Catharina von Lersner in 1694. The last decade of his life he spent in Frankfurt, surrounded by his students. Wansleben and Christoph ↗Schlichting were his best-known assistants. By 1702, L. had completed about 15 more or less extensive works dedicated to Ethiopian studies, all following scholarly principles already established for other philological disciplines (precise mention of sources, explanation in footnotes). Due to the groundbreaking importance of his writings, they were soon translated from the original Latin into the major European languages of the time. His grammar and dictionary of Gəᶜəz remained standard reference works for two centuries until they were superseded by ↗Dillmann's studies.

L. was buried in the Katharinenkirche in Frankfurt.

Lule Täsfaye

L.T. (ሉሌ፡ ተስፋዬ, b. 1906 A.M. [1913/14 A.D.], Addis Abäba, d. 25 November 1978, Sweden) was an important figure among the leading Ethiopian women of her time, by virtue of her continuous contribution to voluntary welfare. She was the daughter of *ato* Täsfaye Tägañ, diplomat, and of *wäyzäro* Šäwaräggäd Adäfrəs, founder member of the Ethiopian Women's Welfare Association (**የኢትዮጵያ፡ ሴቶች፡ በጎ፡ አድራጎት፡ ማኅበር**, *Yäʾityopya setočč bäggo adragot maḫbär*).

L.T. came from a Catholic family and was educated in France, where her father was head of the Ethiopian Delegation in Paris. Returning to Ethiopia before the Italian occupation, she succeeded her mother in the Association, becoming its Secretary-General. She supervised the running of the Association's school and worked tirelessly, over many years, to raise funds for it, as well as to meet the other expenses of the Association, which also supported the Princess Ṣäḥay Clinic and an orphanage, originally for war orphans.

L.T.'s husband, *ato* Täfäri Šaräw, supported the abortive ↗Coup d'État of December 1960 (s. EAE II, 1081f.) while he was Ambassador in Sweden, and remained there in exile for 16 years. Because of these circumstances L.T., who stayed in Ethiopia, found it wise to decline the honour of representing the Association when it was awarded the Ḫaylä Śəllase I Prize in 1970.

L.T. went to Sweden for medical treatment, but could not be cured and died there in 1978. Her husband passed away in Addis Abäba almost immediately afterwards, and both were buried together in Addis Abäba's Gulläle Cemetery on 2 December.

In 2000/01 L.T. was posthumously awarded by the Government the Twentieth Century Ethiopian Women's Prize on the recommendation of the then Minister for Women's Affairs and President of the Ethiopian Women's Movement, *wäyzäro* Taddäläčč Wäldä Mikaʾel.

Rita Pankhurst

Lundin, Avraam Grigor'evič

L. (b. 25 December 1929, Leningrad, d. 12 October 1994, St. Petersburg) was a Russian Orientalist, who specialized in South Arabian and Aksumite studies. A son of school teachers, in 1946 he joined the Oriental Faculty at Leningrad State University and the last stream of students who were taught main subjects by Ignatij ↗Kračkovskij. L. graduated in 1951 as Historian of Arab countries, and in 1954–57 followed the post-graduate course at the Leningrad Branch of the Institute of Oriental Studies of the USSR Academy of Sciences under the supervision of Nina Pigulevskaja, Corresponding Member of the Academy, famous Syriologist and broad-minded specialist in the early medieval history and culture of the Middle East.

In January 1958 L. was employed by the Leningrad Branch of the Institute of Oriental Studies as Research Fellow, in April submitted his Ph.D. thesis on *South Arabia in the 6th cent. A.D.* and became the pioneer of Sabaean studies in the Soviet Union. At this stage of his career the sphere of his interests embraced the relations between the kingdoms of ↗Ḥimyar and ↗Aksum in the first half of the 6th cent. A.D. His principal works were dedicated to the political régime, social structure and religious beliefs of Sabaʾ, Qatabān and ↗Ḥaḍramawt in the 1st millennium B.C. In 1969 L. submitted his "Doctor of Sciences" (habilitation) thesis on *Sabaʾ as the State of Mukarribs* (*Sabaean Eponymate*). ↗Epigraphic South Arabian documents were always at the centre of his scholarly activities. Notably he published the so-called list of the eponyms of Sabaʾ from the tribe of Ḫalīl and ca. 150 inscriptions collected in Yemen by Grjaznevič in 1966–67 and 1970–71. He presented some of the results of his research relating to Aksum at the Ninth ↗International Conference of Ethiopian Studies in 1986. L. took part in the Soviet-Yemenite Multidisciplinary Expedition in 1987–91 as Epigraphist.

In his works on the early history of alphabetic writing L. considered the names of the Ethiopic letters to be an important argument in favour of the acrophonic principle of its origin.

Lüpke, Theodor von

L. (b. 12 April 1873, Hermannsburg near Celle, d. 13 April 1961, Bückeburg, Lüneburger Heide) was an architect who played a prominent role in the 1905/06 ↗Deutsche Aksum-Expedition (DAE). He studied in Munich and Hanover. Already as a student he started to work with photographic equipment (unusual at that time), which was to have a decisive impact on his professional life.

The German Emperor Wilhelm II, during his travels to the Near East in 1898, acquired the concession for excavations at Baalbek, Lebanon, where German excavations were carried out under the direction of Otto Puchstein in 1902/03. Members of the team were, among others, the architect Daniel ↗Krencker and L. The latter was responsible for the photogrammetric work, a new branch of architectural photography.

In 1905, L., on the recommendation by Krencker, who also participated, was appointed a member of the DAE under Enno ↗Littmann; L. assisted Krencker. He contributed to the final publication of the DAE, especially to DAE III, of which he was the editor. On this expedition (to Aden, ʿAsäb, Massawa and ↗Aksum) L. took nearly 1,000 photographs of archaeological monuments, churches, priests, ordinary people, plants, and landscapes. About 660 negatives are still preserved at the Brandenburgisches Amt für Denkmalpflege und Archäologisches Museum, Wünstorf (the first part of this material was been published in WenDAE I).

In 1909 he became the director of the Prussian "Meßbildanstalt" and inaugurated major projects: the architectural documentation of downtown Berlin (1910) and Potsdam (1911–12). The Greek government invited him in 1910 to photograph systematically important ancient monuments. After World War I he incorporated major collections of photographs into the archives of the now "Staatliche Bildstelle". He documented the Theodosian city wall of Constantinople (Istanbul) in 1928 and the German excavations of the late antique ruins of Aizanoi, Anatolia. During the 1930s he documented the old buildings of Nuremberg and prepared a documentation of German theatres. He retired in 1938.

Luqas

Äläqa L. (ዐላቃ, fl. end of 19th – beginning of 20th cent.) was an Ethiopian painter, probably from ↗Goğğam (Guida 242), who is supposed to have decorated various churches during the reigns of *aṣe* ↗Yoḥannəs IV and *aṣe* ↗Mənilək II. His first set of wall ↗paintings would be the now destroyed decoration of ↗Däbrä Bərhan Śəllase church in ʿAdwa, founded by *däğğazmač* Kaśa Mərṣa in 1868 and finished in 1871. The paintings must have been partially completed later, after Kaśa's ascension to the throne as Yoḥannəs IV. On the eastern socle of the ↗*mäqdäs*, Yoḥannəs's accession to power is depicted, from the coronation in ↗Aksum Ṣəyon (January 1872) to the ↗*gəbər* given on this occasion and remembered for its munificence.

L. is mentioned by Mérab (1929:303) only in 1908 as the painter who executed those murals, and by the *Guida* in 1938. Numerous sources mentioning the same paintings before Mérab (e.g., Raffray 1876:72; Powell-Cotton 1902:393; DAE III, 57ff.) do not ascribe them to L. Mérab also states that L. decorated Mənilək's church dedicated to Maryam in ↗Addis ʿAläm and that he was still active in 1913. L. was probably also involved in the decoration of the old churches of Maryam and Yäkka Mikaʾel in Addis Abäba, of ↗Ǝnṭoṭṭo Raguʾel and of Täklä Haymanot in ↗Däbrä Libanos. The two latter churches he painted with the aid of his son, Śahlu Luqas (Pankhurst 1966:18).

An "Eritrean painter" named Luqas and identified with *äläqa* L. by Ricci (1986:280) exhibited a work at the Palermo National Exhibition in 1891–92.

L. (ሉቃስ, d. 7 January 1899, Däbrä Marqos) was one of the three coadjutor bishops (the others were ↗Matewos and Marqos) who went to Ethiopia with the metropolitan bishop ↗Peṭros in 1881 (BTafY 153f.). They came following the request of *aṣe* ↗Yohannəs IV to the Coptic Patriarch Cyril V. This represented an extraordinary expansion of the Ethiopian episcopacy, there having rarely been in the country more than one bishop at a time. Expansion of the episcopacy was part of a broader religious strategy of Yoḥannəs: doctrinal unity through suppression of the ↗*Qəbat* and ↗*Yäṣägga ləǧ* sectarians; conversion of the leading Muslims of ↗Wällo; and expansion of the Church along with expansion of the state.

L. was assigned to ↗Goǧǧam and ↗Käfa, the territories under *nəguś* ↗Täklä Haymanot. He settled down at ↗Däbrä Marqos at the Abun Säfär, one of the new areas created by Täklä Haymanot; his "court" seems to have included a number of Gondärines (Täklä Iyäsus Waqǧera ch. 44 n. 19). He went twice to battles against the ↗Mahdists, first with Täklä Haymanot and later with Yoḥannəs.

L. is said to have enjoyed Täklä Haymanot's trust. He also played a conciliatory role during the struggle between Täklä Haymanot and Yoḥannəs. He was buried in the church of Marqos, Däbrä Marqos, and was succeeded by *abunä* Yoḥannəs (Täklä Iyäsus Waqǧera ch. 44 n. 4).

Luqas

Abunä L. (ሉቃስ, formerly *mämhər* Wäldä Mika'el; b. 1900, ᶜAddi Qäbay, Säraye, d. 18 November 1992) was an Ethiopian bishop. Born to *wäyzäro* Bərre and *qes* Bərhanä Mäsqäl, who taught him the ↗Psalter, he joined the monastery of ↗Däbrä ᶜAbbay. There he completed a traditional church ↗education, studying ↗*zema*, ↗*qəne*, Commentary to the N.T., liturgy (↗*Qəddase*) and the ↗*Abušakər*. He subsequently taught liturgy and took monastic orders.

After a failed project to go to Jerusalem, and following the outbreak of the ↗Italian war of 1935, L. joined the northern army. He was present at the battle of ↗May Čäw but was injured and returned to Addis Abäba. He lived in the Mänbärä Patrəyark Qəddəstä Qəddusan Maryam and ↗Qəddəst Śəllase churches. Enjoying the favour of the Emperor and the *əčč̣äge* for his presence at May Čäw, he was appointed *aläqa* of Ṣərḥa Ṣəyon Ḥawaryat Golla Qəddus Mika'el Church in Addis Abäba.

L. was also engaged in social projects, especially helping orphans. He opened an elementary school for poor children and continued social activities at Taᶜəka Nägäśt Bä'ata Lämaryam in Addis Abäba. He helped in the construction of the Ṣərḥa Mənilək building in Addis Abäba (↗Addis Kätäma) and secured the return of most of the property taken during the Italian occupation. It was around this time that he translated the ↗*Dərsanä maḥyäwi* from Gəᶜəz into Amharic.

In 1951, L. was promoted to General Manager of the Patriarchate and in May 1952 was appointed Bishop of the ↗Arsi diocese. There, he was active in developing traditional schools, promoting road and bridge construction. From 1962 to 1964, he acted as bishop in Eritrea. Under the *Därg* (↗Provisional Military Administrative Council), due to his stand against the brutal killings of youths, he was sentenced to four years in prison (1976–79). After his release he was forced to retire along with other critical bishops. He was buried in the Qəddəst Maryam Church, Asälla.

M

Maale

Maale language

The M. language is spoken by ca. 53,800 people (CSA 1996; Gordon 2005:117) in the South Omo administrative zone, in south-west Ethiopia. M. is the sole member of the southern branch of the ↗Ometo cluster, which in turn belongs to the ↗Omotic language family.

M. consonant segments are: stops *p*, *b*, *t*, *d*, *k*, *g*, *ʾ*; implosives *ɓ*, *ɗ*; ejectives *ṣ*, *ʧ*, *q*; fricatives *s*, *z*, *š*, *ž*, *h*; affricates *ʦ*, *č*, *ǧ*; nasals *m*, *n*; liquids *l*, *r*; glides *w*, *y*. M. has five vowels (*i*, *e*, *a*, *o*, *u*); length is phonemic in both vowels and consonants.

Two tones are distinguished: high and low. Syllable-patterns include: CV, CVV, CVC, and CVVC, e.g., *nú*, 'we'; *lóó*, 'up there'; *ṣun.gú.ʦi* 'nail'; *waas.ka* 'on water'.

Basic (underived) nouns end in one of the terminal vowels *i*, *e*, *o*, or *a*, which are dropped when any morpheme beginning with a vowel is added to the noun.

Nouns in M. can be marked for gender, definiteness, number, and case.

The gender-distinction system is basically sex-based, though some inanimate nouns can also take a gender suffix. The markers are *-aʦi* for masc. def. and *-éll-* for fem. def., e.g., *naʾa*, 'a child' – *naʾaʦi*, 'the boy' – *naʾélla*, 'the girl'. Indefinite nouns are unmarked for gender.

In some nouns, definiteness is indicated by the suffixation of -z(z)- to sg. and *-nʦi* to pl. nouns (e.g., *kani*, 'a dog' vs. *kanzi*, 'the dog' and *kanattó*, 'dogs' vs. *kanattóntsi*, 'the dogs'), gemination of the final consonant (e.g., *wúdi*, 'a hut' vs. *wúdd-a*, 'the hut'), or alternation voiceless / voiced (e.g., *goši*, 'a farm' vs. *gož-á*, 'the farm').

Plural markers for indefinite nouns are *-aʦi* (coinciding with the masc. def. sg.; 'divorced woman' *sayó* [sg.] vs. *sayaʦi* [pl.]), *-att-* ('potter' *mani* [sg.] vs. *manattó* [pl.]), gemination of the final consonant of the sg. noun ('bridge' *zóka* [sg.] vs. *zókk-ó* [pl.]), and consonant alternation ('lash (for hitting)' *bádi* [sg.] vs. *bàžá* [pl.]).

Case marking is gender-sensitive. Thus, in masc. nouns, the nominative is marked by high tone on the final vowel of the noun, whereas the absolutive is unmarked, e.g. 'a tree' *mítsi* (Abs.) vs. *mítsí* (Nom.). In fem. nouns, nominative and absolutive are marked by *-á* and *-ó* respectively, e.g., 'the woman' *laalélláá* (Nom.) vs. *laalélló* (Abs.). Dative, ablative, instrumental, genitive, and locative are marked by *-m*, *-ppa*, *-na*, *-ko*, and *-ídda*, respectively (for both masc. and fem.); e.g., 'people' *ʾasóm* (Dat.), *ʾasóppa* (Abl.), *ʾasóna* (Instr.), *ʾasóko* (Gen.), *ʾasóídda* (Loc.).

Three sets of basic pronoun paradigms are distinguished.

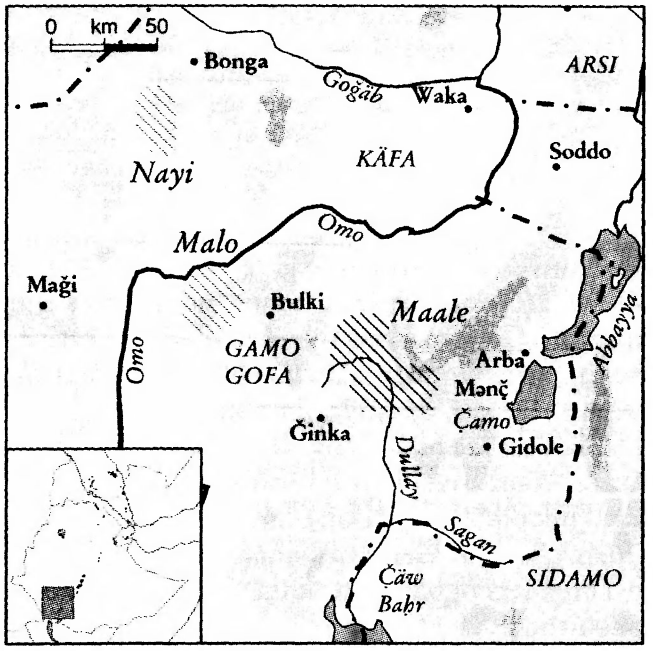
Pers.	Genitive	Subject	Object
1st sg.	*ta*	*táání / tá*	*táná*
2nd sg.	*ne*	*nééni / né*	*néná*
3rd sg. masc.	*ʾízá*	*ʾízí / ʾííní / ʾí*	*ʾízá*
3rd sg. fem.	*ʾízó*	*ʾízá*	*ʾízó*
1st pl.	*nu*	*núúní / nú*	*núná*
2nd pl.	*ʾíntsi*	*ʾíntsí*	*ʾíntsi*
3rd pl.	*ʾiyátó*	*ʾiyátá*	*ʾiyátó*

1st pers. sg. and pl., 2nd pers. sg. and 3rd pers. masc. sg. pronouns have alternative short variants. Peripheral cases such as the Dat., Abl., Instr., and Gen. are derived from the shorter variants, e.g., for 1st pers. sg.: *táám* (Dat.), *tááppe* (Abl.), *táána* (Instr.), *taakó* (Gen.).

Besides, M. has another pronoun which is only used when in the same sentence a third person possessor or affected entity is identical to the subject. This pronoun distinguishes only a possessive form (*pè*) and an absolutive form (*péná*).

There are two basic demonstrative forms: *ha-* (proximal) and *ye-* (distal). To these, gender, number, and case markers are added to derive twelve distinct demonstratives. The proximal Nom. forms are *hayí*, 'this (masc.)', *hánná*, 'this (fem.)', *háátá/hantsí*, 'these (pl.)'; the Abs. forms are *háya*, *hánnó* and *hááta*, respectively. E.g., *hánná ta nayíke*, 'this is my daughter'; *hayí ta nayíke*, 'this is my son'; *háátá ta naattóke*, 'these are my children'. Locative demonstratives include *haika/haka*, 'here'; *yeka/ʾiika*, 'there'; *léka*, 'up there'; *líka*, 'down there'; *séka*, 'there, to the side of the speaker'.

Question words are derived from the bases *ʾa-/ʾo-* and *wo-/wa-*: *ʾóóní*, 'who'; *ʾóná*, 'whom';



ʾaigé, 'what (Nom.)'; *ʾaigó*, 'what (Abs.)'; *ʾáiddó*, 'when'; *woka*, 'where'; *ʾánko*, 'to where'; *woyí*, 'which (masc. Nom.)'; *wónná*, 'which (fem. Nom.)'; *wozí*, 'how'; *wááʾʾí*, 'how many'.

Like adjectival, demonstrative and other modifiers, numerals generally precede the head noun as in *pétte*$_1$ *laali*$_2$ 'one$_1$ woman$_2$'. The noun modified by a numeral can be in the singular or in the plural: *haitsó ʾasi / haitsó ʾasó* 'three persons'.

In M. verbs, a two-way aspect distinction is made. The perfective is marked by *-é-* as in *mukké-ne*, 'has come'. The imperfective has two sub-categories: present imperfective, marked by *-á-* and future imperfective marked by *-andá-*: e.g., *mukká-ne*, 'comes' vs. *mukk-andá-ne*, 'will come'.

In M. one can distinguish declarative, interrogative, and imperative moods. *-ne* is the marker of affirmative declarative. In the negative declarative, *-se* replaces *-ne*, e.g., *mukk-íba-se*, 'has not come' vs. *mukk-uwá-se*, 'does not come' vs. *mukk-induwá-se*, 'will not come'. Affirmative interrogative is marked by *-y*, e.g., *ʾaigó múʾ-é-y*, 'what did (you) eat?' vs. *ʾaigó múʾ-á-y*, 'what do (you) eat?' vs. *ʾaigó múʾ-andá-y*, 'what will (you) eat?'.

In declarative and interrogative moods, M. verbs do not inflect for subject. In imperatives, sg. and pl. are marked by *-e* and *-uwáte* respectively. E.g., *múʾ-e*, 'eat (2nd pers. sg.)!' vs. *múʾ-uwáte*, 'eat (2nd pers. pl.)!'. A polite form of the imperative is marked by adding *-ra* to the pl. form: *múʾ-uwáte-ra*, 'please eat!'. The optative is marked by *-óm* for 1st pers. and by *-óngó* for 3rd pers.: *múʾ-óm*, 'let me/us eat!' vs. *múʾ-óngó*, 'let him/her/them eat!'.

Causative, passive, and inchoative stems are derived by adding respectively *-is-*, *-int-* and *-ad-* to the verb root. E.g., *gel-éne*, 'has entered' vs. *gel-is-éne*, 'make enter'; *mask-éne*, 'has washed' vs. *mask-int-éne*, 'is washed'; *bélsi*, 'lazy' vs. *belṣ-ád-éne*, 'become lazy'.

The basic word order is Subject-Object-Verb. Modifiers often precede their heads. Dependent clauses precede the matrix clause. A sentential example:

díbi	*banq-á*	*bed-áza*	*ʾeeʾé*	*hánná*
many	frog-Nom	see-Temporal	yes	this:Fem:Abs
baak-ka	*báiqq-áʾʾá*			
middle-Loc	disappear-Emphatic:negative			

'When they found many frogs [they said] "yes! (our frog) will certainly be among these!"'

The standard ten-word list for M. is: *pétte* 'one', *lamʾó* 'two', *haitsó* 'three', *tami* 'fire', *waatsi* 'water', *súgútsi* 'blood', *ʾábi* 'sun', *ʾagínni* 'moon/month', *ʾindírsi* 'tongue', *ʾáčči* 'tooth'.

Azeb Amha

Maale ethnography

The M. are an Omotic-speaking ethnic group in southern Ethiopia. In 1994, their number was 46,391 (CSA 1996:66).

The M. country lies north of the ↗Banna territory and east of the ↗Aari Mountains, the River Bazo (or Dəməkare) serving as the M.'s natural boundary with the ↗Gofa to the north and with the ↗Ṣamay to the east.They were traditionally subdivided into 13 chiefdoms, which followed a political hierarchy: Bala, Makana, Ǧaato, Šabo, Goddo, Bio, Lemo, Gento, Irbo Lalo, Gero, Ǧado and Gollo; the Bala chief had a higher status than the following ones, and the Gollo chief the lowest. Each chiefdom was represented by a chief called *goda*. The M. country was part of the ↗Hamär Bakko *awraǧǧa* of ↗Gamo Gofa province. Today M. *wäräda* (previously, Bakko Gazär *wäräda*) is part of the South-Omo Administrative Zone in the Southern Nations, Nationalities and Peoples's Regional State.

M. is the name of the dominant agro-pastoralist caste which is distinguished from two craft castes: potters and tanners/drummers on the one hand, and blacksmiths on the other hand, although ag-

riculture and cattle raising are now practiced by all. These three sedentary castes thus have mixed economies that also include activities such as beekeeping, gathering, hunting and fishing. The cattle are mostly kept in the semi-arid lowlands, but also all over the M. country. Agricultural produce (maize, sorghum, *ṭef*, beans, coffee, and some root crops such as sweet potatoes) represents the primary means of subsistence, however, with livestock reserved for rituals or matrimonial exchanges (Ferran 2005:20). M. attend the markets of their neighbours and sell, e.g., small stock, cattle and honey, depending on the market. Long distance traders come to M. country to buy cereals, red pepper (↗*Bärbäre*), pumpkin seeds, beeswax, cowhides and goatskins.

The M. were incorporated into the Ethiopian state by conquest in 1894 (s. Donham 1986:80f.) and like other peoples of the south have suffered under the ↗*gäbbar* system. Farming families were assigned to members of the conquering army to work for and feed their families. M. life under the Italian occupation improved considerably; M. tradition considers the Italians as their saviours from the oppressive empire. M. were in that period also employed in constructing a road to the regional capital Bakko. In the post-war period much of M. fertile land was re-appropriated by the descendants of the former conquerors from the north and by the M. *kati* (lit. 'king', equivalent of *kao* or *kawo* in other Ometo languages). This was later resolved by the decree of 1975 that nationalized rural land. However, after the collapse of the *Därg* military dictatorship, some of the previous owners reappeared under a new guise.

The M. include over 30 clans, traditionally divided into two exogamous marriage-classes (moieties), *karazi* and *raggi*. The *karazi*, who are said to have immigrated into the country after the *raggi*, possessed the superior position. In the 1950s Jensen observed a shift from this dual structure towards a greater importance of clan organization (VSAe I, 276f.). Present research, however, suggests that the moieties and the clans have always coexisted and have always formed a part of social organization. Craftsmen, as in other Ometo traditions, were excluded from farming activities, while farmers were prohibited from engagement in handicrafts. There are two endogamous craft groups: potters-tanners/drummers and blacksmiths. The hierarchical relation between the different categories of people

Jumping dance of the Maale during the ritual *laali baytsi*, in Bule, Irbo; photo 2006, courtesy of Hugo Ferran

created ritual and labour dependencies between higher and lower social ranks.

In traditional M. culture the institution of "kingship" was crucial. The village of Bala was the seat of the M. *kati*. He was responsible for the blessing of the country, the performance of sacrifices and functioned as a "rainmaker" (↗Rainmaking). His ability to curse made his power ambivalent. Jensen reports that the position of the *kati* was particularly expressed in the elaborate rituals connected with his burial and during the enthronement of the new *kati* (VSAe I, 269ff., 271–75). The M. system of kingship was based on the production of inequality and wealth to benefit kings, chiefs and sub-chiefs. The *kati*, however, has always been a ritual rather than a political king (Donham 1994:162, n. 3). After the incorporation of the M. into the Ethiopian empire the *kati* and the *goda* (chiefs) became the intermediaries between the M. and the imperial system. The last M. *kati* lived ca. 20 km south of ↗Arba Mənč in the village of Šelle, employed as a veterinary assistant until his death in 2005.

The rites of passage are not exclusive to the king and the chiefs. The common people have also to transit through a complex series of ritu-als to produce (and reproduce) the society. For instance, the rite *laali baytsi* ('bring a wife'), which is the third and last step of the wedding process, is necessary to integrate the wife in the lineage of the husband.

The neighbours of the M. regard them as reliable partners and aspire to enter into a relation of *bele* bond-friendship. The *bele* includes the exchange of gifts and visits, mutual support and revenge of the killing of the partner by an enemy. The pastoral neighbours of the M. in the south regard them as skilful warriors, and their use of

poisoned arrows is legendary. Even pastoralists armed with Kalashnikovs become wary when M. are mentioned (for the ↗Hamär's view of the M. s. Lydall – Strecker 1979). The Hor (↗Arbore) consider the M., whom they call Bagira, to be their most potent enemies. They traditionally considered killing a M. as very beneficial to their social and cultural reproduction of the Hor. Once every generation the Hor organized cattle raiding and man hunting teams to capture M.

Today an erosion or transformation of traditional values in M. society can be noted. The effects are visible in a declining cohesiveness in interpersonal relations and a weakness of traditional institutions that cared for common natural resources. Social cohesion was provided until the end of the 19th cent. by those whom the M. call their territorial and genealogical *fathers*. Today, the traditionalists live alongside Evangelical Protestants, Orthodox, Muslims and Syncretists.

Maanso

M. is a Somali word that is used (1.) as a general term for all genres of poetry and songs and (2.) in a narrower sense for indicating the genres of poetry that are traditionally regarded as "most noble and best fitted for dealing with serious and important matter" (Andrzejewski – Lewis 1964:47). The etymology of the Somali noun M. is still unknown; connecting it with Arabic *manẓūm* 'poem' (↗*Manzuma*; Morin 1999:48f.) is just pre-scientific folk etymology. Two of the salient features of the traditional oral M. of the Northern and Central Somali are its authoriality, i.e., that oral poems are attributed to individual poets, who are said to have composed each of them on a specific occasion and for a particular purpose, and its being aimed primarily at achieving a political or social effect, rather than a purely aesthetic or hedonistic one.

In traditional settings, the poet (*gabyaa* or *laašin* [*laashin*]) composes his M. poems orally and a memorizer, who is sometimes called a *ḥaafid* (*xaafid*), listens while each line is composed. Subsequently it is the memorizer who performs the poems to a wider audience. With the spread of modern electronic devices, tape recorders replaced memorizers, and audio cassettes, audio files on the Web and, increasingly, written transcripts are now used for disseminating old and new poems throughout the Somali homeland and the worldwide diaspora. Like most kinds of oral poetry, Somali M. are performed with a musical tune and rhythm, the *luuq*, that changes according to the genre and, at times, the author or the performer. Only in recent times have written poems started to be simply recited.

Sheekh Jaamac (1974:v) and Yaasiin (1984:66ff.) provide detailed classifications of the topics covered by M. poems. For instance, the former distinguishes *ammaan*, 'praise'; *ᶜay* (*cay*), 'abuse'; *faan*, 'self-praise'; *digašo* (*digasho*), 'derision'; *diradire*, 'controversy'; *ᶜalaaᶜal* (*calaacal*), 'lament'; *gubaabo*, 'exhortation'; *waano*, 'moral and religious advice'; *kuhaan*, 'curse', and *ḥigmad* (*xigmad*), 'wisdom', as the main topics of M. Passionate love has been introduced among the topics of M. only since the 30s, by urban poets such as ᶜIlmi Bownderi (Cilmi Bowndheri). Typically, there is no epic poetry among the Somali, although cycles of events centred around legendary or historical characters are frequently told as oral narratives, e.g., the terrible queen Arraweelo, the wise chief Wiilwaal, or the uprising of the Dervishes led by the *sayyid* ↗Muḥammad ᶜAbdallāh Ḥasan.

Concerning their form, all Somali verses are characterized by alliteration, by a scansion system based upon vowel length and syllable counting, and by sophisticated poetic diction with frequent use of rare words, oblique or veiled discourse, and permutations of the normal word order. Alliteration requires the use of words that begin with similar sounds in different portions of a line, as *koorta*, 'the bell' and *korommo*, 'gelded camels' in the first line of the *gabay* below, or in different lines when these are short, as *waaga*, 'the first light of dawn' and *wannahaarka*, 'and the whole day' in the first and second lines of the *geeraar* below. Most genres of Somali poetry require the same alliterating sound to be used in all the lines of a poem, even when their number is quite high. As far as scansion is concerned, it should be stressed that short vowels always count as metrically short, even when they occur in closed syllables like the second one in *korommo* (⏑⏑⏑), 'gelded camels' or the first one in *nirgaha* (⏑⏑⏑), 'the camel foals', while diphthongs are metrically anceps, i.e., either short or long.

Most Somalis agree that the main genres of pre-modern or "classical" M. are the *gabay*, the *geeraar*, and the *masafo*. The former is characterized by a long line divided into two unequal half lines by a fixed caesura. The general pattern is | ⏓ ⏓ ⏑ ⏓ ⏓ ⏑ ⏓ ⏓ ⏑ ⏓ ⏓ ⏑ |, but the second half-line has to consist of six syllables. It has been widely used in the past for most topics and, after the above-mentioned ʿIlmi Bownderi, also for love poems. Yet, during the 1970s and 1980s several of the most renowned poets started to prefer for political and love poetry the *ğiifto* (*jiifto*), a genre with shorter lines.

The following is the first part of a *gabay* alliterating in *k*, composed by Raage Ugaas – a 19th-cent. poet who lived in the Ogaden – when his wife Ḥaddiyo (Xaddiyo Nuur) was killed by a lion. It is an example of *ʿalaaʿal* (The text is in the Somali orthography).

Sida koorta yucub oo la sudhay
Ama geel ka reeb ah oo nirgaha
Ama beelo keynaan ah oo
Ama ceel karkaarrada jebshiyo
Ama habar kurkii wadnaha
Ama kaal danley qaybsatiyo
Shinni kaaluf galay ama sidii
Xalay kololo'aygii ma ladin
korommo buubaal ah
laga kaxaynaayo
kor u hayaamaaya
webi karaar dhaafay
lagaga kaw siiyay
kur iyo dhaal yaabis
koronkorroo oomi
kaamil reeruhuye.

'Like the wooden bell tied to camels that are running away,
Or like camel cows whose young are being separated from them,
Or like people journeying with no interruptions while moving camp
Or like a well which has broken its sides, or a river which has overflowed its banks,
Or like an old woman whose only son has been killed,
Or like the poor fighting among themselves for their scarce meal,
Or like bees entering their hive or corn when it crackles in the frying pan,
Yesterday my wailing kept all the camps away from sleep.'

The *geeraar* is a genre with shorter lines, whose general scansion pattern is | ⏓ – ⏑ ⏑ – (⏓) |, but also lines of eight or nine syllables are possible if an anceps syllable is added at the beginning or at the end. Its *luuq* is characterized by a strong trochaic rhythm. In the second half of the 19th cent. it was used by several poets for praising famous horses and camels, but also for topics like political exhortations. The following is a stanza from a *geeraar* alliterating in *w*, composed by the *sayyid* Muḥammad ʿAbdallāh Ḥasan in praise of Walhad, one of his favoured war horses.

Haddii waaga la fuulo
Wannahaarka boqoole,
Wahdi weeye qabow e
Walwal leyr ah miyaa?

'If he is mounted at the first light of dawn
And under the scorching sun throughout the whole day,
He is a cool wind himself:
Is he the light evening breeze?'

The *masafo* has been used mainly by religious poets for moral and religious advice and exhortations. But great poets such as *sayyid* Muḥammad ʿAbdallāh Ḥasan also used it for political controversy. The scansion pattern of the *masafo* resembles that of the *gabay*, but lacks the requirement of the six syllables in its second half line, and has a fixed caesura in the exact centre of the line.

Some Somali authors, such as *sheekh* Jaamac (1974:IV), also regard as M. a few other genres such as the *guurow*, used by poets of the Benaadir region for political, social and love topics, and the *buraanbur*. The latter has a distinctive scansion pattern, is composed only by female poets, and is frequently performed with an accompaniment of handclapping, stepping, or drumming. In the 1990s powerful poetesses used the *buraanbur* genre for long poems that denounce the horrors of the civil war and the degradation of living in their country.

Mäᶜaquddi

M. (መዓቀዲ) is a historical site in ↗Gärᶜalta (Təgray), on the rim of the southern mountain facing the ↗Dəgum plateau. It has an important rock-hewn church dedicated to John the Evangelist, called here by his cognomen "the Son of Thunder" (Mt 3:17) – Yoḥannəs Wäldä Nägʷädgʷad.

According to tradition, the church was founded in the 14th cent. by *abunä* ↗Gäbrä Mäsqäl of Gärᶜalta, who had previously established a major monastic community at ↗Däbrä Mäᶜar nearby. It is an oriented, three-nave basilica (ca. 10 x 9 m) accessible through a rock-hewn passage leading to the south door, which opens into the western bay of the church. A wooden Aksumite-type west door leads from a vestibule into the nave. The vestibule is divided into two sections (4 x 4 m and 5 x 5 m), behind the nave and south aisle respectively, both under flat domes. Three windows in the south façade and two small openings in the western wall let light enter the church. The interior plan, a cross-in-square with three bays divided into nine units by four pillars, is completed by connecting arches and imitation beams. The ceiling in the western bay is vaulted, the south ceiling of the central bay is shaped like a low canopy, elsewhere it is flat. The sanctuary runs the full-width of the church and is open from north to south, with high arches separating it from the nave and aisles. It has two altars, monolithic in the central section, and constructed in the north. An opening in the south-east corner of the sanctuary leads to a grotto. The architecture – namely the absence of side chambers in the sanctuary, the monolithic altar, the height – suggests that the church was hewn in the 14th cent., which conforms to local tradition and to Buxton's typology "Tigrean Basilicas – Earlier Series" (1971:38). A date contemporary with the mid-17th-cent. ↗paintings has also been proposed (Lepage – Mercier 2005:192), but seems very unlikely. A large water cistern, possibly of recent construction, is located to the south outside the monastic compound.

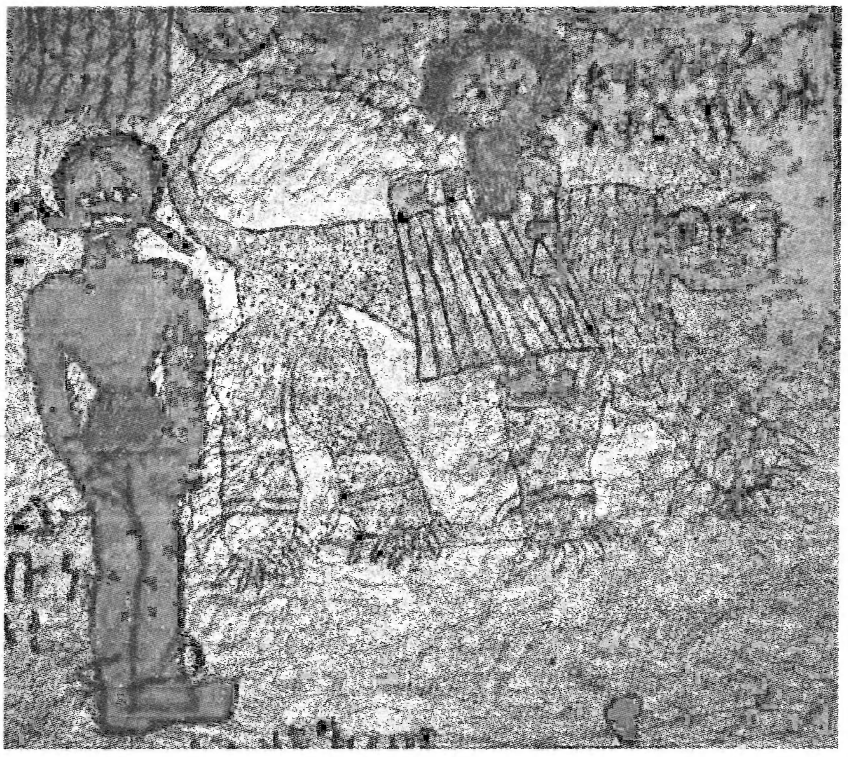
Painted geometrical patterns on the ceilings, pillars, capitals, arches and other architectural elements imitate wooden carvings, particularly the coffered ceilings of old constructed churches like ↗Yəmrəḥannä Krəstos.

Paintings cover the entire western bay-walls, engaged pillars, ceilings and the western surfaces of the free-standing pillars. The ↗inscription on the north wall states that they were ordered by a certain Gäbrä Iyäsus, "the (spiritual) son of Sägid Läʾab, whose father was Arganonä Śəllase of Däbrä Mäᶜarä", in the 26th year of *aṣe* ↗Fasilädäs's reign (= 1657 A.D.). The picture of the ↗donor, who himself is portrayed sitting on a chair near St. Mary and St. John the Evangelist, also mentions *mämhər* Aṣfä Krəstos, the contemporary abbot of Däbrä Mäᶜar, which suggests that the connections between the monastery and the church (i.e. dependency of the latter upon the former) were still strong in the 17th cent.

The pictorial programme includes ca. 60 painted figures and scenes. *Aṣe* ↗Fasilädäs on horseback, surrounded by guards spearing their enemies, is represented on the western wall, preceded by a procession of mounted and foot soldiers on the northern wall. The ↗*Maiestas Domini* appears at the top and centre of the northern wall, with the 24 Heavenly Priests before him around the vaulted ceiling of the western bay. A cherub and a seraph occupy the south-west corner, while the archangels Raphael, Raguel, Saquel, Fanuel and Afnin are on the central ceiling and on the free-standing and engaged pillars. Michael and Gabriel accompany St. Mary with the Child. The O.T. scenes include the Original Sin, completed by a representation of demons (one is identified as the Angel of Death). Scenes from the life of Christ are limited to Baptism, Temptation (middle of the western wall), and Crucifixion (atop the south pillar). The twelve Apostles appear high on the south and south-west walls.

A developed scene of the martyrdom of ↗John the Baptist on the central part of the western wall, showing Herodias with Salome before Herod and the decapitated body of the saint, may indicate that the church was originally dedicated to this saint. John the Evangelist, on the other side, appears twice: among the Apostles and on the opposite wall, his head raised to heaven. The figure on the west side of the monolithic altar, holding the cross and labelled "Yoḥannəs", cannot be clearly identified.

Other representations include four ↗equestrian saints struggling with evil powers (St. ↗George with the dragon on the north wall, St. Theodore the Oriental with the "pagan of Qʷəz", St. Aboli with ↗Muḥammad in the south-west corner, and St. Victor with a lion attacking a hyena on the west-central wall), ↗Gäbrä Krəstos, ↗Gäbrä Mänfäs Qəddus, ↗Libanos, two "Syrian" saints ↗Yəmʾata and ↗Liqanos, ↗Ewosṭatewos, ↗Täklä Haymanot and his followers (↗Mädḫaninä Ǝgziʾ, ↗Samuʾel of Waldəbba with his disciples Zärufaʾel and ↗ʿAbiyä Ǝgziʾ). Also portrayed are the founder of the church Gäbrä Mäsqäl and a certain *abba* Iyokäyos. Gäbrä Mäsqäl of Lägaso (Šire) is represented twice, holding a cross and riding a lion.



Abba Gäbrä Mäsqäl of Lägaso; wall-painting in Mäʿaquddi, ca. 1675; photo 2002, courtesy of Michael Gervers

The paintings are almost monochromatic, limited in colour to brown, beige and grey, and the figures are highly simplified. This style and the iconography remind one of the murals in the Ṗeṭros church at Mälähay Zängi, Ṣəraʿ, the painted parchment in Mäqälä museum (donation no. P3), and a painting on canvas in ↗Gundä Gunde.

Among the paraphernalia in possession of the church, an old *mänbärä tabot* which presently is used to support candles (and accordingly called *qändil*) and a tryptich depicting St. Mary with Child in the central panel and on the wings, deserve particular attention. Moreover there is a fragment of an illuminated gospel book with miniatures in the late ↗Gundä Gunde style (with the portraits of the Four ↗Evangelists, 12 Apostles on two pages, St. Mary with Child, *Maiestas Domini*). It also contains two added miniatures representing a male and a female saint which once belonged to a 14th-cent. ↗*Gädlä säməʿətat* in a style similar to the illumination of *Gädlä säməʿətat* from ↗Tulluu Guddoo, a fragment kept in ↗Aksum Ṣəyon and a Psalter from ↗Däbrä Wärq.

Mäbaʾa Ṣəyon

Abunä M.Ṣ. (መባአ፡ ጽዮን, frequently Mäbaʿa Ṣəyon, also መብአ፡ ጽዮን, Mäbəʾa Ṣəyon) was a 15th-cent. monk and saint. According his Vita (Budge 1898), he was a son of the nobleman Habtä Ṣəyon, "from the lineage of master (*räbban*) ↗*nəburä əd* Samuʾel" of Andägäbṭän (i.e., ↗Ǝndägäbṭän) and Ṣəyon Təkuna. He was ordained deacon, and then was sent for education to the monastery of St. John (the Baptist?), the place of the *mämhər* of Ǝndägäbṭän, where he was given the name Täklä Maryam (used in the Vita interchangeably with M.Ṣ; but cp. EMML VIII, 255). He was trained in chanting, writing and painting (his early devotion to St. ↗Mary's *śəʿəl* ['image'] is mentioned in the Vita, s. Budge 1898:3 [text] = 30f. [tr.]). After refusing the marriage arranged by his parents, he entered the monastic life. A certain *abba* Gäbrä Krəstos of ↗Damot foresaw his spiritual excellency, and he was ordained priest by *abunä* ↗Gäbrəʾel (after 1438) and eventually rose to the position of a respected religious leader (Budge 1898:4ff. [text] = 31–37 [tr.]) and high ranking ecclesiastic – *nəburä əd* of Ǝndägäbṭän (s. EMML V, 249f.).

In the Vita repeated attention is paid to M.Ṣ.'s great respect for the holiness of the ↗Eucharist (a topic reminiscent of *aṣe* Zärʾa Yaʿəqob's religious policy), and hints at M.Ṣ.'s connection with Däbrä Libanos of Šäwa, which M.Ṣ. visited (*abunä* ↗Täklä Haymanot appeared to him and gave him Holy Communion). The Vita reports several miracles, among which are visions of Jesus Christ and the crucifixion scenes (in all probability inspired by a Western European image of the Crucifixion). According to the Vita, he particularly revered the monthly feast of the Crucifixion (known as the *Mädḫane ʿAläm*, 'Saviour of the World', or *Täzkarä Mädḫən*, 'Commemoration of the Saviour') on the 27th day of the month (annual feast on 27 *Mäggabit*; cp. EMML VIII, 254, no. 3420) and cared for its proper celebration. The success of his spiritual teaching in Damot and among the ↗Gafat is also reported in the Vita of M.Ṣ, which is thus a rare witness to South Ethiopia's religious situation prior to the 16th-cent. Muslim wars. M.Ṣ. died on 21 *Ṭəqəmt* at the age of 74, probably at Däbrä Maryam of Šäwa.

M.Ṣ. may have been connected with the composition of the መጽሐፈ፡ ሕማማቲሁ፡ ወዜና፡ ስቅለቱ፡ ወቅትለቱ፡ ለእግዚእነ (*Mäṣḥafä ḥəmamatihu wäzena səqlätu wäqətlätu läʾəgziʾənä*, 'The Book of the Passion and the Account of the Crucifixion and Killing of Our Lord'), a homiliary to be read on the feast of *Mädḫane ʿAläm* (e.g., EMML 1779, fol. 2r-36v; 2860, fols. 39r-109r). The Vita of M.Ṣ. may be preceeded or followed by some other texts related to the *Mädḫane ʿAläm*, including sequences of miracles (↗*Täʾammər*) of the Saviour of the World and M.Ṣ. (e.g., in mss. EMML 519, fols. 56v–79v; 621, fols. 15r-18r; 1779, fols. 36v–43r). In some manuscripts, a loose collection including the Vita of M.Ṣ. appears under the title መጽሐፈ፡ ተዝካሩ፡ ለመድኃኔ፡ ዓለም (*Mäṣḥafä täzkaru lämädḫane ʿaläm*, 'The Book of the Commemoration the Saviour of the World'; EMML 766, fols. 8r–71v; cp. EMML 64, 519, 537). Sometimes, M.Ṣ.'s Vita is called መጽሐፍ፡ ለተዝካረ፡ መድኅን (*Mäṣḥaf lätäzkarä mädḫən*, 'The Book for the Commemoration of the Saviour'; e.g., Ṭānāsee 21, fols. 17ra–36vb; cp. EMML 621).

Diptych (detail) signed by Täklä Maryam (i.e. Mäbaʾa Ṣəyon), 15th cent., private collection; photo 1994, courtesy of Marilyn Heldman

In addition, a passage in the Vita concerning M.Ṣ.'s training before taking his monastic vow (Budge 1898:31–34 [tr.]) suggests that M.Ṣ. might have achieved a significant career as a painter. Indeed, some 15th-cent. paintings signed by a monk named Täklä Maryam (M.Ṣ.'s monastic name)

can be probably identified as the work of M.Ṣ. Among them is the left panel of a diptych showing St. ↗George of Lydda poised beneath the bust-length portraits of Christ and St. Peter and St. Paul (s. ill.). A note, painted on the red background, reads: "St. George the Martyr. May his prayer keep Elsäbeṭ and me the sinner, its painter Täklä Maryam. And forget not the one who commissioned the painting, Zena Ḥawaryat." Another note beneath St. George reads: "Salutation to George, head of the martyrs. May your intercession be a shield [and] grace for us. Amen" (tr. by Getatchew Haile). The identities of Elsäbeṭ and Zena Ḥawaryat are unknown. The panel is so close in style to the icons of ↗Fəre Ṣəyon that it merits attribution to a painter within the immediate circle of the latter (Heldman 1994:52ff.).

Possibly Zär'a Ya'əqob's contemporary, M.Ṣ. is not known as a founder of monastic institutions, nor is he included in any of the published versions of the ↗*Sənkəssar*. However, since Budge's luxurious edition of 1898 on the basis of one single ms. Lady Meaux no. 1 (which was considered lost, but s. *The Burlington Magazine* 1996, no. 1119), new information on M.Ṣ. and many new manuscripts of his Vita have come to light (the oldest ones dating from the 18th cent.; cp. also KinBibl no. 95). The spread of M.Ṣ.'s veneration and hagiography, though probably of later period (18th cent.?), is remarkable and requests further study.

Mäčakkäl

M. (መቻከል, or መቻክል, Mäčakkəl) used to be one of the seven districts of the former ↗Däbrä Marqos *awraǧǧa* bounded by the rivers Gedäb-Ṭäd and Gulla-Tämča in the east and west, respectively. Its administrative centre was at M. Amanu'el. Formerly it was part of Q^{w}älla ↗Damot *awraǧǧa*.

M. is the name of a Säräbe clan which is traditionally traced back to an ancestor with the same name, who was allegedly of ↗Gafat stock. The Säräbe clans (M., Sahnan, Säbərad) occupy the lands between the Čay and Zəngəni rivers (Taddesse Tamrat in PICES 12, 954ff.). Another tradition states that M. was the land of the Amhara as opposed to the neighbouring areas which were inhabited by the ↗Agäw, Gafat and ↗"Šanqəlla" (BTafA 939). M. was probably originally inhabited by a Gafat group of the same name.

Mäčäne

M. (መጫኔ, also ማጫኔ, *mačäne*, መጫነ, *mäčane*; Amh., from Gə'əz *mäṭ(ṭ)ani*, lit. 'the one who measures out [food]') is an important office in some larger churches of the ↗Ethiopian Orthodox (Täwaḥədo) Church. The M. is appointed by the head of the church (↗*Aläqa*). In the Bä'ata church of Addis Abäba (the Mausoleum of *aṣe*

↗Mənilək II) the function of the M. is assigned to the *liqä liqawənt*, the head of the church (MahZekr 555).

The M. is responsible for allotting lodgings to each member of the community during a festival, and also for assigning tasks according to age and capacity. The M. may be entrusted with the control of the income of the church; he may regulate the access of visitors or supplicants to the head of the church, letting in after announcing their names those to whom permission has been granted and escorting out those who have been dismissed. At a banquet, the M. takes care of the guests ensuring that they are appropriately seated and served; he also takes care of their horses. He is also entrusted with allotting ↗musical instruments and books to the church choir on duty, and collecting them at the end of the service.

In some churches (and monasteries), the person performing the function of M. is referred to by such other titles as **የካህናት፡ አስተናባሪ** (*yäkahənat astänabari*, lit. 'usher of priests'); **የመክፈልት፡ ሹም** (*yämäkfält šum*, lit. 'chief of distribution'), i.e. the one who distributes food and drink brought for the priests and deacons to the *däğğä sälam* (i.e., entrance gate) house during memorial services (↗*Täzkar*), ↗funerals or ↗baptism; or as **ምክትል፡ አጋፋሪ** (*məkəttəl aggafari*, lit. 'vice-↗*aggafari*'), i.e. the person assisting the one who controls access to the head of the church or monastery. The tasks of the M. may be simply assigned to another official or just remain in the hands of the head of the ecclesiastic institution.

For liturgical purposes, the office of M. is twofold, with a M. of the right and a M. of the left. The former is at the service of the *qäñ geta*, a cantor standing on the right side in the *qəne maḫlet* of the ↗church building; the M. of the left is at the service of *gəra geta* (cp. ↗*Märigeta*).

In a donation by ↗Ləbnä Dəngəl to his mother ↗Naʿod Mogäsa that is dated 1526 and preserved in the *Mäṣḥafä* ↗*Aksum*, two officials bearing the title M. (*mäčänot*) are mentioned, probably those of the royal church (CRAxum no. 30). In a document of 1531 two other persons bearing the title appear (ibid., no. 43), where it is specified that one is the M. of the left, the other of the right.

The term M. is sometimes used interchangeably with the civil title (*liqä*) *mäṭani/mäṣane*, designating one of the four supreme judges (cp. ↗*Liq*).

Mäčča

The M. are a branch of the ↗Oromo. They inhabit the north-western part of the present Oromiyaa Region, i.e. the former provinces of ↗Wälläga, ↗Illubabor, ↗Käfa and western Šäwa, but there are M. also north of the Abbay river, in Wämbära in southern Goğğam (Schuver 1996:211f.). Much of their country is a high plateau with undulating hills and a few higher mountain massifs. Traditionally, the M. settled mainly in an ecological zone above approximately 1,500 m A.S.L. and avoided permanent settlement in the lowlands, because of the prevalence of trypanosomiasis and malaria. The lowlands to the west and the valleys of the Abbay, the Ḍiḍeessaa (Didessa) and the Dabbus rivers were, until the state settlement schemes of the last decades, sparsely populated by speakers of Omotic and Nilo-Saharan languages (↗Anfillo; ↗Mao).

At the time of their expansion in the 16th cent., the Oromo were, according to the earliest written source (↗*Zenahu lägalla*) written by *abba* ↗Baḥrəy in 1593 (BeckHuntAlm xxxvi), divided into two main branches, the ↗Barentu and the ↗Boorana, with the M. and the ↗Tuulama belonging to the latter category (BeckHuntAlm 112). Baḥrəy enumerates the names of "tribes" or segments, that together made up the M. and indicates the reputed genealogical relationships between them, as well as between the M. as a whole and the Tuulama (Baḥrəy in BeckHuntAlm 112–15). Names mentioned by Baḥrəy, such as ↗Guduru, Liiban, ↗Leeqa, ↗Sayyoo and Tume, are known from M. history as designations of regions and their inhabitants (cf. maps in HuntGal, map 5; HuntGal, map E; Lewis 1965, maps 3–4; Negaso Gidada 1984, maps 2–8).

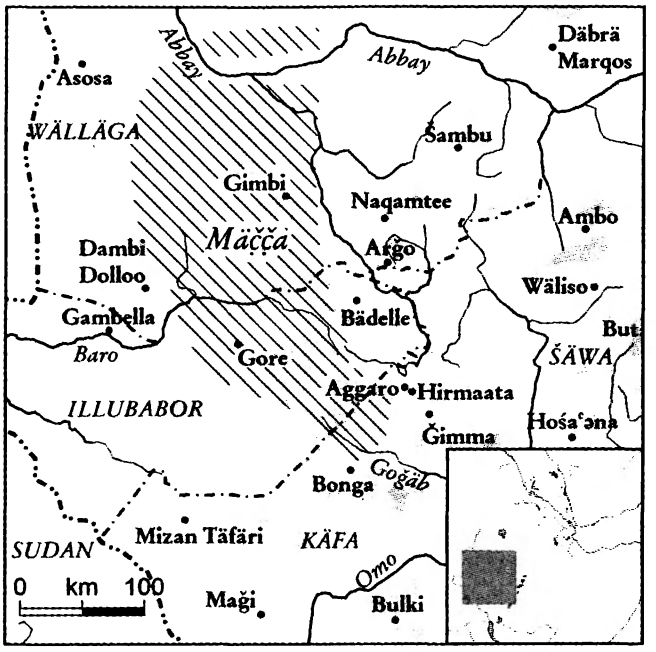
The M. penetrated the region south of the Abbay in the second half of the 16th cent. (↗Migrations). By then, the former polities in the area were already destroyed or weakened by wars in the preceding decades between Christians and Muslims (↗Aḥmad b. Ibrāhīm al-Ġāzī) and by the campaigns and slave raids of Christian kings and war lords (Hultin 1982:196; 1988 [in PICES 8]; MHasOr 27ff., 46f.).

Traditions about the general pattern of migration suggest that in the 16th cent. the expansion into new areas was not made by large segments, but by smaller groups (cp. BeckHuntAlm 113). M. clans are not localized and therefore the same names of clans and lineages appear again and again all over M. country.

In the course of their 16th-cent. northward migrations, the M. and Tuulama had a common *gadaa* system with a common centre, ↗*čaffee*, at Odaa Nabi, south of present Addis Abäba (↗Finfinnee; VSAe II, 540; Knutsson 1967:170ff.; Hultin 1975:276; MHasOr 18). Later, according to d'Abbadie (1880) at the close of the 16th cent. (Knutsson 1967:178), the M. established their own *čaffee* further to the west at Odaa Bisil, or Ṭute Bisil, in the upper valley of the Gibe river (ibid.; MHasOr 42). Tuulama and M. traditions respectively blame the other party for the break up of their common ↗*gadaa* (MHasOr 42ff.).

According to M. traditions, their own, independent *gadaa* with its ritual prescriptions, calendar and law was first proclaimed at Odaa Bisil by a man, Makkoo Bilii (Knutsson 1967:178; BartOrom 60, 172, 212, 242 et passim; Negaso Gidada 1984:30–36 et passim; MHasOr 44ff.; Triulzi 1990; Hultin 2003:420), whom d'Abbadie (1880), on the basis of the number of generations given in the tradition, placed at the close of the 16th cent. (Knutsson 1967:178). Makkoo Bilii was not only the founding father of the M. *gadaa* system, he is also a cultural hero who figures in oral traditions and migrations from all over M. land (cf. e.g., Negaso Gidada 1984:17f., 32–36). The *čaffee* at Odaa Bisil was the central assembly of all M., but in addition there were lower, regional ones from where delegates were sent to the central *čaffee*. With continued migration and occupation of new areas, new regional and local district *čaffee* were established and the importance of the central one was attenuated until it was finally dissolved (Knutsson 1967:178ff.,184; Hultin 1975:275–78).

The M. *gadaa* system resembled in its general principles, but not in its details, the one of the Boorana. It was an exclusively male institution: women could not participate, but had their own institutions, such as the *siiqqee* socio-religious organization as well as the cults of ↗*Ateetee* and *Maaram*, powerful female spirits of fertility and birth (Fisseha H. Maskal 1959; Knutsson 1967; BartOrom 123–29, 265ff.; Mengesha Rikitu 1998:103–07). The M. *gadaa* system consisted of



a 40-year cycle divided into five eight-year periods. A man entered the system five grades, i.e. 40 years, after his father. Members of a *gadaa* class together advanced through the series of grades at fixed intervals and together held different rights and duties. Each class elected, from amongst its members, a number of officials. The most important duty of the members of a set was to provide leadership during their eight years as *luuba* in grade five (LewJim 27). At the end of this period they handed over to the incoming *luuba* and performed the ↗*buttaa* sacrifice and were circumcized. After this they retired from the 40-year cycle (Knutsson 1967:175).

The M. series of *gadaa* names differs from that of the Boorana. 300 years after Baḥrəy, Antoine d'Abbadie (1880:175ff.), who in the 1840s spent several years in ↗Guduru in northern M., recorded that ten *gadaa* groups were recognized which partly coincided in name, but not in order, with those mentioned by Baḥrəy (Knutsson 1967:177f.). Another century later, in 1976, Hultin (2003:420f.) witnessed how two elderly men at a political rally in western Wälläga referred to Makkoo Bilii as the founder of *gadaa* and to some of the names of *gadaa* classes mentioned by Baḥrəy and d'Abbadie. The names of *gadaa* classes recorded by d'Abbadie were arranged in five pairs in the following way: (1) Birmağı; (2) Malba; (3) Mudana; (4) Robale; (5) Dulo; Aldada; Horata; Bifole; Sabaqa; Kirole (cf. Knutsson 1967:178). In the prescribed sequence of *gadaa* class names, the class of a man and that of his son had different names. The name of a man's class and the ones of his grandfather and his grand-

sons, on the other hand, were the same (Knutsson 1967:178).

There is little concrete information about how the leadership within the M. *gadaa* system functioned in detail (Knutsson 1967:176–207). European observers since the middle of the 19th cent., such as d'Abbadie (1880:175ff.), Massaja (MasMis) and de Salviac (1901), mention the ↗*abbaa bokku*, who headed the *čaffee* assembly, and the war leader, ↗*abbaa duula*, or ↗*mooti*, as the most important officials of the ruling *luuba*. Whatever its function at the time when the M. entered their present land in the 16th and 17th cent., the central *čaffee* at Odaa Bisil disintegrated relatively early. Most traditions agree in suggesting that factional conflict, feuds and warfare caused the demise of Odaa Bisil. They vary, however, by putting the blame on different factions and political leaders for having dealt the final blow. Knutsson (1967:179ff., 205) cites the tale of a certain Mogora Dambalo, who criticized the inefficiency of the central assembly and the corruption of its officers (ibid. 205) and exhorted the people to go to their own, local *čaffee* instead. Mohammed Hassen (MHasOr 63) cites another tradition about "a certain Na'aa Doro", who is notorious for having "burned Oda Bisil out of madness". He was a war leader involved in conflicts between major M. groups, as well as with the Tuulama (ibid.; Negaso Gidada 1984:24f.); according to the "M. genealogy", he is also an ancestor of Kumsa Moroda (Negaso Gidada 1984:24, 54).

In the traditions about the disintegration of *gadaa*, the consequences are described as catastrophic. The regional and local *gadaa* assemblies and their officers, however, continued to proclaim law and dealt with the adjudication and resolution of local conflicts, but their authority was waning in the 18th and 19th cent. Instead of war leaders, wealthy lords of the land and men who controlled market places and taxed trade routes came to play an increasingly important part in local affairs, while *gadaa* became restricted to providing the context of the most important rituals.

In many districts, the performance of *buttaa* ceased in the 20th cent.; in Sibuu in western M., the last time was probably in the 1940s (Hultin 2003:421). Every eighth year, men who had undergone *buttaa* went on pilgrimage (*ğila*), to the ↗*abbaa muudaa* in what is now southern Oromiyaa (d'Abbadie 1880:181f.; CecZeila vol. 2, 30ff.; CerFolk 140; CerEt ch. 8; HuntGal 83ff.; VSAe II, 153; Knutsson 1967:147–51; BartOrom 64ff.; Mohammed Hassen 2005).

For the northern M. region, the written sources of d'Abbadie, Plowden and Massaja from the mid 19th cent., and later by de Salviac (1901), all report constant feuds and wars between territorial groups. In this situation, the *abbaa duula*, or *mooti*, the war leader of the *gadaa* system, became increasingly powerful. Like other *gadaa* officers, he was, ideally, elected for a period of eight years, due to the constant wars his term of office tended to be permanent and inherited. Despite the endemic conflicts, the trade routes between Goğğam and the Gibe region were not interrupted. Control of trade was a source of wealth. Plowden (1868:308) reports that local leaders and men in control of land taxed the caravans that passed through their territory. On their way south, the caravans had to stop for one or two months at the market in Asandabo to negotiate terms of passage with the different landowners. De Salviac (1901:195f.) reports that although much of the land was "communal", there was also a class of influential landowners, ↗*abbaa lafa*, fathers of land and *abbaa biyya*, fathers of the country. They could attract clients, relatives and craftsmen to settle on their land and recruit their own armed followings (Knutsson 1967:183; de Salviac 1901:196f.). All sources suggest that these landowners and war leaders coexisted for a long time with the *abbaa bokkuu* and the *čaffee* assembly. Sometimes a powerful man could ignore the authority of the assembly, for example in case that *abbaa lafa* and *abba bokkuu* made alliances (de Salviac 1901:195; LewJim 32). The men, who thus became rulers, are in traditions and sources invariably referred to as *mooti*.

In the central parts, amongst the ↗Leeqa, *mooti* ↗Bakaree Godanaa began in the middle of the 19th cent. to expand the territory under his control by defeating a number of neighbouring leaders (Abebe Abamtchew et al. 1957:9ff.; Bartels 1970:149–54). After Bakaree's death in 1868 (Triulzi 1986:52), his son ↗Moroda continued this policy. In the late 1870s, Moroda claimed supremacy over Sibuu and other parts of Wälläga, i.e. the region to the west of the Ḍiḍeessaa, "well beyond the traditional boundary of the Leka" (ibid.). After the battle of ↗Ǝmbabo in 1882, he was recognized as ruler of his territory and appointed *däğğazmač* by Mənilək (ibid. 34). His son, Kumsa (*däğğazmač* ↗Gäbrä Ǝgzi'abəḥer), succeeded him and descendants of Bakaree con-

tinued to rule as provincial and district governors throughout much of the imperial era.

Early in the 20th cent. Kumsa Moroda instructed the "elders" of his country to write down "the genealogy of our grandfathers so that it will not be forgotten by the youth". The Ethiopian ruler, *ras* Täfäri (later *aṣe* Ḫaylä Śəllase I), however, turned down his request to have it published (Triulzi – Täsämma Ta'a 2004:47–50). This genealogy enumerated hundreds of named lineages and their putative genealogical links in what amounts to an attempt to construct a comprehensive "M. genealogy" (cf. Negaso Gidada 1984:257–67 et passim).

Jan Hultin

Mäčča and Tuläma

The M.T. Association (Orom. *Waldaa Maccaa fi Tuulamaa*, Amh. *Yämäčča Tuläma Märrädäğa Maḫbär*) was founded in January 1963, in accordance with Article 45 of the Imperial Constitution and Article 14, No. 505 of the Civil Code of the Ethiopian Empire as a civilian self-help association among ↗Oromo speakers (Mohammed Hassen 1998:195). It included also membership in the wider ethnic setting of southern Ethiopia (Id. 1997:217f.). Within a short period the activities of the M.T. Association shifted from local demands for development as a *waldaa gargaarsaa* (Orom. 'self-help association'; cp. ↗*Maḫbär*) to collective demands for cultural and political freedoms (Mekuria Bulcha 1997:38f.). In February 1967 the association was banned. A well-researched book in Amharic on the history of the M.T. Association by Olana Zoga preceded the re-foundation of M.T. Association in 1992 (Olana Zoga 1993; Mohammed Hassen 1997; Zitelmann 1995:258). The M.T. Association was

banned again in 2004. Events in the early years of this century appear as a recent unfolding in the *longue durée* of the contested development of civic associations in Ethiopia.

The structural history of the M.T. Association is marked by efforts for development, schooling, and civic commitment, as well as opposition against Amhara supremacy. Since the late 1950s, local rural self-help associations mushroomed in Ethiopia (↗*Iddər*). The demand for control of these associations and their financial means by their members became an act of defiance against the state and regional governments that used "development" as a pretext for extra exactions from the peasants (Zitelmann 1994:80). The Ğibat-Mäčča Self-help Association and the Šäwa-Tulämа Self-help Association merged in 1963 into the M.T. Association (Alamuu Qixxeessaa in *Waldaa Maccaa* ... 1993:3). The M.T. Association's first president (and again in 1994) was Colonel Alamuu Qiṭṭeessaa (Qixxeessaa), with the lawyer Baqqalaa Naḍii (Nadhii) and Colonel Qadiidaa Gurmeessaa as his deputies. The lawyer Hayilamaaram Gammadaa became secretary of the Association (*Waldaa Maccaa* ... 1993:6), and is regarded as the intellectual leader behind the M.T. Association (Olana Zoga 1993:398–402). He chose the Odaa tree (↗Sycamore) as the symbol of the M.T. Association. General ↗Taddäsä Bərru (Taddasa Birruu), who is widely associated with the history of the M.T. Association, joined the association at a later stage (ibid. 418–25).

The bulk of M.T. Association membership came from the emergent middle class consisting of military, lawyers, academics, officials, journalists, and teachers. With the M.T. Association's expansion in 1965–66, the land-holding ↗"*balabbat* class" followed. The land-owners provided land for projects, and money and infrastructure to organize large public meetings in the provinces. The message of such meetings changed from the demand for local development to wider political and cultural issues that challenged the status quo. During the meetings the Oromo language was used in public, and commensality between Oromo Muslims and Christians was introduced as a provocative symbol of unity (Mohammed Hassen 1998:206; Zitelmann in BHTOrom 109). The M.T. Association's emergence in ↗Wälläga was seen as a particular threat to imperial rule. This branch was headed by the only women having office in the M.T. Association, Aṣäda Habtä Maryam (Asadaa Habta Maaram), of the royal house of Wälläga (Anon. 1993:8). The Wälläga membership threatened to penetrate the closed circle of the Emperor's trusted bureaucracy (Mohammed Hassen 1997:215).

Most of the land granted in Wälläga by the *balabbats*, was used for school projects (*Waldaa Maccaa* ... 1993:9f.). Mass education in Amharic for Oromo became a particular contested issue that, within a short time, alienated even Amharized Oromo from imperial rule. Taddäsä Bərru's joining the M.T. Association was the exemplary case. He was regarded as an important supporter of ↗Ḫaylä Śəllase I's cause during the coup d'etat of 1960 (s. EAE II, 1081f.; Mohammed Hassen 1998:200). He had been a police general (riot battalion) since the 1950s, but he was also the head of the national ↗literacy campaign. Himself a self-educated person, he was eager to spread the Amharic language for educational purposes. In 1963 he did not join the M.T. Association, because he considered it as "tribal politics" (Olana Zoga 1993:24; Mohammed Hassen 1998:200), but he cooperated with the M.T. Association in promoting literacy. Prime Minister ↗Aklilu Habtäwäld, who was not aware of Taddäsä Bərru's Oromo background, adviced him informally to curtail the literacy campaign among the Oromo, to keep them far from modern education and power. Taddäsä Bərru was shocked by this suggestion, and joined the M.T. Association in 1964. While he initially believed that the Emperor did not support obstacles set by local administrations against the M.T. Association's work, he gradually became convinced that the Emperor himself was the obstacle (Mohammad Hassen 1997:219).

In late 1966 Taddäsä Bərru became involved in a Byzantine-style rebellion against the Emperor (ibid. 220ff.). This was immediately exposed and outwitted. Taddäsä Bərru received a gratuitous pardon, while the ban on M.T. Association as a whole became the target. In February 1967 state agents placed a bomb in Addis Abäba's Cinema Hall. The M.T. Association and its leadership were accused of being responsible, and the Association was banned. In a show trial, a young lieutenant, law student and cultural activist with Marxist leanings, ↗Mammo Mäzammər (Maammoo Mazammir), was sentenced to death (Mohammed Hassen 1997:222ff.). Hayilamaaram Gammadaa was tortured to death. Many of the early leaders of the M.T. Association died in prison, either during the last days of imperial rule

or during the early days of the *Därg* (*Waldaa Maccaa* ... 1993:11f.). Taddäsä Bərru was sentenced to local confinement in ↗Galamso. He was executed after he attempted to initiate a peasant uprising, after the *Därg* came to power, on charges of opposing land reform.

After 1967 the M.T. Association's card-holding membership, with a perhaps exaggerated estimate of 200,000 (Zitelmann 1994:80), was disbanded, but a core network remained active and became crucial for the emergence of Oromo political organizations during the 1970s, including the formation of the Oromo Liberation Front (↗Liberation movements; Zitelmann 1994:81; Mohammed Hassen 1998:213). However, membership included also prominent members of the *Därg*, as Teka Tulluu and Debela Ḍinsa (Dhinsaa; cf. Mohammad Hassen 1997:216), as well as the second president of the Ethiopian Federal Democratic Republic, Girma Wolde Giyorgis (Olana Zoga 1993:411–14; *Waldaa Maccaa* ... 1993:6).

Thomas Zitelmann

Maccabees, Ethiopic Book of

The Septuagint (LXX) has four deuterocanonical ↗historical books giving the history of the Jewish family of the M. who rebelled against Seleucid rule. None of the four Books of M. known from the LXX (1–4 M.) are present in the Ethiopian Biblical canon (↗Bible). However, a completely different work generally known as the "Ethiopic book of Maccabees" (መቃብያን, *Mäqabəyan*) exists in Gəʿəz tradition.

According to Rahlfs (1908), the absence of the LXX books of M. in the Gəʿəz Bible can be explained by the latter's close relationship with the recension of the LXX cod. "B", i.e. the Codex Vaticanus (cf. Knibb 1999:20 n. 3), where the 1–4 M. are not found, as well as by the influence of the canon established by bishop ↗Athanasius of Alexandria on that of the early ↗Ethiopian Orthodox Church. In his discourse on the canon (cf. Festal Letter 39,15–20, ed. 2003:509–12), Athanasius does not mention the M. (the problem is not hinted at by Brandt 2000 or under ↗Bible canon in EAE I; cp. the observations in Bausi 1992:46–51, 72f., on the Bible canon in general, here 49). As a matter of fact, no book of M. has ever been part of the Hebrew Bible. The deuterocanonical M. are only found in two of the three main majuscule testimonies of the LXX, "A" (Codex Alexandrinus), and "S" (or א, i.e. Codex Sinaiticus, only 1 and 4 M.); Codex Vaticanus has none.

A few Ethiopic Bible manuscripts contain 1 and 2 M. (also ed. by Franciscus a Bassano 1926:413–99), which do not follow the LXX version and were translated from a different *Vorlage* – as generally assumed, from the Latin text of the Vulgata in the 16th or 17th cent., at the instigation of the Jesuit missionaries (cp. Simon 1938:386). The purported quotation from 1–2 Vulgata M. in a 15th-cent. writing by Giyorgis of Sägla on the Easter of Resurrection (YaqMist I, 393f. [text] = 247 and nn. 76f [tr.]) does not, in fact, challenge this assumption. The passage from the *Mäṣḥafä ↗məṣṭir* mentions the tradition on the "hiding of the Temple vessels" by the Prophet Jeremiah, which is found in 2 M. 2:4–5. However, with reference to the episode, the passage also mentions the "handing of the keys by the prophet over to the sun", and this tradition is not found in 2 M., while it is told in several writings on the prophet (cp. Piovanelli 1999:264, n. 60), such as the *Paralipomena of Jeremiah* 3,7–8.14 and 4,3–4 (DillmChr 3f. [text]; Piovanelli 1999:309–12 [tr.]; the two recensions of the Vita of Jeremiah in the *Vitae Prophetarum* have only the "hiding of the Temple vessels", cp. Knibb 1985:25, 27 [text] = 29 [tr.]). Thus, it is likely that the *Paralipomena of Jeremiah*, and not M., were the actual source of Giyorgis's writing.

The Ethiopic M. (excerpts ed. and tr. by Horowitz 1906) is traditionally subdivided into three parts. Sometimes it appears in the Bible in addition to 1–2 M. The Ethiopic M. is an origi-

nal work centred on the legendary martyrdom of three Jews under king Ṣiruṣaydan (from the name of the cities of Tyre and Sidon). It also contains an excursus on theological and philosophical questions and has as its main goal the proof of the resurrection of the dead (Horowitz 1906:195). It was probably composed not earlier than the 15th cent., and it seems to depend partially upon the ↗*Zena Ayhud* (ed. and tr. Kamil 1938), attributed to Josef ben Goryon (whose Hebrew *Vorlage* is usually known as the *Yosippon*; cp. GrafLit vol. 1, 221ff.). A historical compendium translated largely after the Gəᶜəz Bible from Arabic, the latter replaces the deuterocanonical M. in the biblical canon of some Christian Oriental Churches. Sometimes the summary of the *Zena Ayhud* (5 M. or Arabic M., cp. Haelewyck 1998, no. 200; GrafLit vol. 1, 223), not found in the Gəᶜəz tradition, likewise substitutes for the deuterocanonical M.

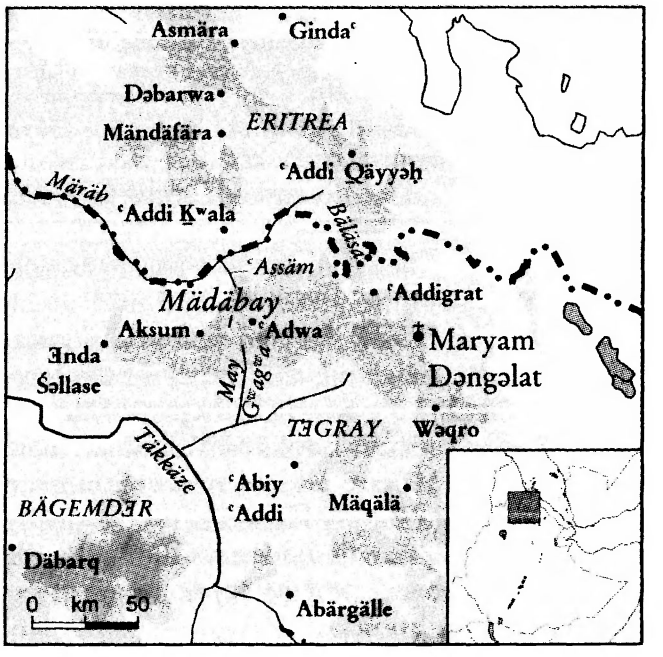
Alessandro Bausi

Mädäbay

M. (መደባይ) is a term indicating an area and a descent group of Təgrəññа speakers (↗*ənda*) in ↗Təgray to the north-west of ↗Aksum, opposite Qʷäḥayn (KaneTDic 509). The M. region consisted of two parts, Mädäbay Tabor [or Tabər] in the west (around Mount Tabor, 1,976 m A.S.L.) and Mädäbay Wäläl in the east (bordering on the ↗Märäb). The Chronicle of *aṣe* ↗Yoḥannəs mentions a sub-district of M. Wäläl called Barkʷa (cp. CRAxum doc. 83) and a stream Məḥsab Alabu at which *aṣe* ↗Täklä Giyorgis II camped while retreating from his opponent Kaśa Mərčа in 1871 (BTafY 105). In the modern ↗administrative division, M. and Zana (a part of the historical region of ↗Šire with the town of Säläqläqa as its centre, south of M.) form the Mädäbay Zana *wäräda* (ca. 97,000 inhabitants in 1994) of the Məᶜrabawi Təgray Zone. The *wäräda*, stretching from Aksum to the Märäb, is sometimes also referred to as Mädäbay Tabor. Three villages west of Aksum (north of ↗Ǝnda Śəllase) bear the name M.

M. is mentioned several times in the *Liber Axumae* (*Mäṣḥafä ↗Aksum*), for the first time among the ↗*gʷəlt* that *aṣe* ↗Säyfä Arᶜad gave to St. ↗Mädḫaninä Ǝgziᵓ (CRAxum doc. 8). *Aṣe* ↗Dawit II then gave the M. province as a fief to *abba* ↗Samuᵓel of Däbrä Qʷäyäṣa (doc. 10). Renewing the land grants of the monasteries of Däbrä Bänkʷäl, ↗Däbrä Halleluya, Lägaso and Maḫbärä Maryam, ↗Ləbnä Dəngəl stipulates that no (people of) M. may enter the territory of the monasteries (docs. 42, 44). In the 19th cent., *däğğazmač* ↗Säbagadis endowed *qesä gäbäz*



Zä'amanu'el with ᶜAd Abaᶜər and ᶜAd Sälama in M. of Baḥar, specifying that the *śəyyum* of M. and Barkʷa would have no right to enter these territories any more (doc. 83).

Royal chronicles record that ↗Yolyos, retreating from *aṣe* ↗Susənyos's troops in ↗Dämbəya, had to face the ↗*č̣äwa* M. from ↗Ṣägade, one of whom, Amduy, killed Yolyos on 10 March 1617 (PerChron ch. 47). According to the tradition recorded in the *History of the Galla* by ↗Aṣmä Giyorgis, M. was the home of the very first *č̣äwa* (BTafA 202f.).

Before arriving in Säraye, St. ↗Abranyos reportedly spent some days in M., at a (sacred) place called Bäᶜattä Ḥammo Ǝgzi' ('Cave of Ḥammo Ǝgzi'') in the 1660s (Raineri 1983:454).

The 19th-cent. *Zena Lalibäla* speaks of M. as the place where ↗Mäsqäl Kəbra was waiting for ↗Lalibäla's return from his pilgrimage to ↗Jerusalem (SerHist 266).

According to a widespread ↗genealogy reconnecting people of northern Ethiopia to Jewish tribes (first recorded and published by Conti Rossini 1901:166ff., on the basis of four mss., among which a 16th-cent. ms. from ↗Däbrä Bizän of the Acts of Sts. Filəṗṗos and Yoḥannəs), the people (*ənda*) of M. descend from the tribe of Benjamin (Bənyam). The Jewish connection also features in ↗hagiographies: according to the genealogy of St. ↗Täklä Haymanot rendered by the long version of his Acts (ch. 3), the saint descended from a Jewish nobleman who had arrived from ↗Jerusalem with ↗Mənilək I and a woman of the Däqqä Mädäbay (↗*däqqi*; Budge 1906:2).

Oral traditions (EllLusAnt 29, 34, 37, 44) have it that a woman from the M., after a bath in a river, gave birth to a *zändo* snake, a monster which kept the people in slavery, until the hero Gäbgäbo came to set them free.

The birthplace of St. ↗Yared, ᶜAddi Ṣäḥafi north of Aksum, lies in M. *Abba* ↗Abäkäräzun of Däbrä Gärzän was also a native of M., and so was *abeto* Gäbrä Mäsqäl, the father of Yoḥannəs I's wife ↗Säblä Wängel.

In M., some 5 km to the north-west of Aksum, along the track leading from Aksum to the historical site of ᶜAddi Ṣäḥafi, there is an area of archaeological interest. The ↗pottery discovered by the M. farmers in 1997 was surprisingly intact, and this led the archaeologist ↗Munro-Hay to believe that it was associated with a ↗burial site (Munro-Hay 1999). The ceramic corpus consisted of globular pots with cylinder necks, one decorated with an applied pre-Christian crescent/disc motif, a globular oval jar of fine red Aksumite ware decorated with horizontal striations, a number of other globular pots with handles, a burnished beaker with incised-line decoration, a crucible and a pot stand. Munro-Hay suggested a 4th-cent. date for these vessels on the basis of comparison with material recovered during archaeological work at the Tomb of the Brick Arches at Aksum in the early 1970s. Recent work at that site by the British Institute in Eastern Africa in the 1990s has yielded a more detailed comparative ceramic database, and it would now appear that the majority of these forms do indeed belong to the late 4th cent. A.D., as "Classical Aksumite II ware" (Phillipson 2000:455). Future archaeological investigation at M. as a site on the periphery of the core Aksumite urban zone could provide a more detailed picture of the Aksumite regional system, and socio-economic relationships between town and hinterland.

Madäriya

M. (ማደሪያ, Amh. 'lodging, place to pass the night; land allotted in return for military service [temporarily or for the life of the holder]', from Amh. *addärä*, 'to pass the night') is a form of ↗land tenure. Both Guidi and Baeteman (GuiVoc 494; BaetDic 620; also KaneDic 1301) note that a secondary meaning of the verb *addärä* is 'to be, or to become, a soldier (a mercenary), a servant of someone'. The term appears primarily in documents of the late 19th and the 20th cent. and in the

context of the state of ↗Šäwa. It appears, if at all, only rarely in the Gondärine land documents. M. can be defined as 'place of stay, residence'; the corresponding verb appears in all the Ethio-Semitic languages (Mantel-Niećko 1980:98f.; Berhanou Abbebe 1971:50–63; LesCDic 258f.).

M. land was the reward for, and tied to, the performance of specific services, primarily military, to the state, or, by extension, to the Church, where it was equivalent to ↗*sämon* land. Most commonly, M. land was held by the military and was granted temporarily, the rights to it ceasing when the awardee left office or ceased to perform the service for which it had been granted. Mantel-Niećko notes that in some cases M. was land itself, which the holder cultivated or leased for cultivation. In other cases, where it was imposed over holders of ↗*rəst* land, M. was the income from the land, and not the land itself, which remained in the hands of the *rəstäñña*.

Where M. consisted of income from the land, it was often indistinguishable in form from ↗*gʷəlt*. Berhanou Abbebe distinguishes the two primarily in terms of extent, *gʷəlt* referring to much more extensive holdings. M. land was awarded to individual soldiers, whose holdings were dependent on their rank in return for campaigning in war. Individual M. holders had specific duties, although the most common was to serve as ↗*näfṭäñña*. An ordinary soldier might receive one to three *gaššа*, while commissioned officers might hold from ten to thirty *gaššа* (Berhanou Abbebe 1971:23, 53). In addition to soldiers, from the reign of Mənilək II up to 1935, M. land was also held by a number of different state officials, including land surveyors, imperial appointees (↗*Mälkäñña*), churchmen and churches in Šäwa and the southern provinces.

According to Mantel-Niećko (1980:99), as late as 1932, Ḫaylä Śəllase I granted the church of Däbrä Ṣəyon (St. Mary church) at ↗Addis ᶜAläm, land of 779 ↗*gäbbar* as M. Finally, holders of M. land could petition to have their holding made hereditary. The land and taxation reforms introduced in the early 1940s provided for the conversion of M. land to freehold (BZHist 191ff.).

Mädḫaninä Ǝgziᵓ

M.Ǝ. (**መድኃኒነ፡ እግዚእ**; fl. 14th cent.) was an Ethiopian saint, a disciple of *abba* ↗Täklä Haymanot, who lived during the reigns of ↗Wədəm Räᶜad, ↗ᶜAmdä Ṣəyon, and ↗Säyfä Arᶜad.

M.Ǝ. probably joined the followers of Täklä Haymanot during the latter saint's stay at ↗Däbrä Damo (TadTChurch 163; in ↗Gʷənagʷəna according to the ↗*Sənkəssar* note for Täklä Haymanot, s. BudSaint 1245). In monastic genealogies he is mentioned among the very first disciples of the Šäwan Saint (e.g., Conti Rossini 1943; Getatchew Haile 1982). He is credited with the foundation of the monastery of Däbrä Bänkʷäl, near ↗Aksum, during the reign of Säyfä Arᶜad. The latter visited the Saint and richly endowed the monastery with lands in ↗Təgray, around 1352 or later (cp. CRAxum doc. 8). M.Ǝ. died shortly after Säyfä Arᶜad (d. 1372).

M.Ǝ.'s unpublished Vita (↗*Gädl*) recounts several miracles attributed to him, including those performed by the Saint posthumously, e.g., during the Ottoman invasion during the reign of *aṣe* Särṣä Dəngəl (1563–97), or following the order by *aṣe* Fasilädäs (1632–67) to plant decorative trees around Aksum Ṣəyon; as well as many ↗healings and otherwise prodigious acts. The late 17th cent. can thus be taken as the *terminus post quem* for the composition of the Acts. The

Mädḫaninä Ǝgziᵓ; double-sided pendant diptych (detail), 17th cent., monastery of Samuᵓel of (Däbrä) Qʷäyäṣa, Təgray; photo 2000, courtesy of Michael Gervers

Mäṣḥafä ↗ᶜArke (IES, ms. 34, fol. 44r) contains a short hymn dedicated to M.Ǝ.

Among the Saint's disciples and followers there were such famous monks as ↗Samuʾel of Waldəbba (whom M.Ǝ. is believed to have ordered to found the monastery of ↗Däbrä Abbay), Samuʾel of Säqurt, ↗Tadewos of Däbrä Bartarwa, ↗Yasay, Aron of Kətur, Yoḥannəs of Bänkʷäl (or of Zəgranaqʷe), ↗Yafqərännä Ǝgziʾ of Gʷəben, ↗Krəstos Bezanä and Zäkaryas of Gefa.

Osvaldo Raineri

Maʾəkälä baḥər

M.b. (**ማእከለ፡ ባሕር**) was an old title and office of a provincial governor. References to it appear predominantly in documents of the ↗Zagʷe and early Solomonic periods transmitted in the "Golden Gospels" of ↗Däbrä Libanos of Šəmäzana. The charter of *aṣe* ↗Lalibäla (which Conti Rossini "reconstructed", CRDLib no. 7), dated to 1225 A.D., seems to contain the earliest attestation of the title (ibid. 18). Officials bearing the title are mentioned in other ancient land grants: Yagb[əʾ]a Ṣəyon in a charter from ↗Yəkunno Amlak's time (ibid. 194f., no. 10); Maḥṣänt (who probably succeeded Yagb[əʾ]a Ṣəyon) in a charter by Sänbät Mäḥari, a contemporary of *aṣe* ↗Wədəm Räᶜad (ibid. 198, no. 14). M.b. Gäbru is mentioned in a charter by *ḥasgʷa* Täsfanä Ǝgziʾ (ibid. 199, no. 15), dated to 1305, and M.b. Sämay appears in a land grant by *aṣe* ↗ᶜAmdä Ṣəyon I (ibid. 206, no. 21). In another charter issued by ᶜAmdä Ṣəyon (ibid. 208, no. 22), his son Baḥrä Asgäd concentrated in his hand, besides the title of M.b., four of the most important titles of the state: *śəyyumä ənṭärta* (↗Ǝndärta), *maʾəkälä täwazat*, *ḥasgʷa* and *aqanṣan* (↗ᶜ*Aqaṣen*; cp. KrAmdS 5 n. 33; Conti Rossini 1910:859f.). The account of the campaign of ᶜAmdä Ṣəyon I against the Muslims also mentions the M.b., together with *maʾəkälä angot, maʾəkälä täwazat, mäkʷännənä əndärta* etc. (MarAmdS 52f.; KrAmdS 5, n. 34).

The origins of the title remain obscure and may be traced back to pre-Zagʷe times. The meaning of it is usually inferred from the interpretation of its parts: *maʾəkäl* 'centre', or, as an adverb or preposition, '(in) between', M.b. being thus interpreted as a geographic term, not as a title (cp. "Mittel-Meerland" in Dillmann 1884:1012, similarly in PerrAmdS 330). Others considered *maʾəkäl* to be a preposition and speculated as to what would *baḥər* could refer to: two rivers (e.g., Märäb and Täkkäze), the ↗Red Sea and a river, a lake etc. Later, the term was considered as referring to a maritime province(s), "which apparently included the whole region between the Märäb and the Red Sea" (TadTChurch 74, n. 5, cp. ibid. 97 no. 3; cp. CRDLib 192). Kropp (KrAmdS 5 n. 34) interprets *maʾəkäl* as a title (of unclear meaning) and *baḥər* as a term for the coastal areas southeast from Təgray, considering the M.b. precursor of such officers as ↗*təgre mäkʷännən*, ↗*baḥər nägaš*, or *śəyyumä baḥər* etc. One may wonder if the word *maʾəkäl* could refer to the central political position occupied by a M.b. in the region (cp. *maʾəkälä angot*).

The geographical location of the M.b.'s dominion is vague, apart from the general reference to the northern (coastal) region. Remarkably, in the documents, M.b. is frequently mentioned (but elsewhere omitted, e.g., CRDLib 200, no. 17) together with, or between, the governors of Ǝndärta and of the littlee known Däbrä Maᶜəṣo. This sequence of governors can refer to their actual hierarchy, but also reflect the geographical reality, i.e. the location of the area controlled by the M.b.

Sometime after ᶜAmdä Ṣəyon, the title seems to have been abolished (probably replaced by *baḥər nägaš*). It is registered only in two isolated charters by *aṣe* ↗Ləbnä Dəngəl (CRAxum nos. 26, 44), but otherwise missing in both documents and oral traditions. Despite the unsolved historical and linguistic problems connected with it, the title raised interest and is referred to in the new Ethiopian/Eritrean ↗historiography (cp. KilHDic 105, 298).

Denis Nosnitsin

Maᶜəṭänt

The M. (Gəᶜəz: **ማዕጠንት**, 'censer, thurible' [any censer burner]; Amh.: **ማጠንት**, *maṭänt*, **ማጠኛ**, *maṭäññа*; or, in current usage, **ጽና**, *ṣəna* [Gəᶜəz: **ጽንሓሕ**, *ṣənḥaḥ*], 'censer, thurible') in ↗Ethiopian Orthodox (Täwaḥədo) Church worship is a circular metal vessel designed to contain heated charcoal upon which ↗incense is burned. The container is suspended from three chains (four when the pan is square) that are all attached to the handle, by which it is swung. It has a foot and is equipped with a lid that slides on the chains. Designed to control the smoke, the lid hangs on an additional chain with a cross at the end; the cross of this chain, passing through the shaft of the handle, tops the whole instrument. 24 small bells (called *šaḥura*, *bilbilla*) are also attached to the chains (twelve bells may be enough, evoking the twelve Apostles, whose voices reach "the end of the world" [Ps 18(19):4–5, sung as ↗*məsbak* on an apostle's feast day]).

The M. is used in almost every service in the Ethiopian Orthodox Church tradition. While it may be handled by deacons and even other people for practical purposes, priests alone may hold it by its handle and perform incensations. A folk explanation, frequent among the clergy, is that the shape of the M. represents the image of Mary's body, which was carried to the tomb by the Apostles, since the deacons who would normally have performed the task were not instituted until later (interview with ᶜAlämnäw Azzänä 24 May 2005).

Typology

The Ethiopian Orthodox liturgy (esp. the hymn *Anti wəʾətu maᶜəṭänt zäwärq* …, 'You are the Golden Censer …', ↗*Wəddase Maryam*, 6th strophe of Sunday; VelME I, 91; II, 296; *Mäṣḥafä qəddase* 1981/82, ch. III, no. 122 [Daoud 1954:41, no. 122] and the *Zə wəʾətu gize* …, 'This is the Time …', *Mäṣḥafä qəddase* 1981/82, ch. III, nos. 160–72 [Daoud 1954:48f., nos. 160–72]) and Ethiopian traditional scholars (via the ↗*Śərᶜatä betä krəstiyan*) attach a spiritual meaning to each element of the M. when it is being used: the golden M. (cp. Heb 9:4) represents the figure of St. Mary, who gave the Word of God his humanity. The live charcoal (**ፍሕም**, *fəḥəm*) in the M. is the burning Divine Word of God in Mary's womb; it is likened to the glowing coal the angel took to purify Isaiah's lips (Is 6:6), and the communion spoon (**ዕርፊ፡ መስቀል**, *ᶜərfä mäsqäl*) is itself likened to the tongs he employed. The incense is the perfume of Jesus Christ's Incarnation and his well-pleasing sacrifice. The pan and the three chains symbolize the Father, the Son, and the Holy Spirit, One God; the handle represents the fullness of the Godhead; the 24 bells represent either the 24 Heavenly Priests (Rev 5:8), or the angels' voices at the foot of the Four Living Creatures. The smoke signifies the fragrance of God or the angels' scent.

A silver *maᶜəṭänt* belonging to St. Michael's church at Ankobär, Šäwa; photo 1993, courtesy of Michael Gervers

Nowadays, many churches in the towns use Greek censers, despite the fact that they lack some of the elements described in the *Śərᶜatä betä krəstiyan*.

Iconography

At ↗Ǝmäkina Mädḫane ᶜAläm (Lasta), a mural of the second half of the 13th-cent. depicts the angel, who attended the baptism of Christ, carrying a Coptic censer (Balicka-Witakowska 2004, fig. 13). It should be noted, however, that neither the form of the M. nor the way it is swung are shared with the Copts, though they are used in most of the same ceremonies. In contrast, an Ethiopian M. is engraved on the wall of *abunä* Abrəham's prayer room at 14th-cent. Däbrä Ṣəyon (Fritsch – Gervers 2007:25, fig. 11). A miniature of Christ's entry into Jerusalem in the Gospels of ↗Däbrä Maryam of Qʷäḥayn

(Eritrea, dated 1361) shows the Temple in Jerusalem as a Christian sanctuary (Heldman 1973:47, fig. 3); framed by the triumphal arch, a M., rather than the more common lamp, hangs above the altar. In such a context, it evokes the evening psalm "Let my prayer be as incense before thee, and the lifting up of my hands as an evening sacrifice" (Ps 140[141]:2) as well as the bloodless sacrifice of the ↗Eucharist which, according to the patristic and liturgical reading of Mal 1:11, takes the place of Temple worship, perpetuating the salvational actions of Jesus in the world.

Mäftəḥe śəray ↗Magic literature

Mafud

M. (ማፋዲ; 9° 54' N, 39° 51' E) is a small hill and the area surrounding it in the lower part of northern ↗Šäwa. M. hill is located about 2.5 km east of ↗Čəra Meda on the main road (for location s. Mägäzäz). The general altitude of the surrounding area is about 1,500 m A.S.L. The area is well suited for traditional farming, although vulnerable to drought.

M. is known as a centre of ↗Islam before the invasion of *imām* ↗Aḥmad Ibrāhīm al-Ġāzī ("Grañ"). In the 16th cent., the area was overrun by the Karrayuu Oromo, but Muslim communities survived, led by the ↗*wälasma* based at M. The Muslim principality allied itself with the early Šäwan rulers in the struggle against the Oromo. The *wälasma* was one of the key figures in the ↗Šola Meda assembly which nominated ↗Səbəstyanos as ↗*märəd azmač*, and he was also an important ally in the later events that led up to the Šäwan victory against the imperial army in the battle of ↗Ayne. When the future *aṣe* ↗Mənilək II escaped from Tewodros, he was received by the *wälasma* at M.

In the 18th cent., the Muslim chiefs became subordinate to the Christian rulers. Travellers who visited ↗Ankobär about 1840, described the main *wälasma*, then based in the Ankobär lowlands, as one of the principal chiefs in the kingdom, but he held his position at the discretion of the king. Under Mənilək, the Muslim chiefs lost all political significance.

Today there are a few Muslim villages remaining to the east of M. Many still speak the ↗Argobba language. Formerly they occupied a much larger area, as demonstrated by many Muslim place names in what is now Christian territory.

During ↗World War II, in 1941, M. became the name of a large *wäräda*, stretching from the ↗Ṭarma Bär tunnel as far as the ↗Awaš river. Since then the borders, internal organization, as well as the name of the *wäräda*, have often changed.

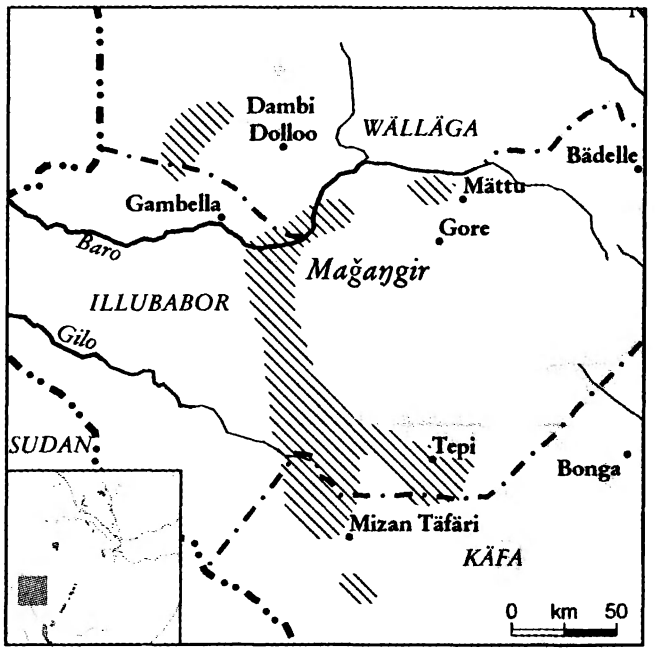
Svein Ege

Mağaŋgir

Mağaŋgir language

M. (also Mesengo, Masongo; self-name: *Ato mağaŋgiroŋk*, lit. 'mouth of the M.') is a language of the ↗Surmic group of the ↗Nilo-Saharan language family, and a name of the ethnic group speaking this language. The number of speakers, according to 1994 census, is ca. 15,000 (Hudson 1999:92; Gordon 2005:116).

Cerulli (1948) published the first description of M.; Bender's 1983 work (benefiting from the insights of missionary Harvey Hoekstra) gives a much more reliable and complete description.



The M. consonantal system (Bender 1983:116) comprises: labials *p*, *b*, *ɓ*, *m*, *w*; alveolars *t*, *d*, *ɗ*, *n*; velars *k*, *g*, *ŋ*; sonorants *l*, *r*; palatals *č*, *ǧ*, *ñ*, *y*; plus a few odd cases of intervocalic glottal stop *ʾ*. Palatal affricates *č* and *ǧ* are often pronounced as fricatives (*s*/*z* or *š*/*ž*). No initial consonant clusters are found. M. has nine vowels: *i*, *ɪ*, *e*, *ɛ*, *u*, *ʊ*, *o*, *ɔ*, *a*. Vowel (but not consonant) length is phonemic. Two tones are distinctive, mostly grammatical, but note the lexical minimal pair *táŋ* 'cow', *tàŋ* 'abcess'.

M. has many kinds of suffixes and almost no prefixes. Nominative and accusative are usually unmarked in nouns, genitive has suffix *-(oŋ)k*, locative/instrumental *-e*, dative *-a*. Number marking is not regular. In some nouns, a plural form is marked ('stool' *ɗàŋgé* [sg.] – *ɗàŋgéyík* [pl.]), some take suffixes for singular and plural ('tree' *kéét* [sg.] – *kéén* [pl.]), and some have a plural base and add a suffix to mark the singulative ('ear' *wííná* [sg.] – *wíín* [pl.]). Common patterns involve -(V)*t* for singular and -(V)*r* or -(V)*k* for plural. M. has no grammatical gender.

Pronouns distinguish singular and plural number and three grammatical persons (but not inclusive/exclusive) (Bender 1983:128):

Pers.	Sg.	Pl.
1st pers.	*èèt*	*èt/ŋk*
2nd pers.	*ìín*	*ìínák*
3rd pers.	*čèèn*	*čèèg*

Pronouns can attach locative and dative suffixes, e.g. *éét-á* 'for me'. The genitive (possessive) is more complex, following the Surmic pattern of marking number of both possessor and possessed (Bender 1983:129), cf. below the paradigm for 'knife': sg. *ááré*, pl. *ááréé*:

Pers.	Sg. possessee	Pl. possessee
1st sg.	*ááré-naak*	*ááréé-gaaŋk*
2nd sg.	*ááré-nook*	*ááréé-gooŋk*
3rd sg.	*ááré-nɛɛk*	*ááréé-gɛɛŋk*
1st pl.	*ááré-naŋk*	*ááréé-gaŋk*
2nd pl.	*ááré-noŋk*	*ááréé-goŋk*
3rd pl.	*ááré-nɛŋk*	*ááréé-gɛŋk*

M. has a rich verbal morphology. Verbs agree with their subjects and direct or indirect objects. Tense is expressed by clitics, distinguishing three past tenses and two future tenses: *ba* (remote past), *kàn* (medium past), *kò* (near past), *kóó* (near future), *kòy* (remote future) (Bender 1983:132). Reduplication marks reciprocality and intensity.

Negation in nominal sentences is expressed by the element *mókò*, e.g., *mókò èètì pɔ̀l, èètì pítèr* 'I am not Paul, I am Peter'. Negation of active verbs is marked by a negative verbal root *ku-* inflected for person, number, tense, etc. The negated root appears in a non-finite form, later in the clause:

kú- áá- kò	*čákóyé*	*ádà*
NEG-1sg-PAST	tuber	eat
'I did not eat tuber'		
kú- ɛr- kò	*čákóyé*	*ádà*
NEG-3pl-PAST	tuber	eat
'They did not eat tuber'		

The basic word order is V[erb]–S[ubject]–O[bject], with variations for focus, e.g.:

ɗam-ko	*bokai*	*čákóyé*
eat-PAST	Bokai	tuber
'Bokai ate tuber'		

M. has postpositions, e.g. *lééwè tàk* 'in a pot', and question words are placed sentence-finally (both are typological anomalies in a VSO language). Relative clauses (which are also used to express adjectival meanings) and numerals also follow their head nouns: *táŋ čò mìntánŋóŋk* (lit. 'cow that is-good'), 'good cow'.

M. ten-word list: 'one' *òmóŋ*, 'two' *pééy*, 'three' *gíít*, 'fire' *mád*, 'water' *mááw*, 'sun' *wààwì*, 'moon' *éyén*, 'blood' *yéróm*, 'tongue' *kàdà*, 'tooth' *ŋìdàn*.

Peter Unseth

Mağaŋgir ethnography

The M. (sg. Mağaŋ; also Mesengo, Masongo, self-name: Mağaŋgir) are an ethnic group of ↗Illubabor and to some extent ↗Käfa and ↗Wälläga. According to the recent administrative division, the majority lives south and east of ↗Gambella, a large number from Gurrafarda to east of ↗Tepi, a few near ↗Mättu and ↗Gore and a small cluster near ↗Dambi Dolloo. The M. mainly inhabit the elevations between the highlands and the lowlands, on the slopes of the escarpment.

The 1994 census gave the total of the M. population as 15,341 (Gordon 2005:116f.), but their number is undoubtedly much higher. Estimating their population is very difficult since M. live widely scattered in the rain forests, some in single-family settlements. Their villages are often interspersed with the villages of other ethnic groups, including ↗Oromo, ↗Añwaa, ↗Šakačo, ↗Šabo, ↗Šeko and Še (↗Benč, ↗Gimira).

The M. traditionally practiced shifting cultivation of sorghum, maize, taro, yams, sweet potatoes, pumpkins, beans, sesame, etc. They would stay in one place for no more than five years, then move and clear another area. The M. do not raise any livestock but they hunt a great variety of game and catch fish. Beekeeping is also important, honey often being sold for cash. Coffee leaves are traditionally brewed as *kàárí*, a hot drink prepared with salt, spices, and herbs.

M. society has patrilineal, exogamous clans, with stronger bonds between siblings than between husband and wife. Clans are not strong as political bodies and the M. society is traditionally not stratified and nearly acephalous. An exception is the role of the *tápád*, traditional leaders, most of them from the Melanir clan, their function, however, is more religious than political. The *tápád* were believed to have a kind of blessing power, to heal and to be able to foretell the future. Part of the old socio-religious system of the M. was the belief in spiritual beings (*wakoyo*, also 'God') who were able to possess people and were fed with sorghum beer poured on their chair (*saloy*).

M. were traditionally raided for slaves by Añwaa, Še and by highlanders, but they developed no collective defence strategy. There is evidence of a progressive migration movement from a southern location beyond the River Akobo towards the north. The M. were conquered by Mənilək at the end of the 19th cent., but systematic tax-gathering started only in about 1960. There have been widespread major changes within M. society since 1970, including the development of permanent villages (in the course of the *Därg*'s villagization programs), wearing of clothing, utilization of manufactured goods, attending school, participation in government political structures, small-scale livestock raising, widespread adoption of Protestant Christianity, and a growing sense of ethnic identity. New outside influences include the construction of roads and a major coffee plantation in M. territory.

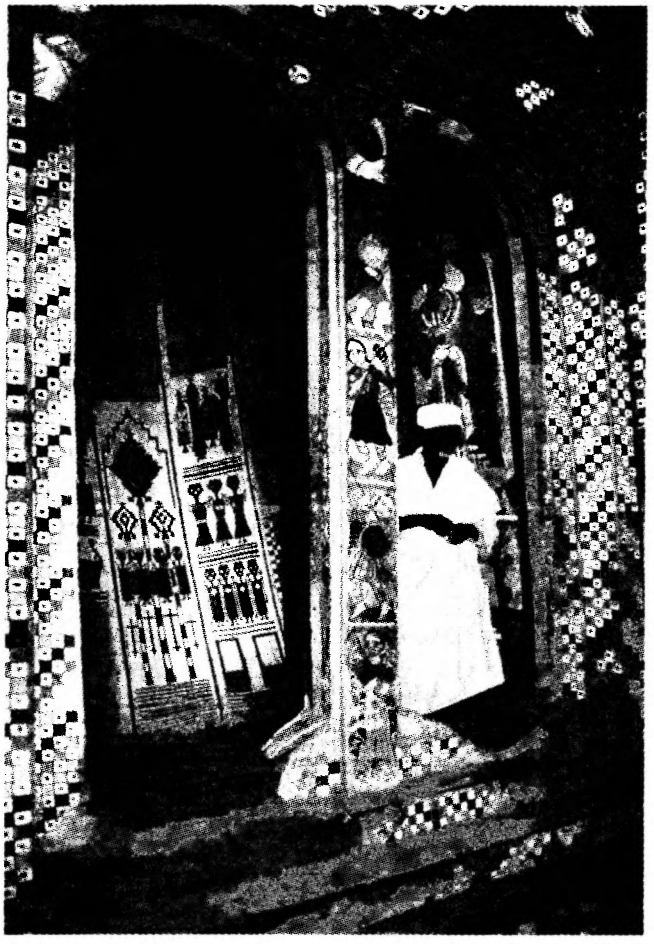
Peter Unseth

Mägarägga

M. (Amh. መጋረጃ, lit. 'curtain') are used in Ethiopian churches to partition the interior space, above all into ↗*mäqdäs*, the *qəddəst* and the place of the assembly (*qəne maḫlet*; cp. ↗church buildings). Thus, they separate the three groups of faithful according to the places they qualify to stand (Beylot 1984:19ff.; Coquin 1966:18, 106f.; Metzger 1986:312–15 [cp. Harden 1920:74]; Taft 1998:27ff.), replicating the three spheres (ʿ*alämat*; cp. Gr. *aiōn*) where ↗Angels dwell (*Fəṭḥa nägäśt* 1965/66:133a). The other threefold space categorisation into men (north), women (south) and priests (east) – after Noah as priest, his male, and female relatives when they boarded the Ark – is also relevant in the concrete liturgical rites.

M. are the projection into our days of the ancient divisions of the churches by chancels (Grossmann – Severin in *CE* vol. 1, 200ff.). The well known palaeo-Christian barrier of the *presbyterium* was



Tablet-woven *mägaräğa* screening main entry into the *mäqdäs*, 18th/19th cent., church of St. George, Ruba Kʷəsa, Tämben; photo 2002, courtesy of Michael Gervers

built in Ethiopia up to the first part of the 12th cent. (e.g., ↗Mikaʾel Amba), the sole complete example being found in ↗Däbrä Sälam Mikaʾel (Lepage – Mercier 2005:64f., 82–85, 96, 100f.). Regular lines of holes found in the rock floor of ↗Wəqro Qirqos suggest that wooden screens fitted between the columns used to divide the whole space (Fritsch – Sidot 2006) according to a perhaps not universally old Coptic model (Grossmann 2002:110; McNally 1998:93). The Coptic *horos* – a *presbyterium* enclosed within solid partitions that open through doors both to east (the sanctuary) and west (the assembly place) – is, however, undocumented in Ethiopia (Burmester 1967:20).

The two M. screening both the sanctuary and the altar are called by the Gəʿəz term for M., መንጦላዕት (*mänṭolaʿət*), reportedly taken from the phrase *bäwəsṭä wəsaṭe mänṭolaʿət* ... ('in the inner curtain ...') of the hymn *Yəweddəsəwwa mäläʾəkt* (ChRep no. 388; Groh hymn 26; ↗Psalter).

According to an ancient arrangement (Beylot 1984:20), the main western doorway into the sanctuary is always screened. Concealing the sanctuary, it emphasizes the transcendence of God, who lives "behind curtains" (cf. *Anaphora of St. Mary* by Cyriacus of Behnesa, MQ § 85; MD 141, 285; *Anaphora* of James of Serug, MQ no. 53; MD 141, 285; Böll 1998:192). Unlike in other Churches, including Coptic (and occasionally Roman), which all use a single piece of textile, the Ethiopian curtain is double, alluding to the curtain of the Temple torn in two when Jesus died (Mt 27:51, Mk 15:38, Lk 23:45); it is red in reference to Jesus's flesh (Heb 10:20). Inside the *mäqdäs*, a fixed screen or curtain between the altar and the doors prevents the altar from being seen from outside. Its origin may be found in the curtain hiding both altar and priest in ancient Coptic churches (Butler 1884, vol. 1, 22, 193; vol. 2, 28–31). Recent churches do not have this.

Since the altar (i.e. *Mänbärä ↗tabot*) developed under Coptic influence in ca. 14th cent. into a large construction surmounted with a canopy, long altar cloths were hung on all its sides except the front. This arrangement was observed by Alvares in the 16th cent. in ↗Däbrä Ṣəyon and ↗Wəqro Maryam (BeckHuntAlvar 76). Nowadays, the east side often has an image of St. Mary instead of M. The M. (or shutters) of the altar are opened for liturgical services and closed after the clergy has received Eucharistic communion for distribution.

While the curtains screening the sanctuary and the altar have theological meaning, the other M. are meant for ordering the church space (cp. Beylot 1984, §16). The *qəne maḫlet* of a round church is divided into three parts by two M. hanging on both sides of the choir in the central area. On the left of the cantors (to the north) is the area where men stand, while women are beyond the curtain on their right (to the south). The *qəddəst* area is sometimes also closed off by a M., chiefly at communion time, or has curtains to the north and south of its central part. These divisions correspond to the entrances to the church: north for the men, south for the women, east for the clergy. The north and south doors of the sanctuary may also be covered with one M. each.

The current tendency in town churches is to confine the hanging of M. only to the main door of the sanctuary, while men and women stand in the north and south areas of the *qəne maḫlet*, respectively. In country churches, on the contrary, M. received as gifts from enthusiastic devotees are hung wherever possible, partitioning the interior into many small areas. M. are also hung

before the paintings of the *mäqdäs* or other devotional images, to protect them from dust.

Tablet-woven M. recently found in Təgray (Balicka-Witakowska – Gervers 1996; Henze 1999–2000; Gervers 2004) have attracted considerable interest because of the method of their manufacture, the issue of their origin, and the peculiar features of their art.

Mägäzäz

M. (መገዘዝ; 9° 17' N, 39° 31' E) is a mountain in ↗Bulga, Šäwa, 25 km east of Šäno town, and the area around it (for location s. Mähal Meda). The peak reaches 3,596 m A.S.L. and is easily visible from the main road. The northern, eastern and southern slopes fall abruptly towards the Qäbbänna and ↗Käsäm rivers. M. is famous for ↗juniper timber.

The sultanate of the ↗Maḫzūmī dynasty was located in the area between M. and ↗Ankobär. It was succeeded by the sultanate of ↗Ifat, which was in constant struggle with the Christian state until it was defeated and made tributary in 1415 (Stitz in USCES, 191).

M. is particularly associated with *aṣe* ↗Susənyos, in which context it probably referred to the upper Qäbbänna valley in general. In his youth, Susənyos was captured by the ↗Oromo and spent many years with them. He was later set free, but after the death of *aṣe* ↗Śärṣä Dəngəl he fled to Šäwa and was able to build up a large following consisting of both Oromo and Amhara. His capital during this period was ƎnžarinQəmbəbit, clearly within the district referred to as M. There is a small village named Qəmbəbit on the northern slopes of the moutain, and the historical M., Ənžar and Qəmbəbit may well have been in this area. According to tradition, it was at M. that Susənyos's son ↗Fasilädäs was born.

After Susənyos became emperor in 1607, he moved to ↗Gondär and lost control over Šäwa. A few years later he sent an army which campaigned victoriously from ↗Goğğam to M. and then returned back (BTafA 331).

The M. area was incorporated into the rapidly expanding Šäwan principality under ↗Ammәḫa Iyäsus in the mid-18th cent. (BTafA 513).

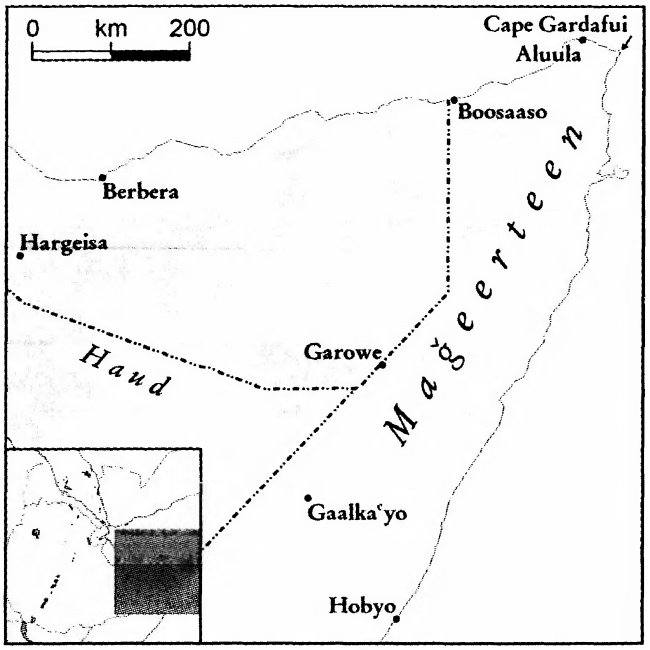
Mağeerteen

M. (Somali sp.: Majeerteen) is a Somali clan which has a prominent position in Somali history as well as in the history of the wider Horn of Africa. According to tradition, M. was the nick-



name of Maḥamed, son of Ḥarti, son of Kombe, son of Kablalaḥ, son of Daarood. Therefore, by patrilinear descent the clan belongs to the Ḥarti clan-federation of the ↗Daarood clan-family. The M.-clan itself is subdivided into numerous groups. The most prominent in recent history are ʿAlī (Calii), Maḥamūd (Maxamuud), ʿIsmaʾīl (Cismaiil) and ʿUmar (Comar), named after the sons of Saleebaan. Of these, in particular, the three sons of Maḥamūd – ʿĪsa (Ciisa) Maḥamūd, ʿUṯmān (Cosmaan) Maḥamūd, and ʿUmar Maḥamūd – and their descendants played important roles in the last two centuries.

According to Cerulli, the M.-clan came from the north-west of the Somali peninsula and gradually expelled the earlier Oromo population in the region. For several centuries it has inhabited the north-eastern Horn from Cape ↗Gardafui (i.e. Ras Asir) to the port of Boosaaso in the west, and to Gaalkaʿyo and, from the late 19th to the early 20th cent., to ↗Hobyo in the south. Some M. sub-clans also live in the so-called Haud region (today Region Five; cp. ↗Ogaden) of Ethiopia, and, since the late 19th cent., also at ↗Kismaayu in the far South of ↗Somalia.

The M. lived as pastoral-nomads in the high plateau in the interior, as collectors and sellers of wild honey, gum Arabic and frankincense in the mountains bordering the sea, and as fishermen, pirates and traders along the coast. This put them in continuous contact with the Arabs of the opposite shore of the Red Sea: conversely, groups of Mahrī, such as the Maḥmūd Ṣāliḥ around the mid-18th cent., settled among the M., and in the progress of time were assimilated, also linguistically.

The highest traditional authority of the M. was called *boqor* ('sultan' in foreign relations), who was a member of the Bah Dir family, within the numerous ʿUṯmān Maḥamūd sub-clan. In the old days, the M.-*boqor* presided over the council of all Ḥarti clans (including Đulbahante, Warsangeeli and others). However, until the 19th cent. he excerted hardly more than nominal authority, like the other traditional leaders in the pastoral-nomadic Somali society. Around 1840, the *boqor* managed to establish a monopoly over the booty from shipwrecks of the mostly European and Indian ships stranded or sunk every year off Cape Gardafui. Furthermore, in 1838 he signed an agreement with the British that engaged him to protect their ships and nationals when passing or shipwrecked on the shores of M. country. He also broke the Indian monopoly of trade in his realm and replaced foreign merchants with M. traders. The *boqor* was then able to equip his followers with modern firearms and build a strong army. Thereby he and his family subsequently gained control over Boosaaso (Bandar Qāsim), the important port in north-east Somalia, and such strategic points as wells in the interior.

In the 1870s a conflict inside the royal family split the sultanate. The then *boqor* ʿUṯmān Maḥamūd Yūsuf saw his authority limited to the north-east with his capital at Aluula. His cousin Yūsuf ʿAlī (Yuusuf Calii "Keenadiid") seized the coastal town of Hobyo, ended the dominance of ↗Hawiye-clans, and established his new sultanate there, on the eastern shore of central Somalia. In 1889, both M. rulers made protection agreements with Italy. Nevertheless, the sultanates were relatively sovereign during the early 20th cent. Between 1899 and 1920, when the so-called Dervishes led by ↗Muḥammad ʿAbdallāh Ḥasan fought the colonial powers in the Horn, *boqor* ʿUṯmān and *sulṭān* Yūsuf ʿAlī at the beginning allied with the Dervishes, but later fought them so as to preserve their realms. In 1925, Italy started a campaign to crush the power of the M. sultanates, both defeated by 1927. The *boqor* and the *sulṭān* were deported to Mogadishu (s. EAE vol. 5), where they died in captivity.

M. politicians gained renewed prominence in independent ↗Somalia. On 1 July 1960 the British Protectorate of Somaliland and the Italian Trusteeship Territory of Somalia united to form the Republic of Somalia. The first Prime Minister was ʿAbdarrašīd ʿAlī Šermarke, a M. From 1967 until his assassination in October 1969 he

was President of Somalia. After the following coup d'état of young military officers led by Muḥammad Siyād (Muxammad Siyaad) Barre, members of the former military and civilian elite were imprisoned. Among them was the Colonel ᶜAbdullāhi Yūsuf Aḥmad (Cabdullaahi Yuusuf Axmad) from the ᶜUmar Maḥamūd-subclan of M. He was released from prison in 1977 to command the southern front in the Somali attack against Ethiopia during the Ogaden War (1977–78). After the defeat he was among the group of mostly M. officers who attempted to overthrow Siyād Barre in April 1979. The coup failed and 17 officers, among them 16 from the M.-clan, were executed. ᶜAbdullāhi Yūsuf escaped and fled to ↗Kenya and then to Ethiopia. There he and other opponents of the Somali regime established the Somali Salvation Front (S.S.F.), the first Somali guerrilla front, which was in 1981 transformed into the Somali Salvation Democratic Front (S.S.D.F.). The core of the fighters came from M. sub-clans. The Somali regime reacted by summarily punishing M. civilians inside Somalia. The guerrillas were mainly supported by Ethiopia and Libya. However, by 1985 internal tensions and conflict with Ethiopia led to the breakdown of the S.S.D.F. ᶜAbdullāhi Yūsuf was imprisoned in Addis Abäba and most of the S.S.D.F. fighters returned to Somalia, accepting the amnesty offered by Siyād Barre, or went to exile. A number of remaining forces continued to exist in name only under the command of the former police-general Maḥamed Abšir.

When ᶜAbdullāhi Yūsuf was released in 1991 he returned to Somalia and rebuilt the S.S.D.F. In the following Somali civil war the guerrillas gained control over north-eastern Somalia, the territory of the former M. sultanates excluding Hobyo, which had been taken back by Hawiye-clans a long time before. In 1998 the Ḥarti clans led by the M. established the Republic of Puntland as an autonomous state with ᶜAbdullāhi Yūsuf as President. The capital city was Garowe, the economical centre Boosaaso, and the personal stronghold of the president his hometown of Gaalkaᶜyo. ᶜAbdullāhi Yūsuf continued to rule against internal opposition until 2004. In October 2004 he was elected President of the Transitional Federal Government (TFG) of Somalia at the Somali Peace and Reconciliation conference in Kenya, held between 2002 and 2004 under the auspices of the East-African regional organization IGAD.

Mäggabi

The M. (መጋቢ, Gəᶜəz 'steward', from መገበ, *mäggäbä*, 'administer', 'be in charge') is an official of importance in the monastic hierarchy of the ↗Ethiopian Orthodox (Täwaḥədo) Church. He serves as a treasurer in a monastery (↗*gädam*, ↗*däbr*) being subject to its head (↗*aläqa*, *abä mənet* or ↗*mämhər*); in larger communities he is responsible to the *rəʾəsä däbr* who in turn answers to the *aläqa* or *mämhər*. The M. is usually responsible for the distribution of food and other financial matters, and was usually chosen by the monks from withn their own community.

The bishop of ↗Aksum received the epithet *mäggabe haymanot* (cp. the 14th-cent. doc. no. 33 from the Golden Gospel of Däbrä Libanos; CRDLib 216). The title often features in Ewosṭatean contexts (e.g., the *Gädlä ↗Absadi*, s. LusStud 79f.). A 15th-cent. Gospel ms. from ↗Däbrä Maryam of Qʷäḥayn includes a commemoration note (↗*täzkar*) on M. Muse (BauEr I, 38). St. ↗Anorewos ("the Elder") was the M. of the monastery of Däbrä Asbo (↗Däbrä Libanos of Šäwa) and in this function reorganized much of the monastic community. A certain

M. Ǝndrəyas seems to have played a role in the conflict between *əṣṣäge* ↗Ǝndrəyas and ↗Zär'a Ya'əqob (CerDLib II, 144ff.). During the reign of ↗Bä'ədä Maryam two M. were installed in Däbrä Libanos, one responsible for paying the tribute to the Emperor, and the other for administering the community. From the documents preserved in the *Liber Axumae* (*Mäṣḥafä ↗Aksum*) we know of the M. of ↗Aksum Ṣəyon Habtä Maryam (*mäggabe maḫbär*; CRAxum doc. 43) at the time of *aṣe* ↗Ləbnä Dəngəl. The Life of ↗'Ǝnbaqom mentions Ləbnä Dəngəl's ordering high church officials, *liqawənt wämäggäbt*, to reconcile the Metropolitan and *əṣṣäge* ↗Peṭros (RicEnbYoh iv, 77 and 92f.). Ricci (ibid. 92) assumes that the priest encountered by the mission of Rodrigo de ↗Lima and introduced to them as a bishop was in fact the M. of ↗Däbrä Bizän. M. ↗Gäbrä Maryam was, during the 1820s–30s, co-responsible (with M. Gäbrä Ḫəywät) for numerous yearly ↗feasts in Aksum Ṣəyon, under *qesä gäbäz* Zä'amanu'el (CRAxum doc. I.12). Ca. 1830 M. Gäbrä Maryam received numerous land grants from *nəburä əd* Yä'əgzer Barya. It is probably the same Gäbrä Maryam who, in the late 1830s, became the 49th ↗*əṣṣäge* of Däbrä Libanos of Šäwa. He was succeeded as M. of Aksum by Wäldä Dəngəl (CRAxum docs. 82, 93).

In conjunction with other terms, M. indicates different functions and positions. An ecclesiastic in charge of the novices is referred to as *mäggabe ardə'ət* (or *liqä ardə'ət*, s. ↗*Liq*), one in charge of all monks is *mäggabe mänäkosat*.

The term is also used to refer to learned scholars such as *mäggabe bəluy* (an expert in the interpretation of the ↗Old Testament); *mäggabe ḥaddis* (an expert in the interpretation of the ↗New Testament); *mäggabe liqawənt* (an expert in the interpretation of the Church fathers); *mäggabe ḥəgg* (an expert in the interpretation of the ↗*Fəṭḥa nägäśt*).

The *mäggabe bet(ä mängəśt)* was an official in charge of the royal household, including the archives: the Vita of ↗Märqorewos of Däbrä Dəmaḥ mentions a certain Ğäwar (an Egyptian; Arab. Ğawhar) who held this position under *aṣe* ↗Dawit II (Conti Rossini 1904:44; cp. LusStud 110ff.; Lusini 1998:13f. and nn. 32f.).

Evgenia Sokolinskaia

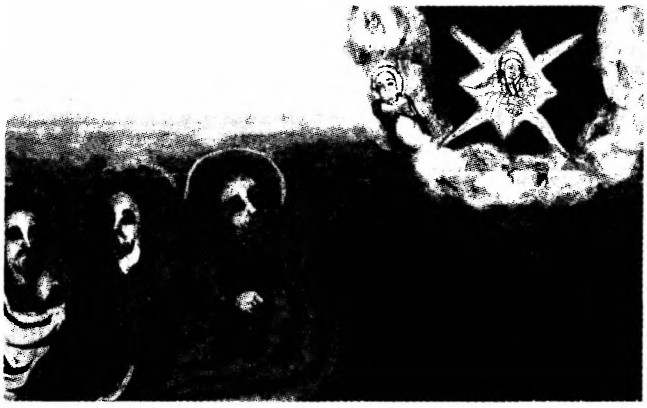
Mäggabit ↗Calendar, Christian

Magi

The M. (Gə'əz **መሰግላን**, *mäsäggəlan*, or **ሰብአ ሰገል**, *säb'a sägäl*) are the Wise Men from the East who, according to Mt 2:1–12, arrived in Bethlehem to pay homage and bring gifts to Jesus. This biblical passage, and the subtle Iranian connection evoked therein (cp. ↗Iran), has been much elaborated in Christian Oriental, including Ethiopian, tradition. In Ethiopic literature, besides the Gospel, the M. occur in several compositions, both original and translated. The latter are mainly N.T. apocrypha: the ↗*Tä'ammərä Iyäsus*, *Mäṣḥafä ↗ləddta lämaryam*, ↗*Tä'ammərä Maryam*, ↗*Nägärä Maryam*; or pseudepigrapha: the *Gädlä ↗Addam*; or exegetical works: the *Catena Gospel Commentary* and the so-called *Commentary* of ↗John Chrysostom (actually, by Ibn aṭ-Ṭayyib). The M. can also be met with in local homiliaries (↗*Dərsanä Maryam*, ↗*Dərsanä Ragu'el*) and commentaries on the Gospel (↗*Tərg*^{w}*ame wängelat*). In addition, their names appear in a few miniatures (e.g., ms. BN d'Abbadie 105, fol. 5v).

Tradition, as seen in these texts, includes several stories, which sometimes contradict one another, which thus cannot derive from a single source. Differences concern the time of the M.'s arrival (often when Jesus was two years old), their guides (Archangels Gabriel, Michael or Raguel), and, most conspicuously, their number and their names. In some texts the M. are three, in others twelve (only by mistake, eleven names are listed: s. Ibn aṭ-Ṭayyib's *Commentary* in, e.g., mss. BritLib Orient. 731 or EMML 368). In legends with three M., their name sets vary substantially: e.g., Ḥor, Bäsänaṭər, Qärsudan in the *Gädlä Addam*, vs. Bä'anti Suram, Mälikun and Bädisəsba in the *Catena Gospel Commentary*.

Some of these traditions can be traced back to early Christian sources, as is the case with the M. as kings, or with the significance of their gifts. Other traditions, such as, e.g., Mary and the Child visible in the middle of the star guiding them, the origin of the gifts from the Cave of Treasures, the



Magi guided by the star bearing the image of the Virgin and Child; ms. *Nägärä Maryam*, fol. 26r, 18th cent., Ǝndabba Ḥadära, Tämben; photo 2002, courtesy of Michael Gervers

figure of Zärädäšt (= Zarathustra or Zoroaster) as the ancestor of the M., and their number being twelve (like the signs of the Zodiac), as well as their names, can be traced to Syriac sources well-acquainted with Iranian lore: in particular, the *Cave of Treasures* (3rd cent.) and the *Story of the Magi*, included in the *Chronicle* of ↗Pseudo-Dionysius of Tel Maḥrē (8th cent.; Chabot 1927: 43, 1949:66; Monneret de Villard 1952:27-49).

In European tradition during the Middle Ages a conception evolved according to which the M. each came from one of the three continents, a result of the idea of the whole world paying homage to the newly-born Jesus. Therefore one of the M., usually Balthasar, was believed to have originated from Africa, and since the 14th cent. he was represented in art as a black man. According to J. Duchesne-Guillemin (1985, vol. 1, 154), such representation was influenced by the legend of ↗Prester John interpreted as the king of Abyssinia.

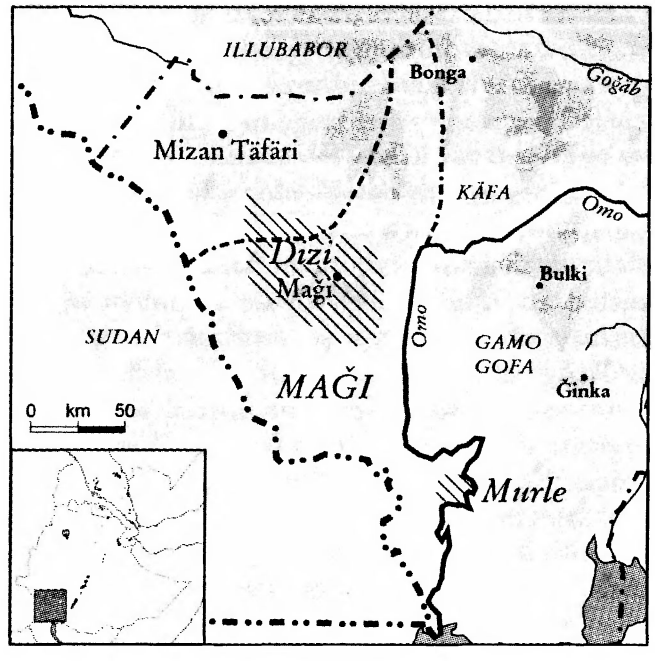
Maği ↗Dizi

Maği

M. (ማጂ; from Dizi *maašt*, 'high place') is a town and area in the ↗Käfa region of south-west Ethiopia. The name also refers to the language of the ↗Dizi people inhabiting the area along with the ↗Benç. The ↗Murle trace their descent to a place called Ǧen, beyond M.

The town of M. (6° 12' N, 35° 34' E; 2,430 m A.S.L.) was founded soon after the Käfa region was conquered by the troops of *aṣe* Mənilək II led by *ras* ↗Wäldä Giyorgis Abboyye in 1898 as a ↗*kätäma* for the ↗*näfṭäññä* from the north. Close to ↗Sudan, it was chosen as the site of a British consulate where in the 1920s Arnold ↗Hodson served as consul. The consulate had to be closed after the Italian occupation in 1936. In 1955, it was chosen as one of the pioneer stations of the United Presbyterian Church and is today an active Protestant missionary area. M. has a small airport where tourists land to visit the ↗Omo National Park.

The town had 3,000 inhabitants in 1938. Later, the population dropped (1,582 inhabitants in 1984 and 1,617 in 1994) and recovered its original size in 2004 (2,798 inhabitants). Administratively, it is today the capital of the Dizi *wäräda*, a subdivision of the Benç-Maği zone (capital in ↗Mizan



Täfäri) of the Southern Nations, Nationalities and People's Region. Formerly, Benç-Mağı was an *awraǧǧa* of the Käfa province. Benç-Mağı covers an area of 442 km² and its population grew from 325,878 inhabitants in 1984 to 455,527 in 2005 (16.7 inhabitants/km² density). Most of the inhabitants live in the densely populated highlands cultivating ↗*ənsät*.

Reportedly, while hunting in the M. area, *afä nəgus* Ǝšäte encountered and bought as a slave Ḫaylä Maryam, the father of Mängəštu. During the *Därg* period, Mängəštu Ḫaylä Maryam in his turn used M. as a place of internal exile for army commanders who failed in the civil war.

Magic

Scholars of culture and religion have tried to produce a definition which clearly distinguishes M. from religion, with only limited success. While some propose a functional distinction (M. has an immediate goal, while those of religion are more general), others have suggested that religion is public and compulsory, while M. is private (even secret) and voluntary. According to James Frazer's classic definition M. is a "primitive science", operating mechanically according to a clear set of "laws", as distinct from religion which depends on the desire of spirits and gods. M. has often been viewed by scholars as representing an early stage on an evolutionary scale and thus M. phenomena in advanced cultures are viewed as "survivals" from an earlier stage in cultural development (Kaplan in StudAeth 414ff.).

Scholars of Ethiopian culture have either explicitly or implicitly applied definitions such as these in their discussions of M. It has been depicted as an early stage of development in the history of religions, a survival of the "pagan" (↗Religion, traditional) past (UllBibl 79), "popular" as opposed to elite or official religion. It appears to have frequently been used as an outsiders' label for the beliefs and practices of "others", and often as a pejorative term. Practices and practitioners are often labelled as magicians to distinguish them from an idealized pure, usually monotheistic, religion, which seldom exists outside the imagination of some scholars and religious leaders. When looking at actual cases, such sharp distinctions are difficult to maintain. M. usually exists alongside or within a religious tradition and makes use of the same repertoire of symbols, rituals, and shares the same practitioners. In the traditional ethnic systems of Ethiopia, there was originally no concept equivalent to M. These difficulties in defining M. notwithstanding there are a variety of phenomena including practices, texts, and cults which are generally discussed in the context of M. and will be dealt with in this article.

Within the ↗Ethiopian Orthodox Täwaḥədo Church (EOTC) a wide array of texts, practices and beliefs fall under the general rubric of M. Thus M. or magic-religious prayers often invoke God, different angels, through the use of ↗*asmat* (cp. ↗Magic literature; ↗Names). Such texts are designed to protect or heal the beneficiary or accord him/her a particular power or desire (love, success, fertility etc.). They may be prepared by a ↗*däbtära* or even a priest or monk and often invoke a pseudo-epigraphic mytho-historical precedent (Solomon, St. Sisinius, Jesus or St. Mary). Such magical texts often appear in the form of an amulet or ↗magic scroll made to be worn by the beneficiary.

Indeed, in the Church, as in other traditions, a single object or act may be understood in different ways by believers under different circumstances; being both an object of religious devotion and an instrument of M. Thus the ↗Cross (↗*Mäsqäl*) serves as the central symbol of the Christian faith and offers protection from ↗demons, heals the sick and accomplishes other magical (or as the faithful would define them "miraculous") acts. Baptismal waters are crucial to the ritual in which a person is reborn and accepted into the Church, but they may also be used to heal and protect from evil, particularly demonic forces (cp. ↗*ṣäbäl*). An icon serves to visually focus the veneration of the faithful, but it may also have an inherent power to act, rewarding the faithful and punishing the wicked. A Biblical text such as the ↗Psalms has liturgical uses and is employed as an ↗oracle. Passages from liturgical texts such as ↗*Təmhərtä ḫəbuʾat* are incorporated into magic scrolls. The ↗*Ardəʾət* enjoys a liturgical status among the Betä Ǝsraʾel and is recited by monks in the EOTC; however it also serves as an amulet. Perhaps more than any Christian element, the ↗Eucharist, whose very existence depends

on a miraculous/magical transformation, is open to multiple interpretations.

M. has survived despite official disapproval and on occasion even royal sanctions and severe penalties. *Aṣe* ↗Zärᵓa Yaᶜəqob campaigned aggressively against the M. practices of his time. While he may in part have been motivated by a desire to purify Christianity, he also sought to de-legitimize his enemies (both religious and political). Despite the resources he devoted to opposing M., he had little success in eliminating beliefs and practices, which were deeply rooted in the population.

Although both Christianity and Islam are formally against the use of oracles, people's desire to know hidden things, whether they be the cause of events which have taken place, or the course of events yet to occur, has proven stronger than any official condemnation. Among many "pagan" peoples, oracles and divination form an integral part of their religious practice and cosmology, and are seen as necessary techniques for leading a successful life. A wide variety of techniques exist including the reading of entrails, the casting of stones, coffee beans or "sandals", the interpretation of natural events and dreams.

Spirit ↗possession cults are also among the most common phenomena considered as a form of M. Practices linked to the beliefs in ↗*ǧinn* and ↗spirits which often intermingle with the *zar* cult, divination (oracles and ↗Prophecy) and other magical rituals are widespread in Ethiopia, even if, being in sharp contradiction to strict monotheism, they are formally condemned. Among peoples who are not monotheist, possession cults although often described within the context of M. usually form an integral part of their religious tradition.

Given its ambivalent status, it is not surprising that practitioners of M. are themselves often viewed with suspicion. Yet again, the formulation could just as easily be reversed to claim that people with an ambivalent status are often suspected of engaging in M. The *däbtära* is often feared for his use of M., but respected for his learning (LevWax 171ff.). So-called peripheral or ↗marginalized people (s. EAE vol. 5) are often associated with M. because as craftsmen (↗Handicrafts; ↗Blacksmiths) they use fire and have contact with "impure" substances. This in turn mingles with accusations of being ↗*buda*, malevolent beings who cause harm to their neighbours as well as their crops, livestock and children. Nevertheless, they sometimes also play a crucial role in their (mainly agricultural) neighbourhood rituals. Other practitioners of M. include those who bring or stop rain (↗Rainmaking), sorcerers who use a variety of means to harm others, witches (who like the *buda* may act unconsciously), and inevitably "witchdoctors", i.e. those who use M. to protect their clients from the harmful M. of others.

M. practices, particularly ↗healing, often result in the crossing of religious and ethnic boundaries as members of different groups sacrifice social exclusivity in the interest of practical efficacy. *Zar* cults which exist among Christians, Muslims and Jews throughout North-east Africa are on occasion the forum for the meeting of disparate individuals united only by their involvement in the cult. Similarly, a skilled *däbtära* or other practitioner with a good reputation may attract clients from considerable distances and from ethnic groups other than his own.

In the 20th cent. with the advent of modern education, M. suffered a further decline in status as educated Ethiopians came to denigrate it and deny its existence. Motivated less by the previously cited religious scruples and more by a sense that M. was "primitive" and "backward", it came

to be seen as a legacy of the past and inimical to progress and a modern identity. However, in Ethiopia and the Ethiopian diaspora, it continues to survive "underground", particularly where other religious, medical and technological solutions have not provided satisfactory solutions.

Magic literature

Christian magic literature

M.l. (i.e. the corpus of texts to be used for purposes of ↗magic), as part of Ethiopian literature, comprises written testimonies of various traditional beliefs and is heterogeneous in content, themes and genres. It provides us with valuable information regarding the degree of dissemination of ↗Christianity and the knowledge of the ↗Bible among the faithful but also about the role played by traditional polytheistic beliefs and their place within the major monotheistic religions of Ethiopia.

Most works of M.l. within a Christian context were written in ↗Gəʿəz, particularly appreciated because of its function as the language of liturgy (↗*Qəddase*); recently, texts in ↗Amharic have also gained wider spread. Problematic is the position of M.l. within ↗Gəʿəz literature and its connections with other genres. In the modern histories of literature M.l. has been mostly described deprecatorily or ignored.

Although M.l. in itself is anonymous, its tradition and transmission is to be attributed to literate people, mainly clerics such as the ↗*däbtära* or magic specialists such as the *ṭänqʷay* who are responsible for collecting and editing texts.

The following chronological survey of M.l. is very tentative. The majority of the manuscripts known in western libraries are datable to the last 300 years. The texts, however, may have been indirectly influenced by the literature of Late Antiquity. The traditions of magic names (s., e.g., Aešcoly 1932; ↗*asmat*), connected with the legends of St. ↗Susənyos, ↗Alexander the Great or ↗Solomon, support the idea of Near Eastern influences through Greek and Coptic mediation, though it cannot be said for sure during which period they reached Ethiopia. The polemic of *aṣe* ↗Zärʾa Yäʿəqob against magic practices could be interpreted as indirect proof of the existence of 15th-cent. M.l. The contacts with Muslims and Europeans have also influenced Ethiopian M.l.

Types of magic literature

The heterogeneity of M.l. makes its internal classification difficult. In the first place magic texts can be divided into those meant to be (frequently) read for different purposes (such as magic prayers) and those written and carried along but hardly ever read (such as ↗magic scrolls). According to the approach which traditionally distinguishes between "black" and "white" magic (Strelcyn 1955:XXI–XL), one can distinguish between M.l. with protective, apotropaic functions and that with a pronounced aggressive character. From the point of view of genre, M.l. can be classified into longer descriptive texts, usually with a subject line of their own, and shorter magic prayers or incantations.

Longer magic texts

Among the basic content elements one can distinguish biblical, hagiographic, liturgical or apocry-

phal motifs; some magical texts appear original, though even the frequently employ quotations from other texts, esp. from the ↗Bible.

Frequently recurrent biblical quotations are, e.g., Ps 1:1–3, 91 (LXX 90); Mark 1:29–31, 5:25–34, 7:31–37, 8:22–26, 10:46–52; Jn 1:1–5, 1:14 (Worrell 1910:410; Grébaut 1939:3–6; Strelcyn 1955:XXVII). Jesus's role as healer and exorcist was probably one of the reasons for the early magical use of these quotations.

An example of a hagiographic motif in M.l. is the text based on a legend from the Acts of ↗Susənyos; it is one of the most frequently used against miscarriage (Worrell 1909, 1910, 1915). The Ethiopic version of the so-called "Prayer of Cyprian" (Basset 1896; Grohmann 1917–18), attributed to ↗Cyprian of Antioch, who, according to the tradition, was a magician converted to Christianity, is another example.

Passages from such liturgical texts as the Doctrina Arcanorum (↗*Təmhərtä ḫəbuʾat*) or Mystagogia are written on scrolls or amulets (cp. ↗*ṭälsäm*) to protect the owner against illness or to assure a long life (Burtea 2001:91f.). Such pieces of M.l. as the ↗*Ḥaṣurä mäsqäl*, meant to protect against all categories of harm and enemies, and to curse Satan (Lifchitz 1940:88ff.), the *Säyfä śəllase* ('Sword of the Trinity', ibid. 226–38) which is meant to give help against enemies, the *Mälkəʾa Fanuʾel* (cp. ↗*Mälkəʾ*) meant to expel ↗demons (Burtea 2001:64–69) and the *Säyfä mäläkot* ('The Sword of the Divinity'; Grébaut 1936:1–6) believed to exorcize Satan, all borrow extensively from ecclesiastic hymnody. The "Prayer of our Lady in the Land of the Parthia" (*Bartos*), which keeps away diseases (Basset 1895:11–47; Conti Rossini 1896), can be classified both as M.l. and as an apocryphal text.

Original magic texts are generally characterized by the belief in the power of a name (↗*Asmat*). The ↗*Ləfafä ṣədq* is believed to possess the power to protect the soul after death on its journey to the next world through the secret and powerful magical names of Jesus. The ↗*Ardəʾət* aims, by means of the secret names of Jesus, to protect from every sin, evil, enemy and from snakebite and every infirmity and disease of the body. The ↗Betä Ǝsraʾel version of this text enjoys liturgical status.

A group of texts claiming the authorship of King Solomon – ↗*Märbäbtä Sälomon*, *Mäṣḥetä Sälomon* ('Mirror of Solomon') – aim to offer protection against the malevolent actions of demons. The ↗*Ləssanä säbʾ* and *Ləssanä Yäᶜəqob* (Grébaut 1935:6–12; Lifchitz 1940:240–43) are designed to protect against malevolent and slanderous tongues.

The use of M.l. in ↗healing is very important for the history of traditional medical practices in Ethiopia. Today most of the texts used in Amharic, though some of them also have Gəᶜəz counterparts. Most of the texts used for healing are collections of prescriptions against demons which are responsible, according to traditional Ethiopian ↗medicine, for causing various illnesses (Griaule 1930; Strelcyn 1966; Tsehai Berhane Selassie 1971; Strelcyn 1975). Some of them prescribe the use of or employ fully or in part magic texts of the types described above, prayers, or psalms (↗Psalter) – an example for the latter category is the *Məśtirä Dawit* ('Mystery of the Psalter'), known in both Gəᶜəz and Amharic versions (Strelcyn 1981, 1985).

Magic prayers

Prayers which are intended to have a particular effect are numerous and are frequently used in religious practices in Ethiopia and as such represent the main genre of M.l. Most of the magic prayers are commonly called *ṣälot* ('prayer'), because they begin with *ṣälot bäʾəntä* ('prayer for / against ...') or *ṣälotä* ('prayer of ...') followed by the name of the demons or ↗spirits addressed. The term for M.p. containing secret names is *asmat* or *qalat* ('[magic] words').

The basic idea that sustains magic prayers is the belief in the power of the uttered spell or incantation (*dəgam*). The written incantation in the form of an amulet or a scroll (*kətab*) is thought to be more efficacious than a verbal spell because its power is amplified by a variety of graphic elements such as the traditional magic paintings or drawings (cp. ↗*ṭälsäm*) and in addition, its effects are continuous (Young 1970:163). Closely connected to this is the belief in the power of the names of supernatural beings. When one knows the name of a being, either a benevolent one like God, Jesus, St. ↗Mary, ↗saints or ↗angels, or a malevolent one like demons or the ↗devil, or even an ambivalent one like most of the spirits or the ↗*zar*, one is able to exercise power over it.

Magic prayers are often attributed to famous biblical figures like Adam (SixTana III, 387, 439), ↗Moses (ibid. 356), Solomon (ibid. 325), ↗Henoch (Gragg in USCES), Mary (SixTana

III, 396), the Apostle Thomas (ibid. 436.3), or to historical persons, known for their anti-magic secret powers such as Alexander the Great or Cyprian of Antioch (Strelcyn 1955:L). The voluminous collection of prayers known as *Mäftəḥe śəray* is thought to protect against every kind of charm or sorcerer. These text contain countless magic words and names, as well as prescriptions similar to what is found in magico-medical literature.Prayers with the same title, but much shorter, can be found on magic scrolls.

Protective prayers are more varied and relate to the main concerns of Ethiopians: illness, misfortune or danger, such as fire (Grébaut 1936:36f.), hail and snakes (Griaule 1935), magicians and ethnic enemies. Standardized protective prayers figure on each magic scroll and in most known texts of M.l. Specialized magic prayers deal with only one disease or act against one demon or class of demon.

Protective prayers are an essential therapeutic element within traditional medicine, being used prophylactically against a consistent catalogue of diseases, or, if sickness is diagnosed, to expel the aggressive demons. A large number of magic texts are known to render demons harmless: *ṣälot bäʾəntä maʾəsärä aganənt* ('prayer for binding demons') or *ṣälot bäʾəntä mäsṭəmä aganənt* ('prayer for drowning demons').

The term employed for aggressive ("black") magic, meant to send illness or other misfortune to a designated victim, is *kəfat* (Amharic, from Gəʿəz *kəfʾat*, 'deformity'; Young 1970:195). The most common work of this category is known as *andärəbbi*. Aggressive magic is accompanied by the recitation of prayers which can be found in the magic notebooks of the *däbtära* (Strelcyn 1960:152f.). Some of them are: *mädfənä ṣär* (to paralyse the enemy), *mästäḥaməm* (to make someone ill) or *mästäbarər* (to make someone err; Mercier 1976a:125ff.). Additionally, invocations to Satan (Strelcyn 1983) or demons (*ganen*-calling or *ganen asmat*) can cause the enchantment of the victim.

Islamic magic literature

Magic practices are widespread in ↗Islam. As in other cultures, ↗magic is divided into white, which is allowed, and black, or sorcery (Arab. *siḥr*), which is prohibited. The difference depends either on the intended effects or on the means used. If the effects are good (health, preg-

nancy, long life, wealth), it is allowed, if bad (death, illness), it is forbidden. As to the means, it is, e.g., allowed to write amulets (Arab. *ḥiǧāb*, *ḥirz*, *ṭilsam*; cp. ↗*ṭälsäm*) with Qurʾānic verses, or beautiful names of God. On the other hand, it is forbidden to call for the assistance (Arab. *istinzāl*) of the ↗devil (Arab. *šayṭān*).

Muslims have produced a vast literature on magic. Theologians and philosophers elaborated detailed theories on the different kinds of magic, and authors engaged in magic wrote practical handbooks on all its methods, such as tricks (Arab. *nīranǧ*), magical chants (Arab. *ruqya*), chiromancy (Arab. *sīmiyāʾ*), the usage of the secret powers of letters etc.

An important manifestation of Islamic M.l. is that of prayers: *duʿāʾ* (appeal, invocation to God), *ḥizb* (mystical prayer of a saint), and *wird* (devotional prayers usually linked to a mystical brotherhood). These prayers were originally conceived as a means to have one's sins forgiven by God, to invoke Him for the well-being of the community, or just to strengthen one's faith with pious practice. However, they often assume a magical function because they are read and recited in order to help solve the problems and obstacles of everyday life (to recover from illness; to give birth to a child; to have one's requests to an official accepted; to have relief from distress and so on). Talismans and amulets frequently worn around the neck or inside the clothes are frequently carriers of such prayers. Geometrical figures (*ǧadwal*, *waqf*) containing magical texts sometimes taken from the ↗Qurʾān or from other sources are also widespread.

Most of the longer and more complex magic texts are attributed to the Prophet ↗Muḥammad, to some of his relatives or companions (e.g., ʿAlī, al-Ḥusayn) or to renowned ↗holy men, whose intercession is openly or implicitly invoked to obtain the satisfaction of the request from God.

These are considered very powerful tools and at the same time they are confidently used and widespread: normally no doubt about their licit status exists as they are of prophetic origin or allegedly written by holy men.

Muslim M.l. in Ethiopia and Eritrea is comparatively little explored. On the basis of the available material one can say that Ethiopian Muslims have widely adopted the genre of M.l. and Ethiopian Arabic ↗manuscripts contain samples of almost all of its varieties. For instance, five *ḥizb* prayers are contained in the Arabic ms. from Harär now in the Robecchi Bricchetti collection in Pavia (Traini 1974:9) no. 5 fols. 60v–70r: three by the famous Harari author *šayḫ* ↗Hāšim b. ʿAbdalzīz (d. 1763) and two famous prayers, *ḥizb an-nūr* and *ḥizb al-baḥr*, by the much revered North African saint Abū l-Ḥasan aš-Šāḏilī (d. 1258). Two *ḥiǧāb*-texts are contained in ms. 6 fols. 1r–2v of the same collection (Traini 1974:11).

The known texts are written in Arabic. Most manuscripts originate in ↗Harär in Ethiopia, some in Eritrea. Recently, many texts of M.l. have become quite widespread in Ethiopia and Eritrea in booklets printed either in Arab countries or locally. A number of *duʿāʾ*- and *wird*-prayers of clearly magical content, some of which attributed to ʿAbdalqādir al-Ǧīlānī, as well as the popular *ḥirz an-nāqa* attributed to al-Ḥusayn and the magical prayer *al-Ǧawšan al-kabīr* (widespread in *šīʿī* tradition) were commonly sold in the Asmära book market (Gori 1995:99f.). Two works of the living scholar Saʿīd b. ʿAlī b. Wahf al-Qaḥṭānī, whose texts strictly adhere to the prophetic tradition, were recently printed by the Najashi Printing Press in Addis Abäba, *ad-Duʿāʾ wa-yalīhi: al-ʿIlāǧ bir-ruqya min al-kitāb wassunna* (1421 H. = 2001/02 A.D.) on the use of prayers and amulets (*ruqya*) to heal the sick, and the much renowned collection of *duʿāʾ* prayers *Ḥiṣn al-muslim* (published in Amharic as *Ḥisnul muslim* [1997 A.M. = 2004 A.D.] and in Oromo as *al-Azkaar zikriwwan guyyaafi halkanii* [n.d.]). *Al-Ḥizb al-aʿẓam*, a long series of invocations for every day of the week, by the famous mystic and Ḥanafī Law expert ʿAlī b. Sulṭān Muḥammad al-Qārī (d. 1014 H. = 1605/6 or 1607) was printed by the Bərhanənna Sälam Press.

Many M.l. texts found in Ethiopia are devoted to predicting the future in different contexts and by different means (↗Oracles and divination). Typical would be, for example, the prediction of the time of occurrence and development of an illness on the basis of the numerical value of the letters of the sick person's name and that of his mother; predictions based on the number of a hyena's howlings (one to fifteen) or on the behaviour of a raven; predictions on the behaviour of a person, perhaps a medium. Some texts are manuals containing instructions how to produce amulets for different occasions, for example, to disable one's wife to have sex with others. Magic texts frequently contain some magical signs with eyes like the letters of the so-called *suryānī* script (↗Harari secret script; WagHand 86–90). Such letters can

also be found in Christian Ethiopic M.l. and in Arabic magical texts of non-Ethiopian origin.

One work of the grand mufti of Eritrea, ↗Ibrāhīm al-Muḫtār Aḥmad ᶜUmar is entitled *al-Hady al-qudsī fī faḍāʾil āyat al-kursī* ('The Holy Guide to the Virtues of the Throne-Verse [Qurʾān II 255]'; FahLit 5). These virtues could be (though not exclusively or necessarily) of a magical nature, and the book may be related to the literature of *ḫawāṣṣ al-Qurʾān* which explores the beneficial virtues of the sacred text.

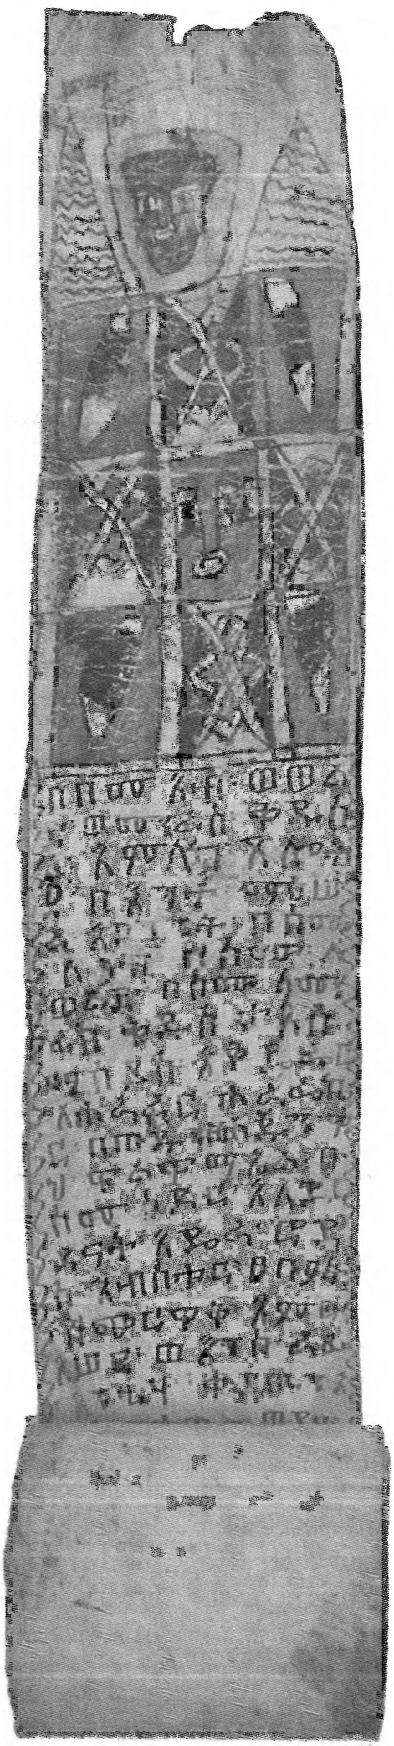
Magic scrolls

Christian written amulets (Amh. ክታብ, *kətab*) are made of crude ↗parchment or leather (up to three strips usually sewn together with thongs of the same material) and can vary from 4 to 25 cm in width and from 40 to 200 cm in length. They are rolled and tied with a thong – the fact which made European scholars call them M.s. (↗Magic). A roll would be, possibly, a more appropriate denomination, since a scroll unrolls horizontally and a roll vertically, as do Ethiopian M.s. These can be kept in leather cases, as their protective effect is realized by the mere possession of them, not by reading. A M.s. is usually written, on special order, by a specially trained ↗*däbtära*.



A magic scroll (upper part), 19th cent. (?); from the Otto Meinardus collection, Ethiopian Studies Research Unit, Asien-Afrika-Institut, Universität Hamburg

Like any ↗manuscript, a M.s. can be cheap and simple, or expensive and decorated. M.s. are often illuminated, for "miraculous are considered not only sounds, words and letters, but images and figures as well" (Turaiev 1916:184). At the top of a M.s. an image of the archangel Michael or Gabriel with a drawn sword is typically depicted, in the middle various images symbolizing good and evil powers can be placed. As for the good, it may be the cross with sun and moon on either side ("↗Crucifixion without Crucified"), or a common Ethiopian eight-pointed cross, or an illustration for the text: for example, St. ↗Susənyos on horseback piercing the female demon Wərzəlya. The images of evil powers are more complicated both in their design and interpretation: they can be shown as a square face with two "horns" on each side, explained by the *däbtära* as "the tied demon" of the Evil Eye, or a grid-like geometric design — "the Devil's throne", inserted into the text with an evident purpose to induce evil spirits, who may possess a human being, to leave him and return to their proper place. These designs are usually framed in red lines of magic text to prevent the spirits from returning. The protective effect of such a written amulet is strictly personal, so the name of the owner is mentioned repeatedly throughout each text; when such a scroll changes owner, a new name is written over the previous one. In the M.s. made for further sale, a blank space for the name is invariably left to be filled in later.

As for the content and origins of these texts, Turaiev (1899:242) remarked that "in Christian ... Abyssinia there is almost no

borderline between faith and superstition, religion and magic practices. Priests and clergymen trade in writing and selling magic prayers which are venerated alongside the canonical ones; the latter in their turn may be used for magic ends, as well as the Scripture itself, by way of mechanical reading, or by wearing on the neck, or even by the very fact of its possession". In spite of a great diversity of texts used for magic ends, they comprise a limited set of literary and folklore subjects, mostly well studied. Among them are: the *Legend of St. Susənyos and Wərzəlya* (Fries 1893:50–70; Grébaut 1937:177–83; Chernetsov 1974:200–07), the *Bandlet of Righteousness* (↗*Ləfafä ṣədq*; Turaiev 1909:359–78; Budge 1929; Euringer 1940:78–99, 244–59), the *Legend of the Net of Solomon* (↗*Märbäbtä Sälomon*; Euringer 1928–29; Chernetsov 1975:209–13), ↗*Asmat*, *Mäftəḥe śəray* (Strelcyn 1955), *The Rampart of the Cross* (↗*Ḥaṣura mäsqäl*; Chernetsov 1975:215–18), *The Incantation of the Devil* (ibid. 213ff.), etc.

These texts, diverse as they are, could be considered, however, as a single category as they are united by distinctive common features: 1) function (they all serve as protective amulets efficacious by their mere presence); 2) form (they are all written in Gəᶜəz, and the repeated mentioning the name of an owner in the very text is indispensable); 3) structure (the narrative element of every written spell consists of a limited number of subjects); 4) mechanism of reproduction (the preservation and transmition of these works are limited by copying, when only a name of the owner is changed). Such distinctive characteristics allow to be classified these works of written protective magic as belonging to a special kind of literature, i.e. ↗magic literature (Chernetsov 1994:109–17). Ethiopian magic literature occupies an intermediary position between ↗Gəᶜəz literature proper and magic folklore and should be studied accordingly. The written form of M.s. permits textological analysis, but it is impossible – given the kind of text – to reconstruct an "original", all the variants being "original" in a sense. As for foreign borrowings, however, written magic offers a more promising field of research, than oral magic does. People always need protection, both physical and psychological, so written amulets, ancient as they are, remain a living reality in today's Ethiopia.

Sevir Chernetsov

Mägʷina

M. (መጕና) is a monastery (↗*Gädam*) in Aläfa *wäräda* of North Gondär zone (for location s. Maḫbära Śəllase). The famous and isolated site is scarcely mentioned in scientific literature. Apparently, it was not visited by Europeans except Antoine d'↗Abbadie, who acquired and made several copies from the manuscripts of M.'s library (ms. BN éth. Abb. 266, p. 163).

The earliest mentions of M. refers to the time of *aṣe* ↗Fasilädäs, who is reported to have looted the monastery in 1657, a few years after the first pro-↗*Qəbat* council of ↗Aringo (Perruchon 1898:90; DombrChr 203). The abbot of M. Ammәḫa Giyorgis and *abba* Ṣəge Dəngəl were then killed and are commemorated as martyrs in some copies of the ↗*Sənkəssar* (on 7 *Yäkkatit*, s. mss. München, Bayerische Staatsbibliothek, Cod. aeth. 140; EMML 656, fol. 14b; cp. GuiIohan 84).

During the reign of *aṣe* ↗Yoḥannəs the monastery was rebuilt, as a notice in ms. BN Abb. 34, fol. 215r (CrAbb 148) testifies, referring to 22 rescued manuscripts from the former library of M. Since that time M. has been an important Unionist centre (↗*Täwaḥədo*). *Abba* Həryaqos, head of M., was appointed *mämhər* of Däbrä Libanos and then ↗*əčča̤ge* between 1669 and 1673. During *aṣe* ↗Iyasu I's reign he was reaffirmed in the two high offices and kept them from 1682 presumably until his death in 1691/92 (GuiIohan 9, 62; BegCron 55; BassÉt 293; DombrChr 217).

During the first part of Iyasu I's reign M. was a faithful supporter of royal policy. When in 1693 Iyasu asked monks to investigate the orthodoxy of the new metropolitan *abunä* ↗Marqos, he trusted the competence of the clergy of M. together with monks from ↗Waldəbba, Qänṭäfa and ↗Qʷäraṣa, other well-known *Täwaḥədo* monasteries (GuiIohan 174f.).

Ǝdä Krəstos was the head of M. after Həryaqos and at least from 1678. He was a close advisor of the emperors (GuiIohan 36f., 87). He strengthened the monastery and ordered some 50 manuscripts to be copied for the library, insisting on O.T. books and ↗monastic literature (CrAbb 147–49). Ǝdä Krəstos might also have commissioned the account of the martyrdoms of *abba* Ammәḫa Giyorgis and *abba* Ṣəge Dəngəl, celebrated for the first time in 1685 (ms. EMML 656, fol. 14b; GuiIohan 84). He died in December 1694 while "going to Egypt", as the "short chronicles" state in a somewhat symbolic way (BassÉt 305; BegCron 67); most probably, he was killed on the order of Iyasu I while trying to leave the country (DombrChr 219). The reason for this could be M.'s strength or its rigid *Täwaḥədo* stance whereas Iyasu had to deal with a strong *Qəbat* party. Nonetheless, the successor of Ǝdä Krəstos, *abba* ↗Zäwäldä Maryam, was also to become very powerful over the next three decades. In 1704–05 the monks of M. sheltered *bäğərond* Iyäsus Moʾa, a potential competitor for the throne, but the royal power infringed the right of ↗asylum and imprisoned him in ↗Wähni Amba (BassÉt 316; BegCron 77f.; DombrChr 235ff.; GuiIohan 238, 242ff.; Schneider 1990:119). At the end of the reign of Iyasu I, in 1705, one more council was held in Gondär in a climate of great instability (testified, e.g., by the fact of three *əčča̤ges* being successively dismissed). As a result, some important figures of the Däbrä Libanos *Täwaḥədo* network found asylum at M. Later, Iyasu I sent a messenger to M., seeking reconciliation with them (BegCron 80f.; Conti Rossini 1893:30f.; however, the pro-*Täwaḥədo* bias of the "short chronicles" calls for a careful interpretation of these statements). In 1706, hostility of M. towards Iyasu I was obvious. M. may even have sheltered the self-proclaimed *aṣe* ↗Täklä Haymanot, a son of Iyasu (DombrChr 240f.).

In the early 18th cent., M. retained the leadership of the *Täwaḥədo* movement. The hard-core *Täwaḥədo*-partisans of M. protested against the decisions of the pro-*Qəbat aṣe* ↗Tewoflos in 1708 (DombrChr 249). In 1718, when the ambiguous decisions of a church council in Gondär seemed to validate *Qəbat* views, the entire *Täwaḥədo* faction led by *abba* Zäwäldä Maryam of M. protested. Consequently, the monks were persecuted at night when they retired to the ↗*əčča̤ge bet* (BassÉt 341; BegCron 102; DombrChr 268; Guidi 1893:603f.). This crisis, the persistence of a policy promoting *Qəbat*, together with the governor of Goğğam *ras* ↗Wäldä Giyorgis, may have led to the death of *aṣe* ↗Dawit III in 1721. During the long period of Məntəwwab's (↗Bərhan Mogäsa) power, marked by a pro-*Qəbat* policy, the royal Chronicles do not refer as frequently to M. However, the monastery was still considered the main leader of the Däbrä Libanos *Täwaḥədo* faction in January 1731 (GuiIyas 67).

During the intense polemics of the mid-19th cent., some source indicate that monks from M. were the delegates of the *əčča̤ge* ↗Maḫṣäntä Mikaʾel, opposed to *abuna* ↗Sälama III (Conti Rossini 1916:468f.).

Anaïs Wion

Mahaffy, Francis Elwood

Reverend M. (b. 19 November 1917, Cherrydale, VA, d. 30 March 1980, Oak Park, IL) was an American missionary, Bible translator and linguist. He arrived in Eritrea in 1945 together with his wife Arlena to work for the Orthodox Presbyterian Church (operating as the American Evangelical Mission). Set up by Clarence Duff in 1943, the mission focused on medical work, ↗Bible translation and evangelical ↗preaching.

M. was initially engaged in the ↗ᶜAsäb area. As a result of this and with the help of local informants, he wrote a fine grammatical sketch of ↗ᶜAfar (1950–52), used later as a basis for the works of Colby and Parker (1961–67), while also helping in the first stage of the translation of the N.T. Later, he was relocated to the ↗Sāho-speaking area. There, he followed the Sāho nomads during their transhumant movements and became proficient in their language. M. translated portions of the N.T. into the Sāho language, wrote over a dozen booklets in that language (primers, religious tracts, Bible lessons) and translated others from English, Təgrəñña and Amharic. He worked together with the linguist William E. Welmers who was interested in the Sāho, ᶜAfar and Təgre languages. Welmers's article (1952) was completed, after a stay in Gindaᶜ and ↗Iṛāfalo, with M.'s and Clarence W. Duff's co-operation.

In 1964, with the help of his informant Ibrāhīm Ismāᶜīl (Ibraahim Ismaaciil), M. completed the translation into Sāho (↗Minifere dialect) of the Gospel of John. Other works on Sāho, such as a remarkable grammatical sketch, have never been published. M. also oversaw the translation into Təgrəñña of other religious tracts and booklets.

M. stayed in Eritrea until 1968.

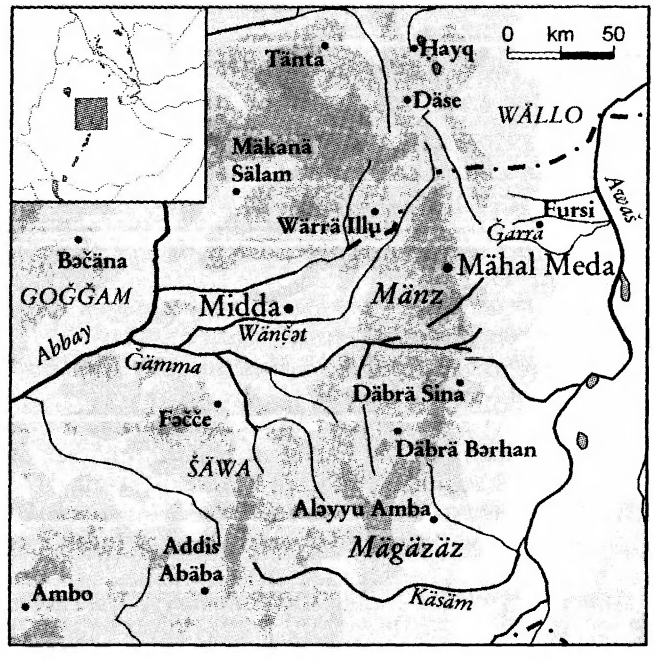
Mähal Meda

M.M. (10° 11' N, 39° 28' E) is a small urban centre which was chosen in the 1960s as the capital of the Mänz–Giše *awraǧǧa* in the ↗Šäwa region. Since the 1991 federal reform M.M. has been the capital of the Gera Mədər–Qäya Gäbrel *wäräda* – subdivided into 43 *qäbäle* – in the North Šäwa Zone of the Amhara *kəllәl*.

The journey there is difficult along the recently improved dirt road which branches off the Addis Abäba–Däse road to the west and climbs the Gʷassa Mountains at an altitude of 3,000 m A.S.L. This southern tip of the Abuyyä Meda range is home to the very rare Abyssinian dog (*Lycaon Pictus*). The town stands on plateaus of the left bank of the ↗Wänčət river which forms a canyon that the road crosses on its way north



to ↗Wärrä Illu and Däse. It could be the same as the halt on the direct mule track from Däbrä Sina to Wärrä Illu mentioned in Italian sources as "Uccan" (Guida 402; CTI fol. 4).

In 1984 M.M. had the population of 4,439 inhabitants. The densely populated Mänz–Giše *awraǧǧa* grew by 131 % between 1970 (120,000 inhabitants, density: 35.4) and 1984 (278,000 inhabitants, density: 82). In 2000 the town had 9,172 inhabitants, and 10,945 in 2004, a mere 6 % of the total figure for the Gera Mədər–Qäya Gäbrel *wäräda*.

The town houses the basic services catering for a dense rural population (103.1 inh./km² in 2004) 60 % of which suffered food shortage in 1995 (Emergency Unit for Ethiopia). World Vision has opened a hospital there and the town houses the offices of an Area Development Project.

Mäḥaləyä mäḥaləy ↗Wisdom books, biblical

Mäḥaləyä näbiyat

M.n. (**መሐልየ፡ ነቢያት**, 'The Canticles of the Prophets') is a collection of 15 poetic excerpts from the Old and New Testaments (↗Bible). All of the passages are stylistically similar to the Psalms, but occur in Biblical books other than the ↗Psalter. M.n. is generally found bound in a single volume together with the Book of Psalms, Song of Songs (↗Wisdom books), ↗*Wəddase Maryam*, and ↗*Anqäṣä bərhan*. Additionally, the Psalter and M.n. together form one of the four collections of monastic hours in Ethiopia, recited by clergy and laypeople alike.

The selections included in M.n. are:

1) **ጸሎቱ፡ ለሙሴ** (*Ṣälotu lämuse*, 'The Prayer of Moses'), Ex 15:1–19;
2) **ጸሎተ፡ ሙሴ፡ ዘዳግም፡ ሕግ** (*Ṣälotä Muse zädagəm ḥəgg*, 'The Second Prayer of Moses'), Deut 32:1–21;
3) **ጸሎተ፡ ሙሴ፡ ዘሣልስ** (*Ṣälotä Muse zäśaləs*, 'The Third Prayer of Moses'), Deut 32:22–43;
4) **ጸሎተ፡ ሐና፡ እመ፡ ሳሙኤል፡ ነቢይ** (*Ṣälotä Ḥanna əmmä Samu'el näbiyy*, 'The Prayer of Hannah, mother of Samuel the Prophet'), 1 Kgs [= 1 Samuel] 2:1–10;
5) **ጸሎተ፡ ሕዝቅያስ፡ ንጉሠ፡ ይሁዳ** (*Ṣälotä Ḥəzqəyas nəguśä Yəhuda*, 'The Prayer of Hezekiah, King of Judah'), Is 38:10–20;
6) **ጸሎተ፡ ምናሴ፡ ነቢይ** (*Ṣälotä Mənasse näbiyy*, 'The Prayer of Manasseh, the Prophet'), 2 Chr 33:1–14 (second numbering, between verses 13 and 14) [= apocryphal Prayer of Manasseh];
7) **ጸሎተ፡ ዮናስ፡ ነቢይ** (*Ṣälotä Yonas näbiyy*, 'The Prayer of Jonah, the Prophet'), Jon 2:3–10;
8) **ጸሎተ፡ ዳንኤል፡ ነቢይ፡ ስብሐት፡ ዘእምአዛርያ** (*Ṣälotä Danə'el näbiyy səbḥat zä'əm'azarya*, 'The Prayer of Daniel, the Prophet, Praise from Azariah'), Dan 3:26–45 [= apocryphal Prayer of Azariah 1–22];
9) **ጸሎተ፡ ሠለስቱ፡ ደቂቅ** (*Ṣälotä śälästu däqiq*, 'The Prayer of the Three Children'), Dan 3:52–56 [= apocryphal Prayer of Azariah 29–34];
10) **ጎበ፡ ባረኩ፡ አናንያ፡ ወአዛርያ፡ ወሚሳኤል፡ ለእግዚአብ ሔር** (*Ḫabä baräku Ananya wä'azarya wämisa'el lä'əgzi'abəḥer*, 'Ananiah, Azariah, and Mishael Blessed God'), Dan 3:57–88 [= apocryphal Prayer of Azariah 35–66];
11) **ጸሎተ፡ ዕንባቆም፡ ነቢይ** (*Ṣälotä ʿƎnbaqom näbiyy*, 'The Prayer of Habakkuk, the Prophet'), Hab 3:1–19;
12) **ጸሎተ፡ ኢሳይያስ፡ ነቢይ** (*Ṣälotä Isayəyas näbiyy*, 'The Prayer of Isaiah, the Prophet'), Is 26:9–20;
13) **ጸሎተ፡ እግዝእትነ፡ ማርያም** (*Ṣälotä əgzə'ətənä Maryam*, 'The Prayer of Our Lady Mary'), Lk 1:46–55 [= the Magnificat];
14) **ጸሎተ፡ ዘካርያስ፡ ካህን** (*Ṣälotä Zäkaryas kahən*, 'The Prayer of Zechariah, the Priest'), Lk 1:68–79 [= the Benedictus]; and
15) **ጸሎተ፡ ስምዖን፡ ነቢይ** (*Ṣälotä Səmʿon näbiyy*, 'The Prayer of Simeon, the Prophet'), Lk 2:29–32 [= the *Nunc dimittis*].

Mäḥammäd Ali

M.A. (**መሐመዲ፡ አሊ**, "horse name" Abba Ǧəbo; b. ca. 1740, d. ca. 1785) ruled the territory of ↗Wärrä Himäno in ↗Wällo in the second half of the 18th cent. He belonged to a lineage of Oromo Muslim notables who had settled in Wällo since the beginning of the 18th cent. His grandfather, Godana Babbo, and his father, Ali Godana, used their influence and politically advantageous marriage alliances to undermine the power of the petty chiefdoms in the eastern parts of Wällo. M.A. turned this lineage into a dynasty, the ↗Mammädočč. It is not clearly established if this name had been used before or only after him.

M.A. first successfully rebelled against the Arreločč chiefs who dominated the area around Lake Ḥayq and who had become unpopular because of excessive taxation. Then he conquered Wärrä Himäno, a territory strategically positioned

on the border of the decadent Gondärine kingdom. He established his headquarters at the town of Tänta, from where he could control Mäqdäla and the countries beyond the Bäšəlo river (Wadla, Dälanta, and Dawənt). According to local traditions, M.A. laid the basis of Mammädočč authority through low taxation, military feats and Islamic proselytization. He assumed the title of ↗*imām*. This title and the religious warrior spirit involved were inherited by his successors. Thus, M.A. is considered the eponymous founder of the dynasty.

M.A.'s mother Ləbəyat was a daughter of a Christian lord of Wadla Dälanta. M. had two Christian wives, Alkon from Amba Ləgot, who bore him three sons (Bätto, Adäm and Amäde), and Ǝgğəgayyähu from Ambassäl, who bore two sons Yəmäre and Qasime. This tradition of intermarriage with women of Christian descent is characteristic of the Mammädočč dynasty.

The only reference to M.A. in Christian historical sources is found in the account of the campaign of *aṣe* ↗Täklä Giyorgis against Wällo in 1783–84 (BlunChr 273–89). This account mentions M.A.'s eldest son, Bätto, as a leader of Wärrä Himäno. The latter allegedly submitted to the Christian king and was appointed *däğğazmač* of Wällo and Wəčale as a reward. However, he was imprisoned three months later for having refused to support the policy of mass conversion to Christianity. Thereupon M.A. lead his people against the rear of the Christian army. It is mentioned that Adäm, his "giant" son, fell in this fierce battle. It seems that M.A. himself died then, too.

The issue of M.A.'s succession is blurred. Bätto probably tried to keep his position as heir for some years, but he was challenged by his youngest brother, Amäde "Kolase" (the father of ↗Libän Amäde), who took the title of *imām* and defended the sovereignty of the Mammädočč not only against the surrounding Christian regional powers but also rulers of other Wällo groups.

Maḥámmad "Illálta" Ḥanfaḍé

M.I. (Maḥámmad b. Ḥanfaḍé b. ᶜAsa Aydāḥis [ᶜAfar sp.: Macammad "Illalta" Canfaxe], d. May 1902, nicknamed *illálta*, lit. 'permanent water hole, prosperous oasis', hence 'the man who brought prosperity'), of the ↗Mödaytó tribe, was the *sulṭān* of ↗Awsa from 1862 to 1902. His patronym, Ḥanfaḍé, which is often found in the *sulṭān*'s family, became a synonym for "*sulṭān* of Awsa" in colonial literature under various spellings: Anfari, Anfray, Hampharé, etc. His grandfather ᶜAsa Aydāḥis was the first to receive the title of *amóyta* (*sulṭān*). During his rule, M.I. increased the power of Awsa; however, his reign ended in a civil war.

M.I. established his domination over the sedentary tribes of Awsa (Harálla [cp. ↗Harla], Intēgér, Bayḍīᶜó) after several short battles in 1863. In 1866, he burnt ↗Tağūra, the residence of the Adᶜáli *sulṭāns* who had signed the 1862 agreement with the French. He formed an alliance with the Debné *sulṭān*, ↗Ḥúmmad b. Loᶜoytá with whose assistance he defeated the Somalis (↗ᶜIssa) at Mari in June 1867. Also, after M.I. made a secret agreement with Ḥúmmad b. Loᶜoytá, the latter led the Egyptian forces, headed by ↗Munzinger, to an ambush at Lake ᶜUddumma where the Munzinger and his troops were annihilated by M.I. on 15 November 1875. This alliance ended ca. 1894, when M.I. ordered the execution of ᶜAbdalqādir b. Arbāhintá, Ḥúmmad b. Loᶜoytá's permanent envoy to Mənilək of Šäwa (later *aṣe* ↗Mənilək II).

M.I. was a ruler who constantly strove for the independence of Awsa; however, the continual threat from ↗Egypt forced him to change his policy. In June 1881, he sent a letter to the French President, Jules Grévy, requesting his protection. The answer came three years later on 23 June 1884, one year after M.I. had signed the "Convention of Friendship and Commerce of Hadelè Gubò" (Addalé-Gub, 15 March 1883) with the Italian Count Pietro ↗Antonelli (known in ᶜAfar as Intinoole). Possibly upset by this diplomatic initiative, Mənilək ordered a military expedition against Awsa in 1886. After the convention of Addalé-Gub was unilaterally transformed by ↗Italy into a protectorate treaty with Awsa (1888), the Emperor started preparations for what turned out to be his final battle against the Italians. On 30 January 1896, two months before the battle of ↗ᶜAdwa, Mənilək's troops, led by *ras* ↗Wäldä Giyorgis Abboyye, *azzaž* ↗Wäldä Ṣadəq, and *däğğazmač* (later *ras*) ↗Täsämma Nadäw, defeated the *sulṭān*'s forces on the plain of ᶜArraddó (↗Millee). However, M.I. was appointed *däğğazmač* by Mənilək in 1896.

to ↗Wärrä Illu and Däse. It could be the same as the halt on the direct mule track from Däbrä Sina to Wärrä Illu mentioned in Italian sources as "Uccan" (Guida 402; CTI fol. 4).

In 1984 M.M. had the population of 4,439 inhabitants. Maḥámmad "Illálta" Ḥanfaḍé

M.I. (Maḥámmad b. Ḥanfaḍé b. ᶜAsa Aydāḥis [ᶜAfar sp.: Macammad "Illalta" Canfaxe], d. May 1902, nicknamed *illálta*, lit. 'permanent water hole, prosperous oasis', hence 'the man who brought prosperity'), of the ↗Mödaytó tribe, was the *sulṭān* of ↗Awsa from 1862 to 1902. His patronym, Ḥanfaḍé, which is often found in the *sulṭān*'s family, became a synonym for "*sulṭān* of Awsa" in colonial literature under various spellings: Anfari, Anfray, Hampharé, etc. His grandfather ᶜAsa Aydāḥis was the first to receive the title of *amóyta* (*sulṭān*). During his rule, M.I. increased the power of Awsa; however, his reign ended in a civil war.

M.I. established his domination over the sedentary tribes of Awsa (Harálla [cp. ↗Harla], Intēgér, Bayḍīᶜó) after several short battles in 1863. In 1866, he burnt ↗Tağūra, the residence of the Adᶜáli *sulṭāns* who had signed the 1862 agreement with the French. He formed an alliance with the Debné *sulṭān*, ↗Ḥúmmad b. Loᶜoytá with whose assistance he defeated the Somalis (↗ᶜIssa) at Mari in June 1867. Also, after M.I. made a secret agreement with Ḥúmmad b. Loᶜoytá, the latter led the Egyptian forces, headed by ↗Munzinger, to an ambush at Lake ᶜUddumma where the Munzinger and his troops were annihilated by M.I. on 15 November 1875. This alliance ended ca. 1894, when M.I. ordered the execution of ᶜAbdalqādir b. Arbāhintá, Ḥúmmad b. Loᶜoytá's permanent envoy to Mənilək of Šäwa (later *aṣe* ↗Mənilək II).

M.I. was a ruler who constantly strove for the independence of Awsa; however, the continual threat from ↗Egypt forced him to change his policy. In June 1881, he sent a letter to the French President, Jules Grévy, requesting his protection. The answer came three years later on 23 June 1884, one year after M.I. had signed the "Convention of Friendship and Commerce of Hadelè Gubò" (Addalé-Gub, 15 March 1883) with the Italian Count Pietro ↗Antonelli (known in ᶜAfar as Intinoole). Possibly upset by this diplomatic initiative, Mənilək ordered a military expedition against Awsa in 1886. After the convention of Addalé-Gub was unilaterally transformed by ↗Italy into a protectorate treaty with Awsa (1888), the Emperor started preparations for what turned out to be his final battle against the Italians. On 30 January 1896, two months before the battle of ↗ᶜAdwa, Mənilək's troops, led by *ras* ↗Wäldä Giyorgis Abboyye, *azzaž* ↗Wäldä Ṣadəq, and *däğğazmač* (later *ras*) ↗Täsämma Nadäw, defeated the *sulṭān*'s forces on the plain of ᶜArraddó (↗Millee). However, M.I. was appointed *däğğazmač* by Mənilək in 1896.

Maḥammad "Illalta", portrayed in 1890 by Augusto Valli, from the collection of Enrico Castelli

In ca. 1898, at the instigation of his third wife Rokkiyá, M.I. nominated his nephew Maḥámmad, son of his brother Aydāḥis, as his successor. This resulted in a struggle between Maḥámmad b. Aydāḥis on the one side, and M.I.'s sons on the other. Known as the "Sangerrá war" (after the name of the *sulṭān*'s residence), this struggle lasted for ten years after M.I.'s death.

Maḥammad Ôbakar

M.Ô. (Amh. *näggadras* Mähammäd, b. 1845, d. 28 March 1915, Addis Abäba) was the second son of ↗Abū Bakr b. Ibrāhīm b. Šahīm of ↗Zaylaᶜ from the ᶜAfar Ḥasōba (Ôbakartó lineage). He was also known as "Maḥammad *näggadras*" since he was the chief of the ᶜAfar merchants in ↗Bati. He created the market of Arāmo, between Gaysāsan and Kay, in the vicinity of Farré, Yəfat, where slaves were gathered before being taken to the coast (↗Slavery). ↗Borelli (1890:9) met him with his elder brother, Ibrāhīm, praising their intelligence which, he said, explained their influential role, while Arthur ↗Rimbaud (1954:447) criticized "le redoutable bandit Mohammed Abou-Bekr, l'ennemi juré des négociants et voyageurs européens au Choa". Oral tradition reports that *aṣe* ↗Mənəlik II used his services to get weapons from the ↗Ottoman Empire. M.Ô., an active arms dealer, seems to have been successful; one tradition claims that it was due to this success that the Emperor conferred the title ↗*näggadras* on him. M.Ô. established himself at Addis Abäba at the end of the 19th cent.

M.Ô.'s son, Ôbakar *näggadras* (also known as Abu Bäkär Čänno, allegedly being from Čänno in Yəfat, s. GebMolIyas 359) had a daughter, Fātuma (b. 1900), who became 20-year-old *ləǧ* ↗Iyasu's third official wife (or the first according to ᶜAfar oral sources) in a ceremony conducted at M.Ô.'s house in Addis Abäba in 1916. This marriage shows the political importance that the Ôbakartó family still had. Fātuma has been described by witnesses as an "admirable and skilled woman". It is said that she was baptized in the church of Abo behind the French legation (Jugniac 1979:63), an indication of her royal ambition. However, Iyasu was deposed on 27 September 1916, his relation to M.Ô. also being used as an argument against him (*L'Afrique Française* 1917:9, 11). Leaving Ethiopia, Fātuma took refuge in the French territory in the Godá mountains, in Ḥasōba territory, at Dīdalé (MorDicAfar 29), where she gave birth to a boy she called ↗Mənilək Iyasu, after Iyasu's grandfather. Her date of death has not been recorded.

Maḥámmad Yāyyó

Sulṭān (locally: *amóyta*) M.Y. (ᶜAfar sp.: Macammad Yaayyo, also Yayyo, b. 1885 [or ca. 1896], Gargori, about 30 km from Aysaᶜiyta, d. December 1944, Addis Abäba) ruled ↗Awsa from 1927 to 1944. He was the eldest son of the powerful *däǧǧazmač* ↗Yāyyó, *sulṭān* of Awsa, son of *sulṭān* ↗Maḥámmad "Illálta" Ḥanfaḍé. M.Y. took over the Sultanate after his father had eliminated any possible challenger to the eldest son's succession. Different from his father, M.Y. decided to cultivate good relations with the Šäwan leaders. In 1927/28 he visited Addis Abäba where Empress ↗Zäwditu and the Crown Prince, *ras* Täfäri Mäkʷännən (later Emperor ↗Ḥaylä Śəllase I), conferred the title of ↗*däǧǧazmač* on him.

After Ḥaylä Śəllase had gone into exile in 1936, M.Y. became involved with the Italians. It

was agreed with the colonial ministry that M.Y. would remain in his position as the leader of Awsa with a certain degree of internal autonomy, but being directly responsible to the Italian colonial administration. M.Y. was then registered in the colonial payroll and received a monthly salary. In addition, the Italians constructed palaces for M.Y. at Massawa and ᶜAsäb.

In 1939 he was invited to visit Rome where he met ↗Mussolini. M.Y. was accompanied by 30 delegates including prominent Awsa leaders like *fitawrari* Yāyyó Ḥámmadu and Kurba Ḥámmadu. M.Y. presented Mussolini with a hand-made carpet woven of golden threads weighing 30 kg which his father *sulṭān* Yāyyó had received from *ləǧ* ↗Iyasu. In return Mussolini gave M.Y. a car and conferred colonial titles on the *sulṭān* as well as some of the delegates. After 34-days stay in Italy M.Y. returned to Awsa on 13 August 1939. The meat supply of the Italian army was largely organized by Awsa.

After the end of the Italian occupation of Ethiopia and Ḫaylä Śəllase's return from exile in 1941, the Emperor summoned *sulṭān* M.Y. to Addis Abäba. But the *sulṭān* kept on replying that he was sick. Following a conflict in 1942 with his deputy in 1942, *fitawrari* Yāyyó Ḥámmadu, M.Y. dismissed Yāyyó and appointed a "naturalized highlander" (s. Kassim Shehim 1982), Maḥámmad "ᶜĀsiyaytu" Gemmessis, son of a former slave of unknown origin living in Awsa and an ᶜAfar woman, ᶜAsiya. After his dismissal, *fitawrari* Yāyyó played a major role in dislodging M.Y. from office. He went first to Däse, where he met the nominal governor of Wällo province (including Awsa), Crown Prince ↗Asfa Wäsän Ḫaylä Śəllase, and then the Emperor at Addis Abäba. *Fitawrari* Yāyyó disclosed confidential information to them and accused the *sulṭān* of "selling" Awsa to France.

Some months after that event, in 1944 ca. 1,500 troops of the *kəbr zäbäññä* (the ↗Imperial Bodyguard) with a convoy of 34 military vehicles, led by *fitawrari* Yāyyó and *fitawrari* Mäkʷännən, invaded Awsa to capture M.Y. at his palace at Ḥinnale. There was only sporadic and uncoordinated resistance, but no effort was made by the *sulṭān* to challenge the invasion (Kassim Shehim 1982). On 14 April 1944 his wife Ukkubi Madina, daughter of ᶜIse, shot and killed the lieutenant who tried to arrest *sulṭān* M.Y. who was lying on his sick bed. Madina was immediately shot dead. M.Y. was arrested and taken to Addis Abäba where he died a few months later, reportedly executed. He was succeeded by *sulṭān* ᶜAli Miráḥ, with *fitawrari* Yāyyó Ḥámmadu again becoming the deputy, and ᶜĀsiyaytu resumed his former post of supervisor of the *sulṭān*'s cattle.

Maḫbär

The Orthodox Christian M. (ማኅበር), alternately described as religious fraternal associations, are reputed to have existed for hundreds of years in Ethiopia. The original purpose of the M. was to collect money to host feasts on church saints' days. Membership was restricted to Orthodox Christians and specific M. were formed by people who felt an affinity to a particular saint. Members would meet on the saint's day (↗Calendar), which was once a month, in the house of each member in turn.

There was considerable latitude for peasants living within a parish to select a M. but once a member, the M. was a powerful vehicle of social control. One beneficial consequence was that membership promoted fellowship between members form one parish with those from distant parishes. Beyond their ceremonial functions, M. were organized to provide mediation and mutual assistance for their membership, for instance, to help rebuild a house that had burned down, support orphans, or lend seed during times of crop failure. Later this was expanded to include charities and some self-help projects at the rural parish level for the community at large, but most activities were non-monetary through the middle to late 19th cent.

With the establishment of Addis Abäba and the expansion of the capitalist economy in the early 20th cent., self-help assumed a different definition, for money was the facilitator of urban life. Membership fees were required and M. officials spent the income on projects that would benefit the religious community. Stemming from these additional activities, some scholars maintain that the M. became the progenitor of Ethiopian self-help associations that took distinct functional and regional forms; this is particularly true with reference to ↗*əddər*, a ubiquitous neighbourhood self-help organization that duplicates much of the functions of the M., except, but not always, shedding its religious ties.

Charles Schaefer

Maḫbär fəqri hagär

On 8 April 1941, the ↗British Military Administration (B.M.A.) assumed responsibility for administering ↗Eritrea pending an international decision about the territory's fate. Nationalist aspirations, especially among the Eritrean youth, led to political demonstrations and violent confrontations. Italian officials in the B.M.A.'s service, particularly those who had been in the *Carabinieri* and the *Polizia dell'Africa Italiana*, sought to suppress the growth of Eritrean nationalism. Nevertheless, political agitation continued as Eritrean youths armed themselves. In April 1941, more than 4,000 Eritreans demonstrated in Asmära. The B.M.A. subsequently imprisoned many of the ringleaders and passed a regulation forbidding Eritreans to assemble in groups of more than three.

On 5 May 1941, a group of Eritrean activists and intellectuals in Asmära formed the M.f.h. (ማኅበር፡ ፍቅሪ፡ ሃገር, 'Society for Love of the Country', also *Maḫbär fəqri hagär;* not to be confused with the Addis Abäba-based *Yähagär fəqər maḫbär*, Amh. 'Love for the Country Association', founded in 1944). It was to be led by a committee with six Christian and six Muslim members. Its leaders included ↗Gäbrä Mäsqäl Wäldu (President; b. 1907, d. 1963), *šayḫ* ↗ᶜAbdälqadər Käbirä (Vice-President), ↗Ibrāhīm Sulṭān ᶜAlī, Muḥammad ᶜUmar Qāḍī, and ↗Wäldä Ab Wäldä Maryam. The society advocated an end to the Italian control of the economy, the replacement of Italians in the administration by Eritreans and self-determination for Eritrea. However, a rift eventually developed between those who wanted eventual independence and those who supported unification with Ethiopia. Additionally, the M.f.h. suffered from poor organizational and leadership skills. Many M.f.h. members accused Gäbrä Mäsqäl Wäldu of "indolence, indiscretions and drunkenness", all of which exposed the organization to criticism. His refusal to accept petitions demanding changes further alienated the M.f.h. membership. As a result, some M.f.h. militants formed a separate wing in early 1943 called the Sunday Association (*Sänbäte maḫbär*). After the British approved Eritrean political activities in 1946, the organization changed its name to ማኅበር፡ ኤርትራ፡ ምስ፡ ኢትዮጵያ (*Maḫbär Ertra məs Ityopya*, 'Association Eritrea with Ethiopia'). This group subsequently affiliated itself with a youth group called *Andənnät* (Amh. 'Union').

In November 1946, the M.f.h. held a new election. Then the Ethiopian official Colonel Nägga Ḫaylä Śəllase and pro-Ethiopian and pro-Unionist forces succeeded in defeating Gäbrä Mäsqäl Wäldu who lost the presidency but retained a Central Committee seat. *Däğğazmač* Bäyyänä Bäraḳi was elected M.f.h.'s president while Kidanä Maryam Gäbrä Mäsqäl became Honorary President. ↗Tädla Bayru assumed the responsibility for most of the M.f.h.'s day-to-day affairs. He also assembled a dedicated and competent staff that enabled him to create an organizational network that quickly spread throughout Eritrea.

After Britain authorized indigenous political activities, M.f.h. changed its name to ናይ፡ ኤርትራን፡ ኢትዮጵያን፡ ጎብረት፡ ማኅበር፡ ፍቅሪ፡

Assembly of the *Maḫbär fəqri hagär*: in the centre, with the cross, *abunä* Marqos, on his right (in white) *ras* Kidanä Maryam Gäbrä Mäsqäl and on his left (in a black cape) *käntebay* ᶜUṯmān, and the President of the Party *däğğač* Bäyyänä Bäraḳi (in a black cape) behind *ras* Kidanä Maryam; from Rampone 1953:16

ሃገር፤ ኢትዮጵያ፡ ምስ፡ ኤርትራ፤ ሓንቲ፡ ኢትዮጵያ (*Nay Erətran Ityopyan ḫəbrät maḫbär fəqri hagär, Ityopya məs Erətra, ḫanti Ityopya*, 'The Unity of Eritrea and Ethiopia, Society for Love of the Country, Ethiopia with Eritrea, One Ethiopia'). This new party quickly established offices throughout Eritrea and launched a party newspaper called *Ityopya* that supported Unionist activities.

After the restoration of the monarchy, ↗Ḫaylä Śəllase I said that Ethiopia's future development depended on gaining access to Eritrea's ports and industrial facilities. Therefore, one of his first tasks was to devise a strategy to incorporate Eritrea into Ethiopia. To accomplish this goal, he funded the M.f.h. and created the *Patriotic Society for the reunification of Ḫamasen with Ethiopia* (also called the *Society for Unification of Eritrea with Ethiopia*), established in Addis Abäba, later also in Asmära. Both organizations sought to gain support for unification by launching a propaganda campaign that stressed the cultural, historical, and religious links between the two countries. Additionally, Ḫaylä Śəllase enlisted the support of the Orthodox Church to spread pro-Ethiopian sentiments throughout Eritrea. In November 1946, M.f.h.'s pro-unification wing had neutralized those who advocated Eritrean independence. As a result, by the end of the year, M.f.h. no longer existed. In 1947, the ↗Unionist party (also called *maḫbär fəqri hagär, Ityopya məs Erətra, ḫanti Ityopya*) succeeded M.f.h. on the political landscape.

Maḫbärä ḥawaryat

The M.ḥ. (**ማኅበረ፡ ሐዋርያት**, 'Community of the Apostles') is a religious association founded in 1949/50 A.D. by a group of monks, priests and laymen as a youth association of the ↗Ethiopian Orthodox Täwaḥədo Church in Asmära. Later, on the initiative of *abunä* ↗Marqos, then Bishop of Eritrea, the name *Fəre haymanot* (**ፍሬ፡ ሃይማኖት**, 'the Fruit of Faith') was added to the title. Initially with 72 founding members and 120 external members, the association soon attracted large numbers of supporters as it spread throughout Eritrea. Its aim was to live the Christian life according to the Gospel spirit and spread it. The M.ḥ. built churches, schools and clinics throughout Eritrea, all administered by themselves. Among its members, there were a number of respected ecclesiastics and church scholars as well as all the monasteries of Eritrea.

A major milestone in the history of the M.ḥ. was the foundation of the Kokäbä Ṣəbaḥ ('The Morning Star') Printing Press on 1 June 1951. Among its executive members were ↗Dəmeṭros Gäbrä Maryam and *liqä mäzämmərən* ↗Mogäs ᶜƎqʷba Giyorgis, the chief editor, who became

famous for the works published there. The Press printed many important religious books, including the complete ↗Bible, the Missal, the ↗*Sənkəssar*, various devotional books, law, homiletics, lectionaries etc. Although Gəᶜəz was the main language of publication, soon it came to use vernacular languages (Amharic and Təgrəññа). The M.ḥ. also edited the monthly newspaper ዜና፡ ሐዋርያት (*Zena ḥawaryat*, 'The News of the Apostles'), founded in 1953/54. It appeared on the fifth of each month and went on until 1959/60. The newspaper was bilingual, producing material in Amharic and Təgrəññа. In 1990s, the association was incorporated into the Eritrean Orthodox Church.

Habtemichael Kidane

Maḫbärä məʾəmänan

The M.m. (ማኅበረ፡ ምእመናን, 'Congregation of the Faithful') is a ↗*mälkəʾ* named after the first two words of the ↗hymn which is also known as መልክአ፡ ቍርባን (*Mälkəʾa qʷərban*, 'Effigy of the ↗Eucharist'). Strictly speaking, the M.m. is a portion of the *Mälkəʾa qʷərban*.

The M.m. is not a typical *mälkəʾ*. Whereas the latter is normally a hymn of praise that begins with the exaltation of the various members of the human body, the M.m. does not display this pattern. Its strophes are not introduced by the otherwise standard salutation ሰላም፡ ለ... (*sälam lä*..., 'Hail to...').

The question of the M.m.'s authorship has yet to be settled. Later sources (Conti Rossini 1917:711, cp. 700) suggest that it was composed by *aṣe* ↗Bäʾədä Maryam in mid-15th cent. This association is indirectly confirmed (Raineri 1984:82) by the existence of a 16th-cent. copy of the hymn in ms. Vat. Aeth. 30, fols. 52–60 (GréTisVat vol. 1, 145). The text "On the Ancient Gondärine Kings" in EMML 1706 says, with no other detail, that its composer was *abba* Zämäläkot (Getatchew Haile in PICES 10, 371, cp. 373 and n. 46).

Even though all the printed missals do not have rubrics stipulating its use, in practice, it is compulsory to sing the M.m. (Euringer 1934:200) during the celebrationof the Eucharist, at two different points in the liturgy (↗*Qəddase*). The first part of the text, which normally comprises eight strophes, is performed inside the sanctuary by the clergy when they receive Holy Communion. The second part of the M.m. is sung after the recital of the thanksgiving prayer (*Ḫaddafe näfs*, 'Pilot of the Soul') and the Lord's prayer. At this point, the celebrants enter the sanctuary to purify the sacred vessels, and the main celebrant intones the M.m. The actual length of the recited part is not strictly fixed. There is no uniformity in its execution and it varies from place to place because it depends on the academic preparation of the clergy presiding over the celebration. Besides the Eucharist, the liturgy makes use of this hymn on at least two other occasions: on the commemoration of the birth of Christ, *Bäᶜalä Wäld*, the 29th of every month, and on the feast of the Saviour of the World (*Mädḫane ᶜAläm*), 27 *Mäggabit* (↗Feasts).

There are various editions of the M.m. that often differ in the number and arrangement of the strophes. Not all of the printed prayer books containing the hymn offer rubrics referring to the M.m.'s use in the Eucharistic celebration, and when they do, they are not always in agreement with one another, and they additionally present some variants in the wording of the composition. The comparative table of some of the printed editions prepared by Fritsch (2002:205) is a good research starting point, but much work is still to be done. An exhaustive survey of published and manuscript material remains a desideratum. As with the *Mälkəʾa qʷərban*, the M.m. was interwoven with several motifs, quotations and allusions drawn from the Old and New Testament. There is in fact a well-known pattern of interpretation that views the O.T. as foreshadowing the N.T. This pattern, already present in the N.T. (e.g. Gal 4:24, with the explicit use of the word "allegory"; cf. also 1 Cor 10:1–11), continued to be developed throughout the ages, especially by the Alexandrian school. The M.m. is a thought-out composition and some of the analogies employed are quite powerful (e.g., the parallelism between the cry of the Jews at the "Western Wall" and the daily contrition of the Christians in front of the sacrifice of the Body and Blood of Christ). The M.m. includes several theological statements and has numerous passages that reflect the Ethiopian Theology of the Eucharist. An example of this comes in the fifth strophe: "The Holy Spirit descends upon the bread and the wine, when the priest says 'Send the Holy Spirit', in the midst of this Holy Church of His, [the Holy Spirit] transforms them at once, so that they become the members [the Body and Blood] of Christ, by

His tremendous power and wonderful capacity" (Mogäs ᶜƎqubä Giyorgis 1964/65:248f.).

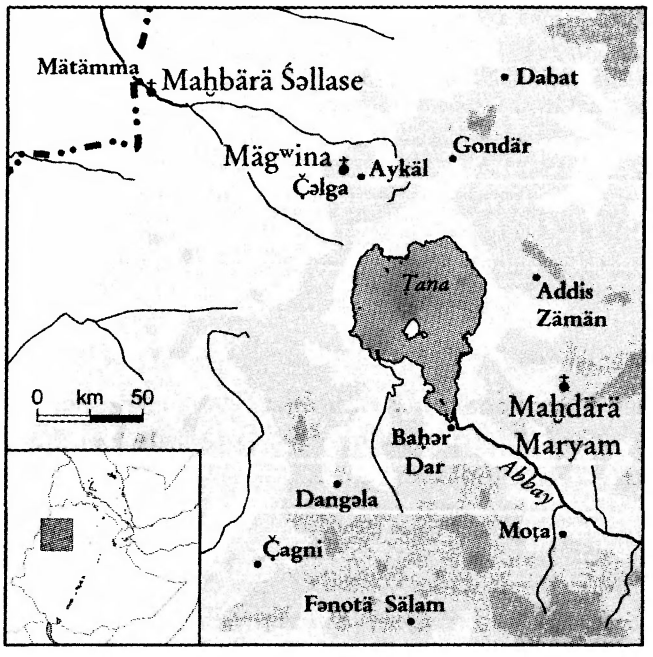
Maḫbärä Śəllase

M.Ś. (**ማኅበረ፡ ሥላሴ**) is a monastery located near ↗Mätämma. Local tradition ascribes its foundation to the Kings ↗Abrəha and Aṣbəḥa, and links it with a vision of the Trinity that St. Frumentius (*abba* ↗Sälama Käśate Bərhan) is said to have had there. Historically, however, M.Ś. is associated with the 17th-cent. holy monk ᶜAmdä Śəllase, who miraculously healed *aṣe* ↗Susənyos. Subsequently, *aṣe* ↗Fasilädäs richly endowed the monastery. Administrative activities of M.Ś. included collecting tributes and taxation, administering justice and providing defence, all organized and directed from the town of Maṭbeya.

M.Ś. had close relations with the rulers of ↗Qʷara. *Ləǧ* Kaśa (the future *aṣe* ↗Tewodros II) was sent to M.Ś. by his mother Attəṭṭäggäb, and stayed and learnt there for some seven years,



leaving the monastery at the age of 16. Moreover, a few years after his death at Mäqdäla (13 April 1868), his son ↗Mäšäša reportedly transferred Tewodros's remains to M.Ś. Although it never accumulated substantial wealth, M.Ś. was attacked and pillaged several times. One of the raids might have happened whilst *ləǧ* Kaśa was there in 1827, being one of the few children to survive. In 1889, the ↗Mahdists attacked M.Ś., burnt the church and massacred the monks; the monastery is said to have also been raided by British soldiers, probably an expeditionary force that came from the Sudan. Finally, during the Italian occupation (some time in 1937), the church was destroyed and some 24 to 50 monks killed by Italian bombing. In August 1940, M.Ś. was the first place where Daniel ↗Sandford, the head of the "Mission 101", looked for local contacts and support.

Based on ᶜAmdä Śəllase's rules, the monastery practices a strict community-oriented form of asceticism. All private property is forbidden (*andənnät*-rule). The head of the monastery is a ↗*mämhər*, with an *afä mämhər* as his spokesman and representative. Relative isolation facilitated retention of land ownership after the ↗Revolution of 1974, and preservation of areas of sacred virgin land in its vicinity. The plan of the monastery is a perfect circle – the main church (dedicated to the Holy Trinity) in the centre with simple thatched houses of the monks around it. M.Ś. maintains relations with the nearby ↗Gumuz people. It is known as **(የ)ሺህ፡ ማኅበር**, (*yä*)*ših maḫbär*, i.e. 'the community of a thousand'.

Maḫbūba

M. (German sp.: "Machbuba" [Arab. 'Beloved']; b. ca. 1825, d. 28 October 1840 Muskau Castle, Germany) was an Oromo slave-girl from ↗Guumma, who was taken to Germany in the early 19th cent. by the famous German Prince Hermann Pückler-Muskau, a noble garden architect and writer. She was originally called Bilillee (Oromo 'narrow-necked flask', from Amh. *bərälle*), and nicknamed ᶜAğamī (or "Agiamé", i.e. 'non-Arab'; cp. Assing-Grimelli 1874)..

Allegedly captured as a result of fighting in which her father and six brothers were killed, she and a sister were taken by slave merchants to ↗Gondär, where they were separated. M. was then conveyed to ↗Khartoum slave market where she and several other slaves are said to have been bought by a French speculator, after which she was, ca. 12–13 years old, purchased at Cairo in 1837 by the eccentric Prince von Pückler-Muskau, who called her, significantly, M. (Assing-Grimelli 1874:111f., 117–20). She followed him during his exploration of the Sudan, until Marāwi (Meroë). He then took her, together with another Oromo slave-girl, also called ᶜAğamī, up the Nile to Cairo, and thence to Palestine, where she met the remarkable British woman traveller of the East, Lady Hester Stanhope, and visited Jerusalem (Stanhope 1845:97, 100f., 106f.; Cleveland 1914:105f., 109f., 113).

Portrait of Maḫbūba in Egyptian clothes, around 1839(?); collection of the Stiftung Fürst-Pückler-Museum, Park und Schloss Branitz; from Volker-Saad – Greve 2006:116

Pückler subsequently took M., who had become his concubine, to Lebanon and Turkey, taught her Italian, which he considered the language of love, and interviewed her about the Oromo conception of God. In 1839, M. and the prince reached Vienna, where he introduced her as an "Ethiopian Princess" to such prominent figures as the veteran Austrian statesman Prince Metternich, the Hungarian nobleman Prince Esterhazy, the financier Baron Rothschild, and the Orientalist Joseph Baron von Hammer-Purgstall, with whom she communicated in Arabic.

Developing consumption, and suffering from tapeworm, she was taken by Pückler to the Bohemian health resort of Marienbad, after which she was installed in the Pückler family estate at Muskau (Assing-Grimelli 1874:112f., 122, 125f., 129, 1875:6–9, 14–17). There, by then in failing health, she came in contact with another Oromo ex-slave, Oču Aagaa, informant and student of ↗Tutschek, the author of the first Oromo dictionary (1844:XIII). Oču Aagaa recommended M. to Tutschek to whom she recited Oromo poems, and whose linguistic studies she thus assisted.

M. died, after which her portrait was painted, and plaster castes made of her head, hand and foot (see her wax figure, Ohff 1993:161). She was buried in Muskau church (Assing-Grimelli 1874:188f.; 1875:17, 21, 37).

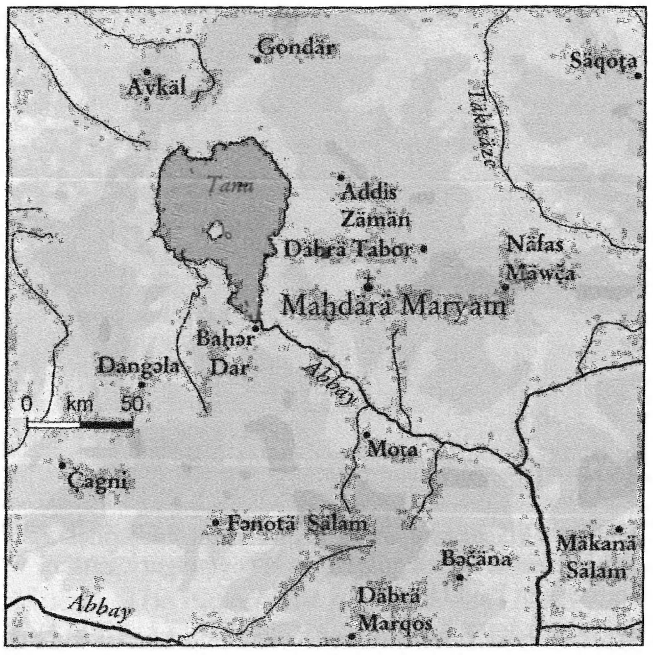
Maḫdärä Maryam

M.M. (**ማኅደረ ማርያም**) is a church located in the Farta *wäräda* (11° 43' N, 37° 55' E), in the ancient province of ↗Bägemdər, in the district of Gərarya.

Ǝtege ↗Maryam Śəna, the wife of *aṣe* ↗Särṣä Dəngəl, founded the church of M.M. before 1577 as her burial place (PerChron vol. 1, 99; Guidi 1926:377; CRHist 63). Her daughters Amätä Mikaʾel, Kəssosawit and Wälättä Giyorgis, wife of *ras* ↗Zäśəllase, were also buried there (Conti Rossini 1893:810; Perruchon 1896:278; BegCron 40; ms. EMML 8879; ms. Illinois/IES 88.XIII.18). In 1747 *bäğərond* Wäldä Giyorgis was buried in M.M. (GuiIyas 152), and, after his death ca. 1818, *ras* ↗Ḫaylu Wänd Bäwäsän (Conti Rossini 1917:886). A proverb says: **አገር፡ አላት፡ ይበሉኝ፤ ማኅደረ፡ ማርያም፡ ቅበሩኝ** (*Agär allat yəbäluñn. M.M. qəbäruñn*, 'Bury me in M.M. so that people say: "she has so much lands"'). Indeed, M.M. possessed a lot of land and, as a royal foundation, received grants from rulers. As the numerous archival documents preserved in the manuscripts of the church state, the church was destroyed during the time of Susənyos. *Aṣe* ↗Iyasu I had it rebuilt in 1681/82 and, to restore its wealth, granted numerous lands, as later did *aṣe* Bäkaffa and Täklä Haymanot (cp. CrumLand 87, 100; EMML 8879, 8883, 8884, 8897, 8902, 8937).

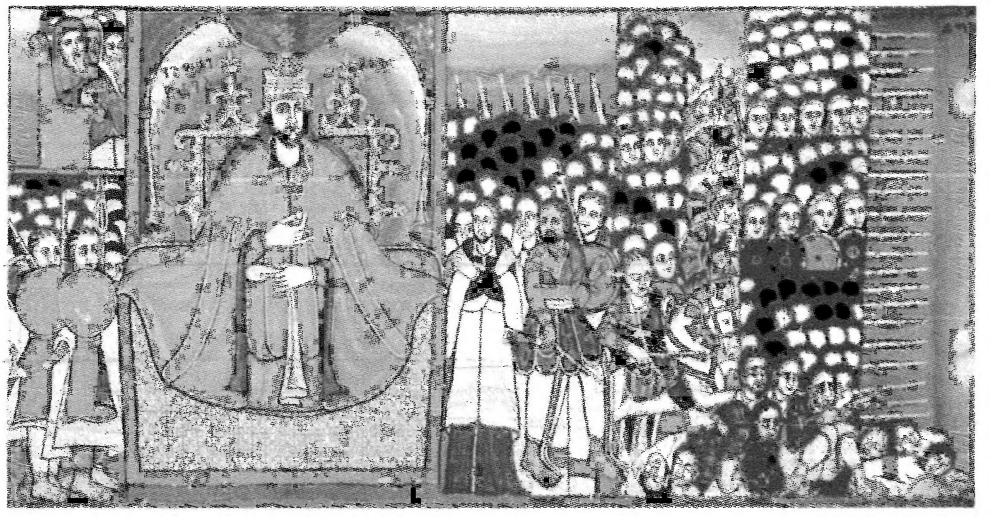
M.M. seems to have stayed away from the theological controversies of the ↗Gondärine kingdom, remaining a centre of traditional church ↗education and a place of ↗asylum. Some *əčč̌äge*, however, may have come from M.M. (CerDLib II, 177), proving the ↗*Täwaḥədo* tendency of the monastery or at least its connection with Däbrä Libanos. This link can also be seen in the fact that the library of M.M. received ca. 40 mss. from *mämhər* Wäldä Yoḥannəs of Däbrä Libanos (s. the library's inventory). Antoine d'↗Abbadie transcribed historical traditions told to him by a blind *däbtära* who reportedly memorized the text from a manuscript preserved in M.M. and given



to the church by *əčč̌äge* ↗Filəppos (ms. Paris, BN d'Abbadie 270; Conti Rossini 1917:700). Also, a copy of the monastic history of Däbrä Libanos (*Zena Däbrä Libanos*) is reportedly preserved at M.M. (Sergew Hable Sellasse 1993) but this is not confirmed by the clergy of the church, nor registered in the EMML microfilm collection.

Däğğazmač ↗Ḫaylä Mikaʾel Ǝšäte studied at M.M., and stayed there when exiled. There he met *abeto* ↗Abägaz and patronized the composition of his famous historical compilation, whose first part was completed in 1785/86 (↗Historiography; Kropp 1989:18f., 26, 34f., 307; ms. BritLib Orient. 820). The status of M.M. as a place of asylum was usually respected but it was violated at least twice. In 1797 *ras* ↗Wäldä Gäbrəʾel captured there *ras* Aligaz (BlunChr 443f.). In 1842 Ḫirut, the wife of *ras* ↗Ali Alula and daughter of *däğğazmač* ↗Wəbe Ḫaylä Maryam, was hiding there, but Ali's adversary *däğğazmač* ↗Bərru Goššu, who wanted to marry her, entered M.M. and kidnapped her (CRNuov 382; AbbSejour vol. 2, 56).

When in the 19th cent. ↗Däbrä Tabor gained in importance, so did M.M., which was located close to that political centre and on a commercial road. A town developed around the church, and several travellers reported about its beauty and its wealth. ↗Mänän Libän Amäde, Ali Alula's mother, established her court at M.M. ca. 1847, after defeating Kaśa (↗Tewodros II), and was visited there by several European travellers (↗Beke, ↗Combes and ↗Tamisier). The Chronicle of Mənilək II mentions that *nəguś* ↗Śahlä Śəllase rebuilt the church before his death in 1847,



Maḫdärä Maryam: painting representing enthroned *aṣe* Yoḥannəs IV holding the pearl in his hand as an insignia of royal sovereignty, eastern wall of the *mäqdäs*; photo 2000, courtesy of Paul Henze

after it had been ruined (GueCopMen 76), but this finds no confirmation in the sources produced at M.M. The church was burnt down ca. 1848, seemingly a result of a criminal act (at the same time as the church of Lədätä Maryam in ↗Gondär), and must have been rebuilt already ca. 1849–50 (CRNuov 397ff.).

Aṣe Tewodros II persecuted and killed the priests of M.M. and burnt the town in 1867, when he was leaving for ↗Mäqdäla, his last stronghold (MonVidTheo 4).

Aṣe ↗Täklä Giyorgis granted lands to M.M. in order to restore its prosperity, and *aṣe* ↗Yoḥannəs IV had the church decorated with fine murals (BlunChr 173). Images of Yoḥannəs himself, wearing a crown and holding the pearl (*lul*), were executed on three sides of the ↗*mäqdäs* (west, east and north), always next to the images of St. Mary. The name of the painter, Zä-Yoḥannəs, is mentioned in an ↗inscription on the northern wall. An oral tradition in M.M. has it that Yoḥannəs had the painter's hands cut off, so that he would not repeat such magnificent paintings elsewhere.

Mənilək, ↗Ṭaytu and ↗Zäwditu made donations of *regalia* to the church. In the 24th year of Mənilək's reign, *ras* ↗Wäldä Giyorgis Abboyye and his wife Yäšəmmabet Bəṭul paid for the construction of a new roof.

The church is still famous for its schools of ↗*andəmta*, ↗*aqʷaqʷam* and ↗*dəggʷa* and its rich library, today one of the largest in southern Bägemdər. Some mss. of M.M. could have been looted by Tewodros and, via Mäqdäla, brought to England (e.g., ms. Add. 1570 in the Cambridge University Library; Ullendorff – Wright 1961:1ff.).

The town also remains an important market place. There are two Muslim communities living in the parish of M.M. (PankHist II, 61).

Maḫdärä Qal Täwäldä Mädḫən

M.Q. (ማኅደረ፡ ቃል፡ ተወልደ፡ መድኅን; b. ca. 1815, Adyabo, d. ca. 1891) was one of the first Ethiopians educated abroad who served as an advisor and secretary to Emperors ↗Tewodros II and ↗Yoḥannəs IV.

The French explorer and envoy Théophile ↗Lefebvre discovered M.Q. as an orphan during his travels in Ethiopia and took him to France on his return sometime around 1843. After studying on French government scholarship, M.Q. was returning to his country when he met in Cairo some Protestant missionaries, who enrolled him in the Protestant College in Malta, where he studied for five years. This represented for him both a confessional and linguistic shift (from Catholic to Protestant and from French to English, respectively). Indeed he was one of the first Ethiopians – if not the very first – to have written his letters in English. He is also an illustration of the prevalent Catholic-Protestant rivalry in the training and recruitment of young Ethiopians. In addition to French and English, M.Q. reportedly had some knowledge of Italian and Arabic.

M.Q. returned to Ethiopia – according to his fellow student ↗Bərru Ṗeṭros rather too suddenly – in late 1854 with the Protestant missionaries Johann Ludwig ↗Krapf and Martin ↗Flad. After a short spell at a Protestant school that he opened, M.Q. was employed by *aṣe* Tewodros II as his ↗interpreter and translator. After Emperor Yoḥannəs IV ascended the throne in 1872, M.Q. transferred his services to the new ruler, often taking considerable liberties in his translation of the Emperor's letters to Europeans.

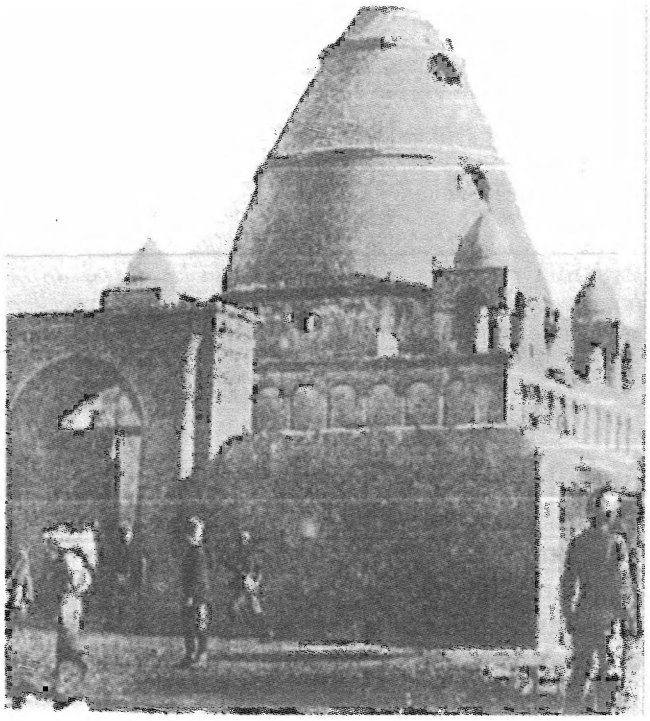
Mahdists

The M. were followers of the *Mahdīya* movement of Islamic revival and political unification in the ↗Sudan. The movement began in 1881, and succeeded in establishing a state from 1885–98. Led and motivated by messianic expectations, it had in its time a considerable impact on Ethiopia's history.

The movement emerged as a resistance against the Egyptian (↗Egypt) occupation of Sudan. Under *ḫidīw* ↗Ismāʿīl *bāšā* (and for a while under his successor, *ḫidīw* Tawfīq, 1879–82) the Egyptian state was administered by both European and "westernizing" Egyptian functionaries, as well as by some Islamic scholars. The Sudanese opposition was led by a Sufi scholar, Muḥammad Aḥmad, the son of a boat-builder. The resistance combined local popular Islamic fraternities, tribal leaders and fighters, frustrated slavers, and the popular masses. They were all inspired by the vision of their leader, and believed that he was the Mahdī, the well guided one, sent by God to redeem ↗Islam from humiliation. By January 1885 the M. had defeated the Egyptians and their British superiors (Egypt itself had been occupied by the British in 1882). The Mahdī by now had abandoned the Egyptian-built ↗Khartoum and established his new capital at Umm Durmān (Omdurman). His new Islamic state was modelled after the Prophet Muḥammad's state in ↗Mecca. It was based on the authentic, early Islamic institutions and on strict obedience to Islamic law. Of central importance was the principle of ↗*ǧihād*, as the Mahdī was determined to fight all Muslims who failed to accept him as their leader. The Mahdī himself died in June 1885 and was succeeded by ʿAbdallāh b. Muḥammad at-Taʿāʾišī, who was proclaimed caliph (↗*ḫalīfa*). The Mahdī's followers called themselves *anṣār* (Arab. 'helpers, supporters') and are also known



Tomb of Muḥammad Aḥmad, the Mahdī, in Umm Durmān; photo taken shortly after the occupation of Khartoum by the British in the 1890s

as "dervishes" because of their mystical inclination.

The M.'s external priority was to reclaim "the land of Islam", especially Egypt. On 16 June 1885 (a few days before his death), the Mahdī wrote to *aṣe* ↗Yoḥannəs IV calling him to accept Islam and become his follower, but unlike similar letters he had written to other rulers, the Mahdī's accompanying threat was quite mild. A few weeks later, when ↗ᶜUṯmān b. Abī Bakr Diqna, a M. *amīr* of eastern Sudan, wanted to penetrate Ethiopian territory, the *ḫalīfa* reminded him of the *ḥadīṯ* "leave the Ethiopians alone as long as they leave you alone". However, because Ethiopia had committed itself to saving the Egyptian garrisons besieged in eastern Sudan, relations deteriorated. After *ras* ↗Alula Ǝngəda defeated ᶜUṯmān Diqna at ↗Kufit in September 1885, and after the *ḫalīfa* heard of Yoḥannəs's coercive treatment of Ethiopia's Muslims, he declared a holy war on the Christian empire. Further correspondence between Yoḥannəs and ᶜAbdallāh at-Taᶜāʾišī and his generals proved futile, and border clashes culminated with *nəguś* ↗Täklä Haymanot's victory of January 1887 over Muḥammad Wad Arbab's M. army. A year later, in January 1888, the M. retaliated when *amīr* ↗Abū ᶜAnǧa invaded ↗Gondär, defeated the army of Täklä Haymanot and massacred those unable to flee. The destruction of Gondär's 44 churches by the *därbuš* ("dervishes") was thereafter engraved in Ethiopian memory and had a traumatic effect on Yoḥannəs. As he faced the Italians on the ↗Massawa coast and the insubordinate *nəguś* Mənilək of Šäwa (later *aṣe* ↗Mənilək II), he decided in early 1889 to march against the M., a move which soon enabled the Italians to expand their occupation from Massawa into the interior. On 9 March 1889, whilst Yoḥannəs's army was winning the battle in ↗Mätämma, he himself was killed in action. Yoḥannəs's head was then sent to Umm Durmān for celebrations, and Mənilək quickly became the undisputed leader of the country.

After the death of Yoḥannəs and the transfer of imperial power in Ethiopia to Mənilək II, no further hostilities were initiated. The M. returned to concentrate their *ǧihād* in the direction of Egypt, and some diplomatic contact was established between Umm Durmān and Addis Abäba. In 1896 when Ethiopia gained its victory at ↗ᶜAdwa, the count-down towards the end of the M. state began. In the 1896–98 "River war", a British–Egyptian army destroyed the Sudanese–Islamic forces. In 1899, the fleeing *ḫalīfa* was hunted down and killed, and Sudan was proclaimed an Anglo–Egyptian joint dominion. The tomb of the Mahdī, which lies near the confluence of the White Nile and the Blue Nile, was then destroyed as a symbol of the Mahdīya state, but reconstructed later.

The M. state was a major factor influencing Ethiopia's history during the time of Yoḥannəs. The Ethiopian crusading Emperor and the charismatic Islamic leader – each captive to their own concepts and beliefs – proved unable to avoid a conflict neither of them wanted. The ensuing downfall of Yoḥannəs had far-reaching implications for Ethiopia. Though the M. state eventually disintegrated, the period of M. rule remains a formative period for Sudanese society to this day. After the movement was modified and divided, it was tolerated by the British, but continued to propagate the concepts of Sudanese independence from Egypt combined with fundamental Islam as the essence of local society, culture and state. The Mahdī's descendants, legacies, and his spiritual followers have continued to play major roles in Sudanese history with varying effects upon Ethiopian affairs.

The endeavours of the M. inspired the figure of the Somali ↗Muḥammad ᶜAbdallāh Ḥasan "Mad Mullah", who at some point in his career was

also seen as Mahdī although he never expressedly claimed to be such.

Maḥfūẓ b. Muḥammad

M. (محفوظ بن محمد, Portuguese Mafudi, d. July 1517) was governor of ↗Zaylaʿ under the rule of the Walašmaʿ *sulṭān* ↗Muḥammad b. Aẓharaddīn of ʿAdal. It seems that Muḥammad tried to remain at peace with the Christians because both sides profited from an undisturbed trade. In contrast to that M. represented a militant Muslim party which propagated the duty of the ↗*ǧihād* against the Christians. M.'s title, ↗*imām*, emphasized the religious aspects of his policy.

Eventually M. gained so much power that he was able to raid Christian territory without consent of Muḥammad. He did so especially during Lent, when the Christians were weak from fasting. To put an end to this, the Ethiopian *aṣe* ↗Naʿod reorganized his army, cleared it of Muslim elements, and led it against M., defeating him decisively. Muḥammad hastened to remedy the situation and concluded a truce which lasted for a few years in spite of new raids by M. every now and then.

When Naʿod was succeeded by young *aṣe* ↗Ləbnä Dəngəl in 1508, *ətege* ↗Ǝleni continued peaceful relations with the Muslims. The situation changed when Ləbnä Dəngəl came of age and reversed this policy. On the Muslim side, M. had recovered from his defeat. He was inspired by emissaries from Arabia, who proclaimed the *ǧihād*. They offered M. a green standard and a tent of black velvet, and helped him with arms and trained men. The policy of both sides led to confrontation. In July 1517, Muḥammad, under the pressure of the religious leaders, launched a major raid to the Ethiopian province of ↗Fäṭägar. The Muslim army, however, was again defeated. Muḥammad escaped with his life, but M. was slain and Ləbnä Dəngəl invaded ʿAdal.

During M.'s rule Zaylaʿ was attacked and sacked twice by the Portuguese: in 1513 by Afonso de ↗Albuquerque, and in July 1517 by Lopo Soares de Albergaria (s. Correa 1860:336–60, 486–507).

M. was the first of a number of Muslim leaders in ʿAdal and Harär who became the *de facto* rulers while the members of the Walašmaʿ dynasty exerted only a nominal power. The most outstanding among those leaders were ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ"), who married M.'s daughter, ↗Bati Dəl Wämbära, and his successor ↗Nūr b. Muǧāhid, who also became her husband.

Maḫlet

M. (*ማኅሌት*, Gəʿəz: 'canticle, hymn', from *ḫaläyä/ḫaläyä*, 'sing, praise') is in its narrow sense an antiphon of the ↗*Dəggʷa* that is sung, combined with the canticle of the Three Youths in the fiery furnace (Ct 9-10 = Dan 3), during the services of ↗*Mäwäddəs*, ↗*Kəśtätä aryam* and ↗*Səbḥatä nägh*. In the broader sense, M. came to designate an extended morning rite within the latter serv-

ice which includes the M. proper with the corresponding Matin (*nägh*) for the sanctoral feasts (cp. ↗*Sä^{c}atat*). M. is always performed standing, the singing being accompanied by dancing, in the appropriate ↗*aq^{w}aq^{w}am* style (but if M. is held in the monasteries, then without dancing, the use of ↗*käbäro* etc.).

The derived term **ማኅሌታይ** (*maḫletay*) or **ማኅሌታዊ** (*maḫletawi*), corresponding to Gr. μελῳδός, is a traditional name for the "composer of ↗hymns" – first and foremost St. ↗Yared, the "inventor" of Ethiopian church music, and the supposed author of the *Dəgg^{w}a*. Several special compositions are also named M.: e.g., the ↗*Maḫletä ṣəge* and the *Maḫletä śəllase*, a collection of praises and prayers to the Trinity.

Each M. begins with a standard opening *Səbbuḥ wäwəddus* ..., i.e. the first words of the formula 'Praised and glorified [is He who created the whole world by one word] ...'. After a short elaboration, a *nägś* follows – extolling the saints, the angels, the righteous and the Trinity – and then a ↗*mälkə^{ʾ}* that is fitting for the celebration. On the ↗saints' feasts, this section can be extended by one or several ↗*ziq*-psalms, three of them being allowed for each part of the saint's body praised. A stanza from the *Maḫletä ṣəge* or the *Maḫletä śəllase*, or even a summary of the ↗*Sənkəssar* reading for the day or the appropriate ↗*^{c}arke*, can be further added.

The ↗*məlṭan*, i.e. the final part of the antiphon, is its culmination point, in terms of both content and music. Taken from the Saturday matins of the ↗*Dəgg^{w}a*, and performed with particularly loud voices and accompaniment, it begins by intoning a refrain from Ps 137:8, *Ǝsmä* [*śəhləkä*] *lä^{c}aläm* ... ('For [Your mercy is] for ever ...'). The M. for a monthly, and often annual, feast ends here with the recitation of a ↗*sälam*.

On special occasions, the *addäraräs* M. (lit. 'rendition, composition'), i.e. the "unabridged" M., is performed. This lengthy service includes the *Kəśtätä aryam*, which used to be performed before the *məlṭan*, but in current practice follows it. In this case, the ↗*kəśtät* combines Ps 136 with the ↗*Wəddase Maryam*, hymns based on other psalms (e.g., Ps 50:14: *Yətfeśśaḥ ləssanəyä* ..., 'My tongue will rejoice ...', Ps 50:1: *Täśahaländni* ..., 'Have mercy upon me ...') and the appropriate ↗*məsbak* (the chant used to introduce the daily ↗Gospel reading). Besides materials of the *Səbḥatä nägh*, this version of the M. may even contain the entire ↗Psalter.

Ezra Gebremedhin

Maḫletä ṣəge

M.ṣ. (**ማኅሌተ፡ ጽጌ**, 'Canticle of the Flower') is one of the most popular ↗hymns extolling St. ↗Mary that is considered one of the most beautiful genuine poetic works of ↗Gə^{c}əz literature.

The M.ṣ. comprises 156 stanzas of five lines each (rhyming as *aaaaa*). The work praises St. Mary, contemplating her nature and dealing with her miracles and her life, including the Dormition (↗*^{c}Ǝräfta*) and the Assumption (↗*Fəlsäta*), etc., as well as with the life of Jesus. The author of the M.ṣ. must have been an outstanding writer and learned theologian. In the Ethiopian tradition, the flower (*ṣəge*) is a frequent symbol of Mary (cf. ↗*Məśṭirä ṣəgeyat*, *Mälkə^{ʾ}a ṣəge*); among the literary devices used in the M.ṣ., the range of similes and epithets applied to Mary is exceptionally wide, and many of them are based on floral elements: e.g., "flower of Aaron", "flower of the faith", "flower of the Resurrection", "perfume of the flowers", "flower of the king" etc. (s. GrohHymn 63f.). Besides, the erudition of the author of the M.ṣ. shows through references and allusions to a number of works of Gə^{c}əz literature (esp. to the ↗*Tä^{ʾ}ammərä Maryam*), historical or biblical figures and real historical developments (e.g., to the Church council of ↗Däbrä Məṭmaq or "the enemies of Mary" – probably the ↗Stephanites, s. ibid. 64).

There is a disagreement concerning the author of the M.ṣ. It is traditionally ascribed to a certain *abba* Ṣəge Dəngəl (Dəmeṭros Gäbrä Maryam – Ṭəbäbu Bäyyänä 1959:6f.), who appears as author, with the "converted Jew" *abba* Gäbrä Maryam of Däbrä Ḥanta, in the Acts of *abunä* ↗Zena Marqos (AmhChurchD vol. 1, 481; cp. Getatchew Haile in PICES 6, 193f., on which

Fiaccadori 2004:687f. and nn. 50–52, equating here "Jew[s]" to "Stephanite[s]"). However, the style, the vocabulary, the ideas and the patterns of the M.ṣ. seem to fit better to the famous 15th-cent. *abba* ↗Giyorgis of Sägla (Fessehatzion Andemariam 1994). Grohmann (GrohHymn 64f.) dated the text to the time between the later period of *aṣe* ↗Zära Yaᶜəqob's reign and the end of the first peaceful part of *aṣe* ↗Ləbnä Dəngəl's reign. Also he assumes that the M.ṣ. is a creation of more than one author, and this hypothesis finds some confirmation elsewhere in the tradition (Getatchew Haile in EMML IV, 329). Since the known manuscript testimonies are more recent (the earliest ones seem to be the 16th-cent. BritLib Orient. 578, fols. 74r–80r, and Orient. 581, fols. 101r–11r), the time of the composition of the M.ṣ. may also be later (cp. GuiSLett 65).

In the liturgy of the ↗Ethiopian Orthodox Täwaḥədo Church, the M.ṣ. is performed during the 40 days of the so-called **ዘመነ** (*zämänä*, or **ወርኃ**, *wärḫa*) **ጽጌ**[**ያት**] (*ṣəge*[*yat*]), i.e. 'Season [Month] of the Flower(s)', from 26 *Mäskäräm* to 5 *Ḫədar* (↗Calendar), the name to which the title of the hyms is possibly related (cp. Fritsch 2001:116f.; Raineri 2000:108f.). In a few manuscripts, the text is subdivided according to the days of the week (GrohHymn 62).

After the M.ṣ. was edited and translated by Grohmann (ibid. 66–157), many other manuscripts came to light and still await an evaluation. A number of Ethiopian Church editions of the work exists for liturgical use.

Habtemichael Kidane

Mäḥrəm

M. is a Pre-Christian Aksumite deity, attested in two "trilingual" royal inscriptions of king ↗ᶜEzana: RIÉ 185 I/2, 18, II/3, 19, 21, 25; and its duplicate RIÉ 185bis I/3, 19, 23, II/3–4, II C/26, 36, 44. M. appears also in RIÉ 186/4–5, 187/4 and 188/5, 29–30.

In the inscriptions of ᶜEzana M. is usually mentioned together with ↗ᶜAstär and ↗Mədr or ↗Bəḥer, cp. RIÉ 185 I/20–21: *lᶜstrm/*[*w*]*lbḥrm/w*[*lmḥrmm*]; RIÉ 185 II/21: *lᶜstr/wlmdr/wlmḥrm*; and RIÉ 185bis I/22–23: *lᶜṯtrm/wl*[*b*]*ḥrm/wlmḥrm*; RIÉ 185bis II/C 35–36: *lᶜstr/wbḥr/wlmḥrm*. In RIÉ 270, the Greek parallel of RIÉ 185bis, M. is identified with Ares (Ἄρης, while ᶜAstär = ὁ οὐρανός and Mədr/Bəḥer = ἡ γῆ), cf. RIÉ 270bis/30: τῷ οὐρανῷ καὶ τῇ γῇ καὶ τῷ … Ἀρέϵι.

M. may be called a dynastic deity of the Aksumite kings, since ᶜEzana calls himself "son of M.", cf. RIÉ 185 I/2 = RIÉ 185bis I/3: *bn/mḥrmm*; RIÉ 185 II/3: *wld/mḥrm*; RIÉ 185bis II/3–4: *wld/lmḥrm*. He gives M. the epithet "he, who begot us [i.e. ᶜEzana]", e.g., in RIÉ 185 I/18: *ḏwldn*[*m*]; RIÉ 185 II/19 = RIÉ 185bis II C/26–27: *zwldn*. The unknown Aksumite king who set up the ↗Monumentum Adulitanum calls Ares τὸν μέγιστον θεόν μου Ἄρην, 'my great god Ares' (RIÉ 277/33–34). The personal relationship between the deity and king is also indicated by the fact that only M. receives dedications – statues (RIÉ 185 I/17–18, II/18–20, 25; RIÉ 185bis I/19–21, II C/24–31, A/44; RIÉ 277/42–43), and cattle and prisoners (RIÉ 188/29–30).

The *interpretatio graeca* of M. as Ἄρης shows his warlike nature, which is also stressed by his epithet "(he) who will not be defeated (by the enemy)", cp. RIÉ 185 I/2–3: *ḏ*ʾ*ytmw*ʾ; RIÉ 185 II/3–4 (= RIÉ 185bis II/4): *z*[ʾ]*ytmw*ʾ/*lśr*; RIÉ

185bis I/3–4 (also RIÉ 186/4–5): *ḏ'ytmw'm/ lṣrm*; RIÉ 187/4: *zä'əyətmäwwa/läṣär*; RIÉ 188/5–6: *zä'ayətmäwwa'/lä[ṣä]r*; rendered into Greek by the adjective ἀνίκητος in RIÉ 270/6:29 and RIÉ 270bis/5:27, 31, 37 (the Greek parallels to RIÉ 185 and 185bis respectively) and in RIÉ 269/8.

In RIÉ 270bis, "the god of heaven and earth" is invoked in the curse-formula (RIÉ 270bis/32–33: ὁ θε[ὸς] τοῦ οὐρανοῦ καὶ τῆς γῆς, with no parallel in RIÉ 185/RIÉ 270 and RIÉ 185bis). Since this epithet can only mean Ares, he seems to have overtaken the function of ἡ γῆ (= Mədr/Bəḥer) as well as that of ὁ οὐρανός (= ᶜAstär). The subordination of other deities to Ares is interpreted as a tendency towards monotheism (cp. BrakKirche 37–41). After ᶜEzana converted to ↗Christianity, similar epithets were used to designate the Christian god, e.g.: *[bä]ḫaylä 'əgzi'a sämay* [*zäbä*] *sämay wämədr mäwa'i* ..., 'By the might of the Lord of heaven, who is victorious in heaven and earth ...' (RIÉ 189/1).

A connection between Aksumite M. and the Qatabanian deity Ḥrmn (Höfner 1965:560) seems unlikely.

Alexander Sima

Maḫṣäntä Mika'el

M.M. (ማኅፀንተ፡ ሚካኤል, b. Yänäğğä, Bägemdər, d. 1850, Ṣoma, Goğğam) occupied the office of ↗*əṣṣäge* during the last part of the ↗*Zämänä mäsafənt*, between 1840–41 and 1850.

Leader of the monks of the "house of Täklä Haymanot" in ↗Azäzo, M.M. professed the most radical theological teaching known as ↗*Śost lədät*, the most popular teaching amongst the followers of this congregation. M.M. was one of the main religious foes of the Egyptian metropolitan of Ethiopia, *abunä* ↗Sälama III, who preached a different theological teaching, ↗*Täwaḥədo*.

In 1841 *nəguś* ↗Śahlä Śəllase had purged the followers of *Täwaḥədo/Wäld qəb* under the pressure of M.M. Nevertheless, just after the arrival of *abunä* Sälama in Gondär, M.M. tried to avoid a doctrinal commitment with the bishop and they might have reached a *modus vivendi*. But the situation was difficult and Gondär was a hothouse of theological quarrels. Very soon, the relations between the bishop and M.M. broke down.

In 1842, Sälama tried to restore *Täwaḥədo* influence in Šäwa. At the same time he issued an excommunication against Śahlä Śəllase, and, in 1843, against M.M. himself.

M.M. and the *nəguś* tried to expel Sälama with the help of *ras* ↗Ali II and *ətege* ↗Mänän, rulers of Gondär. In 1846, Śahlä Śəllase sent messengers asking to have his excommunication lifted. Sälama refused and his house was besieged by the followers of M.M. After Sälama's capitulation, they forced him to walk on foot while M.M. rode. After two days passed in detention, Sälama was expelled to Təgray on Mänän's order.

However, in 1847, M.M.'s main ally Śahlä Śəllase died. At the same time, M.M. lost the support of *ras* Ali, who turned his troops against the clergy of Gondär, sacking their food store. The same year, *däğğazmač* ↗Bərru Goššu of Goğğam visited Gondär and required that M.M., who had no political support any more, abduct. M.M. was exiled to the *amba* of Ṣoma in Goğğam, next to ↗Dima Giyorgis where he died two years later.

Maḫtämä Śəllase Wäldä Mäsqäl

Blatten geta M.Ś. (ማኅተመ፡ ሥላሴ፡ ወልደ፡ መስቀል, b. 30 October 1904, Bulga, d. 20 October 1978, Addis Abäba) was the son of *ṣäḥafe tə'əzaz* Wäldä Mäsqäl and *wäyzäro* Dästa Ayyälä.

After receiving a basic traditional church ↗education, M.Ś. started to receive a modern education at ↗Mənilək II Secondary School in 1914. In 1921, he was called to work for the government, which was badly in need of educated manpower to work in the Ministry of Foreign Affairs. In 1923, M.Ś. was sent abroad by the government for further studies. He went first to Cairo and then to France, where he studied for six years. He received a university degree from the École Nationale supérieure d'Agriculture coloniale, Nogent-Sur-Marne, in 1932.

Upon his return home, M.Ś. was appointed governor of ↗Ambo where he became involved in modernizing the layout of the tow, distributing land for urban development and refurbishing the commercial sector of the Ambo mineral water and recreational facilities. He also helped establish Ambo College of Agriculture.

In 1933, M.Ś. was given the title of ↗*balambaras* by *aṣe* ↗Ḫaylä Śəllase I and was appointed senior aid to *ləʿul* ↗Asfa Wäsan Ḫaylä Śəllase, who was at the time a regional governor. During his tenure, M.Ś. served the Crown Prince as Director of Administrative Services for Wällo, Təgray and Bägemdər provinces. He created an organizational chart of the administrative regions of Ethiopia, which was subsequently adopted by the government with the Emperor's approval.

After the ↗Italian war of 1935–36, M.Ś. submitted to the Italians and started to serve them in Addis Abäba. Later he was deported to a camp and was held as a political prisoner on the Italian island of Asinara together with his father and older brother *ləǧ* Ḫaylä Wäldä Mäsqäl.

After the Liberation, M.Ś. was assigned the task of cataloguing Ethiopian historical records in the imperial palace. Here he started working on his voluminous (985 pages long) compilation of documents **ዝክረ፡ ነገር** (*Zəkrä nägär*; MahZekr).

In 1946, M.Ś. was appointed Director General of the Ministry of Agriculture. He simultaneously held the position of Executive Manager of Agriculture and Animal Husbandry. In 1949, M.Ś. became Deputy Minister of Agriculture and in 1954 was promoted to Minister. In 1958, he was appointed Minister of Finance and two years later Minister of Education. In 1961 he became Minister of Public Works. He kept the position until 1966 when he became Crown Counsellor. The same year he received the title of *blatten geta*. M.Ś. was incarcerated following the 1974 ↗Revolution and died in prison. His son Säyfu, Minister of Education from 1969 to 1974, was also killed by the *Därg*.

M.Ś. received many honorary awards as well as seven imperial decorations from the Emperor, including the prestigious Mənilək II Medal. For his distinguished literary work, in 1965, M.Ś. won the Ḫaylä Śəllase I Prize. To date, there are ca. 20 publications to his name, among which are several large volumes. He additionally wrote several other manuscripts that are currently in the custody of his family which are planned to be published posthumously.

Paulos Milkias

Maḫzūmī dynasty

The history of the M. (مخزومى) dynasty is known only from a short text copied in 1936 by ↗Cerulli (1941) from an Arabic manuscript of 1863. Owned by a notable from ↗Harär, it also contained texts of a chronological, astronomical and historical character. According to the document, the founder of the dynastic family was Wudd b. Hišām al-Maḫzūmī from the Qurayšite clan Banū Maḫzūm, which played an important role in pre-Islamic ↗Mecca, especially in the trade with Ethiopia and ↗Yemen. Wudd himself is said to have entered Ethiopia already in the time of the second *ḫalīfa* ʿUmar (634–44), but it was only in the year 896/97 that his descendants became *sulṭāns* of ↗Šäwa. With the exception of this date, the document says nothing about the first centuries of the dynasty's history and becomes more detailed only for the years 1231–89. This led Taddesse Tamrat (TadTChurch 43) to express some doubts about the early existence of independent Muslim states in Ethiopia before the 10th cent., especially because the Arab author al-Masʿūdī (d. 956) also says that the Muslim people who lived in the coastal towns of Ethiopia were under the protection of the Ethiopians (*fī ḏimmat al-Ḥabaša*). Yet, al-Masʿūdī may have relied on older sources, since he had not personally visited Ethiopia.

The region ruled by the M. seems to have been only the eastern part of modern Šäwa. The capital of the M. state was Walala (perhaps the modern Wäläle, 70 km north-east of Addis Abäba, cf. HuntGeogr 76).

During the 60 last years of its existence the M. state seems to have been in decline and disorder. Rivalry among at least four different branches of the ruling family, rebellion, usurpation, deposition and killing of rulers as well as burning of the capital were the order of the day. Typical was the fate of the last M. ruler, ↗Dilgāmis, who was twice deposed and finally killed. In addition to internal problems, the M. rulers had to fight the neighbouring Muslim statelets: ↗Gidāya (1233/34, 1266), ↗Mora (1264–67), Gabar-gē (Gurage?) (1263, 1270/71) and others. The M. state had also a few contacts with the Christians. For the year 1128 the document mentions the flight of the Amhara from the territory of the ↗Warğih and in 1279 the deposed *sulṭān* Dilmārra fled to the Ethiopian monarch, who must have been *aṣe* ↗Yəkunno Amlak.

The end of the M. state came when the newly established ↗Walašmaʿ dynasty of ↗Ifat started its expansion to the west and the south. In 1276/77 Walašmaʿ and his son ʿAlī appeared in Šäwa and in July/August 1285 Dilgāmis was deposed and the whole family killed.

A study of the non-Arabic personal names in the document led Cerulli to the conclusion that an Ethio-Semitic language was spoken in eastern Šäwa during the M. era (Cerulli 1941:31–34).

The document mentions the following rulers, the first of whom might not have been a member of the M. dynasty:

1. Queen ↗Badīt bint Māyā, d. 1063;
2. *sulṭān* Ḥarbaʿir, r. 1108;
3. *sulṭān* Mālasmaʿī, d. 24 August 1183;
4. *sulṭān* Ḥusayn, came to power 1179/80;
5. *sulṭān* ʿAbdallāh, came to power 1193/4, d. 20 May 1235;
6. *sulṭān* Muḥammad b. Ḥusayn, came to power June/July 1235;
7. *sulṭān* Mālzarra b. Muḥammad, came to power July/August 1239;
8. *sulṭān* Gnba, came to power June/July 1252, d. 27 February 1262;
9. *sulṭān* Girāmgazʾi, came to power March 16, 1262, abdicated 6 December 1263;
10. *sulṭān* Dilgāmis I, brother of Girāmgazʾi, first period of rule 6 December 1263 – 2 October 1269;
11. *sulṭān* Dilmārra b. Mālzarra, came to power 2 October 1269, deposed July/August 1278;
12. *sulṭān* Dilgāmis, second period of rule July/August 1278–May/June 1279;
13. the rebel ʿAbdallāh b. Ğanāḥ in May/June 1279;
14. *sulṭān* Dilgāmis, third period of rule July 1279–July/August 1285.

Maiestas Domini

M.D. is a term for an image of Christian Oriental origin, depicting Christ-Pantocrator enthroned in a mandorla supported either by the angels or by the the Four Living Creatures (if the latter are carrying the books they symbolize Four Evangelists). The representation, understood as the majesty of God in heaven revealed at the Second Coming, is based upon the ↗Old and ↗ New Testament theophanic visions described in Is 6:1–4, Ezek 1:5–10, 10:16–22, Rev 4:6–8 and Mt 24–25. There is also a variant influenced by Dan 7:9 known as the "Ancient of Days".

In decoration programmes of early Christian and Byzantine churches, the M.D. was placed in the sanctuary, on the wall of the apse or in the cupola. This position expressed the connection between the eastern direction and the Second Coming of Christ. The M.D. formula also entered some Christian oriental representations of the Ascension, where it appears in the upper part of the scene, above St. Mary surrounded by the apostles ("narrative" type) or the *collegium apostolicum* ("liturgical" type).

The M.D. in all variants was particularly popular in Coptic Egypt, and, like some other pictorial formulas, was transferred to Ethiopia from the Coptic workshops. Besides the iconographical affinities between the Coptic and the Ethiopian M.D., their connection is revealed by some legends in which the Four Living Creatures usually called in Ethiopia ገጸ ንስር (*gäṣṣä nəsr*, 'face of eagle'), ገጸ ሰብእ (*gäṣṣä säbᵊ*, 'face of man'), ገጸ አንበሳ (*gäṣṣä anbäsa*, 'face of lion'), ገጸ ላህም (*gäṣṣä lahm*, 'face of ox') bear the names known from Coptic angelology: *Bäramira, Mäliṭo, Suritəyon, ʾAgramiṭa* (e.g., the Gospels from ↗Däbrä Ḥayq Ǝsṭifanos, fol. 24r, end of the 13th cent.).

The oldest known Ethiopian representation, dating to late 12th cent. and obviously influenced by contemporary Coptic paintings, is in the ↗Yəmrəḥannä Krəstos church. Placed on the eastern wall of the south aisle, close to the ↗*mäqdäs*, it forms part of the Ascension composition and is clearly rendered in ↗eschatological terms (royal, purple garments of Christ, mandorla encircled by stars, eye-covered wings of the Four Living Creatures).

A group of 13th–14th-cent. churches follows the early Christian tradition even closer, locating the M.D. in the sanctuary. In ↗Ǝmäkina Mädḫane ᶜAläm, the M.D. with Christ accompanied by six archangels occupies the cupola above the central part of the *mäqdäs*. In Gärᶜalta churches, such as ↗Däbrä Ṣəyon, it is depicted in the centre of the eastern wall and is accompanied by the 24 Celestial Priests, represented as young angelic figures. In ↗Qorqor Maryam the M.D. is placed in the third bay of the northern aisle and shows a lamb under the throne which stresses the apocalyptic character of the scene. In some churches the M.D. appears more than once: in ↗Däbrä Sälam of Aṣbidära it can be seen both in the cupola of the *mäqdäs*, and in the eastern bay of the north aisle, in both cases accompanied by the *collegium apostolicum*. In ↗Gännätä Maryam, the M.D. is presently discernible in the southern part of the *mäqdäs* flanked by two angels but it cannot be ruled out that it was originally also depicted in the central part where presently only the Celestial Priests are still seen. In ↗Mikaʾel Amba in Aṣbidära only the upper part of mandorla supported by the eagle in the upper right-hand corner and the top of Christ's head remain of the M.D. Except at the Däbrä Sälam, the M.D. is always either juxtaposed with the Entry into Jerusalem or placed in its immediate vicinity. In the pictorial language of early Christianity this combination visualizes the concept of the earthly and celestial triumph of Christ.

After 15th–16th cent., the M.D. loses its popularity and its original, liturgical connotation is not clear any more. If the scene appears in a church it is seldom placed in the *mäqdäs* (e.g., Ṗeṭros Mälähay Zängi, Ṣaᶜəda Ǝmba, ↗Mäᶜaquddi Yoḥannəs). From the 16th cent., the Ancient of Days often replaces the M.D. (e.g., ↗Yädəbba Maryam). Also in that form the theme is included in the iconographical programme of the *mäqdäs* in the early 17th-cent. circular churches, e.g. ↗Däbrä Sina near Gondär, ↗Ǝnṭonəs (now in Paris, Musée des Arts et Civilisations d'Afrique). Later on, the M.D.'s role and place in church decoration (upper part of the western

Maiestas Domini (detail of the Ascension); miniature in a Gospel Book, fol. 161r, end of the 15th cent., church of *abunä* ʿAbiyä Ǝgziʾ, Däbrä Mädḫanit, Təgray; photo 2002, courtesy of Michael Gervers

wall) was taken over by the Trinity and only a few examples of the M.D. from the 18th–19th cent. can be recalled (↗Wəqro Mäsqäl, ↗Ṣəraʿ Abrəha wä-Aṣbəḥa, ↗Däbrä Bərhan Śəllase).

In the oldest manuscripts (13th–15th cent.), primarily in the ↗Gospel Books with the scenes of Christ's life, some of them carrying on the Syro-Palestinian iconography, the M.D. occupies the upper part of the Ascension and appears in many variants. The differences concern the form of the mandorla (circular/square/almond-shaped), Christ's appearance (young/mature), his throne (which in some cases has form of the globe), the place of the Four Living Creatures around the mandorla and their aspects (full and half-figure variant). There are a few examples of the M.D. represented as a single scene and even in these cases its role is to close the Christological cycle (e.g., the Gospel book of Ğähğah Giyorgis, 15th cent.; mss. London, BritLib Orient. 481, fol. 109v, 17th cent. upon a 15th cent. *Vorlage* from ↗Amba Gəšän, 15th cent.). One more variant shows two or four angels instead of the Four Living Creatures (e.g., Psalter, Paris, BN, d'Abbadie 105, fol. 12v, late 15th cent.).

With the change in character of Gospel illustration, the M.D. disappears from manuscripts after the 16th cent. (with a few exceptions e.g., the Gospels in Qunäla Giyorgis, Tämben, 17th cent.). In 18th-cent. manuscripts, the M.D. sometimes reappears as one of the frontispiece miniatures, added at the beginning of different texts (e.g., ↗*Laḥa Maryam*, Ǝndäbba Hadära, Tämben; ↗*Apocalypse of Mary*, ms. Pistoia, Martini etiop. 5; frequently ↗*Dərsanä Mikaʾel*, e.g., in Ankobär Mikaʾel = EMML 2373, fol. 3v).

The M.D. was seldom the subject of painting on wood, the known examples are most probably the result of confusion with the Ancient of Days (e.g., triptych IES 6619). Instead it belonged to the decoration of liturgical fans ↗*märäwəḥ* where it occupied the centre of the composition in accordance with the liturgical function of the object and in connection with its symbolism. Some 15th-cent. ↗crosses bear the M.D. or the Ancient of Days (IES 3970, IES 4320, the cross from ↗Däbrä Nägʷädgʷad) as do, occasionally, other liturgical paraphernalia (e.g., a chalice from ↗Ǝnda Abba Gärima, early 15th cent.).

Mä²ison

M. (Engl. spelling MEISON, acronym for **የመላ፡ ኢትዮጵያ፡ ሶሻሊስት፡ ንቅናቄ**, *Yä-mälla Ityopya sošalist nəqənnaqe*, 'All-Ethiopian Socialist Movement') was founded at a secret congress held in Hamburg in 1968 as the first offshoot to emerge from the Ethiopian student movement. The founding congress, its leadership, and, for a time, even its membership were dominated by the leading members of the Ethiopian Student Union in Europe (E.S.U.E.); its post of Secretary General being alternately held by Ḫayle Fida (1968–73), Wärqu Färrädä (1973–January 1976), and Käbbädä Mängäša (February 1976–August 1977). The organization stood for the formation of a Marxist-Leninist vanguard party, a national democratic revolution, an armed struggle as the ultimate means to seize power, and for the recognition of the equality and the right of Ethiopian nations and nationalities to self-determination.

M.'s initial enthusiastic revolutionary agitation and its establishment of an underground network in Ethiopia ended with the imprisonment of its first crop of party workers in 1969. As a result, M. became extremely cautious about its political activities. During the five years between 1969 and the outbreak of the revolution in 1974, it maintained a low profile and conducted most of its activities through student unions and other front organisations. Thus it let its advantage of an early start slip by without making significant progress.

From its formation, M. indirectly dominated the E.S.U.E. until 1974 and in particular the Worldwide Union of Ethiopian Students until 1972. This was despite the growing challenge from the upcoming and younger militants who formed their own organisation that eventually became the ↗Ethiopian Peoples' Revolutionary Party (E.P.R.P.). Soon enough, the battle lines were drawn between M. and E.P.R.P., each of which wanted to dominate Ethiopia's student movement. The rivalry and antagonism between the two emergent revolutionary organizations was, by and large, managed behind the façade of a formally united student movement. However, the downfall of the monarchy led M. and the E.P.R.P. to begin settling their differences by violent means.

Notwithstanding the view that M. expressed in 1973 to the effect that a revolutionary upsurge was imminent, it was caught by surprise when the events of February 1974 unfolded. Yet, it was one of the more important clandestine organisations that sought to fuel and give direction to the essentially spontaneous mass uprising. M. produced and widely distributed publications like the serialized **ውጋገን** (*Wəgagän*, 'The Dawn') and, beginning in July 1974, its official organ, **የሰፊው፡ ሕዝብ፡ ድምጽ** (*Yäsäffiw Ḥəzb Dəmṣ*, 'Voice of the Masses').

Initially, M. opposed the seizure of power by the Därg (↗Provisional Military Administrative Council) because of its lack of ideological clarity, its political vacillations, authoritarian tendencies, and its highhandedness. However, M.'s scepticism gradually softened following what it perceived as the *Därg*'s responsive measures to a host of popular demands. Chief among these measures were its proclamation of socialism as a guiding ideology of the Ethiopian revolution, the Land Reform Act (↗Land tenure), and the National Democratic Revolution Program (N.D.R.P.) that sought to eradicate "feudalism, bureaucratic capitalism and imperialism"; facilitate the growth of socialism; and establish a People's Democratic Republic. These and other similar developments prompted M. to switch its policy from total opposition to "critical support". This meant that M. would continue to expose and challenge the regime's authoritarian tendencies and practices while supporting policies that paralleled M.'s own program.

This paved the way for the creation of the People's Organizing Provisional Office that was renamed the Provisional Office for Mass Organization Affairs (P.O.M.O.A., የሕዝብ፡ ድርጅት፡ ጊዜያዊ፡ ጽሕፈት፡ ቤት, *Yäḥəzb dərəǧǧət gizeyawi ṣəḥfät bet*) under the *Därg* on 20 April 1976. This organization's activities included implementing the N.D.R.P. The P.O.M.O.A. run the Yäkkatit 66 Political School that produced numerous cadres, many of whom belonged to M.

Co-operation and conflict characterized the M.-*Därg* alliance, which lasted from April 1976 to August 1977. Additionally, M. fielded its members to implement the land reform, politicize and organize the rural and urban masses, and, in particular, to assist in the formation of local self-government organs known as peasants' and urban dwellers' associations (*qäbäle*). M.'s growing influence provoked the fury of those that opposed the revolution as well as of competing leftist organizations, the E.P.R.P. in particular. The hostility towards M. members and sympathisers was expressed in different forms ranging from mud slinging to assassination.

On 11 September 1976, the *Därg* condemned the E.P.R.P. as "subversive and anti-revolutionary". Beginning on 26 September 1976, the E.P.R.P. unleashed a campaign of assassination against M. members, P.O.M.O.A. cadres, and leaders of urban dwellers' associations. The violence claimed the lives of hundreds of academicians, professionals, students, workers, and leaders of mass organizations, including two M.'s Central Committee members, Gäbrä Ǝgziʾabəḥer Ḥagos and ʿAbdulahi Yusuf. M. reacted by calling for a "Red Terror" as a means of reversing this phenomenon that was dubbed "White Terror", thereby placing the former firmly on the agenda of the Ethiopian revolution.

In January 1977, differences between the *Därg* and M. widened and became antagonistic soon after Mängəśtu Ḫaylä Maryam and his organization, Revolutionary Flame (አብዮታዊ፡ ሰደድ, *Abyotawi Säddäd*), gained the upper hand within the *Därg*. Shortly thereafter, in February, M. and four other organizations (Ethiopian Marxist-Leninist Revolutionary Organization; Ethiopian Oppressed People's Revolutionary Struggle, Revolutionary Flame, and Workers League) established the Joint Front of Ethiopian Marxist-Leninist Organizations to implement the N.D.R.P. and to create the Workers' Party of Ethiopia (የኢትዮጵያ፡ ሠራተኞች፡ ፓርቲ, *Yäʾityopya śärratäññočč parti*). As shown by later developments, M. joined this front while bidding its time to withdraw from the legal forum. In March, M. hastily convened an extraordinary national conference at Addis Abäba that resulted in the renunciation of its policy of "critical support" in favour of one of "revolutionary opposition".

That move was further precipitated by the July 1977 Somali invasion of the ↗Ogaden which gave the *Därg* a pretext to intensify its repression. On 20 August 1977, M., convinced of the futility of further co-operation with the *Därg* and facing the imminent attack to exterminate it, withdrew nearly all of its members from the government and ordered them to go underground. Given that M. was not adequately prepared to make a safe retreat and defend itself, it became an easy prey to the repression that ensued. Most M. Central Committee members, including Käbbädä Mängäša, Danəʾel Taddäsä, Mäsfən Kaśu, Kädir Mäḥammäd, and Bərhanu Gämäda, were killed while resisting arrest or committed suicide. Security forces killed, tortured and jailed large numbers of M. members. Later, in July 1979, the government executed several M. members including two of its Central Committee members, namely, Ḫayle Fida and Nəgəśt Adane (together with her husband Dästa Taddäsä). As a result, the organisation was virtually annihilated throughout the country except for a group that conducted armed resistance in the ↗Sidaama area until 1981.

Some M. leading members, including the only two members of its Central Committee to survive the repression, namely, Näggädä Gobäze and Andärgačč̌äw Assäggəd, continued to undertake political activities in exile. In the late-1980s, M. managed to forge some form of co-operation with other Ethiopian political groups, including the E.P.R.P. Following the Ethiopian Peoples' Revolutionary Democratic Front's (E.P.R.D.F.) seizure of power in May 1991, M. was one of the organisations that were barred from legally participating in the political process of the new dispensation. Then, both M. and the E.P.R.P. were the key players in the formation of the Coalition of Ethiopian Democratic Forces (C.O.E.D.F.). M., which is unique among Ethiopian political groupings of the revolutionary days in that it has never experienced internal splits and violent purges, has remained active abroad, particularly as a major player in the formation of the United Ethiopian Democratic Force (U.E.D.F., የኢትዮ

ጵያ፡ ዴሞክራሲያዊ፡ ኃይሎች፡ ጎብረት, *Yäʾityopya demokrasiyawi ḫayločč ḫəbrät*) in 2003.

Maize

M. (*Zea mays*; corn, Indian corn) is a tall annual cereal grass bearing kernels on large cobs. It is the world's third widest spread crop after wheat and rice. Though an introduced crop, there is much genetic diversity among the present M. gene pool in Ethiopia. As a popular staple cereal of tropical and warm temperate regions it is the main cereal in Africa. In Ethiopia it is mainly cultivated in the western and southern regions between 1,000–2,400 m A.S.L. (Phillips 1995). Cultivated in fields, M. provides more food per unit of land than other cereals. In comparison with other cereals M. cultivation is less labour intensive (McCann 2001:249; 2005:XI).

M. is extensively grown for human consumption, forage and as a source of oil and syrup. The M. cob or grain is often roasted and eaten as such. Cooked M. is added to vegetable dishes or prepared as porridge. M. flour, sometimes mixed with that of other cereals, is used for baking different kinds of bread and cake.

Domesticated ca. 7,000 years ago in Central America, M. was brought to Europe soon after the European penetration of America, and its cultivation expanded rapidly throughout the tropics of the Old World. The introduction of M. into Ethiopia in the late 16th or early 17th cent. was probably connected with the Portuguese activities in the region (↗Portugal, relations with). However, there is no reference to the introduction of new crops by the Portuguese in the medieval chronicles (McCann 2005:78, 248). Possibly, M. was introduced through ↗Arabia as the names *əffun* (Tgn. from dialectal Arab.), *mašälla baḥri* (Tgn.) and *yäbaḥr mašəlla* (Amh.), 'sea sorghum', i.e. sorghum that came from oversees, as well as the Harari term *aräb əḥi* and *arabbiḥi* in Somali may suggest. Linguistic data suggest that M. may have spread from western Ethiopia to regions further south. The Oromo seem to have had a considerable role in the spread of M. as indicated by names, like *boqollo* ('M.') which was adopted into Amharic from Oromiffa. Likewise, the Añwaa name for at least of one M. variety is *igalla* ('Oromo [cereal]') and also the second Somali name *gallay* suggests an adoption of M. from the Oromo (Leslau 1963:23, 31; Pasch 1983:198ff.).

Until the early 19th cent., M. was mainly cultivated by women in their vegetable gardens. Its role in different agricultural systems was due to the fact that it matured earlier than other cereals. Eaten in its green stage it served to bridge the "hungry season" before the harvest of the then major crops ↗sorghum and wheat (McCann 2001:249, 253; 2005:81). Evidence of M. as a field crop is found in travellers' reports only from the early 19th cent. At the beginning of the 20th cent. M. was to be found in southern Ethiopia in any type of mixed agricultural system, be it intercropped with ↗*ənsät* or cereals, like ↗*ṭef*. In other areas of Ethiopia M. remained of minor importance (McCann 2005:81f., 86ff.).

After the Italian occupation period the importance of M. grew drastically as did its regional distribution. When Ethiopia responded to an increase in the world market's demand for coffee with a move from the collection of wild coffee to cultivation, M. became part of a ↗coffee–M. complex, in which low-labour M. cultivation complemented coffee as a cash-crop. Due to

the state price policy of the 1980s the balance of the coffee–M. complex was destabilized again. However, the expansion of M. cultivation was never disturbed. Propagated by foreign aid organizations and Ethiopian governments hybrid M. types, fertilizers and new agricultural strategies were increasingly introduced into the country, while traditional M. types lost much of their popularity. By the end of the 20th cent. the production of M. rose by 12.3 % every year (McCann 2001:265; 2005:12, 89).

The extensive cultivation of M., especially of hybrids, despite obvious advantages, is accompanied by certain problems. The use of hybrids makes Ethiopian peasants dependant on foreign providers because Ethiopia's industry cannot produce domestic hybrids. M. is sensitive to deprivation of water, sunlight and nitrogen. Recent research shows the existence of an interconnection between the extent of (hybrid) M. cultivation and the appearance of ↗malaria, because M. pollen feed the larvae of *Anopheles arabiensis* (McCann 2001:249; 2007).

Maʾkälay ʿalet

M.ʿa. (ማእከላይ፡ ዓለት [also *ʿalät*]) is a Təgrəññа term used in the context of rights to land and the definition of lineages' relationships to each other. A M.ʿa. descended from an immigrant, who did not belong to the original founders of an *ʿaddi* ('land'), i.e. the area in which the M.ʿa. settled. Even if this migration dates back many generations, the M.ʿa. keep their position as a stranger within the local socio-political system. Similar concepts are also found among neighbouring ethnic groups (cp. ↗Kinship; ↗Genealogy).

The M.ʿa.'s position within a descent group was determined essentially by the idea that he did not belong to it from its foundation, i.e. that he brings with him qualities which do not preexist within the group. In some cultures, the foreigner could enjoy a privileged social or economic position. In the Eritrean highlands (↗*Käbäsa*), "foreigners" had a position comparable to that of the members of the group, but were never fully integrated within it.

For example, M.ʿa. normally could not participate in the formulation or amendment of traditional ↗laws. Similarly, the rules on vengeance and blood money did not generally apply when one of the parties involved in the dispute was a stranger. However, in the *Fəṭḥa Mäḥari* of the ↗Təgre, if a foreigner or stranger killed a ↗Mänsaʿ noble, "either a vendetta is started between the two groups, or blood money is paid" (Rodén 1913:304f.). Clearly, in this case compensation also constitutes a viable option between individuals who do not belong to the group.

The position of M.ʿa. with regard to land rights is particularly complex. Generally, they could not receive parcels of *rəsti* (↗*Rəst*) land, the land belonging to the group, as it is clearly stated, for example, by the laws of the ↗Loggo Särda and ƎndaFəqray. However, according to the latter, the foreigner could ask the village for a ruin that he could rebuild or he could buy an existing house, the request being taken into consideration only after all members of the ↗*ənda* had been satisfied (Conti Rossini 1904:12; Capomazza 1937:195f.).

With reference to *šəḥena* ('village land'; ↗Land tenure), M.ʿa. were sometimes allowed to cultivate or use common land, provided that they were residents, and after having obtained the consent of the *ənda*, if their request was made in due time, that is before a reallocation, and as long as they paid tribute (Capomazza 1937:150; *Śərʿat Adgəna-Tägäläba* 1938:33). It is probable that historically they were admitted in order to alleviate the burden of the tribute that was assessed on a village by the first colons (Pollera 1913:16). Of particular interest in this regard is the law of *Məʿem Mäḥaza* that after affirming the right of equal access of M.ʿa. to a parcel of village land, makes an explicit reference to *Krəstyanay kab Gondär* ('Christians from ↗Gondär') and *Aslamay kab Mändər* ('Muslims coming from coastal zones'; Capomazza 1937:89).

M.ᶜa. were usually given full access to *mədri wärqi* ('gold land', i.e. the land acquired by money), and to leaseholds tenancies (*kəray* 'rent', and *sädbi*); in colonial times, there is evidence of a number of these agreements. The ↗Adkämä Məlgaᵓ of Säraye also depicts a unique type of land ownership, *mədri gʷäytat*, 'land belonging to lords'. The three chiefs of the *əndas* of Godofəllase, ᶜAddi Mängʷəntu and May Ṣaᶜda, had taken over the functions of land division originally exercised by the elders of the community. They divided the land among people of the "same blood" as well as M.ᶜa. (Conti Rossini 1904:37). Many different kinds of agreement were concluded between M.ᶜa. and members of the group with regard to pasture and rights of access to water.

Mäkanä Iyäsus

M.I. (መካነ፡ ኢየሱስ, 'Place of Jesus') is a church in ↗Ǝste to the east of Däbrä Tabor. It was founded by *däğğazmač* ↗Ḫaylu Ǝšäte between 1787 and 1789 (BlunChr 144f., 408ff.). With the sanction of *aṣe* ↗Ḥəzqəyas, Ḫaylu endowed the church with 42 ↗*gašša* of agricultural land plus lands dedicated to breeding horses for the royal stable and the right to tax both the local spring and the local market. He also gave the church the right to provide asylum. The dedication of the church was attended by the Emperor, the bishop (*abunä* ↗Yosab), the ↗*əčč̣äge*, palace notables and "learned people".

15 years later M.I. became embroiled in the theological controversies of the late ↗*Zämänä mäsafənt*. Ǝste fell within the domains of *ras* ↗Gugsa Märsa of the Yäğğu dynasty. In 1803, following the death of *abunä* Yosab, Gugsa plundered his property and expelled from his territories everyone who did not profess the ↗*Śost lədät* (CRReal 801f.). Church annals remember this as the time "when our faith was extinguished and our sanctuary destroyed" (Crummey in PICES 9, 202). 70 years later, in November 1873, there was full restitution in another elaborate ceremony presided over by *aṣe* ↗Yoḥannəs IV, *abunä* ↗Atnatewos and *əčč̣äge* ↗Tewoflos. M.I. remains a church of considerable regional influence.

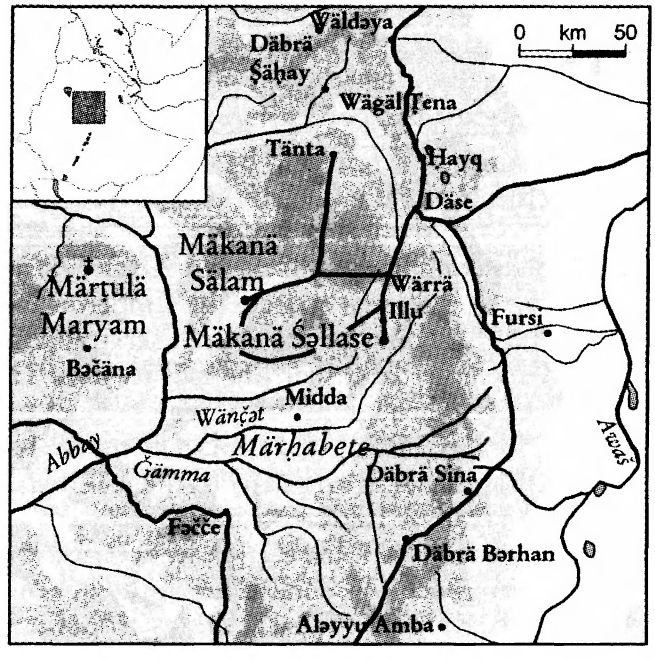
Mäkanä Sälam

M.S. (መካነ፡ ሰላም; 10° 37' 60" N, 38° 46' 60" E, 2,530 m A.S.L.) is a small market town in ↗Wällo, on the western edge of the plateau formed by lava masses from Mount Amba Farit (3,975 m A.S.L.) on the right bank of the ↗Abbay canyon between the confluence with the ↗Bätu river in the south and the ↗Bäšəlo in the north.

The town was established during the Italian occupation in the area where ↗*šəfta* and ↗resistance have been particularly active. Prior to 1991 M.S. was the capital of the ↗Boräna *awraǧǧa* (till 1987 Wällo region, 1987–91 South Wällo region). In the post-1991 administrative division it has become the main town of the ↗Däbrä Sina *wäräda* of South Wällo Zone, Amhara *kəllәl*.

M.S. is an important trading centre for the area with good accessibility owing to an airstrip



served by ↗Ethiopian Airlines flights from Addis Abäba and Däse. A road links it with Tänat and Däse, and a network of seasonal tracks with Wärrä Illu and Fəčče. The town offers administrative, educational and health care services for the surrounding area. Its population has been growing steadily, from 4,901 inhabitants in 1994 to 7,747 in 2003, and to 8,883 in 2006.

The M.S. region has been one of the strongholds of the Oromo People's Democratic Organization. Some of the demonstrators arrested during the post-2005-elections protests were detained in M.S. prison.

Alain Gascon

Mäkanä Śəllase

M.Ś. (መካነ ሥላሴ, 'Place of the Trinity') was a royal church and monastery in ↗Läga Gora, Amhara Sayənt (for location s. Mäkanä Sälam). It was founded in the early 16th cent. by *aṣe* ↗Naᶜod and completed under *aṣe* ↗Ləbnä Dəngəl. Like the previously established ↗Däbrä Nägʷädgʷad and ↗Atronsä Maryam, this monastery was affiliated to ↗Däbrä Libanos of Šäwa. The church was lead by a *liqä kahənat* referred to by Francisco ↗Alvares in the 16th cent. as a "son of the ↗*ᶜaqqabe säᶜat*", possibly signifying a monk coming from the ↗Ḥayq community (BeckHuntAlvar 378f.). According to the same source, the Emperor assigned 200 ↗*däbtära* for the church service, and donated so much land that one had to walk 15 days to travel through all of it. The Gospel of Iyäsus Moʾa (EMML 1832, fol. 1v) mentions some of these lands as originally having belonged to a certain *mähari* Täklä Yoḥannəs.

On 12 January 1521, the church was consecrated in the presence of Ləbnä Dəngəl, the queens ↗ƎIeni and ↗Naᶜod Mogäsa, the metropolitan *abunä* ↗Marqos and the clergy of the other royal churches. On this occasion, Alvares describes the interior of the church, built of stone topped by a wooden roof, with a principal door decorated with metal plates inlaid with stones, and above it Marian and angelic icons. On 15 January 1521, the body of Naᶜod was translated from a little church in the vicinity to the church of M.Ś.

Ləbnä Dəngəl probably also planned to be buried in M.Ś., but the church was plundered in 1531 by the soldiers of *imām* ↗Aḥmad b. Ibrāhīm ("Grañ"). The ruins of M.Ś., located about 20 km north of ↗Wärrä Illu, were rediscovered during the reign of ↗Mənilək II in 1881 (when Däbrä Nägʷädgʷad and Atronsä Maryam were also recovered; GueCopMen 169), "showing a building of 25 m on one side, constructed with big blocks of white stones, the external face of which was sculpted with arabesques and flowers" (Brielli in CRStud 82). A round church was built in the centre of the ruins which are still visible: one can see walls constructed of big stones, some of them sculpted. The ruins are ca. 25 m long and 1.5–2 m high.

Ludolf's informant *abba* ↗Gorgoryos came from M.Ś.

Marie-Laure Derat

Makədda

M. (ማከዳ, or Makʷəd[d]a, ማኰዳ, Makäd[d]a, ማከዳ) is one of the Ethiopic names of the Queen of Sheba. The name has been chiefly connected by scholars to either "Macedonian" (Gəᶜəz *Mäqedonawi*), i.e. the cognomen of ↗Alexander the Great, or "↗Candace" (Gəᶜəz *Ḥəndäke*/*Həndäke* or *Qəndäqe*), i.e. the title of the queens of ↗Meroë: in particular, of the "Queen of the Ethiopians" in Acts 8:27, where one of her eunuchs (↗Philip) is "administrator of her whole treasury" (s. UllBibl 9ff.). According to a more recent interpretation, it would be a distortion of Hebrew *miqdāš* ('Holy of Holies'), alluding to the Temple/Tabernacle personified in the Queen's female figure (Lur'e 2000:188ff.). Apart from other popular etymologies (s. below), the discussion still continues, M. being also, e.g., the

name of a group of people in the north of ᶜAgamä (↗Gulo Mäḵäda; CRStor 254), and *Makādā* meaning, likewise, 'Abyssinia' in eastern Sudanese (↗Sinnār) Arabic as well as "in several non-Semitic languages of northern Ethiopia" (Conti Rossini 1921–23:607f.).

The Queen of Sheba in ancient tradition

The earliest narrative on the Queen of Sheba is the biblical account of her visit to King ↗Solomon of Israel, which was first redacted in the 8th/7th cent. B.C. (1 [3] Kgs 10:1–13 and, with deeper theocratic overtones, 2 Chr 9:1–2). Attracted by the fame of the latter's wisdom, in order "to prove him with hard questions", the unnamed queen goes to ↗Jerusalem with a large retinue and a train of camels carrying lavish gifts, among which spices and precious stones. The king solves all her riddles, and she returns to her own country, satisfied with him and the manifold aspects of his realm.

Apropos of the Queen's rich presents, the Phoenician Hiram's fleet is mentioned – as purveyor either of further gifts by the Queen, or of similar imports for Solomon himself – that sailed as far as the mysterious land of ↗Ophir (possibly, ↗Somalia), and fetched from there gold, precious stones and wood suitable for musical instruments. Given the presence of spices among the Queen's gifts, and the name of her country in the Bible (Hebrew *Šeḇâ*, Gr. Σαβά, 'Sheba'), such an intriguing hint at trading and seafaring activities has long suggested the location of her home in south-west ↗Arabia, i.e. in the kingdom of Saba, rather than in the ↗Horn of Africa (not necessarily favoured by the "rich forest" of the biblical story). Nonetheless, it is difficult to assess the Queen's connection with South Arabia or the historicity of her visit to Jerusalem, either philologically or archaeologically: while Solomon is supposed to have reigned in the 10th cent. B.C., no female ruler seems to be attested in Arabia before the second half of the 8th cent. Then, however, Saba was still far from being the chief power in the peninsula, as it was, however, by the somewhat uncertain date (6th cent. B.C.?) of the text's final redaction, when the name of Saba was possibly added to the biblical narrative (Robin 1992:70, 1996:1045f.; cp. Gilliot 64). So the Queen is more plausibly seen as a north Arabian ruler: queens are well known from north Arabian tribes in the Assyrian records (none being attested for South Arabia at any time), where the Sabaeans appear, in fact, as a north Arabian people (Crone 1987:14f. and nn. 9–11).

Alluded to in the Gospels, which speak of the "Queen of the South" (Gr.: βασιλίσσα τοῦ νότου, *basilíssa toû nótou*, Gəᶜəz: *nəgəśtä azeb*) as a prophetic witness to the Last Judgement who "came from the uttermost parts of the earth to hear the wisdom of Solomon" (Mt 12:42, and Lk 11:32), the O.T. matter has undergone extensive Christian, Jewish and Islamic developments, becoming the subject "of one of the most ubiquitous and fertile cycles of legends of the Middle East and Africa" (Ullendorff in DicEthBio 151).

In the Jewish tradition, references to the unnamed Queen are sparse. The most complex ones, however, are given in such midrashim as the *Alphabet of Jesus ben Sira*, a medieval (10th/11th-cent.?) compilation of Aramaic and Hebrew proverbs (ed. Steinschneider 1858:fol. 21b [א כ]; cp. Lassner 1993:167f.), and, especially, the *Targûm šēnî* ('Second Targum'), a collection of 7th/8th-cent. A.D. (?) Aramaic homilies on the book of Esther that embodies a more detailed version of the story (I, 3, tr. Sulzbach 1920:26–37 [109–11]; cp. Grünbaum 1893:209–15) – already partially available in the 1st/3rd-cent. A.D. *Testament of Solomon*, a Judaeo-Christian pseudepigraphon of Egyptian origin (XIX, 3, ed. McCown 1922:60). Here, she becomes "Saba, the Queen of the South, a sorceress having immense knowledge", her new personal name being subsequently connected, through assonance, with Gr. *Sábbē* or *Sambē´thē*, the name of the so-called Hebrew or Chaldean/Persian Sibyl. In the Byzantine tradition, the Queen of Sheba is therefore called Sibyl, and regarded as an ancestress of the Three Kings (↗Magi), whose journey to Christ, with gifts including the "gold of Sheba" (Ps 72:10), would be precisely forestalled by her visit to Solomon, the true type of Christ (Nestle 1904; cp. Cerulli 1968:129–34).

A similarly developed legend is found in the ↗Qurʾān "Sura of the Ant" (27:20–45), reflecting some of the essential narrative figures of the story: the sun-worshipping Queen; the wizard's appearance of both her and Solomon, surrounded by demons; the hoopoe (*hudhud*), named sometimes Yaᶜfur/Yaġfur, with a letter from the king inviting her to convert to the One God; the Queen consulting with her nobles, sending gifts not well received in Jerusalem, and then coming herself to the king; the latter's deception – a polished glass floor resembling a sheet of water – to reveal her legs. A feature that presupposes

the story of the Queen's birth from a *ǧinnīya* ('female [evil] sprite') is betrayed by two clear marks of sorcery: her hairy legs and/or, in other tales, foot of an ass or a goat, according to the rumours circulated by Solomon's demons lest the king marry her, since they perceived her as a terrible rival.

These and other such elements as the healing of the Queen's deformity with a special cream (*nūra*) ordered by Solomon to remove the disfiguring hair, or with a treetrunk – later to be the wood of the Holy Cross (↗*Mäsqäl*), i.e. the tree planted by Seth on the grave of his father Adam – miraculously brought from the Garden of Eden for the building of the temple of Jerusalem, are variously elaborated by Arab Muslim commentators and writers: first and foremost, az-Zamaḫšarī, al-Bayḍāwī, aṭ-↗Ṭabarī, al-Ḥamdānī, ↗Ibn Ḫaldūn, aṯ-Ṯaʿlabī, al-Kisāʾī, al-Masʿūdī, Yāqūt, al-Buḫārī (s. list in Canova 2000:101f.). The Queen was also popular in Persian tradition (↗Iran): she appears, e.g., in the 14th-cent. *Dīwān* of Ḥāfiẓ, with a pun on her name (*Sabā*/*Ṣabā*, 'Sheba/Zephir'), and in the 18th/19th-cent. *taʿziya*, i.e. the ritual dramas reenacting the sufferings of Muḥammad's grandson al-Ḥusayn, third *imām* of the Šīʿa (s. Bausani 1960); in more recent tales, she is the daughter of the king of ↗China and the princess of the Šahristānī genii (Cerulli 1969:92 n. 27). The first Islamic visual portrayals of her, are indeed Persian, from the Timurid period (1387–1468): she is standing either in water before Solomon or to the right of him, who is then seated on a throne supported by *ǧinn* and lions and surrounded by demons (s. UllBibl 144; Pennacchietti 2002:36).

In Arab Islamic tradition, the Queen's name is *Bilqīs*. Such a form must be traced, via *Bq(w)lys* (and the usual mistake *b/n* due to lack of diacritics in the Arabic script), to Gr. *Nikáulē* or *Nikáulis*, as the "Queen of Ethiopia and Egypt" is called in the 1st-cent. by Josephus Flavius (*Ant. Jud.*, VIII, [158] 6, 2, and [165] 6, 5, ed. Thackeray – Marcus 1934:656 and 660), who further identifies her capital *Sabá* ('Saba') with ↗Meroë (*ibid.*, II, [49] 10, 2, ed. Thackeray 1930:272, s. Cerulli 1968:130ff.). *Nikáulē* or *Nikáulis* is a reinterpretation of **Nqwlh* or **Nqwlys*, Aramaic or Hebrew renderings of Gr. *Onókōlos* ('Donkey-Legged'), a popular nickname of Émpousa, the night hobgoblin of Aristophanes's *Frogs* (293) and *Assembly of Women* (1056) – *Onoskēlís* (also 'Donkey-Legged') in the *Testament of Solomon* (cp. Pennacchietti 2002:35).

Gianfranco Fiaccadori

The Queen of Sheba in Ethiopian tradition

Most prominent among the Christian elaborations, the Ethiopian saga of the Queen of Sheba is fully expounded in chs. 21–39 of the early 14th-cent. ↗*Kəbrä nägäśt* (BezKebr 11b–38b). The great Sheba cycle is introduced by reference to the above mentioned N.T. passages, conflating the respective traditions on the "Queen of the South" and "Candace" (chs. 21 and 32), as already in Origen's *Commentary on the Song of Songs* (ed. Baehrens 1925:116), which elaborates on the "Austri Regina" (after Josephus). This is a further example of the fate of the writings of ↗Origen in Ethiopia. Here, "the Queen of the South [ንግሥተ፡ አዜብ, *Nəgəśtä Azeb*] is in fact the Queen of Ethiopia [ንግሥተ፡ ኢትዮጵያ, *Nəgəśtä Ityoṗya*]", and her "treasure" (Gr. γάζα, *gáza*), misinterpreted as "Gaza" in Palestine (Gr. Γάζα, *Gáza*, Gəᶜəz *Gaza*), becomes "the city which King Solomon had given to the Queen of Ethiopia" (BezKebr 12a and 29a): one may notice, however, that Gaza was at the end at the ↗incense route, starting in ↗Ḥaḍramawt. The Queen hears of the wonders of Solomon from the Ethiopian merchant Tamrin, who has been trading with Jerusalem; she bears the name M., explained as *akko kämäzə*, 'not thus' (ch. 91, ibid., 123b), a literal rendition of Arabic *mā kaḍā*, 'not so', referring to paganism as unfitting for her people (for *mā kaḍā* cp., however, the meaning tentatively offered in GuiSLett 47: 'What is like this [thing/animal/man]?', M. being also the name of *aṣe* ↗Iyasu II's horse).

The African context of M. suggests that *Azeb*, rather than "a metathetical approximation to סבא (*sb'*)" (UllBibl 1968:142 and Ullendorff in DicEthBio 154), is an explanation of Gəᶜəz *Saba* as the name of a wind or a cardinal point, "South-east" (Gr. *Nótos*, Lat. *Auster*). Likewise, in the *Kəbrä nägäśt*, *Saba* and *Liba*, i.e. "South-east" and "South-west", mark the extreme boundaries of Ethiopia, and correspond exactly to *Azeb* and *Liba* shown on local maps and compass cards (↗Geography; cp. GuiVoc 94, and Fiaccadori 1992:73f.); and Sāwīrus b. al-Muqaffaᶜ (↗Severos of Ašmunayn), in the life of Patriarch Cosmas III (921–33), styles "Abyssinia" (*al-Ḥabaša*) as "a vast country, namely the kingdom of Saba [*Sābā*] from which the Queen of the South [*at-Tayman*, lit. 'wind of the South'] came to Solomon [*Sulaymān*], the son of David [*Dāwūd*] the king" (SawHist vol. 2, part 2, 80, corrected by Tedeschi 1987: *Tābtaḥāğ*, '[King] Tābtaḥāğ' > *b-ibtihāğ*, 'with great joy, exaltation'). Within the same Coptic tradition, the story of Solomon and the Queen of Sheba is retold with reference to Ethiopia, as claiming possession of the ↗Ark of the Covenant, in the 12th/13th-cent. Arabic description of "The Churches and Monasteries of Egypt" attributed to ↗Abū Ṣāliḥ the Armenian (ed. Evetts 1894:132ff. [fols. 105a-106a]; cp. Lur'e 2000:194f.).

Only to a certain extent parallel to Muslim tales, the Ethiopian saga, as chiefly expressed in the *Kəbrä nägäśt*, is totally devoid of wondrous and fantastic elements, and somehow closer to fragmentary Christian legends known from medieval Egypt (Amélineau 1888:144–64; Erman 1897:24f.) – the "Abyssinian" connection of which is already confirmed, for the early 10th cent., by the Life of Patriarch Cosmas.

Considered overall, the Ethiopian focus might even echo ancient eastern Mediterranean folk themes gathered long before in Alexandria (Origen's native town), whence they naturally spread to the Red Sea area, there in turn forming local traditions (von Mžik 1935; cp. Fiaccadori 1992:84), with a possible convergence towards the gulf of ᶜAqaba and the borders of ↗Nubia (Beylot 2004). Such lore still seemed to be still unknown in Ethiopia around 518 or 523, when ↗Adulis and ↗Aksum were visited by ↗Cosmas Indicopleustes, who simply writes on "the queen of Sheba (*hē basilíssa Sabâ*), i.e. of Ḥimyar (*toutésti toû Homērítou*)" (*Top. Christ.*, II, 50, ed. Wolska-Conus 1968:359). In the Ethiopian tradition, however, M. is always represented as an Ethiopian queen, with her capital city named Däbrä Makəddа after her (upon which ↗Zion is set: chs. 85f. of the *Kəbrä nägäśt*, BezKebr 110b), and the emphasis is not so much on Solomon as on M. and her own nobility and wisdom. Indirect evidence for the greater antiquity of that tradition is provided by the Ethiopic version of 1 Kgs 10:1, where "with hard questions" (Gr. ἐν αἰνίγμασιν) is rendered as "with wisdom" (*məslä ṭəbäb*) – perhaps the earliest indication of the Ethiopian attitude towards M. (UllBibl 141 and nn. 1–2).

The king is in fact a seducer who takes the virgin queen by ruse. After a banquet with specially seasoned meat, they both retire to the Solomon's chambers, who swears to respect her provided that she promises not to take anything from his house; but the thirsty queen drinks some of the water from a bowl nearby, thus breaking her oath. After nine months and five days, on her journey

home, she is delivered of a child, Ǝbnä Ḥakim or ↗Mənilək I, who is the founder of the Ethiopian ↗Solomonic dynasty – the last representative of which was Emperor ↗Ḫayla Śəllase I.

In the 15th-cent. initial section of the so called *Liber Axumae* (*Mäṣḥafä ↗Aksum*), a work often transmitted along with the *Kəbrä nägäśt*, M. is the second founder of Aksum (after Mazəbər), which she built in the territory of ᶜAsəba or Asfa (CRAxum 3); hence her name (Saba) according to the same text, also with a plausible identification of Aksum with the otherwise unknown Däbrä Makəddа (not in, but beyond the ancient province of ↗Bur), the seat of the Queen's fabulous court. This toponym, however, has completely vanished from local tradition. A much more recent, loosely connected issue is that of the names "Bath/Spring" and "Palace of the Queen Sheba" for the imposing reservoir of May Šum and the ruined structures of ↗Dungur, respectively on the northern and western edges of Aksum (Munro-Hay 2002:252f., 260, 288f.). M. also appears, with a reign of 75 or 50 years, in the traditional "king lists" (CRList 286: list C, no. 6; and 300: list F, no. 2 resp.; cp. 299: list E, no. 3, with no regnal years).

In contemporary Ethiopia and Eritrea, her story is widely diffused, far beyond the general setting of the *Kəbrä nägäśt*, perceived as such, with slight variants, in the 17th-cent. Vita of *abunä* ↗Märqorewos of Däbrä Dəmaḥ (ed. Conti Rossini 1904:3ff.), and in the short accounts edited by Grébaut (1912, 1923), as well as in the historical abrégés found at the beginning of certain Ethiopian chronicles (↗Historiography).

In the later Təgre and Təgrəñña legends published by Littmann (1904, 1947) and Conti Rossini (1911:603ff.) respectively, who collected them at Aksum and Godayf (to the south of ↗Asmära), the story is combined with the more ancient saga of the serpent (or dragon) ↗Arwe, to whom first born daughters were to be sacrificed. When her turn comes, the "Queen of the South" (Tgr. *ətiye Azeb*) is rescued by a foreigner, ↗Angäbo, who kills the monster and marries her, thus giving birth to the dynasty to which Mənilək I belongs. The Christian version has it that she is freed by the ↗Nine Saints – here, actually, four or seven in number – who are called *Ṣadəqanat* (cp. ↗*Ṣadəqan*) in the Təgrəñña text (as in the ↗Ḥamasen traditions, with further variants, s. KolTrad I, 5–8). One of her feet, however, is turned into a hoof by the dragon's blood; she is eventually healed and seduced by Solomon. A recent compilation, in Amharic garb, of most available sources is the anonymous text in the mid-20th cent. illuminated ms. Berlin, Staatsbibliothek Preußischer Kulturbesitz, Or. 3542 (Jankowsky 1982).

The story of M. and the accompanying mystique are officially embedded in the 1955 Revised Ethiopian Constitution (↗Constitutions): "The imperial dignity shall remain perpetually attached to the line [... that] descends without interruption from the dynasty of Mənilək I, son of the Queen of Sheba, and King Solomon of Jerusalem" (Art. 2); and continue to have wide popular appeal within Ethiopia as a cornerstone of the national "true Israel" identity, remaining in some areas "a favourite formula for literary and artistic inventiveness" (Ullendorff in DicEthBio 151).

Gianfranco Fiaccadori

The Queen of Sheba in western culture

Echoes of the Queen of Sheba legend can be also found in western literature, art and music – up to King Vidor's 1959 Hollywood film *Solomon and Sheba* and the more recent television productions.

Long before, the name and the story of Bilqīs had perhaps been behind the figure of Belacâne, the black "Queen of the South" with her son Feirefiz, the father of ↗Prester John, in Wolfram of Eschenbach's *Parzival* (ca. 1200, s. Staude 1957; ↗Moors [EAE vol. 5]). As (the Queen of) Sheba or "Balkis" she passed into several European tales that are best typified in the 13th-cent. *Legenda aurea* ('Golden legend') by Jacopo da Varazze, which definitely grafted her story on to the mystical *Story of the Wood of the Cross* (ch. LXIV, ed. Maggioni 1998:459f.), as well as by the story of the "reine Pédauque" or "Queen Splay/Goose-foot" (s. Pennacchietti 2002:34). A symbol of the gentile Church in the quest for Christ, the Queen appears here with the webbed feet of a goose, stepping over a stream on a trunk laid as a bridge into the water separating her from Solomon – i.e. from Christ. According to the *Legenda aurea*, the treetrunk, prophesied and revered by her as the wood of the Cross, was buried by Solomon at the bottom of that stream, later to become the Sheep Pool, from which it re-emerged unexpectedly just before the Passion of Christ (ibid. 36). In other traditions that formed among Christian pilgrims in Jerusalem, towards the end of the Middle Ages, the stream is identified with the Cedron (↗Gihon): e.g., in the ↗itineraries of Gabriele Capodilista (1458), Arnhold von Harff (1496–99) and Friederich von Liegnitz (1507; s. CerPal vol. 1, 255f., 349f., and 363f. [cp. 347, 359], nos. 44, 69.III and 74, and Conti Rossini 1947:196f., on [Queen] Sibyl in von Harff).

The theme experienced its most far-flung development in the visual arts: during the Middle ages, since the 12th cent. at least, the Queen became a symbolic statuary figure to be seen in the company of apostles, prophets, patriarchs and kings over great cathedral doors (e.g., at Amiens, Chartres, Dijon, Le Mans, Rheims and Wells). Her visit to Solomon was also a popular subject in sculpture and painting (e.g., in the Parma Baptistry, with her statue by Benedetto Antelami; cp. also the stained glass of King's College Chapel at Oxford), where she is either standing or enthroned beside him – the coronation of the Virgin being alluded to in the latter case. Soon identified with the "black and beautiful" Bride of the *Song of Songs*, allegedly credited to Solomon, the Queen was in fact viewed as a foreshadowing of St. ↗Mary (hence the medieval cult of the "Black Madonna").

The same elements were again dealt with by European painters from the 14th to the 16th cent., whose taste for pageantry and display was definitely attracted by the figure of the Queen: first and foremost, in the fresco cycles by Agnolo Gaddi in the basilica of Santa Croce in Florence (1380s), and by Piero della Francesca in the basilica of San Francesco at Arezzo (1452–57; s. ill.), where she is the visible sign of the *concordia Ecclesiae*, much sought after in order to combat the Muslims around the middle of the 15th cent.

Further outstanding interpretations of the legend in sculpture, painting and drawing, or even embroidery and tapestry, are then provided by such artists as Konrad Witz, Lorenzo Ghiberti, Giovanni di Apollonio, Raphael, Giovanni Francesco Penni, Albrecht Altdorfer, Maître Philippe, Paolo Veronese, Jacopo Tintoretto, Rubens, Nicolaus Knupfer, Jacques Stella, Juan de la Corte, Claude Vignon, Erasmus Quellin II, Claude Lorraine, Johann Heinrich Schönfeld, Mattia Preti, Sebastiano Ricci, Francesco Solimena, Balthasar Beschey; not to mention book illustration and cartography from the 15th to the

The reception of the Queen of Sheba by King Solomon, from *The Legend of the True Cross* cycle, fresco by Piero della Francesca; ca. 1452–57, Arezzo, church of San Francesco; from Pennacchietti 2002:37, fig. 12

19th cent., of which the Queen is also an important feature (s. Red. – Bayer 1971:109f.; Ugucciоni 1988; Gribaudo 2000:118–52, 157–67; Simpson 2002:41–50). An impressive series of artefacts, circus spectacles and movies shows that the Queen became an influential figure in 19th- and 20th-cent. western popular culture (Llewellyn-Jones 2002).

Significant literary traces of her, more often with reference to Sibyl and/or Judas Iscariot and/or the magic ring the Queen gave to Solomon, are scattered in several late-medieval and early-modern texts more or less familiar with Oriental (Palestinian or Egyptian) lore: e.g., the *Pantheon* of Goffredo da Viterbo, finished in 1186 (Cerulli 1968:123ff.); a German version of the legend of the Magi written ca. 1350 in Cologne (ed. Röricht – Meisner 1886:49); the speech of the Ethiopian monk Ṗeṭros at the Council of ↗Florence in 1441, immediately translated into Latin (Cerulli 1933:353); and a Catalan chronicle, the *Biblia Pequeña*, compiled slightly later (Id. 1968:118f.). Of special interest, in this respect, are the Portuguese (↗Portugal) and ↗Jesuit writings on Ethiopia, based on a first hand knowledge of the country, the Christian tradition of which they tried to reinterpret in Catholic terms (↗Historiography).

Better known, though, are the occasional mentions of the Queen in the works of William Shakespeare (*Henry VIII*, V, 4), George Wither, Lascelles Abercrombie and Rudyard Kipling, as well as the specific "auto sacramental" on her by Pedro Calderón de la Barca, *El árbol del mejor fruto*, reworked in *La Sibila del Oriente y gran reina de Sabá* (I, 3, and 11: "es imperatriz y reina Sabá / [...] sino a Nicaula Maqueda", ultimately inspired by Josephus and the Portuguese and Jesuit writings, s. Cerulli 1968:132); and then the poems by Robert Browning, *Solomon and Balkis* (1883), Eugénio de Castro e Almeida, *Belkiss, Rainha de Sabá, d'Axum e do Himyar* (1894), Arthur Symons, *The Lover of the Queen of Sheba* (1918), and William Butler Yeats, *Solomon to Sheba* (1919) and *Solomon and the Witch* (1921) – the latter two also reflecting "several facets of the oriental legend" (Ullendorff 1968:143f.; s. Wilson 1960:276ff.). Interestingly enough, writers of the 19th and 20th cent. often betray greater ingenuity in the use of legendary material made accessible by contemporary scholarship. Some of the most comprehensive treatments of the figure of M. and her story are by Jewish authors, especially intrigued by her relationship with Solomon (s. the list in Red. – Bayer 1971:109).

Francisco ↗Alvares, an eye-witness to early 16th-cent. Ethiopia, who contributed to making her traditions known to western culture, deserves a special mention. The Ethiopian legend of the Queen is reported in his book for the first time, also an account of a "very long [or, ancient] chronicle" found in the cathedral of Aksum (↗Aksum Ṣəyon) – most likely, a copy of the ↗*Kəbrä nägäśt*. Thus, according to him, Aksum was the seat of several queens: M. the Queen of Sheba, ↗Candace and Gudit (↗Ǝsato), confused with the previous one. In particular, it "was the city, court and residence (as they [i.e. the Ethiopians] say) of the Queen Saba [whose own name was Maqueda] who took the camels laden with gold to Solomon, when he was building the temple of Jerusalem" (BeckHuntAlvar 145–48 [ch. 37]; cp. Munro-Hay 2002:246). The account of M. ("Marquerda") by the Augsburg physician Leon(h)ard Rau(ch)wolf(f), a pilgrim to the Holy Land in

1575/76, also depends upon the *Kəbrä nägäśt*, but by way of information given to him by the "Abyssinians" of ↗Jerusalem, who added the curious detail of Mənilək ("Meylich") branding his companions on their cheeks by fire to prevent them from leaving Ethiopia (s. CerPal vol. 2, 25f.).

A few centuries later, in 1940, Adolf Jakob ↗Mayer, also well-acquainted with Ethiopian tradition, published his novel *Makéda, Reine vièrge* (adapted into French by Gabriel d'Aubarède), where he follows, as far as the ↗Səmen highlands, the fabulous tracks of one of the "lost tribes" of Israel forced to flee in the "Second Exodus" from Egypt.

M. was not any less attractive to musicians: the introductory symphony to Act III of Georg Friedrich Händel's oratorio *Solomon* (1748) is known as "The arrival of the Queen of Sheba"; operas on her were composed by Charles Gounod, *La Reine de Saba* (1862), and Karl Goldmark, *Die Königin von Saba* (1866–71).

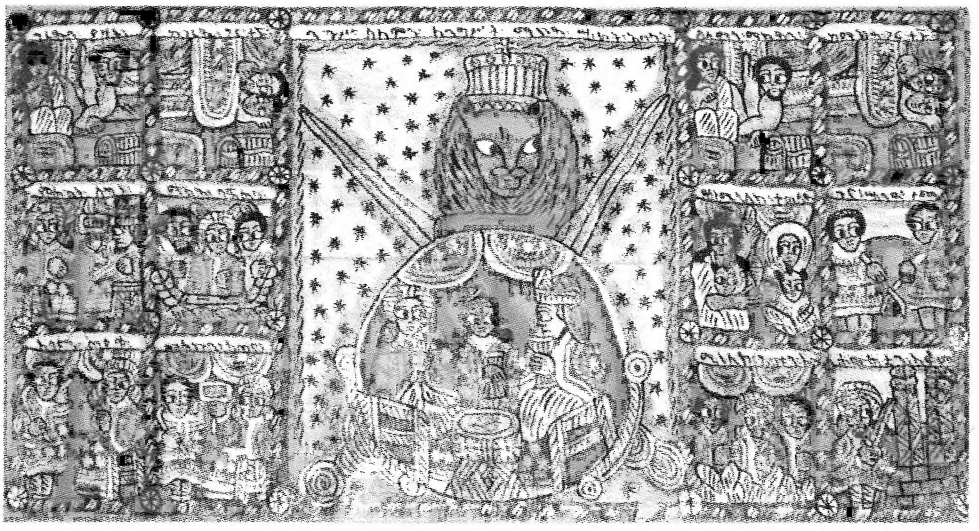
Gianfranco Fiaccadori

Makəddа in art

The story of M. and her son ↗Mənilək I fathered by king Solomon was given visual form at the beginning of the 20th cent., and immediately became one of the most popular subjects of traditional Ethiopian ↗painting. Displaying the numerous episodes and arranged in a cartoon-like series of scenes, the composition was, and still is, manufactured in considerable numbers, now mostly aimed at the tourist market. Some of these are signed and dated.

It is possible that the idea of illustrating the story came from Hugues ↗Le Roux, who ca. 1900 commissioned from Mikaʾel Ǝngəda Wärq a series of five pictures for the book entitled *Magda Queen of Sheba*. The painting purchased by the Russian diplomat A. Kohanovskij (preserved in St. Petersburg's Peter the Great Museum of Anthropology and Ethnography ["Kunstkammer"] of the Russian Academy of Sciences), with four episodes (no. 2594–9B) dates back to approximately the same time (two separate images in the same collection, nos. 2594–9 and 2594–9A, also represent M.). While the set ordered by Le Roux had the pictures separately, the two latter sets present each scene in a separate frame, arranged together into one large tableau. The two canvases published in the *National Geographic Magazine* in 1931 are of the same type. One, with three episodes, was used as a frontispiece for the 1930 French translation of the chronicle of Mənilək II (GueCopMen), the other, with four scenes, dates from 1928 and is preserved in Staatliches Museum für Völkerkunde, München (no. 77–12–5).

These early examples depict only the main events of the story which follow the text of the ↗*Kəbrä nägäśt*: the circumstances of M.'s visit to Solomon and the departure of M. for home. The further development of the pictorial narrative followed two directions. First, the illustration of a Təgrayan tale of a hero killing a snake (↗Arwe) and identified as M.'s father was insert-



Story of Makədda and Mənəlik in 13 scenes: in the middle Makədda and her servant dining with Solomon; painting on parchment, 20th cent., Horniman Museum, London, no. 1973/263; photo 1995, courtesy of Michael Gervers

ed at the beginning. Later on, an epilogue was added, based once again on the *Kəbrä nägäśt* and depicting the story of Mənilək I, his birth, visit to his father and return to Ethiopia with the ↗Ark of the Covenant.

From this three-series set of pictures the "classical" format of the painting emerged, with 44 scenes displayed in four rows of 11 episodes each. Starting in the upper left corner it reads, row by row, from left to right. The scenes, square or rectangular, are contained within frames often used as a background for Amharic legends (↗Inscriptions) describing each depicted event. Sometimes these texts are placed inside the pictures. In some particularly elaborate paintings these are relatively long and skilfully calligraphed (e.g., the painting by a certain Wäldä Mikaʾel, Völkerkundemuseum der Universität, Zürich, no. 10408).

Although paintings with a series of 44 narrative scenes are the most commonest, there are also shorter and longer variants, as well as some deviating from the standard pictorial arrangement of the story. In the painting belonging to the Horniman's Museum, London (no. 1973/263; s. ill.), the middle scene, representing Solomon dining with M. and her servant, is flanked by twelve episodes, six on the left and six on the right. The paintings by Afäwärq Mängäša executed ca. 1970 (private collection in Germany and London, BriMus no. AF 1991, 8:24, 25) present the story in 72 episodes divided between two pieces of skin: 34 scenes relate to the introduction, 23 to the main story, and 15 to the epilogue.

Beside the multi-pictorial representations of the legend there are pictures representing a single scene. Thus, a piece belonging to the American Museum of Natural History, Washington DC (no. 19.1/6173) depicts Solomon and M. banqueting; another one, in the Museum of Ethnology, Basel (no. 12849), the arrival of M. before Solomon; and a painting in the Horniman's Museum, London (no. 19.4.66/20x), M. giving Solomon a golden chain.

Most of the paintings, usually measuring ca. 70–90 cm high and 130–220 cm wide, are executed on canvas or tanned skin. The painters use very bright, commercially produced colours, which include gold and silver otherwise absent in Ethiopian traditional painting and introduce such anachronistic details as ↗firearms or European furniture. Being examples of mass-produced art, they seldom represent a high artistic level but may be used as important ethnographic sources because of the faithfully rendered scenes from Ethiopian daily life (domestic activities, the ↗*gənna*-game), the depiction of utensils, luxury objects (regalia), clothes etc.

Although the *Kəbrä nägäśt* manuscripts were not illuminated, the story of M. became the subject of miniatures that decorate various texts on the traditional history of Ethiopia, all composed in the 20th cent. E.g., among others, rarely pictured episodes on the wood of the Holy Cross, the manuscript in the Kreuz collection (Hammerschidt – Jäger 1968, no. 35) contains 92 miniatures related only to M.'s story (fols. 28v–29r, 36r). A manuscript, formerly in the collection of Sam Fogg, contains 20 miniatures painted in "Ethiopian style" by a certain Mr. Litter, the employee of the British Council in Addis Abäba. It represents 40 episodes and follows the iconography of the traditional "cartoon painting".

Makīn b. al-ᶜAmīd, Ğirğis al- ↗Giyorgis Wäldä ᶜAmid

Mäkʷännən Däməssäw

Bitwäddäd M.D. (መኮንን ደምሰው; b. 1884, d. 14 February 1936, near Amba Aradom, Təgray) was an eminent commander during the ↗Italian war of 1935–36. His father, *ras* Däməssäw Näsibu (husband of Assälläfäčč Wände until 1901) and his grandfather, *afä nəguś* ↗Näsibu, were prominent officials of *aṣe* ↗Mənilək II. His mother was *wäyzäro* Däbritu Kaśa. When *ras* Däməssäw was appointed governor and went to Wälläga, the young M.D. accompanied his father.

In June 1931 M.D. was appointed Minister of Justice, and in 1932 he became governor of Wälläga, Guduru and Leeqaa. He had the reputation of a just and generous ruler. As a member

Mäkʷännən Däməssäw; photo courtesy of the IES

of the Supreme Court, M.D. initiated "a new legal policy of a highly progressive nature" (Burgoyne 1967a:304).

At the beginning of the Italian war of 1935–36 M.D. raised an irregular army that numbered nearly 12,000 soldiers. On 1 October 1935, M. left ↗Arğo in Wälläga, and led his troops towards the northern war front in Wällo and Təgray. On its way the army was reviewed by *aṣe* Ḫaylä Śəllase I in Addis Abäba, with whom M.D. had a personal audience.

On 5 February 1936 M.D.'s army was ordered to leave ↗Koräm where it had been positioned, and march to the foot of ↗Ambalage, on the heights of which the forces of *ras* ↗Käbbädä Mängäša Atikäm were situated. Ignoring the advice of *ras* Käbbädä, M.D. proceeded further to ↗Amba Aradom in order to support *ras* ↗Mulugeta Yəggäzu. Leaving the bulk of his army on the Mahara plain behind Amba Aradom, M.D. led a small group of his men into attack on 13 February 1936, attempting to halt the encircling left wing of the Divisione Sabauda of the Italian forces in ᶜAddi Akäyte. The Ethiopians seized the enemy positions, losing half of their men. M. himself was mortally wounded while leading the centre flank. M. was taken by his people to a safe place where he continued commanding his army from the rear. Then he was transferred to a cave in Mahara where he died the next day. In order to transport his body to Wälläga, the officers had to cut it into two parts and place them in two sealed

war drums (↗*Nägarit*). Soon after the army left May Ḉäw, it was bombarded by the Italians, and a bomb hit a mule carrying one of these drums. The shattered drum was collected and buried by the road side under a tree. The second war drum was then buried at the near-by St. George's church. After the end of the Italian occupation, the drums were collected by M.D.'s widow, *aṣe* Ḫaylä Śəllase's niece, *ləᶜəlt* Yäšašwärq Yəlma, and reburied in ↗Qəddəst Śəllase Cathedral in Addis Abäba.

Getachew Metaferia

Mäkʷännən Dännäqä

Brigadier General M.D. (መኮንን፡ ደነቀ, b. 28 August 1912, Addis Abäba, d. 11 March 2003, Addis Abäba) was the son of *qäññazmač* Dännäqä Yämər and *wäyzäro* Zäritu Ǝwnätu. After completing his traditional education at ↗Qəddəst Śəllase Cathedral in Addis Abäba, he entered the Täfäri Mäkʷännən Secondary School in 1923. In 1932 M.D., along with other young Ethiopians, was sent to Belgium to receive military and police training at the Gendarmérie Royal College. After two years of training he returned to Ethiopia, was promoted to the rank of Lieutenant and served as police commissioner in ↗Dərre Dawa. At the beginning of the Italo–Ethiopian war of 1935–36 M.D. took part in the resistance against the advancing Italian forces in the ↗Ogaden region. Soon he was captured bythe enemy forces and brought to Addis Abäba. He served as an interpreter for the Italian police commander, General Manberini. However, at the same time he worked closely with Mäkʷännən Wäldä Yoḥannəs (brother of ↗Wäldä Giyorgis Wäldä Yoḥannəs), *balambaras* Gäbrä Mädḫən and *ato* Dawit ᶜƎqubäᵓəgzi, who covertly communicated with *aṣe* ↗Ḫaylä Śəllase I in exile, and with the patriots Abbäbä Arägi and Gärräsu Duki, reporting to them on the movements and intentions of the Italians.

After Liberation, M.D. collaborated with the British during the short transitory period of the British Military Administration. On 5 May 1941, when Ḫaylä Śəllase victoriously entered Addis Abäba, M.D. was part of the cavalry that escorted him to the imperial palace.

In 1942, M.D. was promoted to the rank of Major and served as the Emperor's representative in Käfa Province for nine months. Then he was transferred back to Addis Abäba and served with the reconstituted ↗Imperial Bodyguard. Three years later, he was promoted to the rank of Lieutenant Colonel and served as the first Ethiopian Assistant Police commissioner after the Italian occupation. During the ↗Coup d'état 1960 attempt, M.D. was wounded, receiving twelve shots to the lower part of his body, but he survived.

M.D. held several important posts under Ḫaylä Śəllase: he was the Emperor's Chief of Protocol; Ethiopia's ambassador to France and to Morocco for a total of ten years (1962–72). He served in the senate of the Ethiopian parliament for eight months before the fall of the Emperor in 1974. Under the new regime he was jailed for six years.

Mäkʷännən Dästa

M.D. (መኮንን፡ ደስታ, b. 1910, Goğğam, d. 1966) was an Ethiopian intellectual, patriot and politician in post-Italian Ethiopia, and a filmmaker, as well as the first university-educated anthropologist of Ethiopia (Zitelmann 2001). He hold the title of *däğğazmač*.

During the 1920s he went to the Täfäri Mäkʷännən School at Addis Abäba. He continued his studies at the American University of Beirut. He then changed to Harvard University to study medicine where he later switched to anthropology. M.D. returned to Ethiopia in 1935, as a research assistant to the American anthropologist Carleton S. Coon (Coon 1936:20–24). Following the Italian occupation, M.D. fled via Goğğam to the Sudan. He became a teacher of mathematics at the English Mission College in Koubbeh, Cairo. In 1941 he returned to Ethiopia, and joined the patriots (↗Resistance) as a liaison officer for British support units in Goğğam (Zitelmann 2001:165; Shireff 1995:300 et passim). In the first post-independence ↗government of *aṣe* Ḫaylä Śəllase I M.D. served as Minister of Education (up to 1944) and re-established the Ethiopian educa-

Scene illustrating the modernization of Ethiopia from the film of 1956 co-directed by Mäkʷännən Dästa; capture, Asien-Afrika-Institut, Universität Hamburg

tional system. Afterwards he was transferred to the Ministry of Post and Telegraphic Department (Zitelmann 2001:169f.; Hussey 1959). In 1952 he served as governor of ↗Wälläga.

Dăğğazmač M.D. used his anthropological insights in promoting a decisively "patriotic" policy towards Ethiopian unity, including linguistic Amharization through the educational system (Zitelmann 2001:171). A short career as a filmmaker for the German newsreel "Deutsche Wochenschau" culminated in 1956 in the documentary film "Äthiopien, Kaiserreich zwischen Gestern und Morgen" (directors: M.D., Manfred Purzer and Admasu Badima).

Thomas Zitelmann

Mäkʷännən Ǝndalkačča̍w

Ras bitwäddäd M.Ǝ. (መኮንን፡ እንዳልካቸው, b. 17 February 1890, Addisge, d. 27 February 1963, Addis Abäba) was both an accomplished politician and writer.

M.Ǝ. was son of *balambaras* Ǝndalkačča̍w Abräqä and *wäyzäro* Abonäš Täklä Maryam. He received a traditional church education at ↗Däbrä Libanos and was then educated at the Emperor's court; all his life M.Ǝ. was a close friend of *aṣe* ↗Ḫaylä Śəllase I.

In 1914/15, M.Ǝ. married *wäyzäro* Zäwditu Mängäša, daughter of *ras* ↗Mängäša Atikam of Goğğam. Their son, ↗Ǝndalkačča̍w Mäkʷännən, almost equalled his father's career in its distiction.

From 1916–26 M.Ǝ. was officially appointed *ləğ* and made governor of Wämbäru, Abiččuu and Masit. In 1926 M.Ǝ. was made ↗*näggadras*; the same year he became chief inspector of the Franco–Ethiopian ↗Railway company. In 1927 he was sent to London as Ethiopia's representative. In 1931 he became ↗*käntiba* of Addis Abäba. A year after this he received the appointments of Deputy Minister of the Interior and Governor of Sibu, Guddaya and Genğ. In 1934 he became a *dăğğazmač* and was made Governor of Illubabor.

When Italy invaded Ethiopia in 1935 (↗Italian war 1935–36), M.Ǝ. commanded one of the armies that fought on the Ogaden front. After the defeat of the Ethiopian armies, he fled to ↗Jerusalem when the Emperor left for Britain, and at the Emperor's request he worked with Ethiopian refugees in Palestine.

Wäyzäro Zäwditu died in 1935, and in 1936 M.Ǝ. married *ləᶜəlt* Yäšašwärq Yəlma, daughter of Ḫaylä Śəllase's brother ↗Yəlma Mäkʷännən and widow of *ras* ↗Gugsa Arᵊaya and ↗Mäkʷännən Dämməssäw. Their daughter Assälläfäčč Mäkʷännən was the wife of *dăğğazmač* Ammәḫa Abärra, son of *dăğğazmač* ↗Abärra Kaśa Ḫaylu.

After the Liberation M.Ǝ. embarked on a rapid career in the ↗government. In May 1941 he became the Minister of the Interior and Chairman of the Council of Ministers. In this capacity he signed the agreement with the ↗United Kingdom on 30 January 1942 concerning Ethiopian sovereignty. Later the same year he was appointed Prime Minister. On December 1944 he became President of the Assembly established to renegotiate the "agreement" between Ethiopia and Great Britain concerning Ethiopian independence. In 1945 he was Ethiopia's representative inSan Francisco, where the Chapter of the ↗United Nations was signed. In 1957 he received the title ↗*ras bitwäddäd*, which can only be awarded once by the Emperor, and appointed President of the Senate.

M.Ǝ.'s first novel *ᶜAläm wärätäññа* portrayed the tribulations of the heroine, Yayne Abäba, and her family. This novel reflected the author's view that the world's only justification is to test the pure in heart. His second work, the play *Yädäm dəmṣ*, expressed M.Ǝ.'s concerns about the Italian occupation; it dramatized the martyrdom of *abunä* Ṗeṭros, a bishop of the Ethiopian church

Mäkʷännən Ǝndalkačč̣äw;photocourtesy of the IES (no. 7–1)

shot by the Fascists. The short novel *Yädəḳočč̣ kätäma* portrayed a wealthy businessman's inner struggle between the spiritual urgings of his foreboding dreams and the advice of a good man. M.Ǝ.'s autobiography *Mälkam betäsäbočč̣* was reprinted, along with many of his other works, in a collection entitled *Arrəmuññ*. As the leader of one of the country's most powerful feudal families, M.Ǝ.'s writings often depict an idealistic picture of a social system in which the aristocracy use their wealth and power for the benefit of the common people.

M.Ǝ.'s former residence in Addis Abäba today houses Dənqənäš Fine Arts Gallery.

Galina Balashova

Mäkʷännən Habtäwäld

Elder brother of ↗Aklilu Habtäwäld and Akalä-wärq Habtäwäld, M.H. (መኰንን፡ ሀብተወልድ; b. 28 October 1894, d. 16 December 1960) came from a clerical family. He had his traditional education at ↗Ǝnṭoṭṭo Raguʾel on the northern outskirts of Addis Abäba. He served as a ↗*diyaqon* and was engaged with his fellow-student, ↗Takkälä Wäldä Ḥawaryat, in reading prayer books to the ailing *aṣe* ↗Mənilək II at the palace.

M.H. started his administrative career as a customs official and rose to become Director and Director-General in the ministries of Agriculture, Finance and Commerce before the outbreak of the ↗Italian war of 1935–36. He was instrumental in setting up the Ethiopian Patriotic Association (s. ↗*Hagär Fəqər Tiyatər*) to mobilize the Ethiopian public for the war effort. He was aided in this objective by writers such as ↗Yoftahe Nəguśe and ↗Wäldä Giyorgis Wäldä Yoḥannəs. After the victory of Fascist forces, he went into exile in France, where he founded and ran an external wing of the Association.

Soon after the Liberation in 1941, M.H. was appointed Minister of Commerce and Agriculture. He used his position to withstand effectively the machinations of the British to control Ethiopian finance and foreign trade. M.H. was instrumental in setting up the Development Bank and the Ethiopian National Corporation. The latter, with a share capital of 1,300,000 Maria Theresa thalers, exercised a monopoly over the export of cereals to war-torn Europe and the Middle East. He also helped to create the Ethiopian Society for Commerce and Transport (popularly known as *Maḫbär bet*) to exercize the same kind of monopoly over import items, notably cotton goods. The British, who resented his tight control of the import-export trade, dubbed him an "ultra-nationalist" and accused him of extortionist practices. M.H. is quoted as having retorted by saying: "If one Ethiopian robbed another by profiteering, at least the money remained in Ethiopia".

M.H. continued to foster and promote the *Hagär Fəqər* as a centre for modern music and drama and a forum for public debates and lectures. The association even ventured into the media world with the launching of the newspaper *Yäʾityopya dəmṣ* ('The Voice of Ethiopia') and the magazine ↗*Mänän* in 1955. It also served as a venue for promoting harmony between Ethiopian Christians and Muslims, a matter that constantly preoccupied M.H. both in his private

capacity and as part of his government charge. An office to facilitate the annual pilgrimages to ↗Mecca was thus set up in the Association.

M.H. also briefly served as Minister of Interior. But it was as Minister of Finance that he probably left his enduring impact on imperial bureaucracy. His tenure was marked by a distinctly personal type of leadership and a premium on enhancing income and curtailing expenditure. While Minister of Finance, he also took charge of the information services, something that considerably enhanced his power. Once a close friend and ally of the powerful Minister of Pen, *ṣäḥafe təʾəzaz* Wäldä Giyorgis Wäldä Yoḥannəs, he later fell out with him and is believed to have played a pivotal role in the latter's downfall in 1955. Thereafter, M.H. became a power-broker in ↗Ḫaylä Śəllase I's regime, helping to catapult his brother Aklilu to the post of Prime Minister in 1961.

A man of frugal tastes and ascetic disposition, M.H. was also known for his hard work and his generosity to those in need. He was also reputed to have created a powerful private intelligence network. Indeed, M.H. is reputed to have got wind of the coup that Brigadier General ↗Mängəśtu Nəway and his brother ↗Gärmame were plotting in December 1960 (↗Coup d'état 1960) and to have alerted the Emperor. The brothers were then forced to go ahead with the coup rather precipitately. When it failed, M.H. was one of those who was massacred at the Green Salon of the ↗Gännätä Ləʿul palace in the plotters' final act of desperation.

Mäkʷännən Ḫaylä Śəllase

M. (መኰንን፡ ኃይለ፡ ሥላሴ, b. 16 October 1923, Addis Abäba, d. 13 May 1957) was the third child of *aṣe* ↗Ḫaylä Śəllase I and *ətege* ↗Mänän Asfaw. He received his education at St Christopher's School, Bath, Wellington College and Gordonstoun, while staying with his father in exile during the Italian occupation. After the Liberation in 1941, he was given the title of

Märəd azmač Mäkʷännən Ḫaylä Śəllase; from ClapHS 34f.

mäsfənä Harär (Duke of ↗Harär) which made him the governor general of the large province of ↗Harärge. In 1944, he became governor of the town but spent most of the time at the Emperor's court in ↗Addis Abäba. In 1946, he married Sara Gəzaw, with whom he had five sons (Ṗawlos Wäsän Sägäd Mäkʷännən, Mikaʾel Ammәḫa Iyäsus Mäkʷännən, Dawit Mäkʷännən Mäkʷännən, Filəppos Täfäri Mäkʷännən and Bäʾədä Maryam Mäkʷännən).

Rumours have it that M. was the favourite son of the Emperor and that his father preferred the succession to be passed to him rather than to his elder brother, *alga wäraš* ↗Asfa Wäsän Ḫaylä Śəllase. Respected as a good officer serving in the ↗air force and an imaginative businessman, M. was well known for his love of women and fast cars. The latter hobby eventually led to his death from injuries during a car accident on the way to ↗Adaama. He was buried at the ↗Qəddəst Śəllase Cathedral, Addis Abäba.

Mäkʷännən Wäldä Mikaʾel

Ras M. (መኮንን፡ ወልደ፡ ሚካኤል, b. 8 May 1852, Däräro Maryam, Gola, d. 22 March 1906, Qulləbi Gäbrəʾel) was a 19th-cent. political figure. His father was *däğğazmač* Wäldä Mikaʾel Gudisa, a renowned governor in ↗Dobaʾa and ↗Mänz, and his mother *wäyzäro* Tänañña Wärq, daughter of *nəguś* ↗Śahlä Śəllase.

In 1865, M. was invited to *nəguś* Mənilək's (future ↗Mənilək II) court at ↗Fəčče, where he engaged in military training and imbibed the skills of statecraft. He also acquired a common-law wife who gave birth to their son ↗Yəlma. In 1876, he left her to marry Yäšimabet Ali, the 11-year-old daughter of *wäyzäro* Wälättä Giyorgis and Ali Abbaa Ğifaar of Wällo. She died on 14 March 1894, two years after she gave birth to Täfäri (↗Ḫaylä Śəllase I). M. never took another wife, aside from a brief union with Məntəwwab, a niece of ↗Ṭaytu, which comprised an attempt by the Empress – who resented M.'s authority – to establish some influence over him, but the marriage was never consummated and was soon annulled.

In 1876, M. was awarded the rank of ↗*balambaras*, and by 1881 personally commanded about 1,000 well-armed troops. The same year he joined a campaign against the ↗Oromo who were disrupting caravans from ↗Taǧūra, and in 1882 he fought in ↗Arsi. He participated in the battle of ↗Ǝmbabo, faced the Arsi Oromo in fierce fighting for a second time, and led the troops that captured the enemies' field cannons at ↗Č̣ällänqo.

Ras Mäkʷännən Wäldä Mikaʾel; photo courtesy of the IES (no. 398–1)

Following the conquest of ↗Harär, M. was promoted by Mənilək to ↗*däğğazmač* and granted the governorship of the region, then suffering from an economy in shambles, insecure trade routes, a water shortage, and impending famine and social tensions between indigenous Muslims and incoming Christian settlers. Testimonies portray him as fair and just in his treatment of all subjects (except the Somali), and as impartial in the innumerable disputes he adjudicated. He introduced new systems of taxation and managed to promote Christian-Islamic relations. In 1887, M. pushed the expansion of the empire to the east and south of Harär. His troops conquered parts of the ↗Ogaden, ↗ʿIssa and the ↗Gadabuursi territories in the following two years. In 1890, a reinforcement was sent to Harär from Addis Abäba that enabled M's forces to occupy almost all of the Ogaden by 1891.

At Harär M. enjoyed good relations with expatriates, including ↗Capuchin missionaries and a growing number of Europeans en route to the capital. From them he learned as much as possible about the outside world. It seems he especially appreciated ↗Russians, who unlike western Europeans were Orthodox Christians and did not have colonial pretensions in the Horn. M. also shared with Mənilək his passion for ↗firearms. He imported weapons, most of which were shipped to Šäwa and many were later put to use at the battle of ↗ʿAdwa, but he employed some locally to subdue or extract tribute from Ogaden Somalis.

M.'s learning and loyalty, as well as his familiarity with Europeans, made him a logical choice to lead Ethiopian missions abroad. His first trip took place in 1889–90, to witness ↗Rome's formal ratification of the Treaty of Wəč̣ale (↗Italo-Ethiopian Treaty of Friendship and Commerce), which provided a welcome opportunity to buy modern arms and ammunition. On 1 October 1889 he signed the so-called Additional Convention of 1889. On the way home M. stopped in ↗Jerusalem, where he purchased land on behalf of his government, and the Greek Patriarch presented him with a gold crucifix in which a sliver of the True Cross was embedded. In April, after arriving at Addis Abäba, he was raised to the rank of ↗*ras*.

In December 1890, M. participated in the Ethio-Italian debates about Article 17 of the Treaty of Wəċale, condemning Italy's position. Back in Harär, he hardened and disciplined his well-equipped troops with raiding expeditions to the south and east, where they captured cattle and sheep to restock highland herds decimated by the rinderpest epidemic (↗Epidemics). In 1892, M. was summoned to Šäwa because of Italian intrigue in ↗Təgray, insurrection in ↗Goğğam, and an attempted palace coup which threatened to destabilize the internal political situation. The *ras*, who during this period was awarded the French Legion of Honour, spent much of the coming two years participating in internal and diplomatic discussions about Article 17.

In early 1895, tensions with Italy increased and, despite problems of security in Harärge that could have excused him, M. took part in the ↗Italian war 1895–96. At ᶜAdwa he had a prominent role; he was twice wounded and his life was reportedly saved by his son Yəlma. Succesively, as part of Mənilək's policy, M. subdued several sheikhdoms along the Sudanese border. In 1897, he participated in the negotiations for the delimitation of the boundary between ↗British Somaliland and Ethiopia that formed part of the Anglo-Ethiopian Treaty of 1897. In 1898, he helped suppress a rebellion in Təgray and was subsequently appointed governor there, as well as in Harärge. After fully pacifying the northern province a few months later, he requested to be relieved of his second governorship. Mənilək consented and publicly clarified his affection by declaring M. heir to the throne, although some sources suggest he first did so after the battle of ᶜAdwa. The announcement consternated Empress Ṭaytu, probably because she hoped for the nomination of one of her own relatives.

Back in Harär, M., beginning in 1899, helped coordinate combined Ethio-British manoeuvres against *sayyid* ↗Muḥammad ᶜAbdallāh Ḥasan. He also built a hospital and schools, encouraged the construction of the railway (↗Railways), and imported a printing press. In 1902, he went to London as Mənilək's representative at King Edward VII's coronation, and while in Europe toured Paris and Zurich. Apparently most impressed by what he had seen in France, upon his return to Harär he asked Dr. Joseph ↗Vitalien and Father André ↗Jarosseau to teach the ↗French language to his son Täfäri. He also concentrated on governing Harärge and advising the Emperor from afar, often by telephone or telegraph.

In early 1906 as the Eritrean Governor Ferdinando ↗Martini was going on an official visit to Ethiopia, Mənilək summoned M. to Addis Abäba. M., however, never reached the capital for he fell ill and died on the way. The news was phoned to Addis Abäba, where Mənilək commenced three days of intense grieving, before hosting a lavish ↗*täzkar*.

Respected domestically and internationally, *ras* M. was probably among the most progressive Ethiopians during a critically important era. As a mastermind of Ethiopia's military strategy at ᶜAdwa and as a top diplomat, he played central roles in defining modern Ethiopia's boundaries, negotiating its international relations, and guaranteeing his country's freedom from imperialism for another two generations.

Mäkʷəriya Abəyähoy

Nəburä əd M.A. (መኩሪያ፡ አብየሆይ; b. 22 March 1898 [13 *Mäggabit* 1890 A.M.], Gurğ Mikaᵓel, Šäwa; d. 22 March 1998 [13 *Mäggabit* 1990 A.M.], Addis Abäba) was a prominent ecclesiastic of the ↗Ethiopian Orthodox Täwaḥədo Church.

Born to *mämhər* Abəyähoy Abəy and *wäyzäro* Wäsän Yälläš Bäzarde, M. began his traditional ↗education in Laᵓa Mädḫane ᶜAläm (Mänz) with *märigeta* Śəyyum. He was certified in liturgy (by *mämhər* Gäbrä Kidan), *qəne* (by *aläqa* Ṭəbäbu Gämme), the *Fəṭḫa nägäśt*, O.T. (by Bəluy Täkle) and N.T. (by *mämhər* Bälay). After completing all stages of education, M.A. replaced his deceased teacher *mämhər* Bälay teaching *qəne* and N.T. at ↗Däbrä Bərhan Śəllase (Gondär). Several years later, he came to Addis Abäba where he was assigned by the Patriarchate to ↗Mänbärä Mängəśt Qəddus Gäbrəᵓel Church as teacher of N.T., the *Fəṭḫa nägäśt* and the liturgy. At the same time he kept improving his knowledge of the subjects, e.g., studying the liturgy with *mämhər* Gäbrä Kidan (later *abunä* Mikaᵓel), N.T. with *aläqa* Ḫəruy, and O.T. with Bəluy Täkle (at Mäkanä Śəllase, today Bäᶜalä Wäld, in Arat Kilo).

M.A. was also active in writing down the orally transmitted traditional biblical commentaries (↗*Andəmta*). The texts of most of the commentaries of the N.T. books published by the Patriarchate were prepared by M.A. In addition, he prepared for publication such religious books as ↗*Dərsanä Mikaʾel*, ↗*Dərsanä Gäbrəʾel*, and ↗*Mäzgäbä haymanot wäṣälot* among others.

At different times, M.A. served as head of the Treasury Department of the Patriarchate, the Council of the Church Scholars (*Gubaʾe liqawənt*; s. ↗*Liq*), Qäranyo Mädḫane ᶜAläm church and St. Paul's Theological School.

In November 1950, M.A. was appointed ↗*nəburä əd* of ↗Aksum Ṣəyon, with the double responsibility of governing the city along with the cathedral and the then Aksum *awraǧǧa*. He greatly contributed to the development of the holy place and the area. During his tenure the new Cathedral of St. Mary at Aksum was built (1954-64), Aksum St. Mary's Hospital and Aksum Secondary School were established. The town also received a new running water system.

In 1967/68, M.A. was appointed member of the Senate. There, he actively tried to introduce new regulations. The topics of his governmental reports ranged from the importance of Agricultural Income Tax to the significance of the ↗Gəᶜəz language and the detrimental influence of alcohol. *Aṣe* Ḫaylä Śəllase I appointed him to the Constitution Revising Commission. M.A. also contributed to the drafting of the ↗Penal, Commercial and ↗Maritime codes. A rare case among traditional scholars, M.A. learnt English.

M.A. was married to *wäyzäro* Assäggädäčč Wäsäne and was father of ten children. He died at the age of 100 and was buried at the ↗Qəddəst Śəllase Cathedral; later his body was transferred to ↗Ǝtissa Täklä Haymanot.

Mersha Alehegne

Mäläʾəkt: Mäṣḥafä mäläʾəkt

The M.m. (**መጽሐፈ፡ መላእክት**, 'The Book of Angels') is one of a number of apocryphal works concerned with the fate of the soul after death. It relates the manner in which the soul is judged on the basis of its deeds as recorded by the Angel of Light and the Angel of Darkness. The pure soul is taken to Heaven when the Angel of Darkness has failed to seduce the person during his lifetime. The soul of the wicked is confined to ↗Sheol, where the evil angels rejoice.

M.m. itself is clearly based upon a section of the ↗*Dərsanä sänbät*, the same work that was adapted to form a section of ↗*Təʾəzazä sänbät*.

Leslau has speculated that at one time M.m. and ↗Baruch formed a single work based on the Apocalypse of ↗Paul, "just as the Book of Angels corresponds to the beginning of the Apocalypse of Paul, the Apocalypse of Barok [Baruch] is related to the latter part. An abridged version of both these Falasha writings seems to be the Apocalypse of Gorgorios" (Leslau 1951:51). Only further research employing additional mss. will provide a definitive answer concerning the inter-relationship between the different works.

Mäläk Sägäd ↗Śärṣä Dəngəl

Mälʾakä Śäḫay Iyasu

M. (**መልአከ፡ ፀሐይ፡ ኢያሱ**, b. ca. 1916, Ṭəlṭal, ↗ᶜAdal lowlands, d. 4 October 1938) was the illegitimate son of *ləǧ* ↗Iyasu and Aṣädä Maryam Täklä Maryam, daughter of *mäggabi* Täklä Maryam from ↗Bulga. Born probably soon after Iyasu had been deposed as emperor, he was first taken care of by *wäyzäro* Śäḫayä Wärq Darge (daughter of *ras* ↗Darge Śahlä Śəllase, and married to *näggadras* ↗Täsämma Ǝšäte). Śäḫay Wärq, by that time divorced, gave him into the care of *mämhər* Yərdaw, head of the monastery

of Abəyye Gädam, who brought him up and supervised his initial traditional education.

M.'s existence and whereabouts were kept secret until the death of Ṣäḥayä Wärq in prison in 1925, whereupon Yərdaw, fearful that the secret about his charge would leak out, told Empress ↗Zäwditu and *ras* Täfäri (later Emperor ↗Ḫaylä Śəllase I) about him, and they asked Yərdaw to go on caring for him, which he did. When the Italians invaded Ethiopia in 1935 and Ḫaylä Śəllase fled the country in 1936, the freedom fighters, feeling the need for a leader from the imperial family to unite the resistance movement, considered the three sons of Iyasu, Mənilək, Yoḥannəs and M. When both Yərdaw and M. himself resisted the appointment of M. as emperor, he was taken by force by the freedom fighters in Bulga, crowned emperor 2 September 1937 at Wägfäle Mikaʾel church in Bulga and anointed by Yərdaw. Due to his youth and inexperience, he was given "guardians", at first *fitawrari* Wäldä Mädḫən, later *balambaras* ↗Abbäbä Arägay, whom he made *ras*. M. functioned as a rallying point in Šäwa for the freedom fighters for about a year and a month, and when he died, after a week's illness, some suspected foul play. He was buried at Zoma Täklä Haymanot church near Ankobär.

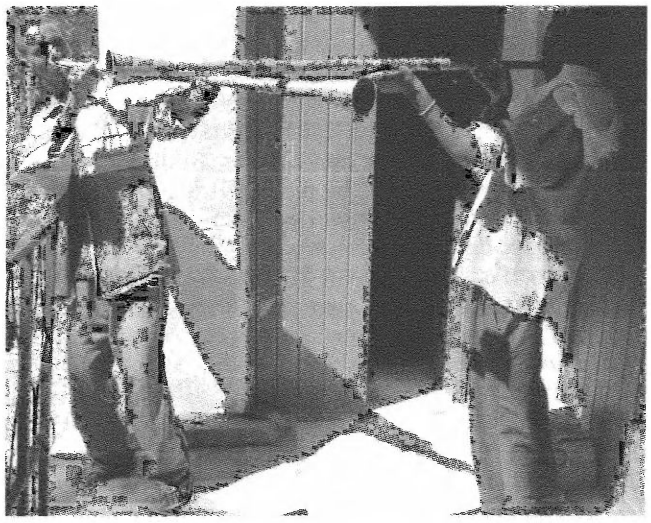
Mäläkät

M. (መለከት) is a long, usually cylindrical side-blown trumpet with a bell-shaped mouthpiece. M. are found among the Amhara and Təgrayans, in northern and central Ethiopia (Šäwa, Bägemdər, and Təgray), and in southern Eritrea (Säraye and Ḫamasen). During a ceremonial state function, M. traditionally were used to accompany royal proclamations heralding the approach of the king or another high ranking official or authority. M., ↗*nägarit* and ↗*əmbilta* were often employed together, and were included in the insignia of royalty. Like the *əmbilta*, the M. is said to have been played by slaves, due to a belief that blowing on wind instruments damages the player's health (Ashenafi Kebede 1971:163ff.). More recently, the M. can occasionally be seen as a member of an instrumental ensemble such as that used as part of ↗Orchestra Ethiopia in 1964 (Kimberlin 2005:196, fig. 6).

The M. is at least one metre in length. The proximal end has a mouthpiece and no finger holes and



*Mäläkät*s of *aṣe* Yoḥannəs IV, kept at Däbrä Bərhan Śəllase, ᶜAdwa, Təgray; photo 2005, courtesy of Wolbert Smidt

the distal end is capped with a flared bell-shape metal or cow horn, or gourd that may be adorned with shells or beads. Occasionally a M. may have a finger hole and/or no mouthpiece. M. are made of metal (e.g. copper, brass), wood, or bamboo, the latter two sometimes having incised decorative marks burnt into the shaft or being covered with leather, skin, or cloth. Although the shape of the M. is usually cylindrical, the instrument can be slightly conical, the smallest end being at the mouthpiece, and the largest being at the throat of the bell right before the flare begins.

The player can choose a pitch using overtones or harmonics. This is done by the player changing his embouchure in which the sound is projected outward through the bell-shaped aperture. The mouthpiece allows the musician's lips to play without touching the sharp and restricted edge of the M. tube itself. The shape of the mouthpiece affects the timbre, sound quality and ease with which the M. can be played. Intonation is produced when the airstream passes through the player's vibrating lips (creating a "buzzing" sound", whereby gaining intermittant access to the air column which is made to vibrate. The rim diameter can be either big or small; a large rim allows for more assured striking of the notes while a smaller rim improves endurance but decreases flexibility.

Mäläkotawit

Wäyzäro M. (መለኮታዊት, lit. 'Divine'; d. 20 February 1626), was the first daughter of *aṣe* ↗Susənyos by his spouse ↗Wäld Säʾala.

M. spent her early years in Däfäśa, Amhara, together with her mother and siblings, sister Gälilawit and brother Känafrä Krəstos (BTafA 247; PerChron 43).

Shortly upon his assuming imperial power, Susənyos married M. to one of his faithful lieutenants from the time when he was still a ↗*šəfta* with aspirations to the throne, ↗Yolyos, whom he at the same time declared governor of ↗Goǧǧam. This was done to spite the powerful *ras* ↗Atnatewos, the kingmaker in those days, who was both the governor of Goǧǧam and a son-in-law of *aṣe* ↗Särṣä Dəngəl. Yolyos was then involved in a series of uprisings against Susənyos, who, after having punished and pardoned him several times "for the sake of his daughter" (as in 1609; s. PerChron 132), ceased tolerating his son-in-law's disobedience and eventually defeated him in battle. Bairu Tafla mentions that M. might have betrayed her husband, disclosing his plans to her father (BTafA 942).

After 1624, according to Almeida's account (in BecRASO VI), M. married *ras* ↗Zäkrəstos, who later, in 1630, married her sister Wängelawit. M. also received lands in the parish of ↗Qoma Fasilädäs, founded by her mother Wäld Säʾala.

Ethiopian annals have little more to say about M., the "short chronicles" noting only her death in the 20th year of Susənyos's reign. Dombrowski, relying on unspecified sources, says that M. was killed in her sleep by an adherent to the Alexandrian faith (DombrChr 195, n. 315).

An inscription on the western wall of the *mäqdäs* in ↗Däbrä Sina Gorgora mentions that its paintings were commissioned by a certain M. It is not clear, however, whether this M. was the daughter of Susənyos as suggested by Cheesman (1936:196f.), the wife of *aṣe* ↗Iyasu I or another princess by the same name (Bosc-Tiessé 2000).

Inscription mentioning a certain Mäläkotawit as a patron of the paintings; Däbrä Sina Gorgora; photo 2006, courtesy of Michael Gervers

Mäläkotawit

Ǝtege M. (መለኮታዊት, d. 13 October 1708) was one of *aṣe* ↗Iyasu I's many concubines, and the mother of his son and successor, ↗Täklä Haymanot. Her parents are not known; she had at least two brothers, Ṗawlos and Dərmən (or Därmän). *Wäyzäro* M. lived on her estate in Aläfa south-west of Lake Ṭana, whereas Täklä Haymanot lived with his father in ↗Gondär and took part in his campaigns.

M. craved for power and wanted to take her chance when Iyasu abdicated and Täklä Haymanot assumed power. It

was reportedly under her influence that on 26 June 1706 Täklä Haymanot sent ↗Fəśśəḥa Krəstos together with M.'s brothers Ṗawlos and Dərmən to Iyasu's refuge on ↗Däq island to confine him to his palace on the island of Č̣əqla Mänzo. Later that same year M. sent her brothers to Iyasu once again, this time with the order to imprison him on ↗Wähni Amba. Iyasu refused to obey and was killed on 13 October 1706: Dərmən stabbed him with a ↗lance, the other soldiers beat him with a gun and burnt Č̣əqla Mänzo palace down.

Täklä Haymanot showed his gratitude by appointing Dərmən *däğğazmač* of Goğğam and Ṗawlos *däğğazmač* of Bägemdər. Dərmən continued his active services for the crown by suppressing numerous revolts, killing, among others, the pretender to the throne ᶜAmdä Ṣəyon on 3 October 1707. He also freed ↗Yosṭos who was later again confined by the king.

In spring 1708, Täklä Haymanot crowned his mother M. ↗*əṭege*.

On 30 June 1708, *aṣe* Täklä Haymanot was killed whilst hunting by Gäbärma Kaśa and Wäraf who stabbed the king with a lance. Power remained in the hands of *ras* ↗Fares until a new king, Iyasu's brother *aṣe* ↗Tewoflos, was enthroned. The latter ordered the prosecution of all those who participated in the conspiracy against Iyasu, including M., Dərmən and Ṗawlos. Dərmən was put in chains by his family and sent to prison in Gondär; Ṗawlos was captured in the monastery of Wälättä Ṗetros in ↗Qʷäraṣa and confined in the house of Yosṭos. Täklä Haymanot's murderer Gäbärma Kaśa was also seized. The accused were sentenced to death according to the Old Testament principle of "an eye for an eye, a tooth for a tooth" (Ex 21:24): Dərmən and Gäbärma Kaśa were killed with a spear; the soldiers who participated in Iyasu's murder with a gun; and Ṗawlos and M., who had not shed Iyasu's blood but had participated in the conspiracy, were bloodlessly hanged on a pole in the Addäbabbay, the central square of ↗Gondär, on 13 October 1708. To make the biblical vengeance complete, the corpses were dragged out of the camp and stoned.

M. may have been the patron of the paintings in ↗Däbrä Sina Gorgora, if the name M. found on the western wall of the *mäqdäs* refers to this queen.

Mälaku Amanu'el Bäyyan

M.B. (መላኩ፡ አማኑኤል፡ በያን, b. 29 April 1900, Wällo, d. 4 May 1940) was a political agent and one of the first American-trained Ethiopian physicians. The son of *grazmač* Bäyyan and *wäyzäro* Dästa, he grew up serving as a pageboy and attendant in the Harär palace of *ras* Täfäri Mäkʷännən (later ↗Ḫaylä Śəllase I), his mother's first-cousin. In 1921, together with Bäšawəräd Habtäwäld and Wärqu Gobäna, he was sent by Täfäri to study in India for one year, and in 1922 the three, supported by Thomas ↗Lambie, were sent to the ↗United States to continue their education at the Presbyterian Muskingum College, New Concord, Ohio. He first had to complete his secondary education. On obtaining the school-leaving certificate in 1925, he entered the college and graduated in 1928. He then majored in chemistry at Ohio State University and in medicine at Howard University, Washington, DC, where he graduated in 1935. While at Howard, he married an African-American, Dorothy Hadley, by whom he had a son, Mälaku. In 1930, he also made a trip to Ethiopia following news of the confrontation between *ras* Täfäri and *ras* ↗Gugsa Wale.

In the United States, M.B. recruited a number of Americans to serve as advisors to the Ethiopian government and worked to build bonds between Ethiopians and black Americans, encouraging the latter to visit Ethiopia. M.B. wanted to seek an internship in the United States but the ↗Italian War 1935–36 made Ḫaylä Śəllase recall him to Ethiopia. A year later, he accompanied the Emperor into exile to the United Kingdom as physician, interpreter and secretary. In September 1936, M.B. became the Emperor's special envoy to the United States. He had no official standing with the American government but as a spokesman tried to make the public aware of the situation in Ethiopia. In 1937, he founded the Ethiopian World Federation and the ↗*Voice of Ethiopia* newspaper, in which he eventually accused the famous Marcus Garvey of taking the side of Italy by criticizing Ḫaylä Śəllase, calling Garvey "a militant usurper and hypocrite". In 1939, M.B. suffered a nervous breakdown, attributed to overwork, and died the following year.

Mälaku Aššagəre

M.A. (መላኩ፡ አሻግሬ, b. 1929 A.M. [1936/37 A.D.], Addis Abäba, d. 8 June 1993) was born in the Gulläle sub-district of Addis Abäba during the initial stage of the Italian occupation. After the attempt on the life of Rodolfo ↗Graziani, M.A.'s parents, *ato* Aššagəre Wärqənäh and *wäyzäro* Wärqənäš Yəzähawal, took him to their own birthplace at Wabi Śəllase in Ǧərru district of Northern Šäwa.

M.A. came back to Addis Abäba at the age of seven and began his traditional ↗education at the church of Mädḫane ᶜAläm in Qäčäne where he became a deacon admired for his chanting voice. M.A. also served in St. George, Mark and John churches in Addis Abäba.

After his father died, M.A. joined ↗*Hagär Fəqər Tiyatər* (then *Yähagär Fəqər Maḫbär*) ca. 1947/48. He became a singer, an actor, prolific playwright and director.

M.A. has written and staged some 24 plays on many different stages but most in *Hagär Fəqər Tiyatər*. The plays, which enjoyed popularity, dealed with social and every day situations and problems in matrimonial relations. He had formed his own troupe and toured the country with his performances.

Asfaw Damte

Mäl'aku Bäggosäw

M.B. (መልአኩ፡ በጎሰው, b. 1900, Goǧǧam, d. 1940, Cairo) was one of the first Ethiopian dramatists. Having received a traditional Ethiopian ↗education in ↗*zema bet* and ↗*qəne bet* in ↗Däbrä Gännät Elyas, he became a ↗*däbtära* in Addis Abäba. In 1934 M.B. started writing plays for performance by students in the "School Theatre" of Mənilək II Secondary School, one of the first theatres in Ethiopia. At the beginning of the ↗Italian war 1935–36 he left his home country and lived in an Ethiopian monastery in Jerusalem.

The writings of M.B. were based on traditional Ethiopian literature. He did not know any foreign languages and thus was not under the influence of western literary standards. Though none of his plays was published, two of them have been staged. His historical drama, ትልቁ፡ ዳኛ (*Təlləqu daññа*, 'The Great Judge'), staged at the opening of the "School Theatre" in November 1934, enjoyed great success. As one of the first dramatists to write national drama, M.B. turned to Ethiopia's ancient history for inspiration, basing the plot on the legend of King Solomon as related in the ↗*Kəbrä nägäśt*. The second play, ዘነበች (*Zännäbäčč* [proper name]), was staged in 1942/43.

In his anthology, Yəlma Därässa (1940/41) describes M.B., together with ↗Yoftahe Nəguśe, as a playwright worthy of imitation.

Galina Balashova

Malaria

M. (Amh. ወባ, *wäba*, Tgn. ዓሶ, *ᶜaso*, Orom. *busaa*) is an infection caused by any of the four species of *Plasmodia* transmitted by the Anopheles mosquito. All four species of M. are present in Ethiopia: *Plasmodia falciparum* accounts for ca. 60 % of cases, *Plasmodia vivax* for ca. 40 % and the others constitute less than 1 %. Additionally, transfusion of infected blood may lead to infection. Symptoms begin 10–14 days after being bitten. The patient develops fever, chills, anaemia, and an enlarged spleen.

M. is a major public health problem in Ethiopia. It is found in about 75 % of the total area of the country, and 40 million (> 65 %) of the total population is at risk of infection. M. transmission is seasonal and depends on altitude and rainfall. Transmission usually occurs at altitudes below 2,000 m A.S.L. The two main seasons for transmission of M. in Ethiopia are

September–December, after the heavy summer rains, and March–May, after the light rains. M. epidemics are frequent and widespread in the country. Most of the areas affected by epidemics are highland or highland fringe areas (mainly 1,000–2,000 m A.S.L.), in which the population lacks immunity to M. Occasionally, transmission occurs in areas previously free of M., including areas above 2,000 m A.S.L., in which the microclimate and weather conditions are favourable for M. Recently, hybrid ↗maize cultivation has been shown to facilitate the spread of M.

M. remains the major cause of morbidity and mortality particularly in sub-Saharan Africa. M. annually affects 4-5,000,000 Ethiopians. While 400,000–600,000 have positive blood films each year, the remainder are diagnosed based on clinical signs and symptoms. In 2001 and 2002, 607,699 cases were reported. This disease was the primary cause of outpatient visits in 2000–01 (10.4 %, next was intestinal parasites with 6.7 %), the primary cause of hospital admissions (14.8 %, second was pneumonia with 8.9 %), and the third highest cause of death (4.6 %, after tuberculosis, 10.1 %, and pneumonia, 7.3 %). Seven percent of admissions to Gondär Medical College in 1995–2000 were for M., and in 1999 there were 6,023 cases in Addis Abäba alone. The death rate of Gambella children with severe M. was 22 %. In addition to the affects M. has within Ethiopia, it is inadvertently carried to other countries by travellers and refugees.

In 1958 an estimated three million cases of M. resulted in 150,000 deaths over six months. As a result of this, M. control efforts began the following year. Early diagnosis and treatment of M. is the primary component of M. control in Ethiopia, though some vector control to decrease the mosquito population is also practiced. Control services were decentralized and moved to regional health bureaux in 1993. The Roll Back Malaria campaign, which began in 1999, aimed to reduce M. rates by 50 % within a decade. Besides, the propagation of impregnated bed-nets and development of a regional warning system for epidemics should have positive results. Due to chloroquin resistance, fansidar (pyrimethamine-sulfadoxine) is the main treatment used against the disease.

In 2005 it was observed that the dichloromethane extract of the roots of Kniphofia foliosa Hochst (*Asphodelaceae*), which have long been used in traditional medicine for the treatment of abdominal cramps and wound healing, displayed strong in vitro antiplasmodial (antimalarial) activity against the chloroquine-sensitive 3D7 strain of *Plasmodium falciparum*. Among the compounds extracted from the roots of the plant chryslandicin inhibited the growth of *Plasmodium falciparum*.

Richard M. Hodes

Mäläsay

The M. (Eth. መለሳይ, from Arab. ملساى) were an important force within the army of ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ"). Their precise status, however, is not fully clear.

ᶜArabfaqīh's ↗*Futūḥ al-Ḥabaša*, our main source on the M., suggests, on the one hand, that they were an elite unit (possibly originating in ↗Harär or in the area controlled by the Muslim state of ↗ᶜAdal) with a notable equestrian component. The historic records have preserved names (s., e.g., BassHist 36 = 84f. and Stenhouse 2003:50) of some of those "true conquerors and warriors of faith, upon whom the *imām* could always rely in battle" (*ahl al-ġazw wal-ǧihād al-aṣlī al-muᶜtamadᶜalayhim fī l-qitāl*; BassHist 52 = 111, Conti Rossini 1946:181). On the other hand, in several instances the term M. is used in ethnic juxtapositions. Within the joint *ǧihād* army M.

are regularly contrasted with the ↗Somali fighters, but also with the ↗Ḥarla, the Arabs and even the Mahra from ↗Ḥaḍramawt (e.g., BassHist 36, 52, 64, 110, 129, 346 [text]). Since the ↗ᶜAfar are the only major people not contrasted with M. it seems likely that they themselves were ᶜAfar. The fact that the terms ᶜAfar or Danākil never actually appear in the *Futūḥ* might indicate that M. is simply the text's ethnonym for the ᶜAfar. The connotation of elite fighters could then possibly refer to a pro-ᶜAfar bias of the author, perhaps facilitated by his hagiographic attitude towards Grañ who himself was of partly ᶜAfar descent.

When the term M. passed from the Muslim sphere into Christian Ethiopian usage it lost its original ethnic and elite connotations. In some parts of the "short chronicles" (DombrChr 39 [text] = 162 [tr.] and n. 76; KrLebD 14ff. [text]), the term M. serves as a generic term for ᶜAdalite Muslims, denoting sometimes Aḥmad Grañ himself (s., e.g., RicEnbYoh v, 194f., 222) as well as Muslim troops of the Ethiopian Christian army (e.g. CRHist 36 [text] = 42 [tr.]) – a shift of meaning possibly facilitated by the identical three root consonants in M. and *əslamay* ('Muslim') and a seemingly similar morphological pattern.

Whatever the term's precise original reference, its etymology is unclear. Neither the guess of Praetorius (1910:621f.) that it was a deliberate distortion of *əslamay*, nor that of Basset (BassHist 84, n. 4 [tr.]; s. also RicEnbYoh v, 223), who suggested an interpretation as 'converts' based upon special meanings in Amharic and Təgrəñña, can be accepted, even if both have found their way into dictionaries (LesCDic 345; they are also mentioned in the English translation of the *Futūḥ* 2003:50 n. 186 and 383 n. 896). Little can also be found to support the suggestions of Conti Rossini (1946:181f.), as Ricci showed (RicEnbYoh v, 223). Whilst the dictionary by Abdurrahmān Maḥammad Qorram (1984:34) offers as explanation of M. as "councillor (*ammakäri*)" who has many ideas/solutions (*balä bəzu mäla*) in stock, the etymology recently suggested by Morin (MorDicAfar 222) seems worth consideration: the term might derive from ᶜAfar *malás* or *maláys* ('try to kill', 'shooter').

According to Kropp (1990), who systematically analyzed Arabic, Ethiopic and European sources, the label M. is still used in Harär to denote a military officer's rank (the meaning also registered by dictionaries; s., e.g., Leslau 1963:107, 1965:116, with no guess as to etymology), or as a title in the context of Harari youth mobs. This use is reflected in the 80-verse-long soldier song *Mäläsay fäqär* (ᶜAbdulmuhaymin ᶜAbdunnāsir 1995:41–44, no. 11).

Mälazo

M. (መላዞ) is an area in Təgray, ca. 10 km southeast of ↗Aksum, where several archaeological sites are located (for location s. May ᶜAyni). The cover term M. is used to indicate M. proper, as well as the adjacent archaeological sites of Gobo Čela (Gobo Sela), Ǝnda Çärqos, and Mäzabär. The nearby site of ↗Ḥawəlti is closely associated with M., both often referred to as the Ḥawəlti-M. area.

M. proper is a site of ca. 1 ha on a gently sloping terrace area above the north-western portion of the May Agᶜazen Basin. It was explored by the groups of Leclant and de Contenson during the 1950s–60s and by Michels in 1974. The site surface includes ↗pre-Aksumite and early ↗Aksumite culture period material culture, including dense potsherd concentrations, stone artefacts, and architectural rubble.

Gobo Čela is located on bluffs above the south-eastern portion of the May Agᶜazen Basin in an area referred to as Taḥtay-M. The site contains multiple mounds of rubble and artefacts dating to the pre-Aksumite and Aksumite periods. Artefacts include a group of cylindrical ↗incense altars with engravings of the disc and crescent symbol (cp. ↗Moon), a white-coloured stone statue of a bull, two round alabaster altars with tripod legs, and numerous dedicatory ↗inscriptions to ↗Almaqah (RIÉ 20, 22, 23 + 26, 24 + 27/or 23 + 27, 24 + 26/, 28–32). During October 1955 and April 1956 Leclant excavated two mounds. Mound A near the edge of a bluff contained a variety of ancient features, including a rectangular paved enclosure, walls, and artefacts that were attributed to the pre-Aksumite period. Mound B contained, among other things, intact two m-high walls, ruins of interior stairs, and a marble plaque fragment.

Ǝnda Ċärqos was excavated by de Contenson in 1958. Under remains of a circular building, a rectangular-shaped basilica-type church structure was revealed, probably dating to the Aksumite period (↗Church buildings). Built into this church were two earlier inscriptions of the pre-Aksumite period, one of which, almost complete, was compiled by a certain LMN, a local ruler, who bore the titles of "king" (MLKN) and of "*mukarrib* of ↗DᶜMT and SBʾ" (RIÉ 5). In its final invocation the gods ↗ᶜAstär, ↗HWBS, ↗Almaqah, ↗D̲āt Ḥimyam, and D̲āt Baᶜdān are mentioned.

Mäzabär, just north of Ǝnda Ċärqos on a plateau of the same name, covers an area of about one ha. In 1958 de Contenson documented the ruins of a two-room stone ↗house structure measuring 8.6 m x 4.2 m and containing steps and wall rebates of Aksumite type. Potsherds, a bronze hook, a fired clay oil lamp, a bronze pin, and a ceramic cup with an incised cross decoration were found here. In 1974 Michels documented an area just north-west of the house with a high density of jasper artefacts suggestive of an ancient stone-tool manufacturing area, for which an early Aksumite age is indicated both by associated pottery and by obsidian hydration dating. Analysis of ceramic sherd collections and obsidian hydration sample collections suggest dating to the early Aksumite culture period.

Mälʾəkti Sälam

M.S. (መልእክቲ፡ ሰላም, 'Message of Peace') is a periodical printed in ↗Təgrəñña that was first edited in 1909 by Olof Eriksson (1878–1962), a missionary from the ↗Swedish Evangelical Mission (SEM) in Eritrea. The first issue came out in March 1909 in Asmära and introduced the aim of the paper with the words: "This paper ... wants to bear testimony to Christ, announcing that he wants to be the king of this nation ... In this paper, you will find sermons, admonitions and good narratives, beneficial for the faithful as well as for the entire population." At first, M.S. was issued four times a year. Later on, it was issued once a month. The 1915 edition included articles in both Təgrəñña and Italian. The periodical printed a selection of articles on church-related subjects, such as sermons, poems, adages, world news, news on worldwide missions, other faiths, biblical figures, Church Fathers, royalty in Italy and Sweden, and mission leaders in Sweden.

The publication of M.S. was interrupted between 1915–48 due to the Italians' inimical attitude towards the SEM, as well as World War II. Distribution was resumed in 1948 under the auspices of the Evangelical Church of Eritrea (ECE). In 1951–69 the publication was issued by the ECE together with the Lutheran Church of Eritrea. Since Eritrea's independence in 1991, M.S. has become a regularly issued church paper with an emphasis on the life and activities of the ECE. From its inception in 1909, M.S. has always been a forum for general education and the enrichment of Təgrəñña as a language.

Mälfa

M. (መልፋ; 13° 38' N, 39° 8' E), the historical capital of Dägʷᶜa Tämben (Tgn. 'Upper Tämben')

in central Təgray, is today only the centre of a *ṭabiya* (administrative centre for several *qušät*, 'village[s]'); traditionally M. was also used as the name for the surrounding region (for location s. Märäb). It also temporarily served as the capital of *rəʾəsä mäkʷanənt* Kaśa Mərčʼa (later *aṣe* ↗Yoḥannəs IV).

M. lies well protected in a mountainous area in Däg^{wc}a Tämben and served as the seat of the governors of ↗Tämben, such as *šum tämben* Wäldä Kidan, *šum tämben* Ḥanṭal, and *šum tämben* Mərčʼa Wäldä Kidan. Kaśa Mərčʼa was raised here; he made M. his first capital as a rebel governor of Təgray (1867), before he moved his base to ↗Aksum and later Agula^{c} in ↗Ṣəra^{c}, when he became emperor.

Aṣe Yoḥannəs IV then appointed the influential *däğğazmač* Wäḥadä Lawṭe, from a side line of the family of the *šum tämben* (s. ↗Lawṭe Zäwde), governor of Däg^{wc}a Tämben in M. Later, however, the importance of M. decreased; ↗^{c}Abiy ^{c}Addi in the warmer Q^{w}älla Tämben ('Lower Tämben') assumed more importance as a capital, and, as a consequence, many migrated to the latter.

Mural on canvas on the western wall of the *mäqdäs* of Ǝnda Maryam, Mälfa, representing the Virgin and Child and *aṣe* Yoḥannəs IV with his attendants as supplicants; painting by *aläqa* Ǝsṭäzya, 19th/20th cent.; photo 2004, courtesy of Michael Gervers

In 1943 A.M. [1950/51 A.D.] the newly appointed governor of Tämben *däğğazmač* Gäbru Gäbrä Ḥəywät from Siḥäta in ^{c}Agamä finally moved the governor's seat from M. to the nearby, more easily accessible, flat, but muddy highland area called May ^{c}Aläqṯi (lit. '[place of] infected water'), calling his new city there ↗Hagärä Sälam.

Due to its relative inaccessibility, the area of M. again became the centre of a rebel government in the 20th cent. After the *Därg* lost control over Təgray, the ↗Tigray People's Liberation Front had its headquarters in nearby ^{c}Addi Gäzaʾiti, from 1989 until assuming power in May 1991.

The church of Ǝnda Maryam, also called Mälfa Ṣəyon, is believed to have been founded in the early 18th cent., during the reign of *aṣe* ↗Iyasu I, along with the monastery around it. The baptismal church of *aṣe* Yoḥannəs IV, it was richly endowed by the Emperor and keeps paintings showing Yoḥannəs and his followers, by *aläqa* ↗Ǝsṭäzya, and objects from his reign. Today there are ca. 20 monks in the monastery.

Mālikism

M. (Arab. *al-maḏhab al-mālikī*; *mālikīya*) is one of the four schools (*maḏhab*, pl. *maḏāhib*) of Islamic law (*fiqh*) in Sunni ↗Islam. M. is named after the jurist *imām* Mālik b. Anas al-Aṣbaḥī (d. 795 in Medina), whose doctrine it has adopted. It was also known as the School of Ḥiğāz or the School of Medina. One of the distinguishing features of *imām* Mālik's legal methodology was his use of the normative practices (^{c}*amal*) in Medina as a source of law. He recorded traditions, opinions and customary practices, together with his own observations, in his collection the *Kitāb al-Muwaṭṭaʾ*. Some scholars have asserted that Mālik used *raʾy* (personal opinion) and *qiyās* (analogy) in expounding legal rules. In the 9th and 10th cent. Mālik's successors – especially in North Africa – systematized more elaborately the M. School. Among the most important works of his successors are: *al-Mudawwana al-kubrā* by

Qayrawānī Saḥnūn (d. 854), a collection of M. jurisprudence and *ar-Risāla* by Ibn Abī Zayd al-Qayrawānī (d. 996), a précis of M. law. An influential compendium of M. law was *al-Muḫtaṣar*, composed by the Egyptian jurist Ḫalīl b. Isḥāq al-Ǧundī (d. 1374).

In the early medieval Islamic period the M. *maḏhab* succeeded in spreading mainly to North Africa and Muslim Spain. Nowadays, the M. School is predominant in Morocco, Algeria, Tunisia and Libya in North Africa. It also has a significant presence in Upper Egypt, Sudan, Bahrain, United Arab Emirates, Kuwait, and is the predominant legal rite of the Muslim communities of West Africa (e.g., Senegal, Mali, Niger, Togo, Nigeria and Chad).

In north-east Africa, the M. is present in parts of Eritrea and is associated, in its diffusion (both early and contemporary) with influences from the Sudan. The *Ḥanafī* and *Šāfiᶜī* schools preceded the introduction and establishment of the M. School in the Eritrean area, through wide-ranging and extensive contacts with the Arabian Peninsula (↗Šāfiᶜism) and the influence of Ottoman and Egyptian rule in the region (↗Ḥanafism). The earliest and strongest presence of M. is among societies of western Eritrea, yet the diffusion of Islam to other parts of the area in the 19th cent. brought the *maḏhab* to various Muslim communities in Sämhar, Saḥəl (traditionally *ḥanafī*) and also to the ↗Ǧäbärti on the highland plateau. It seems that the ↗ᶜAd Šek holy family was active in that process. According to oral data collected by the author, the Ḥāmid ᶜĀbid (referred to also as ᶜAbdu Ḥāmid) mosque in Massawa (no longer in use) was associated with the M. *maḏhab*.

A census conducted in Eritrea in the Italian colonial period (1931) identified the M. school as having a majority of followers with 65 % (*ḥanafis* 26 % and *šāfiᶜīs* 9 %), whereas Pollera estimated that the *ḥanafis* constituted the majority (PollEr 285f.). In the mid-20th cent. Trimingham noted that the M. rite was prevalent among the ᶜAd Šek (Saḥəl, Barka and Sämhar), ↗Beni ᶜAmər, sections of the ↗Ḥabab, Barya, Kunama, Algäden, Säbdärat, Ḥalänga, Aflända, sections of the Ǧäbärti as well as among immigrants from the Sudan. He also noted the existence of M. among the ↗Wäyṭo of Lake Ṭana in Ethiopia. (TrIslam 153, 232f.).

Various *qāḍī* lists prepared by Eritrea's Grand Mufti, *šayḫ* ↗Ibrāhīm al-Muḫtār, show that between the turn of the 20th cent. and ca. 1965 M. *qāḍī*s intermittently held office in most of Eritrea's towns and cities, regardless of the regional distribution of the legal rites. Most M. judges in that period were identified as members of the Təgre-speaking Beni ᶜAmər and ↗Marya groups. But there were also judges from the ᶜAd Täkles, ᶜAd Mäᶜalləm, Asaorta, ᶜAd Dərqi, ᶜAd Šek Ḥāmid, Ḥalänga, and Bedawi (↗Beğa) groups and clans (Ibrāhīm al-Muḫtār [1966]).

In the colonial era, especially after the Italian conquest of ↗Libya (1911), the Ministry of Colonies charged such prominent Italian Orientalists as ↗Guidi and Santillana to translate into Italian Ḫalīl b. Isḥāq's *Muḫtaṣar* which was subsequently published in 1919. Several other Italian colonial handbooks on M. law were published in the 1920s.

Although he identified himself as a *ḥanafī*, Eritrea's first Grand Mufti, Ibrāhīm al-Muḫtār, studied and wrote on the four Sunni legal schools, including the M. It appears that when in the mid-1920s he travelled to continue his religious studies in the Sudan, he expressed concern at his school's arguing that studying exclusively the M. *fiqh* would make his training useless after his eventual return to Eritrea. He therefore took private lessons in Omdurman (Umm Durmān) with the merchant and *ḥanafī* jurist, *šayḫ* Muḥammad al-Qūṣī. Ibrāhīm al-Muḫtār continued his studies in al-Azhar where he deepened and perfected his interests in Islamic jurisprudence. In the late 1930s he prefaced, revised and commented on the text *al-Masāʾil al-fiqhīya allatī lā yuᶜḍaru fihā bil-ǧahl* ('Matters of Jurisprudence which cannot be Pardoned on the Account of Ignorance', also known as *Masāʾil lā yuᶜḍaru fihā bil-ǧahl ᶜalā maḏhab al-imām Mālik*), written by the M. jurist Bahrām b. ᶜAbdallāh b. ᶜAbdalᶜazīz (d. 1402) which had already been commented upon by the scholar Muḥammad b. Muḥammad as-Sinbāwī Amīr al-Kabīr (1742–1817). His edition of Bahrām's text has been reprinted in Beirut (1986) and Cairo (1996). One unverified source points to another text written by Ibrāhīm al-Muḫtār (which might have been published in a journal such as *Maǧallat al-Azhar*) with the title *al-Madḫal al-waǧīz fī ṣṭilāḥāt as-sāda al-Mālikīya* ('A Brief Introduction to the Terminology of the Mālikī Masters').

Among several M. texts that are diffused in contemporary Eritrea one finds editions of the *Risāla* of Ibn Abī Zayd al-Qayrawānī (d. 996) and the *Muḫtaṣar* of the Algerian Abū Zayd

ᶜAbdarraḥmān al-Aḫḍarī (b. 1514) (s. more in Gori 1995).

In Ethiopia, M. seems to be present only in the areas along the Sudanese border (HusIslam 66) and, at least in the past, among the Wäyṭo and Ǧäbärti (TrIslam 153). Little is known about the diffusion of M. in other parts of Ethiopia, yet influences from the Sudan may have made some impact in further regions of the country. The famous 19th-cent. Wällo scholar and saint *al-ḥāǧǧ* ↗Bušrā āy Muḥammad was apparently influenced by M. during his stay in Sudan where he became a disciple of Aḥmad aṭ-Ṭayyib al-Bašīr. He is reported as sitting on the floor of the *ḫalwa* (place of spiritual retreat) of his master after it had been washed with a mixture of water and cow dung (which for M. does not defile ritual purity), while another Ethiopian *šayḫ* was very attentive to keep his clothes away from the impure liquid (HusIslam 107). Later, Sudanese *mālikī* learned men visited *al-ḥāǧǧ* Bušrā in Gäta. One of them, *šayḫ* ᶜAbdalkāfī, who had previously been to Wälqayt, came with 100 students wishing to teach law according to M. *Al-ḥāǧǧ* Bušrā, however, asked him to refrain from doing so as the dominant *maḏāhib* in the region were the *šāfiᶜī* and *ḥanafī* (ibid. 109). Thus, M. did not spread though it did have some influence. In a booklet on the legal rules of pilgrimage to ↗Mecca, recently translated and published by ↗Muḥammad Walī (1991/92) the M. position is given the same importance as that of the other law schools.

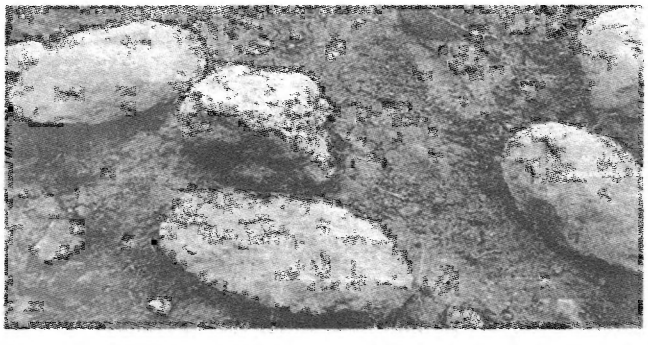
Mälka Qunṭure

M.Q. (መልካ፡ ቁንጡሬ, or Mälka Konṭure; 8° 40' 60'' N, 37° 37' 60'' E, 2,726 m A.S.L.) is an archaeological, paleoanthropological, and paleontological site area located on both banks of the upper ↗Awaš River near the community of Mälka Awaš, ca. 50 km south of Addis Abäba, in Šäwa (for location s. Mäqi).

The M.Q. site area was first documented by Gerard Dekker in 1963 and investigated subsequently by Gerard Bailloud. Between 1965 and 1982 and again from 1993 to 1995 a French–Ethiopian research expedition, led by Jean Chavaillon, conducted systematic archaeological, palaeoanthropological, palaeoenvironmental, and geological research at M.Q. Since 1999 the Italian Archaeological Mission, directed by Marcello Piperno, has carried out research and organized plans for the construction of an open-air museum at M.Q.

The basic geology of the M.Q. site area consists of a number of fluvial terraces containing Pleistocene and Holocene sediments up to one-hundred metres in thickness. A number of archaeological sites have been investigated at M.Q., the most prominent among these include the sites of Gombore I, Gombore II, Garba I, Garba III, Garba IV, Garba XII, and Kella I. Excavations at the Gombore I site revealed Oldowan tool tradition artefacts, dating between 1.7 and 1.6 million years ago (y.a.) and a *Homo erectus* humerus fossil bone fragment. The Garba IV site dates to between 1.5 and 1.4 million y.a. and includes approximately 10,000 lithic artefacts made of obsidian and other igneous rock material, a *Homo erectus* child mandible, and thousands of faunal specimens from a wide variety of mammals. Excavations at the Garba XII site have produced important insights concerning the transition from the Oldowan tool tradition to the Acheulian tool tradition at about 900,000 y.a. The Gombore II



Archaeological site of Mälka Qunṭure, with hand-axes; from Schneider n.d.:6

site has revealed Acheulian tool tradition artifacts that date to ca. 700,000 y.a. and two skull fragments related to *Homo erectus*. The sites of Garba I and Garba III have produced later Acheulian artifacts dating to ca. 500,000 y.a. and ca. 250,000 y.a. respectively. At the Garba III site fossil human remains attributed to archaic *Homo sapiens* have been recovered. The Kella I site is significant in its long archaeological sequence ranging from the Oldowan period to the Later Stone Age.

Mälkam Ayyähu

M.A. (መልካም፡ አየሁ, b. ca. 1885, d. ca. 1945, Gondär) was the principal informant of Michel ↗Leiris during his research at Gondär in 1932. She lived in Gondär's Ba°ata district, where she led a little community of adherents of the *zar* ↗possession cult on the margins of Christian so-

Mälkam Ayyähu in the camp of the Dakar–Djibouti Mission, from left to right: Ṭəbäbu, Mälkam Ayyähu, *abba* Jérôme, Michel Leiris, Mälkam Ayyähu's pupil Dənqənäš; photo September 1932, from Mercier 2003:44

ciety. She practised as a kind of ↗healer for people afflicted by the *zar* (ዛር) ↗spirits. This type of spirit is believed to torment its hosts (ባለዛር, *bäläzar*, lit. 'owner of the *zar*') and create a form of possession which can be unlimited in time and hereditary. A person possessed by a *zar* cannot be freed from it by himself and must pay homage periodically to his *zar*. Herself possessed by several *zar*, M.A. acted as medium. Her mission was to identify which *zar* possessed her clients and to communicate with it. Thereby, M.A. established the worship that the *bäläzar* had to perform in order to make the spirit leave him in peace.

Thanks to his translator *abba* ↗Jérôme, Leiris adapted to the daily life of M.A. in order to study the worship of the *zar*. In the belief that ethnological analysis cannot be separated from subjective experience, Leiris described his life with M.A. in his book *L'Afrique Fantôme* (1934). With irony, he described M.A. as somebody who had all the qualities of a brothel-keeper, a clown and a soothsayer. Nevertheless, at the beginning of his research Leiris showed admiration for M.A. He even fell in love with Ǝmmawayš, a disciple of M.A. However, by the end of his journey to Gondär he rather showed an aversion, specifically after five months (from July to November 1932) of more or less surging common life. Recently, a well-known ↗*kərar* player Asnaqäčč Wärqu portrayed the enigmatic character of M.A. in the play *Michel Leiris à Gondar* by Geneviève Rosset (1997).

Mälkäññа

The M. (መልክኛ) was a historical title and function in Christian Ethiopia. The word most probably derives from the Amharic verb *läkka* ('measure') and therefore originally meant 'the one who measures; measurer' (thus also *ṭäğğ mälkäññа*, *bäg mälkäññа*; s. GuiVoc 34, cp. THMDic 72). Similar to the title ↗*ṣäḥafe lam* ('counter of the cows'), given to governors of big provinces, M. became the title of a local government representative.

The institution is especially associated with northern ↗Šäwa, where all the territory conquered by the ↗Amhara was divided into estates consisting of different types of tax-paying peasants (mainly ↗*gäbbar*, *gəndäbäl* and ↗*sämon*), with a M. over all, usually holding non-hereditary government land (↗*Madäriya*).

The M. institution was highly adaptive and evolved over time. In the widest sense, it has been described as synonymous with *gʷəltäññа*, ↗*balabbat*, ↗*näfṭäññа*, and ↗*wälasma*, and any of these might be referred to as M. in certain contexts. The land rights even of the M. proper varied considerably according to the times. Weissleder has provided the only really detailed description – in the special setting of a church *mälkäññät* (Mäsḳa in ↗Ankobär) in the early 1960s.

The more narrow and original meaning of the term can be illustrated by oral information on the typical M. near ↗Doqaqit, the core area of the early Šäwan state. The role of the M. was to maintain law and order, enforce tax collection, judge in conflicts between his peasants, perform *wär tära* (one month of guarding government property every year), and above all, to go to war when called upon. In return he held one ↗*gaša* of government land (*madäriya*), which was cultivated by some peasants as part of their taxation for their *gäbbar* land. The peasants paid other taxes in labour or kind (later in money) directly to the local governor (the Yəfat ↗*šaläqa* at Wäyr Amba). Their land rights (*gäbbar* etc.) were considered ↗*rəst*, and they could sell their land, but the M. could not sell his *madäriya* land. There were, however, strong tendencies towards hereditary claims, and through a reform in 1955 *madäriya* land became private property.

Mälkəʾ

The M. (መልክእ [pl. *mälkəʾat*], also frequently *mälkəᶜ*) is a Gəᶜəz term meaning 'form, figure', and by extention 'image, icon, effigy, portrait, likeness; blazon' (from the verb *läkʾa*, s. DillmLex 51; LesCDic 313; cp. Amh.: *mälk*, 'face'; *mälkam*, 'nice, beautiful'). M. is a poetic composition in Gəᶜəz praising different parts of the body of a ↗saint or a member of the ↗Trinity. It is a peculiarly Ethiopian type of spiritual poetry (↗Hymns) and an original genre of Ethiopian hagiographic literature.

The number of stanzas in a M. fluctuates from the minimum of 22 to some 52 (ChRep 185f.; HabTent 54f.). Each stanza comprises five rhymed verses; the first verse usually starts with the words *sälam lä*... ('Peace be to .../ Hail to ...'). A few M. start with *əsäggəd* ... ('I worship ...'), or with *tämaḫṣänku* ... ('I entrust myself ...'); a few M. may start without the usual *sälam lä*.... Verses 2–5 do not necessarily praise the part of the body, but continue the motif of the first line and refer to some (miraculous) events from the saint's life (usually linked to his or her Vita [↗*Gädl*]), exalting the saint's holiness, virtue, potency and beauty. Usually the M. begins and ends with a doxology (HabUff 200; Cohen 1957:149ff.). Some M. contain a short invocation for protection or a plea to accept the prayer.

The M. is a necessary component of the saint's liturgical commemoration in the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC), and in manuscripts it frequently follows upon the Vita.

The list of the main parts (**እምርእስ፡ እስከ፡ እግር**, *əmrəᵓəs əskä əgər*, 'from head to foot') of the body celebrated in the M. can be classified as follows: (a) parts of the body above the neck: hair, head, face, temple, eyelashes, eyebrows, eyes, ears, nose, nostrils, mouth, teeth, tongue, voice, word, breathing, throat, lips (but also his/her name, beauty); (b) parts of the middle of the body: neck; (c) from the neck down to the waist: shoulder, breasts, chest, hands, arms, forearms, fingers, nails (hands), sides; (d) internal organs (*nəwayä wəsṭ*): womb, heart, navel, kidney, heart (e.g., conscience); (e) from the waist to the toes: knees, feet, toes, nails, legs, back; (f) decisive moments of the earthly life (the memory of his/her name, conception, virginity, birth, earthly life, passing away, his/her dead body, the shrouding of the body, burial, including afterlife (resurrection, second coming [of Christ], ascension [of Mary]) (ChRep 185f.; HabTent 54f.). There can be strophes addressed to the saint's *qumät* 'stature', or (as in the case of *abunä* ↗Täklä Haymanot) to the saint's monastic tunic (*qämis*), girdle (↗*Qənat*), or cap (*qobᶜ*) and "mantle" (*ᶜəṣəf*; MQAGE no. 12).

Unlike ↗*qəne*, M. are not improvised. In the liturgy, the M. is employed during the "major" ↗*Səbḥatä nägḥ* (or major lauds for the saints). In the Sunday office (↗*Mäwäddəs*) the M. is replaced by the ↗*Təmhərtä ḫəbuᵓat*. In addition, the M. is used in the Office of the Hours, mainly for the Matins (↗*Maḫlet*). The M. is also much used by Orthodox Christians for their private devotion. Many of them recite the M. of their favourite saint at least on the latter's feast or monthly commemoration, or even daily. The ↗*Mälkəᵓa Maryam* and the ↗*Mälkəᵓa Iyäsus* are recited by the ministrants as they prepare for the Eucharistic liturgy (↗*Qəddase*) of the EOTC, and are therefore memorized by the students of traditional church schools (HabTent 55). It is compulsory to know them by heart to be ordained ↗*diyaqon*. The others are left to each student to study according to his ability and his devotion to a certain saint.

Not all saints venerated by the EOTC have a M. of their own, but there are also M. for the Prophets, Apostles and Martyrs (ChRep no. 107), the Angels and Archangels (even for the Guardian Angel [ChRep nos. 39, 272]).

The M. praising the members of the Trinity are, e.g.: for God the Father *Mälkəᵓa əgziᵓabəḥer ab* (ChRep no. 320); for Jesus Christ: *Mälkəᵓa Amanuᵓel* (MG no. 11; Lifchitz 1948; Cohen 1951), *Mälkəᵓa mädḫane ᶜaläm* (ChRep no. 142, 164 [Cohen 1957]; MG no. 12), *Mälkəᵓa Iyäsus* (ChRep no. 25; MG no. 46); for the Holy Spirit: *Mälkəᵓa p̣äraqliṭos* (ChRep nos. 395; MG no. 9). There is also a M. for the Trinity as a whole (*Mälkəᵓa śəllase*, ChRep nos. 20, 189).

M. praising St. Mary are, e.g., *Mälkəᵓa Maryam*, *Mälkəᵓa* ↗*kidanä məḥrät* (ChRep no. 360; MG no. 42 [DillmChr 136–46]), *Mälkəᵓa səᶜəl* (M. for the Icon of Mary, ChRep nos. 32, 368), *Mälkəᵓa Maryam Ṣəyon*, *Mälkəᵓa Edom* (lit. 'M. of Paradise'; MG no. 38), *Mälkəᵓa Qʷəsqʷam* (MG no. 41). The M. praising the ↗feasts of Mary are: *Mälkəᵓa fəlsäta* (MG no. 40), *Mälkəᵓa lədäta* (ChRep no. 23), *Mälkəᵓa bäᵓata*. There are M. in honour of such texts of Ethiopian church literature as the ↗*Wəddase Maryam* (ChRep nos. 299, 319, 326, 383, 385, 398; MG no. 43) and ↗*Anqäṣä bərhan* (ChRep no. 240; MG no. 44).

There are M. dedicated to personified non-humans and objects, such as the ↗Eucharist (*Mälkəᵓa qʷərban*, ChRep no. 17; MG no. 14; Fritsch 2002 [↗*Maḫbärä məᵓəmänan*]); Sunday (*Mälkəᵓa sänbät*, ChRep no. 170; Raineri 2000, no. 178 = G 12; MG no. 36); the church (*Mälkəᵓa betä krəstiyan*, ChRep nos. 93, 179, 307); the ↗*tabot*; the suffering of the Cross (*Mälkəᵓa ḫəmamatä mäsqäl*; ↗Crucifixion).

There are also some M. in honour of such non-ecclesiastical figures as *aṣe* ↗Iyasu II (ChRep nos. 42, 207), ↗Mənilək II (ChRep no. 115; Esteves Pereira 1915), *ras* ↗Mäkʷännən Wäldä Mikaᵓel (ANLin, ms. Conti Rossini 125, XXII, 2); and even ↗Täklä Ṣadəq Mäkʷərya, "the father of Ethiopian history" (Ricci 1992:118).

It is not known which M. should be considered the earliest and when they were composed. A "short chronicle" refers to *aṣe* ↗Naᶜod as the author of "a M. to Mary" (BassÉt I, 327; the M. has not been identified). A document preserved in ms. EMML 1706 (Getatchew Haile in PICES 10, vol. 1) assigns the authorship of many M. to different personalities, including *aṣe* ↗Zärᵓa Yaᶜəqob (presumably, the author of *Mälkəᵓa fəlsäta*), *aṣe* ↗Bäᵓədä Maryam (*Mälkəᵓa Maryam*) and *aṣe* ↗Gälawdewos (*Mälkəᵓa səᶜəl*). The *Mälkəᵓa abunä Täklä Haymanot* (ChRep no. 211) and *Mälkəᵓa śəllase*, which were authored by *abba* Yoḥannes and *abba* Səbḥat Läᵓab respectively, are

traditionally considered to be very ancient. However, the oldest known manuscripts containing M. do not antedate the 17th cent. Irrespective of the time and circumstances of the composition of the first M., it seems that there was a phase of systematic teaching of M. in the traditional schools; the popularity of M. greatly expanded and the genre of M. flourished during the time of the Gondärine period (Getatchew Haile 1995:52f.), when it was also introduced into the liturgical service (HabUff 204). To establish the time of the composition for many M., it would be important to investigate the *Gubaʾe mälkəʾ*, a large compendium of M. (cp. ↗*Mälkəʾa gubaʾe*).

The huge repertoire of M.-hymns and the persistance of this tradition prove the extraordinary popularity of this sort of religious poetry in Ethiopia and its importance for study. However, after a number of important works by Chaîne (ChRep), Grohmann (CrohHymn) and some others, the discussion has focused more on separate M.-hymns and the issue of the origin of M. than on the M. as a genre of Ethiopian medieval literature and its features. Both Ethiopian and foreign scholars have been interested in the identification of the origin of M. Some scholars (also the *liqawənt*, or doctors of the church, s. ↗*Liq*) believe that M. is a genuine type of spiritual poetry, and its sources should be sought in the Bible and Ethiopian hymnody (e.g., HabTent 53; Gabré Yesus Haylu in PICES 3; Gezahegn Getachew in PICES 15). Some others consider the Coptic origin or model of M. (GuiSLett 67; RicLett 819), the hypothesis remaining, however, without decisive arguments (SimChrAeth 308). Others refute any Coptic parallel (Zanetti 2001) and look for the origin of or parallels to Ethiopian M. in Byzantine (ibid.; Lourié 2005) and Latin texts (Stoffregen Pedersen in PICES 8; Beylot 2005).

Habtemichael Kidane

Mälkəʾa Gäbrəʾel

M.G. (መልክአ፡ ገብርኤል, lit. 'The Image[s] of Gabriel') is the title of several collections of ↗*mälkəʾ*-hymns, extolling the Archangel Gabriel. Of these, three are listed in Chaîne's repertory (ChRep; hereafter M.G.[1], M.G.[2] and M.G.[3]), only the latter being the *de facto* standard, official M.G. Like other *mälkəʾ* hymns, they all employ ↗*ᶜarke* style, with five rhyming and rhythmic lines per stanza, dedicated to praising a part

of the saint's body or such entities as the Trinity and different names of Christ.

The *incipit* of M.G.[1] (ChRep no. 126) reads: **ሰላም፡ ለዝክረ፡ ስምከ፡ በመጽሐፈ፡ ዳንኤል፡ ዘተጠይቀ** ... (*Sälam läzəkrä səmәkä bämäṣḥafä Danəʾel zätätäyyəqä*, 'Peace to the mention of your name that is verified in the Book of Daniel ...'). Of all the M.G., this is the only one whose author is known: in the text, the authorship is ascribed to a certain Baḥrəy who was, in all probability, the famous 16th-cent. *abba* ↗Baḥrəy (Getaccäw Ḫayle 2002:49). M.G.[1] is preserved in a single manuscript containing Baḥrəy's other works, including his ↗*Mäzmurä Krəstos* and the ↗*Zenahu lägalla*, s. ms. London, BritLib. Orient. 534, fols. 150r–53r (WrBriMus 84).

Remarkably, M.G.[1] did not enjoy popularity and remained practically unknown. There might have been some reasons for this, since the author speaks of the "waves of envy" arising against him (fol. 150b). As in his other works, Baḥrəy's impressive knowledge of ↗Gəʿəz literature is discernible in M.G.[1]. The roles he claims for Gabriel (as appearing to John in his ↗Revelation) and Michael (as rescuing Lot; cp. Gen 14) must have been inspired by non-biblical sources. In the conclusion, the author asks God for wisdom and knowledge (fol. 150v; s. Getaccäw Ḫayle 2002:49).

M.G.[2] (ChRep no. 156) has been attested in several manuscripts; since Chaîne's article, in which five mss. have been recorded, more copies have come to light: e.g., BritLib Orient. 9051 (fols. 31r–40v); Ṭānāsee 6 (fols. 38v–43r) and EMML 1284 (fols. 128r–32r). Furthermore, the fact that M.G.[2] has at least two different *incipits* could have prevented its identification. The standard *incipit* (s. ChRep 201) reads: **ሰላም፡ ለዝክረ፡ ስምከ፡ ዘተጸውዓ፡ ቀዲሙ** ... (*Sälam läzəkrä səmәkä zätäṣäwʿa qädimu*, 'Peace to the mention of your name, which has been referred to first ...'), whereas in ms. EMML 1284, e.g., the *incipit* goes as follows: **በስመ፡ እግዚአብሔር፡ ሥሉስ፡ ዘተጸውዓ፡ ቀዲሙ** ... (*Bäsəmä əgziʾabəḥer śəllus zätäṣäwʿa qädimu*, 'In the name of God the Trinity, [Gabriel] who was referred to first ...').

The unknown author repeatedly refers to *märqe* ('lowland', 'hot desert land'; e.g., EMML 1284, fols. 128r, 131v), the place where he had been or still was while composing the *mälkəʾ*. Interestingly, while the author seems to be well versed in Gəʿəz literature (claiming, e.g., that the ratio of the "Archangel's forearm" to that of a human being is 1:144), his praise of Gabriel's breath ("When your breath was spilt in Mary's ear soothingly, she conceived her Son ...", ibid. fol. 129r) contains an argumentation that is refuted elsewhere ("O man who says, due to the ignorance of the Scriptures, 'An invisible power entered with the words of Gabriel through the openings of the Virgin's ears and dwelt in her womb'", s. Conti Rossini 1904:3).

The anonymous M.G.[3] (ChRep no. 246) is the standard version of Gabriel's *mälkəʾ*. As such, it was widely copied, studied and memorized by both clergy and students of traditional schools, especially at churches dedicated to Gabriel. Apart from 14 mss. with M.G.[3] recorded in ChRep, a cursory survey reveals many more copies (EMML V alone contain nine mss.). M.G.[3] was printed in Ethiopia several times (e.g., in the collection *Mälkəʾa gubaʾe* 1966/67:313–25).

The reason for its popularity is most probably its having been the first M.G. composed and made known to the clergy. From the very beginning, M.G.[3] is marked by the exquisite ↗*sämənna wärq* style, reminiscent of ↗*qəne*-poetry (*Mälkəʾa gubaʾe* 1966/67:312):

ሰላም፡ ገብርኤል፡ መልአክ፡ በላዕለ፡ ማርያም፡ ዘአዕረፈ።
ከመ፡ እዜኑ፡ ጎዳጠ፡ ወአኮ፡ ትሩፈ።
እግዚአብሔር፡ ሀበኒ፡ ሲሳየ፡ ልቡና፡ መጽሐፈ።
ወአፉየ፡ ሙሴ፡ ለእመ፡ ኮነ፡ ጸያፈ።
ጰራቅሊጦስ፡ አሮን፡ ይኩነኒ፡ አፈ....

In order that I may proclaim a little bit, not overflowingly,
The greeting of angel Gabriel that rested upon Mary,
Give me, God, the Scriptures, nourishment of the mind;
If Moses, my mouth, is a blemish,
Let Paraclete, Aaron be [my] mouth'.

The author tried to guess the meaning of the name of Gabriel [Gəʿəz: Gäbrəʾel], which "looks as if it means lord and slave" (ibid. 312f.; obviously combining the meaning of Hebrew **ēl* 'lord' and Gəʿəz: *gäbr*, 'slave'"). The author gives Gabriel credit for rescuing the Three Holy Children from the furnace (Dan 3; ibid. 314). The work's other remarkable passages are prayers for guarding one's speech from offending anyone (ibid. 315) and for comforting sorrows (ibid. 318).

Ms. Munich, Museum für Völkerkunde, 88.310024 (fol. 4v) possibly contains still another, the fourth M.G., with the *incipit*: **ሰላም፡ ለዝክረ፡ ስምከ፡ ኀበ፡ ድንግል፡ ተፈናዊ** (*Sälam läzəkrä səmәkä ḫabä dəngəl täfänawi*, 'Peace to the mention of your name, messenger to the Virgin'; SixDeu 446).

Mälkəʾa gubaʾe

M.g. (**መልክአ፡ ጉባኤ**, 'The Collection of Images') is the title of the large collection of ↗*mälkəʾ* and other ↗hymns, as it appears in a contemporary printed edition of the ↗Ethiopian Orthodox Täwaḥədo Church (s., e.g., MG). The traditional title of the collection was *Gubaʾe mälkəʾ*, M.g. being thus the "Amharized" Gəʿəz title with the same meaning. It is sometimes called **ምእላደ፡ ጸሎት** (*Məʾəladä ṣälot*, 'Collection of Prayers'). In manuscripts the content of the collection varies; the title *Gubaʾe mälkəʾ* can be applied to compendia of diverse length, containing different sets of hymns, many of which are also known as separate texts.

The *Gubaʾe mälkəʾ* was dated to the second half of 16th cent. by ↗Guidi (GuiSLett 66), and his hypothesis seems plausible in view of a collection of hymns in ms. BritLib Orient. 575, with parts dating to the 16th and 17th cent. Some other manuscripts with the *Gubaʾe mälkəʾ* seem to date to the 17th cent. Of particular interest are mss. BritLib Orient. 578 (dated to 1645/46 A.D.), Orient. 573 with the hymns set according to the sanctoral dates of the ↗Calendar, and 18th-cent. Orient. 577. Ms. Orient. 574, the late 17th-cent. codex "of Däbrä Bərhan", contains, apart from the *Gubaʾe mälkəʾ*, a large list of all the hymns, including *mälkəʾat*, for the entire year (WrBriMus 124f.). It is apparent that, the study of *Gubaʾe mälkəʾ*-collections could shed light on the history of separate hymns and the development of the entire *mälkəʾ*-genre.

The contemporary M.g. may be the result of the conflation and selection of the hymns from several *Gubaʾe mälkəʾ*. The *mälkəʾat* comprising by the M.g. are the following:

1) Jesus: ↗*Mälkəʾa Iyäsus* (MG no. 46; ChRep no. 26); *Mälkəʾa Amanuʾel* (MG no. 11; Cohen 1951; Lifchitz 1948; Getatchew Haile in PICES 10, vol. 1); *Mälkəʾa mädḫane ʿaläm* (MG no. 13; ChRep no. 164; Cohen 1957);
2) Trinity: *Mälkəʾa śəllase* (MG no. 10; ChRep no. 20; Gabré Yesus Haylu in PICES 3, vol. 2);
3) God the Father: *Mälkəʾa əgziʾabəḥer ab* (MG no. 8).
4) Holy Spirit: *Mälkəʾa Ṗäraqliṭos* (MG no. 9; ChRep no. 143);
5) St. ↗Mary: ↗*Mälkəʾa Maryam* (MG no. 45; ChRep no. 172/220); *Mälkəʾa*↗*kidanä məḥrät* (MG no. 42; DillmChr 136–46; Raineri 1989); *Mälkəʾa fəlsäta lämaryam* (MG no. 40; ChRep no. 213; Roman 1922/23:416–26); *Mälkəʾa Qʷəsqʷam* (MG no. 41); *Mälkəʾa Edom* (MG no. 38; ChRep no. 221); *Mälkəʾa wəddase* (MG no. 43); *Mälkəʾa anqäṣä bərhan* (MG no. 44; ChRep no. 241);
6) The Archangels whose *mälkəʾat* are in the M.g.: Mikaʾel (MG no. 16, ChRep no. 119); Gäbrəʾel (MG no. 20, ChRep no. 246; ↗*Mälkəʾa Gäbrəʾel*); Rufaʾel (MG no. 18, ChRep no. 131); Raguʾel (MG no. 20, ChRep no. 365); Fanuʾel (MG no. 21); Uraʾel (MG no. 19; ChRep no. 129);
7) Saints whose *mälkəʾat* are in the M.g.: ↗John the Baptist (MG no. 22; ChRep no. 279); Peter and Paul (MG no. 23; ChRep no. 187); Mark the Evangelist (MG no. 25); John the Evangelist (MG no. 24); Ḥanna (MG no. 39; ChRep no. 178); Stephen the Protomartyr (MG no. 26; ChRep no. 253); ↗George of Lydda (MG no. 27; ChRep no. 147), his conception (MG no. 28) and his suffering (MG no. 29); ↗Täklä Haymanot (MG no. 32; ChRep no. 211); ↗Gäbrä Mänfäs Qəddus (MG no. 30; his second *mälkəʾ* MG no. 31); ↗Zämikaʾel Arägawi (MG no. 34; ChRep no. 278); ↗Gäbrä Krəstos (MG no. 33; ChRep no. 127); ↗Zena Marqos (MG no. 35); ↗Lalibäla (MG no. 37);
8) Sunday: *Mälkəʾa sänbätä krəstiyan* (MG no. 36; ChRep no. 170; Raineri 2000:178);

The M.g. also contains some liturgical texts (e.g., ↗*Kidanä nägḥ*, ↗*Təmhərtä ḫəbuʾat* etc.), prayers and poems do not correspond to the typical definition of a *mälkəʾ*. These are, e.g.: ↗*Maḫbärä məʾəmänan* (MG no. 14; ChRep no. 17), ↗*Ṭäbibä ṭäbiban* (MG no. 7; ChRep no. 372) and ↗*Ləssanä säbʾ* (MG no. 15).

Mälkəʾa Iyäsus

M.I. (**መልክአ ኢየሱስ**, 'The Image[s] of Jesus') is a ↗*mälkəʾ*-hymn which praises the name of Jesus, his virtues, his physical characteristics and his wonderful works. The M.I. has 51 stanzas and ends with a doxology (**ስብሐት ለ...** *səbḥat lä...*) to Jesus himself and to the ↗Trinity. As in every *mälkəʾ*, a stanza of the M.I. is structured as follows: greeting (**ሰላም ለ...** *sälam lä...*, 'Hail to ...') and praise to every part of the body of Christ, supplication or request to fulfil a particular wish ("grant me ...", "protect me ...", "make me ..."). The objects of celebration are the main parts of Christ's body: a) above the neck; b) below the neck; c) internal organs; d) parts of the body from the waist to the toes; but also e) decisive moments of his earthly life: his birth, his death and his burial; the tomb, his resurrection, his ascension to heaven, his second coming. In the M.I., Christ is praised as the High Priest, the Lover of humankind, the Saviour of the World, etc.

The M.I. is performed liturgically on the Nativity of Christ (↗*Lədät*), but it is also sung at such annual ↗feasts as the Incarnation (*Təsbəʾət*), the Crucifixion (*Mädḫane ᶜAläm*) etc. (at all major and minor feasts of Christ; the one who recites it must still be fasting, even in the afternoon). Since some of these feasts occur monthly, the M.I. is consequently to be sung monthly. Extracts from the M.I. are recited during the preparation of the Eucharistic bread and wine.

One of the most used among all the *mälkəʾat*, the M.I. is recited at every morning office (cp. ↗*Maḫlet*; ↗*Kidan zänägh*) after the ↗*Mälkəʾa Maryam*. The M.I. is learnt by heart by the young pupils who begin to learn reading in church schools, and, along with the *Mälkəʾa Maryam* and other prayers, by advanced students who seek to be ordained deacons. The M.I. is very much used for private devotion.

It is not certain when the M.I. was composed, its authorship having been ascribed to a certain ᶜAmdä Ḥawaryat, who probably lived in the 17th–18th cent. However, this assumption is rather questionable, for the liturgical relevance of the work suggests a much older use. Besides, the traditional scholars (*liqawənt*) of ↗Dima Giyorgis identify *abba* Səbḥat Läʾab of Gondär (to whom also the ↗*Səbḥatä fəqur* is ascribed) as the author of the M.I.

Mälkəʾa Krəstos

M.K. (**መልክአ ክርስቶስ**, also Mälkəᶜa Krəstos, fl. 1629–35, d. 1635) was a rebel in ↗Lasta. He was a descendant of *aṣe* Ḥəzbä Nañ (↗Täklä Maryam) whose family had suffered persecution under *aṣe* ↗Zärʾa Yaᶜəqob (both Ḥəzbä Nañ and Zärʾa Yaᶜəqob being sons of *aṣe* ↗Dawit II). When the latter's descendant, *aṣe* ↗Susənyos, embraced Catholicism, the Lasta branch of Ḥəzbä Nañ's family under the leadership of M.K. attempted to reclaim the throne, the latter presenting himself as the champion of Ethiopian Orthodoxy (according to a note in the 15th-cent. Gospel book preserved at Lalibäla, Betä Gäbrəʾel, ms. EMML 6954, fol. 10).

Since 1629, M.K. began to build a strong coalition of forces against the Emperor in ↗Bägemdər, ↗Təgray, and ↗Amhara. The main stronghold of rebellious M.K., who received wide support, became the scarcely accessible mount ↗Ǝmäkina in Lasta (the "short chronicles" call him the "rebel of Ǝmäkina"; BassÉt I, 342; FotiCr 114f.). In 1632 Susənyos undertook several military expeditions into Lasta to quell the rebellion, but was unable to break into Ǝmäkina. In 1632, M.K. took the battle into the heart of Bägemdər, close to the Emperor's court. At the battle of Wäyna Däga, the rebel army was defeated and M.K.'s officers *wag šum* ↗Rətuᶜa Amlak and ↗Bihono were killed, but M.K. eluded the Emperor and fled from the battlefield (PerChron ch. 99; DombrChr 196). Shortly afterwards, frustrated Susənyos abdicated the throne and proclaimed

the restoration of Orthodoxy. Consequently, M.K. was credited by the people with the re-institution of the Orthodox Church, and remembered as "the restorer of the Faith" or "king of the (Orthodox) faith".

After that, M.K. did not give up the claim to the throne and his rebellion did not end. In the third year of *aṣe* ↗Fasilädas's reign (1635) he defeated the army of the Emperor in a surprise attack at ↗Libo. Fasilädäs had to flee, M.K. "entered the King's house" and even "sat on the throne" and put a "candelabra" on his head pretending to be king (BegCron 48f.). A few days later, however, Fasilädas gathered new forces, attacked M.K. and killed him.

Wudu Tafete Kassu

Mälkaʾa Krəstos

Abetohuṇ M.K. (መልክአ፡ ክርስቶስ, also Mälkaʿa Krəstos, d. 10 December 1633) was a prominent 17th-cent. nobleman and high-ranking officer of *aṣe* ↗Susənyos.

The personality of M.K. is somewhat difficult to single out, since at that time there were a number of noblemen bearing this name. It is not quite sure that the chronicler *abba* ↗Täklä Śəllase was always able to avoid confusion, and consistent in adding *abetohun* and other titles to M.K. (the same applying to Portuguese sources). At least, *abetohun* M.K. should not be confused with a step-brother of Susənyos (from PerChron ch. 17; s. Chernetsov 1984:328 n. 1 to ch. 27, p. 194).

In the Chronicle of Susənyos, M.K. probably appears for the first time in October 1609, accompanying the Emperor in the raid against the ↗Agäw at Zalabasa (PerChron ch. 39). Over many years, M.K. remained loyal to the Emperor despite the latter's inclination to ↗Catholicism. At the same time, M.K. was obviously the husband of the famous anti-Catholic saint ↗Wälättä Peṭros (he is mentioned as commander of the Śəlṭan Märʿəd regiment both in the Chronicle and Wälättä Peṭros's Acts, s. Ricci 1970:13; PerChron 164 [ch. 47]; Papi 1943:88 n. 2; Chernetsov 1984:334f., n. 7 to ch. 39, p. 221). M.K.'s three children from Wälättä Peṭros died; when she decided to become nun, he managed to bring her back from the monastery (Conti Rossini 1912:14ff.). They finally separated in 1617, when M.K. took part in the battle against ↗Yolyos, one of the first anti-Catholic rebels, in which *abunä* ↗Səmʿon was killed, and happened to take the Metropolitan's vestments (Conti Rossini 1912:17, 70). Possibly, M.K. did not remarry; a certain Wälättä Ṣadəqt of the monastery of ↗Qʷäraṣa, mentioned elsewhere (cp. DombrChr 197 n. 330; TurIz 271), is probably still the same Wälättä Peṭros.

In 1618/19 M.K. appears as *abetohun* and *blatten geta* (PerChron ch. 53), fighting, together with *däğğazmač* Yonaʾel, against ↗Funǧ and "Arabs" (in Daläb, Kahba, Barta, Radamer, Abromela, Sən and Sahya). Soon thereafter, he fought against ↗*šanqəlla* and the "people of ↗Atbara, called *bagara*", having been left in a difficult situation by *däğğazmač* ↗Wäldä Ḥawaryat, who did not want to be commanded by M.K. In 1622, M.K. fought the people of ↗Ambassäl who joined *däğğazmač* Yonaʾel, by that time in rebellion, until they were all defeated (PerChron chs. 66–67; cp. BassÉt 27; BegCron 45; DombrChr 193). In the same year, M.K. was appointed *abägaz* for the campaign against ↗Gedewon, but was less successful and caused Susənyos's indignation (PerChron ch. 69). In 1623 M.K. was sent to Ambassäl, to help *däğğazmač* Buko fight the locals and "Fälaša" (↗Betä Ǝsraʾel). The campaign was successful, but thereafter M.K. refused to assist *ras* ↗Səʿəlä Krəstos, his rival, and deeply upset Susənyos. At the end M.K. was pardoned and appointed governor of ↗Səmen, the region of the restive Betä Ǝsraʾel. In ca. 1625 he scored a significant success, killing Gedewon (PerChron ch. 74).

According to the Portuguese sources, M.K. was present when Alfonso ↗Mendes was introduced to Susənyos in February 1626 (BecRASO VIII, 143). M.K. was said to be very close to Susənyos, but rather hostile to the Portuguese (the feeling aggravated, probably, by the drama of M.K.'s marital life). By 1629, M.K. is mentioned as senior (*ʿabbiy*) *blatten*[*očč*] *geta* (PerChron ch. 81; without the title *abetohun*; cp. "mordomo mor", BecRASO XII, 274). However, the Chronicle later mentions that M.K. was appointed (i.e. reduced in rank?) *blatten*[*očč*] *geta*, and finally blames M.K., referring to the tension between M.K. and Susənyos, which was lessened thanks to the mother of the former, *wäyzäro* Mäsqäl

ʿƎbäya (PerChron chs. 84–85). The change of M.K.'s attitude towards the Emperor seems to be logical in the context of the fierce anti-Catholic conflict during the last years of the latter's reign.

In 1632 M.K. avoided campaigning against rebels again (PerChron ch. 96). His links to the rebellion in Lasta and its champion, also called ↗Mälkaʾa Krəstos (cp. DombrChr 197 n. 330; Conti Rossini 1912:61), by that time became transparent, especially after the battle of Wäyna Däga, in which the rebel officers ↗Rətuʿa Amlak and ↗Bihono were killed. M.K. was arrested, accused of treason and sentenced to death, which was substituted by exile (BecRASO VIII, 360). A "short chronicle" reports that *bəḥtəwäddäd* M.K. died on 4 *Taḥśaś* of the second year of *aṣe* ↗Fasilädäs (BassÉt 29; 10 December 1633 A.D.).

Mälkaʾa Krəstos

Abunä M.K. (**መልክአ፡ ክርስቶስ**, also frequently Mälkəʿa Krəstos, fl. second half of the 17th–early-18th cent.) is a saint venerated by the ↗Ethiopian Orthodox Täwaḥədo Church. According to the unpublished Vita of M.K., the main source on his life, he was born in a region called Säräko, southern ↗Wällo, as the son of Ṭaʿəmä and Awganya. Distinguished by piety, he learned by heart commentaries on the Scriptures wandering from place to place, including to such monasteries as ↗Waldəbba Dəlšaho and ↗Däbrä Abräntant. At Waldəbba he completed his education and decided to become monk. There, M.K. was ordained priest and later appointed abbot.

His Vita stresses that M.K. was a supporter of the ↗*Täwaḥədo* doctrine who taught the Union of Divinity and Humanity in Christ and preached the observance of two ↗Sabbaths. The Vita mentions M.K.'s many disciples: ʿAmdä Bərhan, Zämänfäs Qəddus, Gännätä Maryam, Nəwayä Maryam, Səhinä Maryam. Founding churches and monasteries, M.K. travelled extensively in Təgray, Ḥamasen, Amhara, Goğğam, Šäwa, Sayənt, Wadla, Dawənt, Lalibäla, Gayənt, Guna, Abärgälle etc.

According to the Vita of M.K., St. Mary ordered him to build a monastic community at Gəšäq, situated between the Bäšəlo and the Minčəq rivers, in the district of ↗Mäqdäla (↗Wärrä Himano). However, the monastery of Gəšäq had been founded prior to M.K.'s arrival. M.K. apparently was a member of that community and may have re-established Gəšäq after a period of desertion (s. Getatchew Haile, EMML V, 465). According to the Vita, M.K. died on 10 *Säne* at Gəšäq (but he is commemorated in the *Mäṣḥafä ↗gəṣṣawe* on 5 *Mäskäräm*, also the day of his annual feast at Gəšäq monastery).

The Vita of M.K. is followed by some ten miracles (↗*Täʾammər*). A story tells how two disciples of M.K., Maḫdärä Krəstos and Samuʾel, asked him to permit them ↗martyrdom, since they wanted to rebuke the King (most probably *aṣe* ↗Fasilädäs) for marrying two sisters at the same time. Both were beheaded; M.K. summoned the monks of Gayənt, Sayənt, Lasta, Wadla and Bägemdər, met them at Därа (Däbrä Tabor) and went to the King, who resided at Araha. The King was advised by his soldiers Kämal Säno and Baša Aygäbəz to persecute the monks immediately. But *əčč̌äge* Zäkrəstos (one of the two ↗*əčč̌äges* bearing the same name, both contemporaries of Fasilädäs, CerDLib II, 172f., 175) advised the King to speak with the monks. Having exposed the reason for their coming, M.K. so impressed the King that he set the monks free and promised not to harm them.

The Vita of another saintly monk, *abunä* Ǝstänfasä Krəstos, claims that M.K. was his disciple during the time of *aṣe* Fasilädäs, until the reign of *aṣe* ↗Iyasu I. The traditions of Waldəbba known so far do not remember M.K. A manuscript of his extensive, though recent Vita, written by an anonymous hermit, has been recorded at Gəšäq (KinBibl no. 99) and photographed by E. Ceccarini (Raineri 1990:369, no. 4; fols. 1r–39r Vita, fols. 39r–63r Miracles, fols. 63v–66v *mälkəʾ*), the photos being preserved at the House of Comboni Mission (Addis Abäba) and in the Vatican Library. A manuscript with ↗*mälkəʾ* of M.K. is kept at ↗Däbrä Ḥayq Ǝsṭifanos (EMML 1950).

Amsalu Tefera Alemu

Mälkəʾa Maryam

M.M. (**መልክአ፡ ማርያም**, lit. 'The Image[s] of Mary', 'Effigies Mariae') is the title of at least two hymnological compositions in ↗Gəᶜəz praising the Virgin ↗Mary which are written in the poetical form of ↗*mälkəʾ*. In each stanza a different part of Mary's body is praised, beginning with the words: *sälam lä...-ki*, 'Peace be for your ... /Hail to your ...'. According to Ethiopian theology, the uniqueness of Mary is shown by the ultimate perfection of her body, each part of which can thus be dealt with as a divine concept.

Although considered as one of the most important ↗hymns, the M.M. has not been thoroughly investigated. The existence of several M.M. has long been known, but given hitherto insufficient attention. M.M. texts are not distinctly described in manuscript catalogues. In fact, any hymnological composition praising Mary's body could be entitled M.M.; the source of the confusion was also the inconsistency of titles in the manuscripts themselves.

One M.M. [1] is known from the editions of Dillmann (DillmChr 136–46) and Budge (1900:78–83), as well as a few translations (ibid., 149–57; Grébaut 1909; Budge 1933:236–44; Euringer 1938). It is listed in Chaîne's répertoire (ChRep no. 360). Grohmann (GrohHymn 30) has it under the title *Mälkəʾa kidanä məḥrät* and notes that the hymn bears the same title in the ↗*Mälkəʾa gubaʾe* collection (cp., e.g., *Säbattu kidanat* ... 1966/67:681–700). Also Raineri uses the title *Mälkəʾa kidanä məḥrät* (1989:92f., 101f.), originally due to the fact that the text is to be read on the feast of the ↗*Kidanä Məḥrät* which is mentioned in each stanza (16 *Yäkkatit*, ibid.; cp. also *Mälkəʾa kidanä məḥrät* 1948 [A.M.]). The title M.M. seems to have been added to the hymn by Dillmann (s. Euringer 1938:76). The hymn is connected with the *Transitus Mariae* literature and the interlinked Dormition accounts (s. *Mäṣḥafä ↗ᶜərgäta lämaryam*), as well as with the tale of the *Five Pains of Mary* (Cerulli 1957) and often recited together with the *Mälkəʾa Fəlsäta* and *Mälkəʾa Ṣəge*.

Another widespread text, known as M.M. [2] only and included in the modern *Mälkəʾa gubaʾe* (e.g., *Säbattu kidanat* ... 1966/67:735–56, no. 46; *Mälkəʾa gubaʾe* 1966/67, no. 45, one and the same as ChRep no. 220; corresponds obviously to no. 172, cp. also GrohHymn 35).

The time of composition of the M.M. [1] and M.M. [2] is unknown. The oldest manuscripts seem to date to the 17th cent., but the texts could have been written as early as in the 15th cent., under *aṣe* ↗Zärʾa Yaᶜəqob, the great propagandist of the veneration of St. Mary. Sometimes tradition ascribes the authorship of the M.M. to Ethiopian emperors such as *aṣe* ↗Bäʾədä Maryam or ↗Naᶜod, whose connection with those compositions is, however, far from obvious (cp. SimDillmChr 307ff.; Getatchew Haile in PICES 10, 373, n. 48f.; cp. GrohHymn 46).

The M.M. [2] is used in the Eucharistic liturgy (↗*Qəddase*) and is sung (*bäzema*) at annual and monthly ↗feasts of Mary (some stanzas performed with the full ↗*aqʷaqʷam*), always after it has been recited (*bädägam*). It is recited at every morning office, i.e. ↗*Maḫlet* or ↗*Kidan zänägh*, its portions being distributed among the church choir members. It is always followed by the ↗*Mälkəʾa Iyäsus*. The M.M. [2] is recited also at the ↗*Fətḥat* ceremony, in the house of the deceased. In monasteries, the M.M. [2] is recited in the morning and in the evening, after 5 p.m., before the only meal of the day.

It is used by the faithful for private devotion at home (e.g., it may be said before meals, together with the ↗*Wəddase Maryam*). In addition, it is chanted by heart, solo or chorally, on a specific melody for the five verses during private occasions on which Mary is venerated, such as meetings of ↗*maḫbär*-associations (even if the *maḫbär* is not dedicated to Mary; s. Ancel 2005:105, n. 36). The M.M. [2] is learned by heart in Ethiopian church schools and is used for memorizing the Ethiopic alphabet.

The question of the possible non-Ethiopian sources of the *mälkəʾ*-hymns has been discussed

with special reference to M.M. Similar texts can be found in the works of the Greek church fathers and in Syriac writings (Zanetti 2001), as well as in western Marian literature: analogies have been detected even in a German *Ave Maria* translated into French in the 17th cent. (s. Beylot 2005).

Verena Böll

Mälläsä Täkle

M.T. (**መለሰ፡ ተክሌ**, b. 9 January 1923, Gändəwa Gäbrəʾel, Gondär, d. 28 June 1957, Wisconsin, USA) belonged to the first generation of ↗Betä Ǝsraʾel (Fälaša) educated elite and was the youngest disciple of Jacques ↗Faitlovitch. At the age of eight M.T. was enrolled in a school founded by Faitlovitch in Addis Abäba. He studied there for four years, till the Italian invasion of 1935. During the occupation period M.T. served as a copy typist for the Italians.

Mälläsä Täkle; photo courtesy of the author

After Liberation, in 1942 M.T. became a record officer in the municipality of Gondär. When the Ethio-Eritrea Unity Association (**የኢትዮ፡ ኤርትራ፡ አንድነት፡ ማሕበር**, *Yäʾityo-Erətra andənnät maḫbär*) was formed in 1946, he was one of its members. From 1951 up to 1955 he served as Deputy Director General of the municipality of Gondär. In 1955 *aṣe* ↗Ḫaylä Śəllase I appointed him Chief for the Municipalities of ↗Šäwa province. During this posting he prepared administrative guidelines which served as a basis for municipalities management. M.T. showed himself to be a hard worker, and was lauded "for honesty and incorruptibility" (Messing 1982:69). At the same time M.T. continued his education. In 1952 he studied English, French, history, economics etc. via correspondence with Oxford University. In 1956 he completed a municipality administration course and received a certificate from Ḫaylä Śəllase.

In addition to his governmental jobs M.T. worked intensively for the Betä Ǝsraʾel community. Thus, he assisted in the establishment of schools for Betä Ǝsraʾel children. He also wrote letters of entreaty to Ḫaylä Śəllase, begging him to alleviate the oppression faced by the Betä Ǝsraʾel community. M.T. was in constant contact with foreign Jewish communities, and also with researchers on Betä Ǝsraʾel, such as Wolf ↗Leslau and Simon David Messing. He served as guide and secretary for Leslau during his sojourn among the Betä Ǝsraʾel.

M.T. was sent by Ḫaylä Śəllase in September 1956 to make a tour of various U.S. municipalities with the purpose of studying urban development. During his mission he established contact

with American Jewish communities and supplied them with information on the Ethiopian Jews.

The circumstances of M.T.'s premature death are obscure. The official reason was suicide while his family does not accept this version.

Malo

Malo language

The M. language (self-name: Malittso), spoken by about 20,000 people (CSA 1996; Hudson 1999:92), is a member of the north ↗Ometo branch of ↗Omotic (for location s. Maale). Little linguistic research has been done on M. The present contribution is based mainly on Mahider Tesfu (2003) and an interview with Yema Yela (2006).

M. has the following consonants: stops: *p*, *b*, *t*, *d*, *k*, *g*; ejectives: (*p'*), *ṣ*, *č'*, *q*; implosives: (*ɓ*), *ɗ*; sibilants: *s*, *š*, *z*, *ž*; affricates: *č*, *ǧ*, *ʦ*, *ʣ*; nasals: *m*, *n*; laterals: *l*; vibrants: *r*; approximants: *w*, *y*; glottals: *ʾ*, *h*. Both *p* and *ɓ* are reported; most probably, only one of these is phonemic. The vowels are *i*, *u*, *e*, *o*, *a*. Vowel length and gemination are contrastive, e.g. *maʦ* 'bee' vs. *maaʦ* 'milk'; *gado* 'diseases' vs. *gaddo* 'to put down'.

Most citation-form nouns and adjectives end in one of the lexically determined terminal vowels: *e*, *o*, or *a*. Some nouns end in consonants, e.g. *keʦ* 'house'; *ṣeet* 'hundred'. Plural is marked with *-it-*, and in kinship nouns with *-unʦ*, e.g. *naʾa*, 'child' vs. *nayita*, 'children'; *aabbo*, 'father' vs. *aabbunʦ*, 'fathers'. Singular is unmarked.

Gender (masc. and fem.) is distinguished in 3rd pers. pronouns. In nouns, gender is interrelated with the marking of definiteness and of cases (nominative and accusative). The definiteness marker, *-(a)t-*, is used only for fem. nouns, e.g. *gaware*, 'cat (citation form)' vs. *gawar-at-a*, 'the cat (fem. nom.)'. Nominative is marked by *-i/-y* (masc. sg./pl.) and by *-a* (fem.). Accusative is marked only in definite nouns by *-a* (pl. and masc. sg.) or by *-o* (fem. sg.). E.g.: *gawar-at-a*$_1$ *kap-at-o*$_2$ *bayez*$_3$, 'The cat$_1$ (fem.) chased$_3$ the bird$_2$ (fem.)'; *asa-y*$_1$ *gemat-ita-a*$_2$ *šuqez*$_3$, 'The man$_1$ slaughtered$_3$ the oxen$_2$'. Dative, ablative, locative, and instrumental/comitative are marked by *-(a)s*, *-(a)p*, *-n*, *-ar*, respectively: *daydo-s* 'to/for Daydo (name)'; *dere-p* 'from a mountain'; *hiiʦa-n*, 'on/in bed'; *kawe-r*, 'with a gun'. There are also locative terms (relational expressions based on body-part nouns): *bella*, 'on/on top'; *giddo*, 'inside'; *garsa*, 'under'; and *mille*, 'side'.

Personal pronouns in M. include:

Pers.	Subject	Accusative	Possessive
1st sg.	*tani / ta*	*tana*	*ta*
2nd sg.	*neni / ne*	*nena*	*ne*
3rd masc. sg.	*ezi / e*	*eza*	*e*
3rd fem. sg.	*iza / i*	*izo*	*i*
1st pl.	*nuni / nu*	*nuna*	*nu*
2nd pl.	*yinti / yi*	*yinta*	*yi*
3rd pl.	*unti / u*	*unta*	*u*

Although the short forms of subject pronouns in the above table appear identical with respective possessive pronouns, there probably exists a tone/accent difference between the two (this question is not discussed in Mahider Tesfu 2003; the author's own data are insufficient to draw a conclusion).

Possessive pronouns can be nominalized through attachment of special markers of gender and number, e.g.: *tasi yeʾez*, 'mine (masc.) came'; *tara yeʾez*, 'mine (fem.) came'; *esitay mez*, 'his (pl.) eat'.

The demonstratives are:

	proximal		distal	
	nom.	acc.	nom.	acc.
masc. sg.	*ayi*	*aya*	*yeni*	*yena*
fem. sg.	*hanna*	*hanno*	*yanna*	*yanno*
pl.	*ayitay*	*ayitaa*	*yenitay*	*yenitaa*

Question words include: 'who' *oni*, 'what' *abi*, 'when' *ayde*, 'where' *ana*, 'why' *abis*, 'how' *wosta*, 'how much' *aappun*.

Numerals may precede the head noun (in this case they are not marked for gender and case); more frequently, they follow the head noun and are marked for gender and case: *naʾa tab-ita-y yeʾ-e-z*, child ten-PL-NOM come-PF-DECL, 'The ten children came'.

Subject agreement is not indicated on the verb. Perfective, imperfective and future tenses are marked by *-e-*, *-i-* and *-od-*, respectively; the declarative markers *-z(a)/-(a)* occur after vowel/consonant endings: *ta afila meč̣č̣-e-z*, 'I washed clothes'; *ta afila meč̣č̣-i-z(a)*, 'I wash clothes'; *ta ant-od-(a)*, 'I will work'. (Cf. interrogative clauses, marked with *-ne/-e*: *e ang-e-ne*, 'did he go?'; *e ang-i-ne*, 'does he go?'; *e ang-od-e*, 'will he go?')

Progressive action is expressed by an analytic construction involving the main verb followed by *-idar* and the imperfective form of the exis-

tential verb *ye-*, e.g.: *ta ant-idar ye-iz(a)*, 'I am working'. Distinction between present perfect and past perfect is reported: *ta m-iaš-ez(a)*, 'I have eaten' vs. *ta m-iašaš-ez(a)*, 'I had eaten'.

In negatives, present, past/perfective and future forms are distinguished, e.g.: *nu wong-owa*, 'we do not buy'; *nu wong-ekka*, 'we did not buy'; *nu wong-enna*, 'we will not buy'. The negative progressive is: *nu wong-idar baa*, 'we are not buying'.

Imperative is marked by *-ob* (sg.) and *-oyta* (pl.), e.g. *ant-ob*, 'work (2nd pers. sg.)'; *ant-oyta*, 'work (2nd pers. pl.)'. Negative imperative forms are: *oyč-ipp*, 'do not ask (2nd pers. sg.)!'; *oyčippat*, 'do not ask (2nd pers. pl.)!'. Optative/hortative is marked by invariable *-o* (affirmative) and *-ippe* (negative) for all 3rd pers.: *oyč-o*, 'let him/her/them ask!' vs. *oyč-ippe*, 'don't let him/her/them ask!'.

M. clauses mainly follow Subject-Object-Verb order. In noun phrases with adjectival or numeral modifiers, head-modifier order (with case and other nominal information added to the phrase-final element) is the most frequent. Possessive pronominals on the other hand precede the head.

as	*dura-y*	*ketsa*	*wong-ez*
man	rich-M:NOM	house:ACC	buy-PERF

'The rich man bought the house'

nu	*kets*	*dammo*
1SG:POSS	house	big

'Our house is big'

The standard ten-word list for M.: 'one' *petto*, 'two' *nam'i*, 'three' *heedz*, 'water' *atsa*, 'fire' *tama*, 'sun' *awaata*, 'moon' *ageena*, 'blood' *suts*, 'tongue' *irints*, 'tooth' *ača*.

Azeb Amha

Malo ethnography

The M. form one of the ethnic groups who live in the middle Omo valley of south-western Ethiopia. The term a local ethnonym used by the group itself as well as by the neighbouring groups, but Amhara and other central Ethiopians conventionally call them *mälo* or *mällo* (leading to the spelling Melo or Mello in official documents). The traditional area of the M., currently administered by the Malo-Koza *wäräda* of Gamo Gofa Zone, Southern Nations Nationalities and Peoples' Region, is bordered to the east by ↗Gofa, to the south by ↗Basketo, to the west by Dola and other ↗Dokko groups (further to the west by ↗Dime), to the north-west by Čara, to the north by ↗Konta (and Koyša), and to the north-east by ↗Dawro. M. and the neighbouring peoples all speak ↗Omotic languages. The number of the M. population is estimated at 19,918 (CSA 1996).

Located on the southern fringe of the Omo River, the land forms a remarkably steep mountain topography with its highest peak of Mount Zaalallo (ca. 3,400 m A.S.L.) in the centre. Altitudes in the area range from ca. 600 to ca. 3,400 m A.S.L., but people generally live between 1,000 and 3,000 m A.S.L.

The majority of the people are subsistence farmers who engage in crop cultivation and livestock raising. They grow more than 100 species of cultivated plants: cereals (barley, wheat, ↗maize, sorghum, ↗*ṭef*), tuber and root crops (↗*ənsät*, taro, yams, cassava, potatoes), pulses (peas, beans, etc.), vegetables (Ethiopian cabbage, squash, etc.), fruits (banana, papaya, sugarcane, etc.), spices (pepper, Ethiopian cardamon, etc.), stimulants (↗coffee, ↗*čat*, etc.), plants for material uses (gourd, eucalyptus, bamboo, etc.), ornamentals (rose, etc.). Still a large number of local varieties are distinguished among the major food crops such as *ənsät* (over 60 varieties), taro (over 30), barley and wheat (over 20 respectively). *Ǝnsät*, which is found in almost every household garden, is by far the most important both for daily food sources and for various non-food material uses. *Ṭef* is nowadays sown most extensively in the lowlands, both for domestic consumption and for cash sale.

Plough cultivation has found its way in the lowland fields, while the digging stick known as *mangatso* is the main implement for tillage in the highland fields. People raise some cows, sheep, goats, and chickens as well as horses, mules, and donkeys, using the dung as essential manure for home gardens. Some of the people engage in beekeeping for collecting honey which is partly consumed in drinks but largely sold for cash.

Historically, M. was an autonomous kingdom ruled by a hereditary king (*kaate*). Though oral tradition is largely dismissed and seriously frag-

A Malo house in an *ənsät* grove; photo 1950/52 by Eike Haberland, courtesy of Frobenius-Institut (23–Ha061–11)

mented after its final extinction following the demise of the imperial regime, more or less ten kings are remembered, suggesting the kingdom was established no later than the 19th cent. The kingdom was settled by immigrants from the neighbouring areas, mostly from Gofa. The early kingdom, however, only occupied the north-eastern tip of the territory later called Abba. The royal clan of the Abba dynasty, referred to as Abba Gošana'a, migrated from and then kept good relation with their homeland of Gofa. But around the turn of the 19th cent., king Gobe and his followers were driven to the other side of the Omo River where they settled and formed the Konta kingdom. The leader of the emergent group who took over power from the Abba dynasty was Madda, founder of the M. dynasty. He and his successors, whose clan is claimed to be M. Gošana'a, based their residence (*gad'o*) in Šama in central M. Under the M. dynasty, the kingdom expanded through constant battles against the neighbouring polities in the 19th cent. King Ṣoona, referred to as Tona in Borelli's account (1890), is familiar to the people today.

In early 1890s when imperial troops invaded the land, however, expansion suddenly ceased. Central and northern Ethiopians, mostly Amhara, came to settle the land. While the kings maintained their status by becoming ↗*balabbats*, commoners became heavily exploited under ↗*gäbbar* system.

Even before incorporation into the empire, the M. area had been penetrated by several trade routes linking Ǧimma and the current South Omo area where wild animals abounded. In Šama, Bokre, and Godo, all market towns on the routes, Islamic merchants had their settlements. Local boys and girls were taken to Ǧimma as slaves (*ayle*), which apparently continued up to the Italian occupation in 1936.

During the Italian period, some of the northern M. area became unsafe because local Amharas and others central Ethiopians concealed themselves in the forests along the Omo river as a base for resistance, raiding local settlements. When the Italian occupation ended in 1941, Libaane Alto, one of the local collaborators (*banda*) who had furnished the Italians with firearms and bullets, started an anti-Amhara or anti-imperial war which was suppressed in a year or so. After the fall of the imperial regime in 1974, armed Bodi and other ↗Me'en agro-pastoralists, locally referred to as *golde* or *golda*, repeatedly came from the lower Omo valley to attack northern M. settlements for cattle, which led to depopulation in the northern M. area.

The social organization of the M. is hierarchically arranged. It includes four distinctive hereditary subgroups: two farmer groups (Goqa and Dokko) and two artisan groups (Ota Mani and Gita Mani). Goqa is the most dominant subgroup composed of over 30 clans most of which have putative origins outside M. land. It occupies most fertile fields suited for crop cultivation. Dokko, on the other hand, has a smaller population and is composed of about 15 clans most of which do not have any putative lands of origin. The Dokko are more or less confined to remote and isolated places such as steep slopes or lands surrounded by cliffs and deep valleys. Other than farming, they usually engage in various handicrafts such as basket making and weaving. Oral tradition tells that the Goqa came from the immigrant settlers who ruled during the kingdom period and the Dokko descend from the conquered autochthons.

Th ere are also two hereditary artisanal groups, which are subsumed under the derogatory term Mani. One group is the Ota Mani, whose female members work as potters, and the other is the Gita Mani, whose male members work as black-

smiths. The Mani do not intermarry with farmers. In former times, especially up to the imperial conquest, they were considered impure and were differentiated from farmers because of their alleged food habits and strange behaviour. These days, relationships between farmers and artisans have gradually ameliorated.

Reflecting the complex origins of the people, various languages are spoken in the region. The Dokko keep their original language Dokittso (the Dokko language) which is similar to Baskeetittso (Baskeeto language) spoken in the south of M. Probably the ancestors of the current Goqa brought the ancestor of the M. language when they immigrated into the land a few centuries ago. But now the language is not common even among Goqa members. It is being replaced by Gofattso (Gofa language). The process of language shift from Malittso to Gofattso in M. land started in the first half of the 20th cent. And now Malittso is obviously one of the endangered languages of Ethiopia. The language shift may be related to local concepts. While the Gofa language is associated with sophistication or civilization (*žaažo* or *ǧaaǧo*) and often called Žaažiččo or Ǧaaǧiččo (language of sophistication), people commonly regard Malittso as Gezittso (language of *gezo*, ignorance or backwardness). In this context, the ↗Oyda language, close to the M. language, is considered Gezittso as well.

Various traditional beliefs and practices such as ancestor worship and harvest rituals associated with fertility are maintained, but only sparsely. Muslim traders from Ǧimma brought Islam to the land. Their descendants who keep their faith now live in several settlements as farmers. Since the incorporation into the Ethiopian state, Orthodox Christianity and possession cults entered the country though both are not popular. It is a missionary Christianity that has gained ground, which reached the region in the latter half of the 20th cent.

Mämhər

M. (መምህር, Gəᶜəz: lit. 'teacher', from *mäharä*, 'teach') is a traditional title in the ↗Ethiopian Orthodox (Täwaḥədo) Church. From its original meaning of 'teacher' the term has come in the course of time to assume additionally the specific meaning of 'abbot', i.e. the head of a monastery ormonastic community (cp. ↗*gädam*), the supreme teacher in spiritual, religious matters (cp. ↗*aläqa* for ↗*däbr*). However, today M. is frequently used also as an honorific title, while there are other terms which are used to denote technically the role of the superior of a monastery: cp., e.g., Gəᶜəz *liqä mənet*, *abä mənet* (DillmLex 194); Amh. *abba mənet* (cp. early evidence in CRDLib 190). Some abbots bear a particular title linked to the monastery in which they serve: ↗*ᶜaqqabe säᶜat* of Ǝnda Abba Mäṭaᶜ (↗Däbrä Libanos of Šəmäzana) or ↗Däbrä Ḥayq Ǝsṭifanos, *makbəb* of ↗Atronsä Maryam, *bätra yarəq* of ↗Tädbabä Maryam etc. An abbot may be addressed simply as "father" (cp. ↗*Abba*, ↗*Abbate*) and not as a M. The title *afä mämhər* (lit. 'the mouth of M.') refers to the spokesman or vicar of the abbot.

It is difficult to know when the term (in origin, a participle form from the intensive stem, **mämə*h*(*h*)ər* [Dillmann 1907:241, §114a], but traditionally pronounced as a participle form of the causative stem, *mämhər*, like *mädḫən* [ibid. 242]) started to be used in the monastic context. It appears in the Ethiopic Bible rather in the meaning 'scholar, doctor' or 'teacher' (DillmLex 144). The part of the so-called *Regulae Pachomii* (cp. ↗Pachomius) translated from Greek during the Aksumite period, employs *abbas* (from Greek: ἀββας) for the superior of a monastery (DillmChr 62f.; also in BauEr II, 46f., III, 36), while a later Ethiopian addition uses M. (DillmChr 64, 65; also in the ↗*Fəṭḫa nägäśt*, cp. Guidi 1897–99, § 10, 15).

During the Salomonic period M., in the meaning 'abbot, superior', was widely used, although in many cases the connotation 'teacher' was specifically emphasized: e.g., *mämhəranä ḫägg abäwinä*, 'the teachers of the law, our fathers', *mämhərənä wämägäśśəṣənä* ('our teacher and tutor', cp. BauEr

I, 44), or *mämḫərä däbr məslä däqiqu* ('the M. of the monastery with his (spiritual) sons', CRDLib 186); cp. also *mämhəranä zäkäswa bämänbärä məhəro abunä Ǝsṭifanos*, 'the teachers of Käswa on the seat of the teaching of *abunä* Ǝsṭifanos' (Mordini 1953:57). Cp., however: *litähi Ṗeṭros baᶜälä Bizän mämhərəkəmu zəkäruni*, 'remember me, your teacher Ṗeṭros, the master of Bizän' (BauEr III, 37). The same term was used also in the context of a legal stipulation where the upper hierarchical position of M. had to be stressed (... *əmmähi mämhər wäʾəmmähi qäysä gäbäz* ..., '... if a M. or if a *qäysa gäbäz* ...', BauEr I, 68).

In the Ethiopian monastic tradition, the appointment of the M. as the head of the monastery was a complex matter, where Canon ↗law, political considerations and local tradition encountered each other. As attested in the sources, it could occur in at least three different ways. Sometimes a M. was elected by the monastic community (e.g., the same Filəṗṗos, according to the Acts of ↗Anorewos). At other times, lots could be drawn by a number of candidates elected within the community (this method was used, e.g., in the selection of the 16th-cent. *əčč̣äge* ↗ᶜƎnbaqom). Lastly, the M. could be appointed by the king, as was the case of ↗Iyäsus Moʾa of Däbrä Ḥayq, who was appointed by a ↗Zagʷe king; and similarly with ↗Märḥa Krəstos who was appointed by *aṣe* ↗Zärʾa Yaᶜəqob.

As knowledge is a frequent component of sanctity, the Fathers of the Church can also be called *mämhəranä betä krəstiyan*, lit. 'the teachers of the Church', in church discourse and literature (specifically, in ↗hagiography); remarkably, *abunä* ↗Täklä Haymanot is termed *mämhərä ᶜaläm*, 'Teacher of the World' in the first passage of the ↗*Sənkəssar* entry devoted to him (cp. BudSaint 1241; GuiSyn III, 377). In the 15th-cent. Acts of *abunä* ↗Filəṗṗos, a 14th-cent. abbot of ↗Däbrä Libanos of Šäwa, the saint was appointed head of a group of eleven monks who were commissioned with spreading Christianity ('teaching', i.e., evangelizing). All of these monks were given the title M. (in allusion to the twelve Apostles) and founded monasteries of their own.

The narrow meaning of the term has been retained till today in the traditional system of ↗education, especially at its higher levels, where the teacher is called M. The title M. is also employed in village churches to address married priests.

Marie-Laure Derat – Denis Nosnitsin

Mamlūks

M. (Arab. مملوك, lit. 'owned') was an ancient Oriental system of enslaving skilled manpower. It developed into a process whereby new recruits were transformed into individuals who went on to hold high administrative and military positions. The final outcome was that M.-ruling households emerged in various corners of the Islamic world. In ↗Egypt local M. took over in 1250 and transferred power within their system until 1517. The M. period (divided into the Baḥrī [Kiptchak, 1250–1382] and the Burgi [Circassian, 1382–1517] periods), was medieval Egypt's golden age, and it coincided with the hayday of the Solomonic monarchy in Ethiopia, 1270–1529. During this period the relations that developed between the two countries left an enduring legacy.

After the Mongols destroyed Baghdad in 1258, Egypt became the capital of Middle Eastern ↗Islam. The M. *sulṭāns* hosted the ᶜAbbāsid caliphs and engaged in conflicts with both the Mongols in the Fertile Crescent, and the late Crusaders in the Mediterranean. They also invested in building Egypt, developing its cities, the Nile irrigation, and its long-distance trade. M. interest in Ethiopia stemmed from all those aspects. Facing the menace of the Crusades from Europe, they

were concerned about the Christian connection to Ethiopia and developed the myth that Ethiopia might block the ↗Nile. As political and military patrons of Islam, they assumed some patronage over the Islamic sultanates of Southern Ethiopia, notably ↗Ifat and ↗ᶜAdal, who were fighting a losing battle against the Solomonic rulers. Because the land trade-route to the east was blocked by the Mongols, they developed a Red Sea fleet and established contact with the Muslims of the Horn (to whom they mostly referred to as *zayāliᶜa*, sg. *zaylaᶜī*) through the port of ↗Zaylaᶜ. The M. often regarded the Copts as a "fifth column" in Egypt because the way they treated them often angered the Solomonic rulers. Additionally, the M. controlled ↗Jerusalem and the Christian Ethiopian pilgrimage route; and, like all Egyptian rulers, they were in a position to prevent the sending of new metropolitans to Ethiopia (↗*Ṗappas*).

This cycle of fears, threats and Ethiopian–Egyptian counter-threats manifested itself in the correspondence between the *sulṭāns* and the Ethiopian emperors: aẓ-Ẓāhir Baybars (1260–77) and ↗Yəkunno Amlak; Manṣūr al-Qalāwūn (1279–90) and ↗Yagbəᵓa Ṣəyon; an-Nāṣir Muḥammad (1309–41) and ↗ᶜAmdä Ṣəyon I; aẓ-Ẓāhir Barqūq (1382–99) and *sulṭān* ↗Barsbāy, ↗Dawit II and ↗Yəsḥaq; *sulṭān* Ǧaqmaq (1438–53) and ↗Zärᵓa Yaᶜəqob. During the reign of *aṣe* Dawit II, in 1381, an Ethiopian force even dared to penetrate upper Egypt (TadTChurch 255).

In the midst of the conflicts, there were often positive exchanges between the two sides. Under M. rule, Egypt went on to become a source of innovation and progress. *Abunä* ↗Sälama "the Translator" supervised the momentous scripture translation enterprise for texts that were transported from Egypt to Ethiopia. In the al-Azhar mosque of Cairo, the M. opened a corner for Ethiopian Muslims who went to study there (*Riwāq al-Ǧabartīya*; cp. ↗Gäbärti). Faḫraddawla, a prominent administrator in the M. court who fled to Ethiopia, reorganized *aṣe* Yəsḥaq's entire government, including taxation system, along the M. administrative lines. In addition to this, *aṣe* Zärᵓa Yaᶜəqob obtained, for the first time, a second bishop from Egypt.

The fact that Ethiopia was often on the M. agenda is also reflected in the rich literature produced in Egypt during that period. Of the various sources on the Horn of Africa, worth mentioning are the writings of Aḥmad b. ᶜAlī al-↗Maqrīzī, and Ǧalāladdīn as-↗Suyūṭī. Altogether, medieval Egypt was quite respectful of Solomonic Ethiopia, as reflected in the *sulṭāns'* letters to their Ethiopian counterparts, which show the deferential approach they dedicated to Ethiopian monarchs (Gori 2002). The Solomonic dynasty, for their part, had a similar egalitarian attitude to Egypt. This Egyptian–Ethiopian mutuality, however, was to take a different shape following Egypt's fall to the Ottomans (as of 1517), and after the Solomonic dynasty was traumatically shattered by ↗Aḥmad b. Ibrāhīm al-Ġāzī's *ǧihād*.

Mamma mədər ↗Mänz

Mammädočč dynasty

M. is the name used to refer to the ruling dynasty of the ↗*imāms* of ↗Wärrä Himäno, who ruled this part of ↗Wällo from the end of the 18th cent. The *imām* Mäḥammäd ᶜAli's conversion to Christianity as *ras* ↗Mikaᵓel in 1878 can be considered as marking the end of the independently ruling Muslim dynasty, though its representatives continued dominating political scene within the Christian Ethiopian empire.

There are two etymological assumptions in the traditions that explain the foundation of this dynasty. The more common one refers to the locality of Mammäd in Gärfa (not far from present day ↗Bati) where the founder of the dynasty, Goodanaa Babboo, an Oromo Muslim cleric from ↗Arsi,

settled in the middle of the 18th cent. The second assumption, deriving M. from the name Muḥammad, suggests two possibilities: either claiming a prestigious Šarifian ancestry from the Prophet of ↗Islam through the lineage of *šayḫ* Nūr ↗Ḥusayn of Bale (which may be a later reconstruction, but not in contradiction with an Arsi origin) or from ↗Mäḥammäd ᶜAli "Abba Ǧibo", the grandson of Goodanaa Babboo, considered the real founder of the dynasty in Wärrä Himäno.

The process of political and territorial expansion led by the M. was rapid as it took themonly a few decades to subdue and reassemble the fragmented and rival chiefdoms of Wällo and to establish their dominance over this territory. It started with Goodanaa Babboo, who "exploited his credentials as a religious notable" (HusIslam 117) to achieve hegemony over the Arloč clan who had been dominating Sägarat located between Wärrä Babbo and ↗Täkʷəladäre. His son ᶜAli Goodanaa revolted against the Arloč and took over their possessions and proceeded to expand the territory further. Mäḥammäd ᶜAli "Abba Ǧibo" further consolidated the dynasty from its centre at ↗Tänta. This location was of strategic importance as M. controlled the resources of a fertile highland territory and, through its ↗*amba*-mountains (↗Mäqdäla, Ləgot), a system of valleys (the ↗Bäšəlo river and its tributaries) serving ↗Bägemdər and ↗Yäǧǧu. This location gave to the M. a strong power base that enabled them to take advantage of the turmoil of the warlord era of the ↗*Zämänä mäsafənt*.

The M. chiefs succeeded in maintaining their authority through exceptional abilities as warriors on the battlefield. But this was not attained only through force. They also based their authority on promoting and strengthening ↗Islam. This religion was effectively used as an ideological shield against the ongoing process of the incorporation of Wällo by the neighbouring Christian powers.

Mäḥammäd ᶜAli was succeeded by the *imāms* Amäde "Kolase" (↗Wäldä Gäbrəʾel), ↗Libän Amäde "Abba Ǧərru" and Amäde Libän "Abba Muǧa". They participated in a number of battles and intrigues in which they often gained an advantageous position. Their immediate rivals were the rulers of the Wärräsek Yäǧǧu dynasty (who were similar to the M. in origin) dominating Bägemdər and Yäǧǧu. The M. used their strength against the Wärräsek by maintaining a power balance among their large neighbours: Təgray, Goǧǧam and Šäwa.

Later on, the M. were internally divided by fighting for the title of *imām*. This division weakened them particularly when they faced ↗Tewodros II who established his headquarters at Mäqdäla and waged a violent campaign against the M. who were a hindrance to his policy of territorial unification. Nevertheless Wällo forces resisted the campaign of oppression led by the two widows of M. *imāms*, ↗Mästawät and ↗Wärqitu, claiming power for Amäde Liban "Abba Waṭäw", and Mäḥammäd ᶜAli, respectively. They eventually found themselves caught in the rivalry between ↗Mənilək of Šäwa and ↗Yoḥannəs IV of Təgray. The sons of both queens were finally forced to be baptized at the Council of Boru Meda in 1878.

This event marked a turning point in the history of Wällo, but it was not a radical break in the M. strategy to accumulate power. The most striking feature of the M. *imāms* was the intricate interplay with their Christian rivals. A close look at M. genealogy shows that the first M. *imāms* married women of Christian background. The mother of Mäḥammäd "Abba Ǧibo" was the daughter of a lord of ↗Wadla Dälanta. He himself had two Christian wives, one from Amba Ləgot, the other from Ambassäl, who bore him his successor, Amäde Kolase. The latter, in his 20s, entered the service of *ras* ↗Goššu, who baptized him with the name of Wäldä Gäbrəʾel and who gave him his niece in marriage. After Goššu's death, Amäde returned to Islam and took over the leadership of Wärrä Himäno. His son Libän "Abba Ǧərru" received a Christian education in Bägemdər with his mother. After her death, he returned to his father who converted him to Islam. When he was *imām* in his turn, he vigorously championed Islam. Like his predecessors, he also married a Christian woman, the mother of Ali "Abba Bulla". After Libän, this process of matrimonial absorption of Christians in the M. dynasty was discontinued, yet we must note that his daughter (by another wife) ↗Mänän (later *ətege*) married *däǧǧazmač* Alula, with whom she conceived *ras* ↗Ali II. She later married Alula's brother Wäle and eventually the Gondärine *aṣe* ↗Yoḥannəs III.

This genealogical sketch allows us to understand that the case of Mäḥammäd ᶜAli – Mikaʾel was not unique. It was part of a historical pattern of interreligious mix. That is what his son, *ləǧ* ↗Iyasu, tried to suggest when claimed to combine his M. paternal heritage with his Solomonic maternal ancestry.

Mammo Çorqa

M.Č. (ማሞ፡ ጮርቃ, Mammo Corka or Chorka, b. 12 *Ḥamle* 1894 A.M. [1902 A.D.], Gidaamii, d. October 1965, Addis Abäba) was an Evangelical pastor, government official and Member of Parliament in Western ↗Wälläga. In his youth he was taught at Sadi Guma by teachers recruited from Rev. Cederqvist's so-called "English School" in ↗Addis Abäba. During the 1920's M.Č. worked as a teacher at the American Presbyterian Mission School in Sayyoo (↗Dambi Doolloo), he also tutored in-patients at the hospital and conducted daily devotions. When the Evangelical Church in Sayyoo was organized in 1934, M.Č. became one of the elected elders and its spokesman after the Italian invasion. In 1938 the congregation elected M.Č. for ordination. After training in Addis Abäba he was ordained priest (*qes*) by Rev. D. Henry on 6 February 1939. He returned to Wälläga and served as a pastor in Sayyoo and also in the vacant Swedish mission stations Mändi, Näğğo and Boğği.

On 8 August 1940 *qes* M.Č. was arrested by the Italian authorities and taken to Ǧimma, accused of espionage for the British and for the Emperor. He was held in solitary confinement and cruelly tortured during the first three months of his incarceration and later sentenced to death. A few hours before his execution he was freed by British troops on 3 June 1941.

In 1943 *aṣe* ↗Ḫaylä Śəllase I requested *qes* M.Č to take charge of the gold and platinum mines in Yubdo/Wälläga. After consultation with the Sayyoo elders M.Č. accepted the government assignment.

In 1957 M.Č. was elected as a Member of Parliament and moved to Addis Abäba. Besides his duties he served voluntarily in the Bethel Congregation and other places, until his death.

M.Č. was a man highly trusted by those in both high positions and low. He often served as mediator between quarrelling persons and groups and used his personal authority for reconciliation.

TAYLOR (ed.), *Mamo Chorka's Own Story*, n.p. 1942; DEBELA BIRRI, *History of the Evangelical Church Bethel 1991 to 1947*, Ph.D. thesis, Lutheran School of Theology at Chicago 1995; GUSTAV AREN, *Envoys of the Gospel in Ethiopia: in the Steps of the Evangelical Pioneers*, Stockholm 1999.

Johannes Launhardt

Mammo Mäzämmər

M.M. (ማሞ፡ መዘምር, Maammoo Mazammir, b. 1937, Gudär, d. 1970, ᶜAläm Bäqañ) was an Ethiopian soldier and an Oromo nationalist originating from the ↗Ambo area of the Ǧəbate-Mäčča district. His parents were Umee Gurmeesa Nagawoo and Mazammir Haabta Durii. He received his junior secondary education at Däğğazmač Bäšah School in Gudär and at Yämaᶜərägä Ḫəywät Qädamawi Ḫaylä Śəllase School in Ambo. After having attended Täfäri Mäkʷännən School in Addis Abäba, he started training as a teacher in Harär, in order to make a living. However, in due course he followed his real aspirations and joined the ↗Harär Military Academy.

Since M.M. scored the highest result in the Harär Military Academy, he stayed there as a teacher until he received the rank of lieutenant. In 1962 he was one of the members of the military who were given a scholarship to pursue a higher education, earning an L.L.B degree in the Faculty of Law at Ḫaylä Śəllase I University.

Whilst M.M. was at the university, he joined the ↗Mäčča and Tuläma Association. He was a leading activist for the aims of the Association till his death. He spent much of his time reading books on history and politics, and collected many historical documents in order to write a history of the Oromo people.

M.M. was accused of exploding two bombs at the Cinema Ampere in Addis Abäba on 20 October 1967. The bombing, which was actually carried out by government agents, caused many causalities. M.M. was arrested in the morning of 22 November 1967 and later sentenced to death. He was hanged at ᶜAläm Bäqqañ Prison in 1970. According to Ṭäsfäye Dägaga, his prison mate and lifelong friend, the real reason for this punishment was a draft copy of a history of the Oromo people which was found when his house was searched.

M.M. is said to have declared in the last minutes of his life, as he was walking towards his executioners, that his death was a "sacrifice" for the sake of the Oromo people and the

fight against the feudal system (Olana Zoga 1993:428).

Dawit Kassaye Woldeyohannes

Mammo Taddäsä

Ato M.T. (ማሞ፡ ታደሰ, b. 1924) was a prominent politician of ↗Ḫaylä Śəllase I's government. He was born into a middle-class Catholic family from ↗Šäwa. His grandfather, Kiros Ayyälä, was the first dragoman of the French legation in Addis Abäba and the brother of Wäldä Maryam, an extraordinary secretary of *ras* Täfäri.

After studying in France in the years following World War II and marrying a French woman, from 1958–66, he served as a Vice-Minister and Minister of State in the Prime Minister's Office. From 1966–69, he served as Minister of Justice and then Minister of Finance. In 1966 he was a personal envoy of Ḫaylä Śəllase to Accra to help resolve the conflict between Ghana and Guinea Conakry.

In addition, M.T. often acted as deputy Minister of Foreign Affairs and sat on many governmental boards and commissions, including as Chairman of the Codification Commission and Head of the Central Personnel Agency. He worked on the Ethiopian ↗constitution with René David and was closely associated with Prime Minister ↗Aklilu Habtäwäld. As it was also the case with the latter, based on his French education and wife, M.T. was perceived by more traditional opponents as a tool of undue foreign influence. He was imprisoned by the *Därg*.

Evgenia Sokolinskaia

Mammo Wälde

M.W. (ማሞ፡ ወልዴ, also Däməsse Wälde, Mammo Wälde Dägaga; b. 12 June 1932, Diri Ǧille, d. 26 May 2002, Addis Abäba) was an athlete and Olympic marathon champion. Orphaned very young, he joined the ↗Imperial Bodyguard in 1951, spending two years in Korea as part of the UN peace-keeping mission. After his victory in the Olympic Games of 1968 he was promoted by Emperor ↗Ḫaylä Śəllase I to the rank of captain, remaining in post-revolutionary times on the military payroll working as a sports lecturer until 1992.

Altogether M.W. participated in four Olympic Games (1956, 1964, 1968 and 1972). In 1968, in Mexico City M.W. became the second Ethiopian (after ↗Abbäbä Biqila) to win a gold medal in an Olympic marathon race (2:20:26,4 h); he also won there a silver medal in the 10,000 m-race. With a bronze medal in the marathon race in Munich 1972, the 40-year-old M.W. was the oldest medal winner in a running event of the Olympic Games.

After the victory of 1968 Solomon Täsämma, a legendary sports journalist, wrote a song to honor the Ethiopian marathon heroes, M.W. and Abbäbä Biqila, entitled ማራቶን፡ ልዕልትዋ (*Maraton lᵊəltwa*, 'Marathon the Princess').

For two years at the end of the 1970s M.W. headed a political committee as a junior local official. In 1993 he was arrested, charged with being involved in the murder of a 15-year-old boy named Samuʾel Alemo in 1978. M.W.'s case gained international attention in 1996 when he was invited to be a guest at the Summer Olympics in Atlanta 1996 by the International Olympic Committee. However, all efforts by various former Olympic champions such as Kenyan runner Kipchoge Keino were unsuccessful: M.W. remained under arrest until 2002 in the Central Prison of Addis Abäba awaiting his trial. Sentenced at last to six years in prison, M.W. was released from custody in January 2002 because of his long pre-trial imprisonment, and returned to his family, second wife Abärraš Sämhate and his three children. Only five months later M.W. died at the age of 69. A commemorative life size statue for M.W. was erected in 2003 (next to the one of

1975 honouring Abbäbä Biqila) near his burial place in the cemetery of St. Joseph's Church in Addis Abäba. In the beginning of 2007 the statues and tombstones of both athlets were damaged by unknown persons.

Thomas Rave

Mäna

M. is a town in ↗Bale, lying at 1,700 m A.S.L. in the cultivated valley of the Wabi Mäna river, a left-bank tributary of the ↗Ganalee which has its source on the eastern slopes of the Bale massif. It is the river that gave the town its name.

M. was the capital of the former ↗Dolo *awraǧǧa* of the Bale region (1960–87). After the reform of 1991 it became the administrative centre of the Mäna, Harä and Buluq *wäräda* of the Bale zone, Oromiyaa *kəlləl*. It had 2,666 inhabitants in 1984, 6,947 inhabitants in 1994, and 11,873 inhabitants in 2004. The *wäräda* population grew from 81,011 inhabitants on 6,680 km² in 1994 to 111,469 (density 16.7) in 2004.

Alain Gascon

Mänän

M. (መነን) was a monthly periodical that was issued in Amharic (later also in English) between 1955–74. The opening of the magazine was timed to the 25th jubilee of coronation of Emperor ↗Ḫaylä Śəllase I and Empress ↗Mänän Asfaw. It was named after the Empress to stress her contribution to the modernization of Ethiopian women's social role and promoting their issues. Initially, the magazine was supposed to help in these tasks, since its objectives, as outlined in the editorial of the first issue, were to introduce women and the youth to the modern ways of house keeping, bringing up children, managing family matters and health care. Later both the topics of the articles and the range of the potential readers were expanded.

The maiden issue of M. has no date or place of publication or name of editor in it. Its date of issue is probably 1 *Ḫədar* 1948 A.M. [11 November 1955 A.D.], since the second issue is dated 1 *Taḫśaś* 1948 A.M. [11 December 1955 A.D.]). The mark "Copertina Officina Grafica della S.A. Corriere Eritreo – Asmara" appears at the bottom of the front cover; thus, the first issue must have been printed in the then province of ↗Eritrea.

In the 1 *Mäskäräm* 1950 A.M. [11 September 1957 A.D.] issue of M., the cover title changed to መነን፡ ዘመናዊ፡ መጽሔት (*Mänän zämänawi mäṣḥet*, '*Mänän*. Modern Magazine'). From that time on, articles in English started appearing in M., until it was declared a bilingual magazine in December 1958. In September 1962, M. was split into two independent periodicals, Amharic and English, both preserving the original title. In April 1969, M. became bimonthly, and in August 1969 it was again a monthly magazine.

The publishers of M. were the Ethiopian Patriotic Association (s. ↗*Hagär Fəqər Tiyatər*) from 1955 to July 1969, the Ministry of Information from August 1969 to September 1972, ᶜAläm Public Relations Consultants from October 1972 to 1974.

The first editor ("directress") of M. was *wäyzäro* Romanä Wärq Kaśahun (1955–56), followed by Alexander Velahoviski, a Swiss national (1956–58), Mängəśtu Mäkʷännən (1959–60), Zäwde Rätta (April 1960–September 1961), Ḫamärä Śəllase Betä Maryam (September 1961–March 1969). Homer Smith (1959–62) and Yaᶜəqob Wäldä Maryam (1962–69) were the English editors of the bilingual M. After the splitting of the magazine, the Amharic M. was edited by ↗Bäᶜalu Gərma (April–July 1969), who considerably reshaped it and opened new columns that covered diverse social and political topics, including arts and entertainment information. He was followed by Mulugeta Lule (August 1969–September 1972), and Azarya Kiros (October 1972–74). The last issue of the Amharic M. found in the library of the ↗Institute of Ethiopian Studies is that of *Säne* 1966 A.M. [June 1974 A.D.].

According to the report published in the *Näḫase* 1955 A.M. [August 1963 A.D.] issue, the monthly run of the Amharic M. was 1,500 exemplars for *Miyazya* 1955 A.M. [April 1963 A.D.], but raised to 10,000 for *Ḫamle* 1955 A.M. [July 1963 A.D.].

In the course of its history, M.'s editorial policy and scope of interests were changed several times. Its original objectives were reconsidered in 1960 by Zäwde Rätta, who suggested catering, *inter alia*, for the educated elite. In 1969, with Bäᶜalu Gərma, the journal stepped back to the original motto. In April 1974, it was declared that M.'s three main aims were informing, teaching and establishing links between readers and "knowledgeable people" in "various disciplines". The only constant topic of the magazine was Ḫaylä Śəllase's court and its life.

The issues of M. contain valuable information on cultural and social life of Ethiopia of the period, and, in particular, on such prominent personalities as ↗Abbäbä Biqila, ↗ᶜAśrat Wäldäyäs, ↗Kidanä Wäld Kəfle, ↗Dästa Täklä Wäld etc.; painters and writers like Afäwärq Täkle, ↗Gäbrä Krəstos Dästa, ↗Ṣäggaye Gäbrä Mädḫən etc.; singers and dancers such as Iyoᵓel Yoḥannəs, Dästa Gäbre, Täsfaye Śahlu etc.; music and literary commentators and critics like Solomon Därässa, Yoḥannəs Admasu, Täsfaye Gässäsä, ↗Bərhanu Zäryəhun etc.; writers of articles on issues related to language and culture such as Yəggäzu Bəśrat, Getaččäw Ḫayle, Bairu Tafla, etc. Information on *Hagär Fəqər Tiyatər*, Ḫaylä Śəllase I Theatre, the School of Fine Arts, the Young Men's Christian Association, Ḫaylä Śəllase I Prize Trust, the National ↗Literacy Campaign and other economic, educational and social institutions can also be found in M.

Fekade Azeze

Mänän Asfaw

Ǝtege M.A. (መነን ፡ አስፋው, also Mänän *dagmawit* [= Mänän II], originally called *wäyzäro* Mänän Mikaᵓel, baptismal name Wälättä Giyorgis; b. 25 March 1889, Ǝgwa, Ambassäl, d. 15 February 1962, Addis Abäba) was the wife of *aṣe* ↗Ḫaylä Śəllase I until her death. Daughter of *ǧanṭərar* (title of the guardian of the mountain fortress of ↗Ambassäl) Asfaw, scion of one of the ancient families of Wällo, and *wäyzäro* Səḥin Mikaᵓəl, M.A. was, through her mother, granddaughter of *nəguś* ↗Mikaᵓel ᶜAli and niece of *läǧ* ↗Iyasu.

As a young lady she was married to *däǧǧazmač* Ali of Č̣äräč̣a in Wällo and had two children with him, *wäyzäro* Bälaynäš Ali and *ǧanṭərar* Asfaw Ali (Zäwde Rätta 2005a); but she was soon divorced from him. She was then married by her grandfather to another prominent Wällo nobleman, *däǧǧazmač* Amäde Ali "Abba Dəyas". Their children were *wäyzäro* Dästa Amäde and *ǧanṭərar* Gäbrä Ǝgziᵓabəḥer Amäde (ibid.). After her husband's death she was married in ca. 1909/10 to a Šäwan nobleman, the considerably older *däǧǧazmač* (later *ras*) ↗Ləᶜul Sägäd Aṭnaf Sägäd, which was a political marriage as were the previous ones. They had one child, but she was separated from him soon in order to arrange a new political alliance.

After this short third marriage she was married by *läǧ* Iyasu to his cousin *däǧǧazmač* (later *ras*) Täfäri Mäkʷännən (the future Emperor Ḫaylä Śəllase) in August 1911 (HSLife 41f.). She had six children with him, of whom only three, Princess ↗Tänañña Wärq, Crown Prince ↗Asfa Wäsän Ḫaylä Śəllase and Prince Śahlä Śəllase (b. 27 February 1931, d. 23. April 1962) survived her. Her daughters Zännabä Wärq (b. 25 July 1918, d. 25 March 1933) and Ṣäḫay Wärq (b. 13 Octobre 1919, d. 17 August 1942) died in their youth, and her second son *märəd azmač* ↗Mäkʷännən a few years before her death.

The marriage lasted for over half a century and, according to several accounts including Rosita Forbes, who was entertained by the couple in the early 20s: "there was much sympathy between

them" (Forbes 1925:137). This also emerges from the Emperor's autobiography (HSLife 41f.). In the pre-war years the couple, and many nobles, facilitated commercial agriculture, especially coffee-growing, deriving considerable profit from permits to do business, as well as taxes on trading posts and coffee scales. The future Empress also benefited from trading in coffee grown on her own lands by sharecroppers (Marcus 1987:80).

In a break with tradition, M.A. was also crowned on the occasion of her husband's coronation ceremony in 1930. The year after her coronation M.A., encouraged by the Emperor (Sandford 1955:48), endowed the Empress Menen School for Girls, the first girls' school in the country, built in the Palace grounds. With the Italians preparing to invade Ethiopia she backed the formation of the Ethiopian Red Cross Society, becoming their patroness, and the first Ethiopian women's association, whose chief patron she remained until her death. When the invasion was launched she organized Ethiopian women to tend the wounded, and appealed to women's associations abroad for material and moral help.

M.A. shared her husband's exile in Great Britain, though, having had a traditional education and not being acquainted with foreign languages she passed on her public role in support of her husband to her Swiss-educated daughter, Princess Ṣäḥay (who later trained as a nurse in Britain), and subsequently, to another daughter, Princess Tänañña Wärq, who was familiar with England and could speak fluent English. M.A. made pilgrimages to the Holy Land, the then British-ruled Palestine, and to Syria and Lebanon, to pray for Ethiopia. She made a vow to St. Mary in Bethlehem to donate her crown to her if her homeland was liberated.

On returning home in 1941, M.A. kept her vow never to wear her crown again, which was sent to the Church of Nativity at Bethlehem. Deeply religious, she spent her last years in failing health, but continued her good works, constructing and repairing monasteries and churches, including the Ethiopian Church in ↗Jerusalem, where she had spent part of her exile. It is said that, by her death in 1962 she deprived Ḫaylä Śəllase of one of his most trusted advisers, though it is difficult to assess her influence as it was exerted in private. She played little part on the wider political scene (ClapHS 61). She was buried in the crypt of the ↗Qəddəst Śəllase Cathedral of Addis Abäba. Her remains were transferred to her sarcophagus

Ǝtege Mänän Asfaw; photo 1930s, courtesy of the IES (no. 51–1)

in the northern transept of the Qəddəst Śəllase Cathedral's nave on the occasion of her husbands belated funeral of 2000.

Rita Pankhurst

Mänän Libän Amäde

Wäyzäro M. (መነን፡ ሊበን፡ አመዴ) was a daughter of the powerful *imām* ↗Libän Amäde of ↗Wärrä Himano and herself a major political figure in central Ethiopia of the 19th cent. In 1831 one of

her sons, ↗Ali Alula (she had at least two others, Ḫaylu and Yəmam [CRNuov 390]), was elected to rule the ↗Yäğğu Wärräsek dominion in central Ethiopia whilst he was still a boy. M. enjoyed great power and influence throughout the 1830s and 1840s. She ruled provinces in her own right and led troops in battle. During the 1830s, she acted as regent together with her brothers Bäšir and Amäde. After Ali overthrew the regency, M. retained her influence over her son until the very end of his rule, in 1853, when they fled together from the armies of Kaśa Ḫaylu (later *aṣe* ↗Tewodros II) to Yäğğu (CRNuov 408).

Before the death of her father, she was baptized and soon after married Alula (CRNuov 359f.). Subsequently, at the insistence of *ras* ↗Gugsa Märsa, then head of the Wärräsek clan, she divorced Alula and married a certain Wäle. In 1840 her son by the first husband Ali gave her the lands of ↗Maru Qämmäs, which she held for seven years, actively asserting her claim through a series of military campaigns. During this period, she married Yoḥannəs, a recognized scion of the Solomonic line, and in 1840 she deposed *aṣe* Śahlu (↗Śahlä Dəngəl), replacing him with her husband, who became ↗Yoḥannəs III. They underwent the coronation ceremony together, and M. thus gained the title *ətege* (CRReal 63f.; CRNuov 380).

In 1844 she began to restore the church of ↗Ḥamärä Noḫ in Gondär, originally founded by *aṣe* Tewoflos. She renamed it Lalibäla and installed two altars, one for each of the sectarian parties, the ↗*Qəbat* and the ↗*Ṣägga*. While many (if not all) of the Wärräsek were Muslims, M. did not appear to waver in her adherence to Christianity. In 1846 sectarian conflicts within the Ethiopian Church reached a peak. *Abunä* ↗Sälama, who arrived in 1841, had taken up residence in Gondär, where he soon came into conflict with *əčč̌äge* Maḫṣäntu, a *Ṣägga ləğ* partisan. Sälama had anathematized the province of Šäwa following the establishment of *Ṣägga* teaching there in 1841. Five years later, Śahlä Səllase, ruler of Šäwa, wrote to Sälama, Ali and M., to have the anathema lifted. Sälama refused and in the conflict which followed Ali and M. supported the party of the *əčč̌äge*, who expelled Sälama, with some violence, from Gondär (CRNuov 386f.).

As ruler of Maru Qämmäs, M. was Kaśa Ḫaylu's overlord. By the mid-1840s she became uneasy at his rising influence. To win him over she arranged for him to marry ↗Täwabäčč Ali, her granddaughter, and appointed him ruler over Qʷara (ZänLitTheo 11–15; RubTew 36f.). In 1847, Kaśa rebelled, captured M. in battle and took over the rule of Maru Qämmäs. M. then withdrew to Maḫdärä Maryam, near Däbrä Tabor. Whilst there, she was visited by a number of Europeans, who describe her as being a formidable character; Lefebvre likened her to Catherine de Medici or Catherine the Great (LefAbyss vol. 1, 356; see also AbbSéjour 182f.).

M. was one of the most notable women to hold power in Ethiopia. For two decades she was at the centre of the country's political and military affairs, which she shared with her son, Ali. In this respect, she resembled her predecessor, Empress ↗Bərhan Mogäsa (Məntəwwab), although the latter's power probably exceeded that of M. M. was also a significant representative of Wärräsek power. Though the dynasty's roots lay in Yäğğu and Wällo, and many of its members were Muslims, M. serves as an example of the dynasty's conversion to Orthodox Christianity.

Donald Crummey

Mänbärä Mängəśt Qəddus Gäbrəʾel

M.M. (መንበረ፡ መንግሥት፡ ቅዱስ፡ ገብርኤል) is one of the major churches of ↗Addis Abäba (today in Arada district) that was established by *aṣe* ↗Mənilək II. According to tradition, before he marched to the north during the ↗Italian war of 1895–96, Mənilək had vowed to establish another ↗*tabot* in his small private chapel known as Däbrä Mänkərat Kidanä Məḥrät (also known as *śəʿəl bet*, lit. 'House of paintings'), built inside the palace compound (↗*Gəbbi*). At the time of his vow, Mənilək had not specified the *tabot*'s dedicatee. After his victory at ↗ʿAdwa, Mənilək chose Archangel Gäbrəʾel and installed the *tabot*. Thus, the Emperor's chapel came to be known as ∃lfəñ Gäbrəʾel (lit. 'Gäbrəʾel of the Inner Chamber'). Actually, the *tabot* had been brought long before from the monastery of Abba ↗Qäwisṭos in Bulga in 1880 A.M. [1887/88 A.D.], reportedly by one of Mənilək's men, *qäññazmač* Gäbrä Giyorgis.

The *tabot* remained in ∃lfəñ Gäbrəʾel for a few years. In 1899, the Emperor decided to build a new church to which the *tabot* of Gäbrəʾel would be transferred. He preferred the site not

to be too far from the former church. The neighbouring area occupied by *azzaž* Zäᵓamanuᵓel, the chief administrator of the *ətege* Ṭaytu's "chancellery" (*śəra bet*), was chosen, and Zäᵓamanuᵓel, whose residence is still in the compound serving as a store house for the church, was then moved to Ras Mulugeta Säfär.

The corner stone for the construction of the church was laid by *abunä* ↗Matewos in the presence of *aṣe* Mənilək in 1904–05. From the outset, the Emperor closely followed the work. He also instructed his soldiers and servants to collaborate voluntarily in the building of the church supervised by Wäle Mäḥammäd, the then chief constructor in the palace.

The octagonal church, with four entrance doors, was completed in 1908–09. The interior walls of the church were decorated with pictures of saints by the well-known artist Kaśa Äräggahäññ (Haile Gabriel Dagne in CentAddis 67). The consecration by *abunä* Matewos followed, and the *tabot* was transferred from Ǝlfən Gäbrəᵓel to the new church in the same year, on 19 *Taḫśaś*, the annual feast of St. Gabriel. The inauguration ceremony was conducted on the same day, in the presence of the Emperor, the Empress and other court dignitaries. Later, Gäbrəᵓel's church received the status of ↗*gädam* from *ətege* Zäwditu, *ras* Täfäri Mäkʷännən and *abunä* Matewos. For some time after its foundation, the church was known as Gəbbi Gäbrəᵓel. However, in 1915 A.M. [1922/23 A.D.], Zäwditu renamed it M.M. During the occupation of 1935–41, the Italians ordered the removal of the *tabot* to the Church of St. Mary, but the priests managed to avert this.

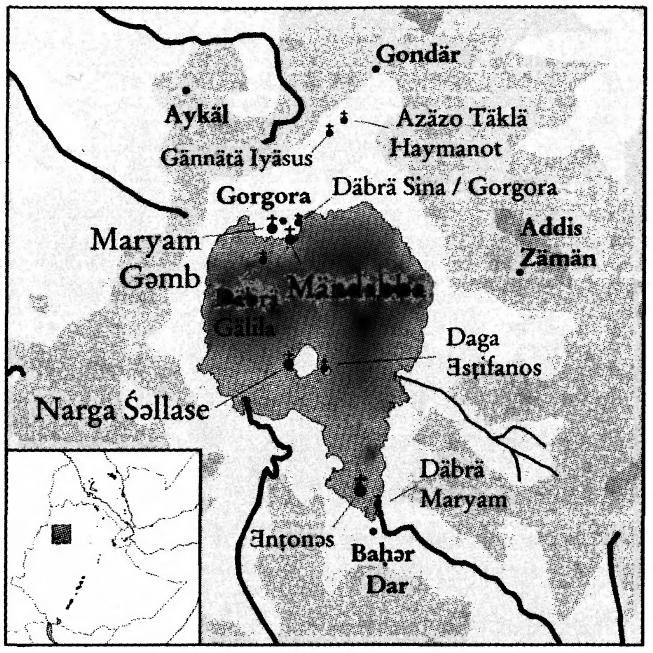
Mersha Alehegne

Mändabba Mädḫane ᶜAläm

M. (መንዳባ፡ መድኃኔ፡ ዓለም, also Mandabba, Mändä Amba, Mandämba, Mandəban) is a monastery located on a peninsula of the northern shore of Lake ↗Ṭana, ca. 70 km from Gondär, close to Gorgora (the Dämbiya *wäräda*). It is the second largest monastery (↗*Gädam*) in the Lake Ṭana region after ↗Daga Ǝsṭifanos.

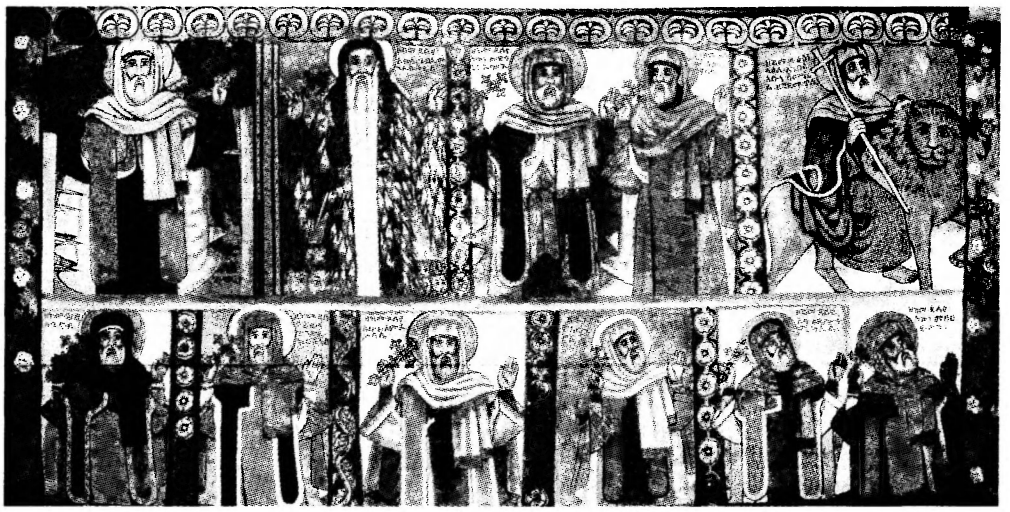


M. was allegedly founded in the 14th cent. by *abunä* ↗Yasay, son of *aṣe* ᶜAmdä Ṣəyon I, one of the so-called "seven stars" associated with *abunä* ↗Mädḫaninä Ǝgziᵓ (cp. Fiaccadori 1997:47, 50f.). Yasay reputedly travelled between the islands of Ṭana in a "stone boat", still displayed in the churchyard. The place name M. is thought to refer to him and traditionally interpreted as *man əndä abba* (Amh. 'Who is like the *abba*?').

The entrance to the monastic compound is forbidden to women. The main church, established by *abunä* Yasay, reputedly survived most invasions undamaged, including the 16th-cent. wars of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ"), who according to the local tradition was chased from the monastery by the archangels Michael and Gabriel. The building was renovated in the 17th cent. by *aṣe* ↗Fasilädäs, his sister ↗Mäläkotawit subsidizing the wall-paintings. Later, *aṣe* ↗Bäkaffa, his wife ↗Bərhan Mogäsa (Məntəwwab) and other emperors were benefactors of the monastery.

As an important centre of learning, M. played a central role in the Christological disputes of the Gondärine period. The monastic tradition remembers the 17th–18th-cent. abbot *abba* Niqolawos (also known as *abba* Liqanos), contemporary of *aṣe* ↗Iyasu I and one of the ↗*Täwaḥədo* leaders, who was beheaded together with 40 church scholars by *aṣe* ↗Dawit III for opposing the ↗*Qəbat* teaching.

The church and the monastery did not suffer in the 19th-cent. ↗Mahdist wars. In the 20th cent., *aṣe* ↗Mənilək II and Empress ↗Zäwditu donated books to the library, *aṣe* ↗Ḫaylä Śəllase I



Ethiopian saints (upper row, left to right: Täklä Haymanot, Gäbrä Mänfäs Qəddus, Mädḫanina Ǝgziᵓ and Yasay, Samuᵓel of Waldəbba; lower row: Nob, Tänśəᵓe Krəstos, Amdä Śəllase, Kiros, Bäṣälotä Mikaᵓel and Mäbaᵓa Ṣəyon); mural on cloth in the main church of Mändabba, by Täwäldä Gäbrä Bərhan, 1983; photo 2006, courtesy of Michael Gervers

provided for the extensive renovation of the old church and *ətege* ↗Mänän Asfaw financed an adjoining church for women.

M.'s ↗*rəst* and ↗*gʷəlt* once included the districts of Sowit, Aläfa and Täkʷəsa. Though much reduced now they are still larger than for most other monasteries. The monastery survived the *Därg* period fairly well, a water pump facilitated agricultural projects like the planting of fruit trees and cattle-breeding. However, lack of access to markets caused problems.

M. is administered by the abbot (cp. ↗*mämhər*) bearing the title of ↗*mäggabi*, with a *liqä räd*ᵓ ('head of the novices') and an *afä mämhər* (abbot's spokesman); they build a committee dealing with financial matters. The main festival of Mädḫane ᶜAläm ('Saviour of the World') is celebrated on 27 *Mäggabit*.

The liturgy is only celebrated on major festivals; Saturday afternoons are devoted to spiritual teaching, and on Sundays the monastic rules, *Śərᶜatä abäw mänäkosat* are read (cp. ↗Monastic literature). The usual number of monks is close to 150. The monastery boasts a number of learned monks and ↗*səwwuran* said to live nearby.

Thanks to its rich endowments throughout history M. still preserves paintings and objects of artistic value. Only small fragments of the 18th-cent. paintings which once covered the whole exterior of the ↗*mäqdäs* are still visible on its walls and the doors (St. Mary with the Child, St. George, an archangel, two saints or monks). Some badly damaged fragments belonging to the same set and depicting the scenes of the Passion were discovered in 2006 inside of an old *mänbärä* ↗*tabot* kept in the *qəne maḫlet* of the church. The new paintings were executed in 1983 by the current head *mämhər* Täwäldä Gäbrä Bərhan who had studied art in Aksum and painted more than ten churches (he is also said to have taught at least 40 pupils, some of them becoming professional artists). Executed in acrylic colours on canvas glued to the walls they display the complete iconographical programme composed and arranged according to the rules established in the 18th cent.

An important collection of ↗manuscripts owned by the monastery has never been properly recorded. Scholars have noted so far a copy of the *Mäṣḥafä* ↗*ḥawi*, a short history of the monastery and a recently produced paper copy of the same written by the abbot Zämänfäs Qəddus Gäbrä Ṣadəqan, the illuminated 14th-cent. *Acts of the Apostles* and the 18th-cent. ↗*Dərsanä Mikaᵓel* with 54 miniatures. The latter once belonged to the noble couple Gäbrä Ləᶜul and Märᶜatä Giyorgis portrayed on fols. 4v and 14v.

The professional crosses are mostly recent (19th–20th cent.) with the exception of a bronze one which may be dated to the 15th cent.

Painting on wood is represented by a group of triptychs from 17th–19th cent. The largest (61 cm x 43 cm x 4 cm) displays in the central panel the Flight into Egypt and follows the tradition of the second Gondär School of ↗painting which in this particular case became strongly influenced by a baroque model.

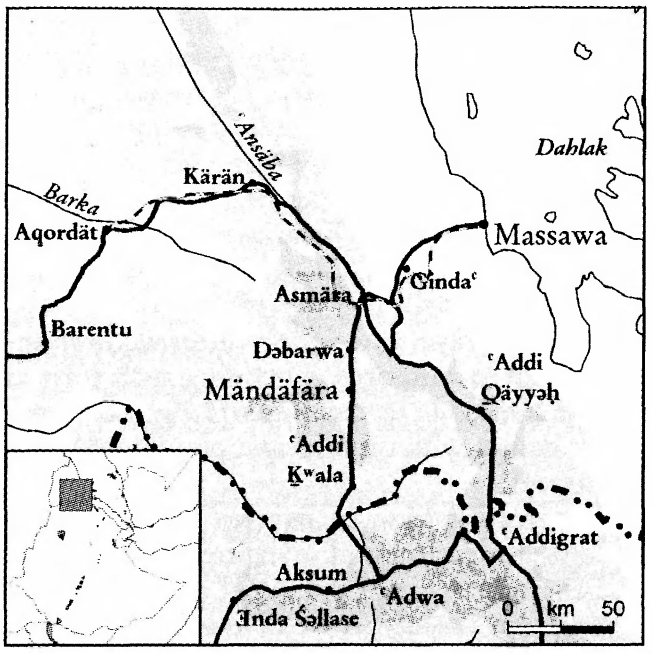
Mändäfära

M. (መንደፈራ, 14° 53' N, 38° 48' E; 2,022 m A.S.L.) is a town in the historical district of ↗Säraye, Eritrea, 54 km south of Asmära along the road connecting Asmära, ↗ʿAddi Ḵʷala and ʿAdwa. Another road links M. with ↗ʿAddi Qäyyəḥ (Akkälä Guzay, via May ʿAyni and the plain of Ḥasamo) in the east, and with ↗Barentu in Kunamaland (via Arresa) in the west. The ↗Märäb has its source north of M., near ↗Dəbarwa.

The village of ʿAddi Wägri (ዓዲ፡ ወግሪ; today administratively part of M., lying at its outskirts) was a caravan post on the way from the Red Sea coast to Təgray. The place is an early settlement area: the 2004 archaeological rescue excavations, directed by Yosef Ləbsäqal, Federica Crivellaro and Yämanä Samuʾel, revealed a 2nd-cent. B.C. graveyard where ↗pottery, skeletons and bronze objects were found (s. *Sudan Tribune*, 4 December 2004). Nearby M. there is the old monastery of Ǝnda Abunä Abranyos (↗Däbrä Ṭəllul).

The new urban settlement of M. was founded near ʿAddi Wägri by the Italians (↗Africa Orientale Italiana) who chose it as the centre of administration (Residenza) for the Commissariato del Seraè. The town, which soon also replaced ʿAddi Wägri as the trading post, became known as M. after the hill at its centre. In folk etymology the city's name is attributed to a noble, who passed by in the 19th cent. or earlier, and – judging the area difficult to plough because it was densely covered by bushes and trees and populated by wild animals – remarked: "Who dares [to dwell here]?" Another, probably secondary, interpretation of the name connects it with the memory of local resistance against colonialism (Kimberlin in PICES 15, 416). The Italians themselves, in any case, kept referring to the new settlement by the name of the old village nearby (s. Guida 234f.: Adi Ugrì, Áddi Úgri). Therefore, on older maps M. appears under the name of ʿAddi Wägri, even if formally it is not totally correct.

During the Italian war, in late 1894/early 1895, ↗Baratieri stationed in M., with ca. 3,500 soldiers. The Eritrean colonial governor ↗Graziani spent his first four years in Eritrea in M. (1908–12). The Orthodox church of St. George was built during the Italian time in art nouveau style. The church school dates back to the same period, so do the Catholic (S. Francesco) church and school (among the most famous former students of the Capuchin school was the late Cardinal ↗Ṗawlos Ṣadwa). The Catholic mission established a printing press in M. There is also a station of the ↗Swedish Evangelical Mission (since 1905), a Protestant Qalä Ḥəywät church, and a mosque. A government school was established in 1905; in 1914 then the Scuola d'Arti e Mestieri S. Giorgio. From 1919 till 1921 there was also a school of agriculture in M.



M. is now the capital of the *zoba* Dəbub ('Southern District'). With over 30,000 inhabitants, it is the third biggest town of Eritrea. It is planned (2006) that 25 villages become part of M., to be enlarged from two to eight administrative zones.

Another small locality by the same name lies between ↗Dəgsa and ↗ʿAddi Qayyəḥ in Akkälä Guzay (Guida 209).

Wolbert Smidt

Mänfäs qəddus ↗Trinity

Mängädä sämay

The M.s. (መንገዱ፡ ሰማይ, 'Journey to Heaven') is a title of (1) several (seven?) Gəʿəz prayers (*Ṣälotä zämängädä sämay*; s. Fusella in PICES 10) and (2) a short catechetic text in Amharic or in both

Amharic and Gəᶜəz (sometimes also referred to in its *incipit* as *Zämängädä sämay nägär* or *Zämängädä sämay məśṭir*, 'The Matter of the Journey to Heaven' or 'The Mystery of the Journey to Heaven', resp.) that is devoted to the soul's journey after the person's death (for summary and discussion s. Fusella in PICES 3, vol. 2; for ed. and tr. of the Amharic text from two mss. s. Getatchew Haile in StudAeth).

The M.s. prayers are widely diffused, often appearing in manuscripts containing such texts as the ↗*Ləfafä ṣədq* or the *Mäṣḥafä* ↗*gənzät*, or in combination with other magic prayers (↗Magic literature).

The treatise M.s., in its two parts, one describing the journey of a righteous man's soul, and the other that of the sinful one, follows all steps, from the departure of the soul from the body (pleasant for the righteous and tormenting for the sinful) to the heavenly judgement of the soul at the court of justice (unlike Mt 25:35–40, the knowledge of the Christian faith is more important here than the righteous deeds) and to the final journey to the temporary abode (via the Kingdom of Heaven and the fire of Hades to Paradise for the righteous and via same way to Bärbanos or Hell for the sinful) where it will stay until the final Resurrection or the Second Coming of Christ (↗*Dagəm məṣᵊatu läkrəstos*).

Although differing significantly in its details, the M.s. is heavily dependent on such Gəᶜəz apocalyptic texts as the ↗*Raᵊəyä Maryam*, the *Raᵊəyä Gorgoryos*, the ↗*Dərsanä sänbät* and the *Mäṣḥafä* ↗*mäläᵊəkt*.

The M.s. treatise is one of several short works composed in the form of a catechism that deal with themes of the Church's teaching (cp. ↗*Ammənstu aᶜəmadä məśṭir*). Although the concept of the journey implied in the M.s. has no support in the canonical scriptures, several copies of the text are a mark of both its importance as the "teacher's manual" on an important aspect of Ethiopian Orthodox Christianity, and of its place in the Church's popular literature.

Getatchew Haile

Mängäša Abboyye

Däğğazmač M.A. (መንገሻ፡ አቦይ, "horse name": Abba Səbär, d. 30 August 1967) was a resistance fighter. The son of *däğğazmač* Aboyye from ↗Wällo, he served as a soldier on the northern front during the ↗Italian war of 1935–36 and after Ethiopia's defeat continued as a partisan. His wife Laqäčč Däməssäw, a great granddaughter of *nəguś* ↗Śahlä Śəllase of Šäwa, accompanied him to the front in a man's uniform and with a rifle.

After the Liberation in 1941 he served as a governor of one of the districts in Wällo province. Towards the end of his life he went to Europe hoping to find a cure for his deteriorating sight. The treatment brought no success and M.A. returned to Ethiopia where he went blind and died.

Hanna Rubinkowska

Mängäša Atikäm

Ras bitwäddäd M.A. (መንገሻ፡ አቲከም, "horse name": Abba Gädəb; b. Agäw Mədər, d. 1910, Addis Abäba) was an officer of *aṣe* ↗Mənilək II. A son of *blattengeta* Atikäm Bitärfu, whose family came from Zägedəm, ↗Damot, Goğğam (Caulk 2002:46), M.A. was one of Mənilək's earliest and most faithful companions as well as a councillor throughout his life. They became acquainted at the court of *aṣe* ↗Tewodros II, in whose army M.A. was serving at the time. In the 1860s, when Mənilək escaped from Tewodros's detainment, M.A. followed him to Šäwa. He was then made the head of the ↗Gondär army with the title of *qäññazmač*.

In the late 1870s, M.A., then *däğğazmač*, played an important role during the struggle between *aṣe* ↗Yoḥannəs IV and Mənilək. In 1877 he was a part of a mission sent by Mənilək to *əčč̣äge* Tewodros carrying a letter to *aṣe* Yoḥannəs in which Mənilək declared his readiness to submit to the Emperor. M.A. served as governor of several provinces. In 1878, a governorship of ↗Dämbəya, Gondär, ↗Bägemdər, and ↗Wällo (formally under *ras* ↗Arᵊaya Śəllase Yoḥannəs) was given to him when he shared the regency for Yoḥannəs's son together with ↗Ṭaytu's brother, *däğğazmač* Wäle.

In 1889, Mənilək bestowed the title of *ras* on M.A. The next year Mənilək ordered him to leave his land in Amhara Sayənt and to lead an expedition against Wälaytta, which turned out to be unsuccessful. In 1891, M.A. received the governorship of Dämbəya and Gondär (Caulk 2002:283f.) and in 1894 he was bestowed the title of *ras bitwäddäd* together with the governorate of the most part of Bägemdər (Caulk 2002:403). In 1896, he was probably behind the detention of *käntiba* ↗Gäbrä Ǝgziʾabəḥer Dästa, since as governor of Gondär he could not tolerate competition with a mayor.

M.A. took part in the battle of ᶜAdwa (↗ᶜAdwa, battle of) with an army of at least 6,000 soldiers. He did not enjoy, however, a good reputation as a warrior, even being nicknamed *wäyzäro* because of his extreme caution. After the battle he participated, together with *ras* ↗Mäkʷännən Wäldä Mikaʾel, in peace negotiations with Italian representatives. In 1901, after *nəguś* Täklä Haymanot's death, a large part of Goğğam including Damot, Agäw Mədər and Qʷara was given to M.A. In 1902 he safeguarded the situation between Ethiopians and ↗Mahdist forces at the Ethiopian–Sudanese borderlands. M.A. also held governorships over Wändige, ↗Ačäfär (1899–1909), and Wälläga (1910) and remained politically active during the time of Mənilək's illness.

M.A. had one son, *ras* ↗Käbbädä Mängäša, and three daughters: Laqäčč, who married *ləğ* Gäbrä Rufaʾel Gobäna, son of *ras* ↗Gobäna Dači, and bore Ṣəge Maryam, who married ↗Ǝmmərru Ḫaylä Śəllase; Askalä Maryam; and Zäwditu. He is buried in the cemetery of the Qəddəst Śəllase church in Addis Abäba.

Mängäša Ğämbäre

Bitwäddäd M.Ğ. (**መንገሻ፡ ጀምበሬ**, b. 24 May 1884, Baḥər Dar *wäräda*, d. 15 April 1950) was a 20th-cent. resistance fighter and governor of ↗Goğğam. By 1920 he was *fitawrari* and governor of Gola in Goğğam; he governed other provinces in Goğğam before the outbreak of war in 1935, including Meč̣č̣a and ↗Ačäfär, and was married to Säblä Wängel, daughter of *ras* ↗Ḫaylu Täklä Haymanot.

As *däğğazmač*, he commanded a detachment of the Goğğame forces at the battle of Šire in 1936 (↗Italian war 1935–36). He led ↗resistance forces in northern Goğğam throughout the Italian occupation, pledging his loyalty to ↗Ḫaylä Śəllase I in August 1938. His most spectacular action was an attack on Italian forces at the "Piccolo Abbay" ford on 14 March 1940. He welcomed Daniel ↗Sandford's Mission 101 in September 1940, and joined Ḫaylä Śəllase during the Goğğam campaign of 1941 (↗Gideon Force).

After the Liberation, M.Ğ. was appointed governor of Mätäkkäl, Agäw Mədər, Baḥər Dar, becoming vice Governor General of Goğğam in 1943, with the title of *bitwäddäd*. After a brief period in the Senate, he was Governor General of Wälläga from 1946 to 1949. He had difficult relations with other resistance leaders in Goğğam, notably ↗Nägaš Bäzzabbəh, and like other Goğğam resistance leaders, came under suspicion after the Liberation, but did not openly challenge the imperial government.

Christopher Clapham

Mängäša Wəbe

Bitwäddäd M.W. (**መንገሻ፡ ውቤ**, "horse name": Abba Gatäw, b. 1895 in Šäwa, d. 24 March 1961, Addis Abäba) was a son of *däğğazmač* ↗Wəbe Aṭnaf Sägäd, who was briefly the third husband of *nəgəśt* ↗Zäwditu.

M.W., a protégé of Zäwditu, spent his youth at the imperial court and became the ↗*liqä mäkʷas* of *ras* Täfäri Mäkʷännən (later *aṣe* ↗Ḫaylä Śəllase I). In 1919, bearing the title of *fitawrari* at the time, M.W. was a member of the Ethiopian delegation to Italy. In 1922 he was accused of participating in

a plot; along with a few other dignitaries, he was brought to the court, but later pardoned. From 1929, M.W. acted as the Minister Plenipotentary in Rome. Upon his return home M.W. received the title of *däğğazmač*, together with the governorship of ↗Wälläga-Säyyo province. Before the Italian invasion he, also, ran the Slavery Office as director-general. This institution worked towards for the liberation of slaves in Ethiopia, an objective which he pursued energetically (ZerÉth 401).

M.W. participated in the ↗Italian war 1935–36, with the task of defending the capital. However, in the final period of the war, his troops deserted and M.W. surrendered to the Italian army. He was imprisoned in Italy from 1937 until 1944, following the attempt on ↗Graziani's life, and returned to Ethiopia several years after the Liberation. M.W. was President of the Senate in 1946 (s. MockWar 395) and held a number of ministerial portfolios including the office of Minister of Post. M.W. was buried at ↗Däbrä Libanos, Šäwa.

Mängäša Yəlma

Däğazmač M.Y. (መንገሻ ይልማ, "horse name": Abba Täbəb, d. 31 March 1936) was a 20th-cent. military leader. A son of *däğğazmač* ↗Yəlma Mäkʷənnən, the eldest son of *ras* ↗Mäkʷənnən, he was thus *aṣe* ↗Ḫaylä Śəllase I's nephew.

During the first years of Ḫaylä Śəllase's reign M.Y. was appointed to the newly formed administration of the southern border districts ↗Mağı and Goldiya. Before the ↗Italian war of 1935–36 he also served as Director of the War Ministry.

As a general of the Ethiopian army during the war, M.Y. took part in the fighting at the Waräw Pass and at Däbrä Hansa. His army, at first successful, was cut into two parts and M.Y. only managed to escape by simulating death. He was killed about a month later in the battle of ↗May Čäw.

Mängäša Yoḥannəs

Ras M.Y. (መንገሻ ዮሐንስ; b. 1868, d. 1906, Ankobär, Šäwa, r. 1889–1906) was a governor of Təgray and a son of *aṣe* ↗Yoḥannəs IV (r. 1872–89). His mother was Wälättä Täklä Haymanot, wife of *däğğazmač* ↗Gugsa Mərča. Before 1889, M.Y. was considered the Emperor's nephew, but on 9 March 1889 the Emperor on his deathbed, in ↗Mätämma, recognized him as his son, from a side-relation with his brother Gugsa's wife. Therefore, some informants still claim that M.Y. was not his biological son. Apparently, M.Y. was strongly attached to Yoḥannəs throughout his life.

Däğğazmač M.Y. was designated by the Emperor as his heir-to-the-throne, and allegedly crowned still on the battlefield of Mätämma, but M.Y. was not able to claim the throne. In the aftermath of the disastrous battle of Mätämma, the Təgrayan ruling families found themselves embroiled in a power struggle that led to a regional civil war (ErlAlula 140–86; Caulk 2002; BZHist 149). This state of anarchy sapped the energy of M.Y.'s camp to unite the region under his authority. Quickly, instead, *aṣe* Mənilək II was proclaimed emperor in November 1889.

Ras M.Y., however, had the strong military and political backing of Yoḥannəs" chief military general, *ras* ↗Alula Ǝngəda. Additionally, he had inherited a considerable number of armaments and soldiers that had long bolstered the power of Yoḥannəs IV. However, historians cast doubts on M.Y.'s basic military prowess and leadership skills to mobilize the available resources and prevail over rivals, in contrast to his predecessor Yoḥannəs. M.Y.'s strong political ambition once nearly pushed him to ally with the Italians, as demonstrated by the Märäb Convention of 1891 (↗Treaties; ibid. 323, 330; BZHist 75f.). By 1890, the Italians had taken control of the ↗Märäb Məlläš, and aimed at the control of entire Təgray. In the meanwhile, M.Y. and his Təgrayan vassals had revolted against *aṣe* Mənilək II. Italian attempts to instigate them were, nonetheless, short-lived. The Italians' non-committed stance, coupled with M.Y.'s hesitant attitude finally convinced him to end his rebellion, even against the opposition of his counsellors and his military supporters, such as *ras* Alula (ErlAlula 179–86; BZHist 76).

In June 1894, M.Y. ultimately dropped his claims to the imperial throne and officially submitted to *aṣe* Mənilək II (ibid.), ostensibly in expectation of the title of *nəguś* of Təgray. Mənilək, in turn, appointed him governor, not *nəguś* of Təgray. For a while, M.Y. demonstrated his loyalty. The conflict subsequently developing between the Italians and

Mənilək, gave him the opportunity to prove his indispensability to the central government.

During the first phase, in the years 1894–95, the Italians made a number of incursions into northern Ethiopia. M.Y. was then responsible for defending the northern borders. He was beaten in the two battles of Kʷäᶜatit (1894), ↗Säṅᶜafe (Eritrea) and Däbrä Ḫaylä (1895); in early 1896 he even retreated from his stronghold ↗Mäqälä, but kept the Italians busy until a united Ethiopian army was gathered to face them (↗ᶜAdwa, battle of).

Ras M.Y. played an even more important role in the next phase of the conflict. Together with *ras* Alula, he was largely responsible for organizing and running the intelligence of Mənilək II. He exploited his local connections, gathered intelligence and rendered a fairly outstanding command of the Təgrayan army. All these inputs had a crucial role in deciding the outcome of the battle of ᶜAdwa in 1896, which ended up as a grim loss to the Italians (Caulk 2002:555–66).

Despite M.Y.'s retention of "Təgray proper", Eritrea remained in the hands of the Italians. His proposal to sustain the war to push the Italians out of Eritrea was played down by the Emperor, who focused on the control of his own realm. Mənilək officially rewarded M.Y. with 300,000 silver dollars and married him to Kafay Wäle Bəṭul of Yäğğu, *ətege* ↗Ṭaytu's niece. The marriage was meant to cement further the bonds between the houses of Təgray, Šäwa and Yäğğu. It was obtained at the cost of divorcing his loving wife (ibid. 591). Still, M.Y.'s long expectations of promotion to *nəguś* of Təgray were shattered for the second time (Mekonnen Berhane 1996:VI).

M.Y.'s final and desperate rebellion (in concert with *ras* Səbḥat of ᶜAgamä) in 1898 ended with his captivity and confinement at Addis Abäba, starting from 1899, and then in Ankobär where he died as a prisoner in 1906 (ibid.; Tsegay Berhe 1996:165).

M.Y.'s controversial political career, however, left a legacy of Təgrayan identity and autonomy. Indeed, his son, *ləᶜul ras* ↗Śəyyum Mängäša and his grandson, *ləᶜul ras* Mängäša Śəyyum were able to gain the governorship of Təgray, each at different stages of the history of this region (sometimes also partitioned among several governors, relatives of M.Y.), until the 1974 Revolution. Mängäša Śəyyum played then a role as the leader of an anti-*Därg* oppositional party, the Ethiopian Democratic Union, which dates back to the mid 1970s.

Tsegay Berhe

Mängəśtu Lämma

M.L. (**መንግሥቱ ለማ**, b. 1 *Säne* 1920 A.M. [8 June 1928 A.D.], Harär, d. 21 *Ḥamle* 1980 A.M. [28 July 1988 A.D.], Addis Abäba) was a prominent Ethiopian author, poet and playwright.

M.L. was born to Abbäbäčč Yəlma Yəṭäyyəqu and *aläqa* ↗Lämma Ḫaylu Wäldä Tarik in Adäre Ṭiqqo in Harär where he also pursued traditional church ↗education (*nəbab*, *zema*, *qəne*), as well as modern education in the elementary school opened by the Italians for natives. After the Liberation, he continued his modern education at a gov-

Mängəśtu Lämma, portrait from Mängəśtu Lämma 1966/67

ernmental school. As a task of his school director, *muse* Anton (Monsieur Antoine?), he wrote his first poem, **የአንድ፡ ጌታ፡ አስተዋይነት** (*Yäʾand geta astäwayənnät*, 'The Observation of a Rich Man'; printed in the 1995/96 collection). M.L. then went to Addis Abäba, where he joined Kotäbe Secondary School (↗Ḫaylä Śəllase I Secondary School). He completed his graduate studies in the United Kingdom, attending Regent Street Polytechnic (now part of the University of Westminster; February 1948–July 1949) and London School of Economics and Political Science (1949–53). M.L. was among the founders of the Ethiopian Student Society in London, served as its secretary and became its fifth president. He was the first editor of the Society's journal, *The ↗Lion Cub*, where he published a number of articles.

M.L. returned to Ethiopia in 1953/54 and started his career at the Civil Aviation. After that, he served in the Ministry of Foreign Affairs (including service as a Secretary at the Ethiopian Embassy in New Delhi), and in 1969/70 became Secretary-General of the Amharic Language Academy (↗Ethiopian Language Academy). He travelled abroad several more times, including his trip to Moscow in 1965 to attend a symposium on literature sponsored by the Soviet Writers' Union, and to Stockholm in 1967, to present a paper on Ethiopian literature to the African Scandinavian Writers' Conference.

M.L.'s first book of poetry, *Yägəṭəm gubaʾe*, was a collection of 18 poems written in Ethiopia and England over the period of some 13 years; it was first published in 1957/58; the second edition (1962/63) included eight poems written in India. *Yabbatočč č̣äwata* (1960/61) was a collection of poems based on tales of elders. *Bašša Aššäbbər bäʾamerika* (1974), written on the eve of the Revolution, was his second collection of poems.

M.L. greatly contributed to the development of the Ethiopian playwriting (↗Amharic literature: Amharic drama) and ↗theatre. His early plays, *Yalačča gabəčča* (1964/65, a Russian tr. was published in Moscow in 1966, the author's own English tr. appeared in 1970) and *Ṭälfo bäkise* (published 1968/69, dedicated to the marathon runners ↗Abbäbä Biqila and ↗Mammo Wälde; Engl. tr. 1964), were both comedies; they were staged at ↗Ḫaylä Śəllase I Theatre. On the surface they deal with choosing a wife, but on a deeper level raise the topic of conflict between tradition and modernization. For his works of the pre-Revolution period M.L. was awarded with the Ḫaylä Śəllase I Prize in 1967.

After the ↗Revolution, M.L. was elected member of the National Assembly in 1974, and served there until its dissolution in 1975. He worked then for the Ministry of Culture as a literature expert, later transferring to ↗Addis Ababa University to teach at the Department of Theatre Arts. He had four plays staged in this period. Performed at ↗Hagär Fəqər Tiyatər in 1974/75 and at the Addis Ababa Theatre and Culture Hall in 1975/76, *Baläkabbanna balädabba* dealt with the political proclivities of the foreign-educated Ethiopians before their departure and after their return. Presented at the National Theatre in 1976/77 and at Ras Theatre in 1979/80, *Ṭäyyaqi*, an adaptation of John B. Priestley's *An Inspector Calls*, dealt with issues of class and moral struggle in capitalism and feudalism. *Śärä koloniyalist* was staged at the National Theatre in 1981/82 and at Addis Ababa University Postgraduate Hall in 1984/85; it was a historical play about the struggle of Ethiopian patriots against Fascist Italy and the socio-economic damage inflicted by the war. (These three plays were later collected into the anthology *Yätäwnet gubaʾe* 1982/83.) M.L.'s fourth play, **ሽሚያ** (*Šəmmiya*, 'The Scramble'; unpublished), performed at the National Theatre in 1985/86, showed the power struggle taking place within the bureaucracy. Besides, M.L. wrote a one-act play **የዓለም፡ ንጉሥ** (*Yäʿaläm nəguś*, 'The King of the World'; unpublished).

M.L. also translated Anton Chekhov's *The Bear* (as **ዳንዴው፡ ጨቦዴ**, *Dandew č̣äbbude*, 'The Strong Č̣äbbude') and Tawfīq al-Ḥakīm's *Lust to Kill* (as **ግደይ፡ ግደይ፡ አለኝ**, *Gədäy gədäy aläññ*, 'It Told me: Kill, Kill!'). Both (unpublished) plays were performed and transmitted on the national radio.

M.L. was deeply dedicated to the preservation of the traditional culture, and he extensively wrote and spoke both on Amharic literature and on Gəᶜəz *qəne* poetry. He published on literature theory (e.g., *Yätəyatər dərsät yaṣṣaṣaf bəlhat*, 1971/72) and supervised the collection and publication of the *Qəne Collections* at the ↗Institute of Ethiopian Studies. M.L.'s non-fiction works also include a collection of his father's memories (1966/67); and his own autobiography (published posthumously in 1996).

M.L. was concerned with the problems of language and perspectives of modernization; he called Ethiopian intellectuals, particularly those living abroad, to preserve the purity of their language (*The Lion Cub*, January 1951), and warned them not to be too quick in accepting foreign ideas and ideologies (ibid., Spring 1952 [as "Ityopis"]). He extensively dwelt on methods of cultural rejuvenation and transition from the traditional to the modern or from the old to the new. He defined himself as social criticist, whose characters were not embodiments of good or evil but ordinary characters in everyday life (Akalu Getanäh 1981:80–88). M.L.'s worldview pervaded not only his creative but also publicist writing and even his personal life style.

M.L. was buried in Mädḫane ᶜAläm church in Qäčäne (Addis Abäba). Accompanied by a list of his works, M.S.'s autobiography was published posthumously in 1996.

Fekade Azeze

Mängəśtu Nəway

M.N. (**መንግሥቱ፡ ንዋይ**; b. 1916 or 1919, d. 30 March 1961, Addis Abäba) was an ↗Imperial Bodyguard commander and one of the plotters of the abortive ↗Coup d'état of 1960.

M.N. attended the ↗Holäta Military Academy. After the outbreak of the Italian–Ethiopian War in 1935, M.N. went into exile in the Sudan, where he received additional military training at Sobar Academy in 1940/41. He also served as a subaltern with the Commonwealth forces and with the Patriots (↗Resistance) during the re-conquest of Ethiopia.

Shortly afterwards, M.N. became a confidant of ↗Ḫaylä Śəllase I. In 1951, he helped suppress a plot against the Emperor led by *bitwäddäd* ↗Nägaš Bäzzabbəh. M.N. then served as a commander with the ↗Qañňäw Battalion during the Korean War. In 1956 (some sources give 1955), he became the commander of the Imperial Bodyguard and, on 3 October 1956, received promotion to Brigadier General.

In collaboration with his younger brother, ↗Gärmame Nəway, M.N. conspired to over-

Mängəśtu Nəway (left) with the Olympic games gold medalist Abbäbä Biqila; photo courtesy of the IES

throw Ḫaylä Śəllase. According to the *Times* (1960), M.N. was a man with a weak personality who was "influenced by his younger brother", who had, according to some sources, sympathies for socialism (Tubiana 2006:250). On 13 December 1960, the pair attempted a coup d'état while the Emperor was on a state visit to Brazil. M.N. lured the Emperor's cabinet and key ministers to ↗Gännätä Ləʿul Palace under the pretext that the Empress ↗Mänän Asfaw had fallen ill. They were then detained.

The coup attempt quickly unravelled primarily because M.N. and his co-conspirators failed to gain the loyalty of the Army, Air Force, and key government ministries; to devise a coherent plan beyond capturing Addis Abäba and issuing a proposed 11-point program of reforms; and to arrest key supporters of the Emperor such as General ↗Märəd Mängäša (Chief of Staff of the Armed Forces), and ↗ʿAśratä Kaśa (Vice President of the Senate); they also lacked support from governors of key provinces and regions, such as General ↗Abiye Abbäbä (s. EAE vol. 5), chief administrator of autonomous Eritrea. On 15–16 December 1960, loyalists suppressed the coup attempt, prompting M.N. to flee into the mountains. On 17 December 1960, the Emperor returned to Addis Abäba via Eritrea.

Informed by peasants, who knew his hiding-place, the police captured M.N. on 24 December 1960, after he had been wounded in a shoot-out. On 28 March 1961, a three-man tribunal convicted him of committing "outrages against the constitutional authorities", of being the ringleader of the failed coup attempt, of seeking to overthrow the government by armed revolt, and of being implicated in the shootings of 15 persons – six of whom had been former ministers – during the rebellion. The tribunal then sentenced him to be hanged in public, be deprived of his military rank, and relinquish control of all his property. Two days later, M.N. was hanged in ↗Addis Kätäma on Täklä Haymanot square (for many years also called "M. Addäbabay", 'Square of M.', in the colloquial language of Addis Abäba; s. Tubiana 2006:251).

Manǧo

The M. (also Manča) are a low-ranked social group, often termed "caste" (cp. Marginalized people, EAE vol. 5), in ↗Gonga-societies, notably among the Käfičču (↗Käfa) and ↗Šakačo, where they are estimated to constitute 5–10 % of the population. They are also found amongst the ↗Dawro and some other southern groups. Linguistically, the M. language is said to be an argot variant of the ↗Käfa language. The M. were originally a hunter-gatherer group, living from forest products, but did seasonal agricultural jobs for others as well. They often migrated to different areas according to the opportunities available. Their social status was generally low, and historically they were held as inferior. To a certain extent they internalized this condition of inferiority, but in towns this low-rank identity now is fading.

In Käfičču origin myths, the ancestor of the M. figures as the first human emerging from the earth, with a hunting net, thus emphasizing their status as original inhabitants of the area. Historically the M. had a special relationship with the Käfa kings, as M. were appreciated for their hunting skills and products (lion manes, leopard skins, ivory). M. were often appointed as palace

guards, personal guards of kings and nobles, and executioners, reflecting a familiar pattern of special ruler–minority group relations in many East African societies. The M. were also considered good soldiers. They had their own paramount chief (*manǧi* ↗*tato*) representing them at the Käfa court.

M. have their own named (and exogamous) clans, which seem to differ from the Käfiččo and Šakačo clans. M. mostly marry among themselves. Inter-marriage and commensality of Käfiččo and Šakačo commoners with M. was rejected in theory and limited in practice, with reference to their dietary habits held to be "polluting" (e.g., consumption of *gureza* [Colobus] ↗monkey, pig and porcupine) and to their general "closeness to the animal world". For the non-M. amongst whom they lived, they were involved in funerals as corpse bearers. M. could neither enter the homes of non-M. nor share the same food and drink vessels with them. M. traditionally had no rights to own land. In their turn, the M. looked down upon the *Mano* (tanner-potter) craftworker groups. Traditionally the M. followed the same religious beliefs as the Kafiččo and Šakačo, i.e. the ↗*eqo* cults and the belief in the sky god Yero.

Many negative stereotypes about the M. thus prevented closer social relations with their dominant neighbours, but due to modernization, economic and political changes – including socialist ideology since the 1974 Revolution – and legal practices, group perceptions and social behaviour have changed to the benefit of the M. They also theoretically could own land for cultivation after 1974–75, but did not take up farming on any significant scale and maintained a marginal position. They remain fairly cohesive as a group and have their own dispute resolution mechanisms. After 1991, with the advent of the new government, tendencies remerged among the non-M. population in Käfa and Šeka to revert back to old, "pre-revolution" perceptions of the M.: they are again looked down upon, and injunctions against eating with them or against inter-marriage have resurfaced here and there. This is a social phenomenon also noted among other marginalized groups, for instance in Gurage or Hadiyya societies.

As hunting is getting more difficult and is often prohibited in many parts of Ethiopia, M. now work mostly in other occupations, such as apiculture, collecting and selling of firewood, and charcoal burning. M. women often are potters (↗pottery). Growing numbers of M. have taken up trade and other occupations outside the traditional rural economy as well, but their living standard has remained generally low. Occasional tensions, prejudice and avoidance behaviour towards them can therefore still be noted, even when M. and their neighbours are of the same religious belief.

Männagäša

M. (መናገሻ, 9° N, 38° 45' E) is an area and a town situated west of Addis Abäba, between two extinct volcanoes, Mount M. (2,924 m) and Mount Sululta (for location s. Mägäzäz). In the pre-1974 ↗administrative division, the M. area had the status of an *awraǧǧa*; today it belongs to Wälmära *wäräda* of Mə'ərab Šäwa zone, Oromiyaa *kəlləl*. In 2004, M. town had 4,112 inhabitants.

Mount M. was a ↗coronation site for Ethiopian emperors in medieval times, a fact reflected by the name M., which literally means 'place of appointing kings' (in earlier times, an Aksumite locality, a square in front of ↗Aksum Ṣəyon, by the same name served the same purpose; DAE I, plan II, 46). "Ambanegst" of ↗Fra Mauro's map of 1460 – i.e. Amba Nägäšt, 'mountain of kings', can perhaps be identified with Mount M. (Craw-Itin 194).

The M. forest dates back several centuries, and there are traditions that indicate that it existed during the reign of *aṣe* Zär'a Ya'əqob in the 15th cent. It was made a State forest by *aṣe* ↗Mənilək II who also established a saw-mill there. The timber from M. was used for the construction of the ↗*gəbbi* and for the churches on ↗Ǝnṭoṭṭo mountain, sometimes under Mənilək's and Ṭaytu's personal supervision. ↗Junipers, Podocarpus and ↗*koso* trees can be found in the forest today. It is

still rich in endemic fauna, including such species as Mənilək's bushbuck, Colobus monkey, Duiker and Klipspringer.

Two churches are located on Mount M., M. Maryam, founded by *aṣe* Mənilək II half-way up the slope and painted by *aläqa* ↗Mäzmur Dawit, and Mädḫane ᶜAläm, located next to the ruins of a more ancient church near to the mountain top (possibly dating back to the time of ↗Ləbnä Dəngəl who had a house at Ǝnṭoṭṭo). *Abunä* ↗Matewos had his residence built near Mädḫane ᶜAläm.

Manoel I

Dom M. (also Manuel, called "o Venturoso" ['the Fortunate']; b. 31 May 1469, Alcochete, d. 13 December 1521, Lisbon, r. 1493–1521) was king of ↗Portugal. He was the son of the Infante Fernando, Duke of Viseu, by his wife, Beatrice of Aveiro, princess of Portugal, and succeeded his cousin ↗João II.

M. supported Portuguese exploration in the Atlantic Ocean and political expansion. During his reign, in 1498 Vasco da Gama reached India and in 1515 Afonso de ↗Albuquerque secured the Portuguese dominion over the Indian Ocean. He also sponsored contacts with Ethiopia. In 1507, two Portuguese, João Sanches and João Gomes, and a Tunisian, Sidi Muḥammad, were sent to Ethiopia with letters of friendship to ↗Ǝleni (Aubin 1976:5ff.). As a response, the Ethiopian envoy ↗Mateus reached Lisbon in 1514 and was well received at the Portuguese court.

M., then at the peak of his power, cultivated the image of a Renaissance monarch, patron of the arts and friend of savants (João de ↗Barros, Damião de ↗Góis), who was eager to establish connections with figures such as ↗Prester John, whom Europeans located in Christian Ethiopia. Following Albuquerque's advice, he considered the ↗Red Sea a strategic area for control over ↗Indian Ocean ↗trade. As a result, a political alliance with the Ethiopian *nəguś* became a priority in Portugal's foreign policy (Thomaz 1990:55ff.).

An intense exchange of letters between M., Pope Leo X (1513–21; ↗Vatican) and the Christian Orient followed. The king, through his ambassador in Rome, Miguel da Silva, proudly informed the pontiff of his contacts with the Ethiopian ruler (Cortesão – Thomas 1938, apendice b; Santarém – da Silva 1891: 257ff.). The Pope, in turn, began a policy of diplomacy with both Portugal and Ethiopia. In 1514 he dispatched the Florentine merchant and agent Andrea ↗Corsali with two letters to "Davide" (i.e. ↗Ləbnä Dəngəl; Raineri 2005:45–48) and issued a bull to M. encouraging him to send bishops to Ethiopia (Santarém – da Silva 1862:248ff.; another bull, from 1521, in Jordão 1868:124). In 1521, he sent three further bulls to Ethiopia, and two letters to Mark, Patriarch of Alexandria. The Pope exhorted the Ethiopians to abandon ↗circumcision, offer obedience to the Roman Church (↗Catholicism), and conclude the alliance with the Portuguese against the Ottoman empire (Raineri 2005:48–57; Cortesão – Thomas 1938, apendice d). He also offered Mark ecclesiastical benefits and privileges, should he recognize papal authority (Cortesão – Thomas 1938, apendice e; Jordão 1868:128f.).

In the meantime, towards the end of 1514, the Portuguese court was preparing an embassy to Ethiopia – a project carefully followed by M.'s close advisor, Duarte Galvão, also appointed his ambassador (Aubin 1996; Cortesão – Thomas 1938:36f.). The embassy was richly endowed with presents, including several books, a planisphere and clothes (for these gifts, s. Dias 1995; Hook 1973; Aubin 1976, 39, n. 190), valued at 30,000 *cruzados* (Cortesão – Thomas 1938:37). However, opposition from the Governor of India, Lopo Soares de Albergaria, and the death of Galvão on Karaman Island led the embassy to failure. Three years later, a new embassy was organized in India, headed by the *fidalgo* Rodrigo da ↗Lima and the new governor Diogo Lopes.

When news of the encounter between Diogo Lopes and the ↗*baḥər nägaš* "Adiby" (= Adäbabay) at ↗Massawa reached Portugal, M. had a pamphlet published which described it (Cortesão – Thomas 1938). In 1499, after da Gama returned from India with news of his "discoveries", M. added to his titles "Lord of the con-

quest and navigation of Ethiopia, Arabia, Persia, and the Indies" (s. Thomaz 1990:37ff.). M. was succeeded by his son, Dom ↗João III.

Andreu Martínez

Mänsa^{c}

The M. (መንሳዕ, also Mänsä^{c}) are a Təgre-speaking Christian and Muslim group of Eritrea whose population was estimated in the mid-20th cent. at ca. 6,500 (cp. NadEr 39; TrIslam 163). They call themselves and their dialect M. The M. dialect is used as the ↗Təgre standard form.

The M. inhabit the country adjacent to the town of ↗Kärän and about 50 km north-west from the Red Sea-port of Massawa which embraces the territory of the "Northern Hills" (↗Sänḥit), i.e. the low plateau from which the chains of hills slope down towards the north (cp. LitPEA vol. 2, 335; NadEr 31; KilHDic 310). This corresponds to the mountain ridge between the upper ↗^{c}Ansäba valley and the coastal plain adjoining the Sämenawi Baḥri. They marry among themselves and with the other Təgre groups as well as with the ↗Bilin and the ↗Təgrəññña speakers.

In the highlands, the M. move with their animals to winter pastures at lower elevations where they also cultivate crops in a cycle known as *səbäk sagəm* ('seek pasture, return to native village', lit. 'go down, go up' [imperativ]). This phrase is also used to describe dry and wet seasons. M. agro-pastoralism is largely the product of an arid environment that cannot sustain sedentary agriculture. Seasonal movements in search of grazing land and stream-bed cultivation sites mark the lives of these pastoral peoples. M. livestock herds which include goats, camels and some cattle traditionally provide insurance against droughts and other natural disasters, as well as indispensable animal traction for agriculture.

M. were once predominantly pastoralists grazing their herds (cattle, goats) on the plains of Šə^{c}əb (NadEr 32). At the end of the 19th cent., however, almost all their animals were killed by rinderpest (Tgr. *gəlḥay*; s. ↗*Kəfu qän*) and they had to shift to agriculture combined with semi-transhumant pastoralism (LitPEA vol. 2, 236, 335; Shack 1974:76f.; KilHDic 214).

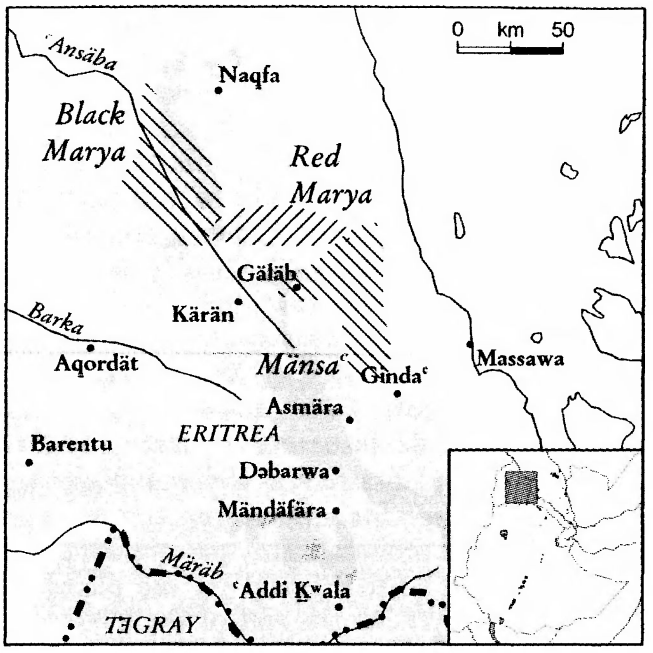
The main diet of the M. consists of meat and milk products, unleavened bread (*bərkətta*) and mead. For *bərkətta* they put dough made of flour, salt and water around a hot stone and let it bake in a charcoal fire until it is ready. Mead is prepared from a concoction of honey, water, ground bark (*kaddo*-tree), and some grains of durra. The mixture is sealed in a jar and buried near the fireplace for four days, after which it is strained (Shack 1974:77; LitPEA vol. 2, 229ff.; Littmann Nachlass, diary notes).

In accordance with their economic strategies the M. developed different types of ↗houses: the semi-transhumant pastoralists use the *qəšaša* (a movable tent shaped like a beehive) while the sedentary cultivators dwell in the *səqlo* (round house) or the *mä^{c}adäni* (rectangular shape; LitPEA vol. 2, 336, 339, figs. 23ff.).

According to oral tradition, the M. descend from a common ancestor called Mänsä^{c}ay, whose father Zed is reported to be an offspring of the tribe of Qurayš and to have emigrated from Arabia to Eritrea. Mänsä^{c}ay's brother Mayray (or Maryay) is believed to be the ancestor of ↗Marya (Conti Rossini 1901; Rodén 1913).

The M. are patrilineal and consist of two major clans, the Bet Abrəhe and the Bet Ǝšḥaqän (or Bet Šäḥaqän). This division into two sections (each with five kinship groups) probably appeared in the middle of the 16th cent.

The senior branch, Bet Abrəhe, occupied the



northern part around Gäläb and were richer in land. One of their ancestors is said to have received in 1600 the rank of *käntebay* (↗*Käntiba*) from the Ethiopian emperor, which then became the hereditary title of their chiefs (NadEr 39; LitPEA vol. 2, 335; MunSt 140f.). The *käntebay* was originally invested by Təgrayan governors during the 17th and 18th cent. His traditional seat was Gäläb. This village is set in a high round valley whose shield-like shape gives it its name.

The Bet ƎšḥaqänThe Bet ƎšḥaqänThe Bet ƎšḥaqänThe

education, Christian missionaries first recorded M. Təgre texts, in Ethiopic scripts, beginning with the Swedish Evangelical Mission at Gäläb. European scholars, including missionaries, also took an interest in M. Təgre's extremely rich traditions of oral poetry, and tales, some of which were collected and published by Munzinger, Littmann (LitPEA) and Rodén, among others.

The Swedish Evangelical Mission built a Middle School in Gäläb during the 1940s, and reportedly the village then had a mixed Muslim/Christian population of about 2000 people. Gäläb was first attacked and burned by the Ethiopian army in the late 1970s, and many M. fled to Käran and then escaped to Sudan as refugees. Gäläb was again attacked by the Ethiopian army in 1975 and in 1980, when many M. villagers were killed and the survivors fled to the Sudan. In 1988, at the time of the Šəᶜəb massacre, Gäläb was cluster-bombed and the last of its population fled, after which the front line between the Därg and the ↗Eritrean People's Liberation Front (EPLF) around Käran cut directly through M. land until the end of the war in 1991. Today Gäläb is a sub-zone administrative centre, a major market place for several surrounding villages, is dotted with schools and clinics, and is connected by an all weather road to Käran.

Kerstin Volker-Saad

Manṣūr b. Muḥammad b. Ayyūb

M. (منصور بن محمد بن ايوب) ruled in ↗Harär and ↗Awsa between 1575–76. When ↗Muḥammad b. Naṣīr b. ᶜUṯmān left Harär to fight the Christians during the reign of ↗Śärṣä Dəngəl, the ↗Oromo took the chance, invaded the country and besieged Harär. Muḥammad's brother, *wazīr* Ḥāmid b. Naṣīr, whom Muḥammad had made regent during his absence, was able to prevent the occupation of the town, but not the devastation of the country. In August/September 1575 a new man rose in Harär: M., who fought the Oromo. In the *Storia dei re* (s. Cerulli 1931) it is not mentioned whether he did so by order of Ḥāmid or after a rebellion. The latter seems to be more probable, because a variant in the same book mentions him as ruler of Harär between the reigns of Muḥammad b. Naṣīr and ↗Muḥammad Gāsā I b. Ibrāhīm, which means that he must have overthrown Ḥāmid.

After pushing back the Oromo, M. took 150 Somali cavalrymen and 300 footsoldiers, and marched against ↗Zaylaᶜ. In April 1576 he proceeded further against Awsa, where in May he removed the *hēgan* Hāšim, whom Muḥammad b. Naṣīr had installed there. This also shows that he acted against the wishes of the ruling family. In July/August 1576, M. planned an expedition against Ǧināḥasar (or Ǧanaḥsir, Ǧanāsir, Čənaḥasän, about 30 km north-west of Ǧiǧiga, cf. HuntGeogr 87, 102, map 18; Cerulli 1941:30, n. 2; BassHist 80 [text]). He had not, however, yet advanced far from Awsa when his own soldiers attacked him. In the following month, Muḥammad Gāsā I, who had taken control of Harär after Muḥammad b. Naṣīr was killed by Śärṣä Dəngəl, transferred the capital of ↗ᶜAdal from Harär to Awsa. If M. had not been already removed by his own people, this must have happened at this time through Muḥammad Gāsā I. At any rate, nothing is heard of M. later.

Manuscripts

The term M. (from Lat. *manu scriptum*, 'written by hand') is applied to artefacts (codices, unbound fascicles, scrolls, or even single leaves), usually on parchment, much more rarely on paper (writing on papyrus is not attested in the Ethio–Eritrean region), which primarily carry texts and/or paintings; their contents are themselves of no relevance to the definition of M. as such. Epigraphic writings (↗inscriptions on stone, metal, wood), occasional writings on paintings (captions and legends), on pottery, textiles, and other objects (such as ↗*mänbärä tabot*), are not to be considered M. On the other hand, scrolls (whether ↗magic or not), although sometimes considered separately, can be labelled M.

Christian, Islamic and Betä Ǝsraʾel cultures have developed and been transmitted in Ethiopia and Eritrea mainly through the production and preservation, in M. form, of numerous texts in various fields (theological, liturgical, literary, historical, etc.) and in various languages (esp. ↗Gəʿəz and ↗Arabic, ↗Amharic, and, to a lesser degree, ↗Harari, ↗Təgrəññña and others).

The peculiar and exceptionally relevant importance of M. in Ethiopian culture is determined by the very late introduction of an extensive use of ↗printing, which does not antedate the 19th cent. (↗Incunabula). Ethiopia and Eritrea are still among the few countries where a tradition of parchment M. (↗Manuscript preparation) is still alive. The M. tradition is rooted in the peculiar past of the area, where – contrary to most African countries south of the Sahara – written tradition (starting from the 1st millennium B.C. in the so-called "South-Arabian phase" of Ancient Ethiopian history) has played a central role in the development of civilization.

Manuscript studies

The study of M. is of major importance to research in various fields of ↗Ethiopian studies. Modern research, esp. recent trends starting from the second half of the 20th cent., has clearly distinguished various branches within M. studies, or "manuscriptology", each one with its own methodology and scope, based upon the fundamental distinction between text and what supports the text.

Codicology studies hand-written books as artefacts, with specific reference to their material constituents and techniques of production ("archaeology of M.", cp., e.g., Muzerelle 1985; Maniaci 2002). Illuminations and drawings in M. are the subject of art history.

↗Palaeography considers the peculiarities of writing and its general development and dating (historically the first aim of palaeography), but also the general "act of writing" in all its general contexts and aspects (UhPal).

Text-criticism, or ↗philology in the narrow sense (cp. Bausi in PICES 15b), has refined its methods in the search for reliable criteria to establish the original reading of texts. It takes advantage of recent developments in other disciplines, witnessed, for example, by the emergence of such specific sub-disciplines as "codicological stemmatics", or "material philology". These new research directions establish the relationships between the M. and the texts they transmit, also by tracing the history of each single M., its material structure and/or the influence specific copies may have exerted within a single textual tradition. So far these recent disciplinary subdivisions have seldom been applied to Ethiopian M. studies.

Ethiopic manuscripts

I. General topics in Ethiopic M. studies

There are fundamental issues in M. studies which still need a definitive assessment, such as:

(1) The total number of manuscripts, inside and outside Ethiopia and Eritrea

(a) Manuscripts inside Ethiopia and Eritrea

The exact number of Ethiopic M. in the Ethio–Eritrean region is not known. The estimate that there should be ca. 200,000 (excluding scrolls; cp. Sergew Hable Selassie 1981:35) seems realistic if one considers the minimum number of M. necessary for every church for religious and liturgical practice (the number of parishes ranging from at least 13,000 to 32,350), and the occasionally large M. collections still preserved in monastic libraries (e.g., ↗Däbrä Ḥayq Ǝsṭifanos, ca. 200 M.; ↗Däbrä Bizän, ca. 570 M.; ↗Gundä Gunde, formerly 800 [?] and now ca. 220 M.; ↗Aksum Ṣəyon, several hundred M. at least). Although still relatively little exploited by scholars and not yet furnished with printed catalogues, two institutional Ethiopian libraries have rich M. collections: the Library of the ↗Institute of Ethiopian Studies, ca. 1,500 M.; and the ↗National Archives and Library of Ethiopia (NALE), ca. 850 M.

(b) Manuscripts outside of Ethiopia and Eritrea

The number of M. abroad may be estimated to be several thousands, most of them catalogued

(for details on the principles of cataloguing Gəᶜəz M. s. Bausi 2004:7–11). The four biggest collections in Europe are those of the ↗Biblioteca Apostolica Vaticana (VatLib), the ↗Bibliothèque Nationale de France (BN), the ↗British Library (BritLib) and the ↗Staatsbibliothek Preußischer Kulturbesitz, Orientabteilung (Berlin). The VatLib (also the first one to have been catalogued, cp. GréTisVat II, 9ff.) has 1,082 M., including the collections Vaticano and Borgia (348 M.; s. GréTisVat I–II; van Lantschoot 1962; Raineri 1993 and in PICES 11), Cerulli Etiopici (332 items; s. RaiCer), Comboni (290 items, s. Raineri 2000) and Raineri (112 items, s. Raineri 1998). The BN has over 1,000 M. and scrolls; the main collections are Éthiopien (s. ZotBNat, ChMonV, GrébGriaule I–III, StrGriaule) and d'Abbadie (s. AbbCat, ChAbb, CRAbb). The BritLib has at least 624 M. (s. DillmLond, WrBriMus, StrBritLib, Nersessian 1989:172ff.); this includes the M. of the India Office (s. Cerulli 1946). The Berlin Library preserves 328 M. (s. DillmBerl, HamSixBerl, SixDeu, Six 2001, 2003, 2005, 2006) and an important microfilm collection of 182 items (s. HamTana I–II, SixTana III).

As far as microfilms are concerned, the collection of the ↗Ethiopian Manuscript Microfilm Library, with so far 9,238 M., is the most important one (the first 5,000 items have been catalogued in EMML I–X). The catalogues of Ethiopic M. and microfilms in the aforementioned collections are:

JESSON (eds.), *Historical Catalogue of the Manuscripts of Bible House Library*, London 1982, 66–121; CRAbb; DillmBerl; DillmLond; EMML I–X; *Exhibition of Ethiopian Manuscripts from the Collection of the Institute of Ethiopian Studies. Museum of the Institute of Ethiopian Studies: University of Addis Ababa, February 16–March 16, 1988*, Addis Ababa 1988; GrébGriaule I–III; GréTis Vat I–II; HamSixBerl; HamTana I–II; ARNAULD VAN LANTSCHOOT, "Inventaire sommaire des mss. vaticans éthiopiens 261–299", in: *Collectanea Vaticana in honorem Anselmi H. Card. Albareda I*, Città del Vaticano 1962 (Studi e testi 219), 453–512; VREJ NERSESSIAN, "Roger W. Cowley (1940–1988)", *JES* 22, 1989, 171–75; OSVALDO RAINERI, "I Manoscritti Vaticani Etiopici 249–250, 300–323", in: *PICES* 11, vol. 1, 685–710; ID., "I manoscritti Vaticani etiopici 300–323. Inventario analitico", *Quaderni Utinensi* 7/13–14, 1989 [1993], 105–44; ID., "Inventario dei manoscritti etiopici 'Raineri' della Biblioteca Vaticana", in: *Collectanea in honorem Rev.mi Patris Leonardi E. Boyle, O.P. ...*, Città del Vaticano 1998 (Miscellanea Bibliothecae Apostolicae Vaticanae VI/Studi e testi 385), 485–548; ID., *Codices Comboniani Aethiopici*, In Bibliotheca Vaticana 2000 (Bibliothecae Apostolicae Vaticanae codices manuscripti recensiti 47); RaiCer; SixDeu; SixTana III; VERONIKA SIX, "Neuerwerbung einer äthiopischen Handschrift durch die Staatsbibliothek Preußischer Kulturbesitz Berlin", *Aethiopica* 4, 2001, 179–81; *ibid.* 6, 2003, 192–95; *ibid.* 8, 2005, 170–73; *ibid.* 9, 2006, 180–89; StrANL; StrBritLib; StrGriaule; WrBriMus; ZotBNat.

A full list of collections and catalogues, with minor omissions, has been compiled by Beylot and Rodinson (BeyRodRép); an updated version is being prepared by Wion – Derat – Bosc-Tiessé (2006); Zanutto (ZanBibl) is still useful in some cases.

(2) The emergence of manuscripts in the Ethio–Eritrean area and dating of manuscripts

The Gəᶜəz word መጽሐፍ (*mäṣḥaf*) is the most general term to indicate 'manuscript, book, writing' in all its meanings (cp. DillmLex 1268f.; LesCDic 552). The term was borrowed into Arab. *muṣḥaf* (also *maṣḥaf*, *miṣḥaf*), which seems to imply that the Arabs adopted the use of M. (codices) in pre-Islamic times from the Ethiopians (Nöldeke 1910:50), who had received it in turn from the late antique Near-Eastern and Mediterranean world. The tradition is already attested in the 9th cent. by Abū ᶜUṯmān al-Ǧāḥiẓ (d. 868/69 A.D.) in his *Faḫr as-sūdān ᶜalā l-bīḍān* ('The Boasting of the Blacks over the Whites'; cp. the Arab. text in van Vloten 1903:71, ll. 11–14). Not clear in its etymology (from **brh* 'be light, be clear', but more likely from Gr. μεμβράνα, cp. DillmLex 501; LesCDic 104; Cohen 1929), the Gəᶜəz term ብርሃና (*bərhanna*), probably a pseudo-etymological spelling for ብራና (*bəranna*) as in Amh. (the form *bəranna*, however, is found in the colophon of the ms. Pistoia, Biblioteca Forteguerriana, Martini etiop. 5, fol. 195rb, dating to 1437/38 A.D., cp. Fiaccadori 1993:162ff., where *säraḥtä bəranna*, 'makers of parchment', are mentioned), is specific for 'parchment', for which the ancient term ረቅ (*räqq*) is also used (cp. DillmLex 284; LesCDic 472). Specific are the borrowings ክርታስ (*kərtas*) for 'leaf' (from Gr. χάρτης, 'papyrus', 'a papyrus roll'; cp. DillmLex 837f.; LesCDic 294), and the later ክታብ (*kətab*), 'writing', but esp. 'magical writing, amulet' (from Arab. *kitāb*, 'book', in all its meanings; cp. DillmLex 852; LesCDic 297). M. may have already been used in pre-Christian times, though there is no evidence for that. In any case, the introduction of ↗Christianity in Aksum certainly implied an early diffusion of M., at least for the strict necessity of religious services and liturgical practice. Though no M. dating to that

Fig. 1: A manuscript with a *ḫarägʷ*: *Gädlä sämaᶜətat*, beginning of St. Thecla's story, fol. unknown, 15th cent., *abunä* ᶜAbiyä Ǝgziᵓ's monastery Däbrä Mädḫanit, Təgray; photo 2002, courtesy of Michael Gervers

period are known so far, their presumed existence is evidenced by the abundance of literature dating from Aksumite times and transmitted through M. up to the present (the ↗Bible with O.T. and N.T., apocrypha, patristic texts of various kinds, i.e., theological, liturgical, hagiographic etc., translated from Gr. models). The oldest preserved M. date to the 13th–14th cent., but in considerable quantities only from the 16th–17th cent. onwards. Christian tradition tends to attribute the scarcity of M. antedating the 16th–17th cent. to the destruction of Christian heritage brought about in the first half of the 16th cent. by ↗Aḥmad b. Ibrāhīm al-Ġāzī. The wars must have seriously affected the survival of M., although the extent of damage can not be determined with any certainty. On the other hand, the intentional destruction/substitution of texts (cp. Bausi in PICES 15a:537f.), the custom of burying M. together with their owners (cp. Lusini 1999a:414) as well as poor preservation conditions in monastic libraries have been adduced to explain the scarcity of ancient M. The conflict with the ↗Jesuits in the 17th cent. and the full restoration of the traditional cult in the ↗Gondärine kingdom may have occasioned the revival of M. production.

Three Gospels from ↗Ǝnda Abba Gärima (I, II and III) are considered to be the oldest Ethiopian M. ever found. Their dating, however, is still uncertain and a matter of discussion, ranging according to different scholars from the 7th or even the 6th cent., esp. considering the style of the illuminations (↗Canon tables) and radiocarbon chronology, up to the 14th cent. (cp. Bausi 2004 [Lit.]). The Georgian palimpsest M. with inferior text in Gəᶜəz discovered in the Monastery of Saint Catherine in Sinai (cp. Aleksidzé – Mahé 1995:487f., esp. n. 6) may be particularly old.

The overwhelming majority of M. can be dated only on the basis of palaeographic evidence (cp. UhPal). In some cases dating is provided by a colophon (also named *subscriptio*, with prevalent exclusive reference to the name of the copyist), i.e., a final note directly referring to the M. where the copyist mentions the place and/or the date of copying according to various chronological systems (cp. Uhlig 1986), and who, or which church or monastery, has paid for it.

II. Codicological manuscript studies

In the total absence of a specialized monograph devoted to Gəᶜəz M. (but s. some recent contributions listed in Proverbio – Fiaccadori 2004:666, n. 3), apart from a short, but useful booklet by Sergew Hable Selassie (1981; cp. also Mellors – Parsons 2002ab), Ethiopian codicology is still in its early stages.

(1) Manuscript typology according to overall format

Two basic types of Gəᶜəz M. are traditionally distinguished, both prepared on parchment according to fixed traditional procedures:

(a) the scroll, usually not calligraphic and almost exclusively used for magical texts and for paintings, not for sacred texts or large works (as in Jewish culture);

(b) the codex, usually with wooden binding and leather cover.

Palimpsests are rarely attested; they are obtained by washing off the ink, more than by erasing, as in the 17th-cent. M. BN d'Abb. 191 (s. CRAbb 108, no. 65; UhPal 233). Washing and erasing (but not rewriting) as radical acts of censorship are well represented, e.g., in the *Mäṣḥafä* ↗*bərhan* of Däbrä Bizän, before 1457/58 (s. BauEr II, 25ff., esp. 30ff., figs. 2–6 [s. fig. 2]).

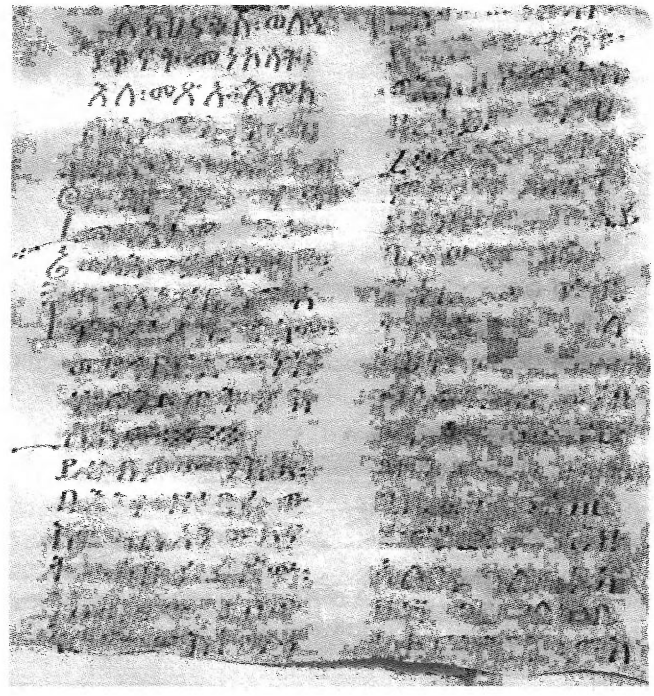

Fig. 2: Example of censorship by erasing; *Mäṣḥafä bərhan*, 15th cent., Däbrä Bizän, fols. 233v–234r; photo 1995, courtesy of the author

(2) Manuscript typology according to material

M. found in Ethiopia and Eritrea can be either

(a) parchment M. as described above; or

(b) paper M.

M. on paper are comparatively rare and very recent, appearing from the end of the 19th and esp. in the 20th cent. Collections containing Gəᶜəz M. copied by Ethiopian copyists for European scholars consist in some cases of a good deal of European-paper M., e.g., Conti Rossini collection in ANLin (cp. StrANL).

(3) Manuscript composition, layout and metrology

Fascicles are normally composed of 4 bifolia in older M.; from the 17th/18th cent. onwards fascicles of 5 bifolia prevail (cp. Uhlig 1989).

Although dimensions and other metric data of M. (number of columns, size of the writing, width of the margins etc.) should be studied as components of the general *mise en page*, no statistical study is yet available for Gəᶜəz M., apart from very limited sample studies. On this provisional basis, one can say that the dimensions of the M. range from 10–12 cm to more than 40 cm in height (48 cm in an exceptional M. from Däbrä Bizän, cp. BauEr II, 34ff., little less than some archaic copies of the ↗Octateuch, cp. Fiaccadori 1994, and also M. 1837 of the Schøyen private collection, London – Oslo, 49 cm.); the most common height is ca. 30 cm.

The most ancient M. usually organize text in two columns; from the 16th cent. the three-column model tends to become frequent and later on prevails. Exceptions are attested, e.g., the three-column M. of the ↗*Gädlä sämaᶜətat* EMML 7602, dating from the period of *aṣe* ↗Dawit II. As a rule, the ↗Psalter is copied in one single column. M. dimensions are only partially dependent upon the number of columns.

Guidelines are drawn on parchment, not by ink, but simply by pressure of a special tool. Paragraph marks are very simple before the end of the 14th cent.; thereafter they become more elaborate. Geometrical ornaments and interlacing (↗*Ḥaräg*) also developed from the 14th cent.; this kind of ornamentation enjoyed a special revival in imperial *scriptoria* in the 20th cent. (UhPal 783).

Black (or dark brown) and red inks are very common; other colours are also used, esp. in ornaments; one special case of "negative" writing (black ink is erased to obtain "white" writing using the colour of the parchment) is attested in the colophon of an Octateuch, Bible House Library, Ethiop. 1, fol. 284r (s. Cowley 1982:71; the M.

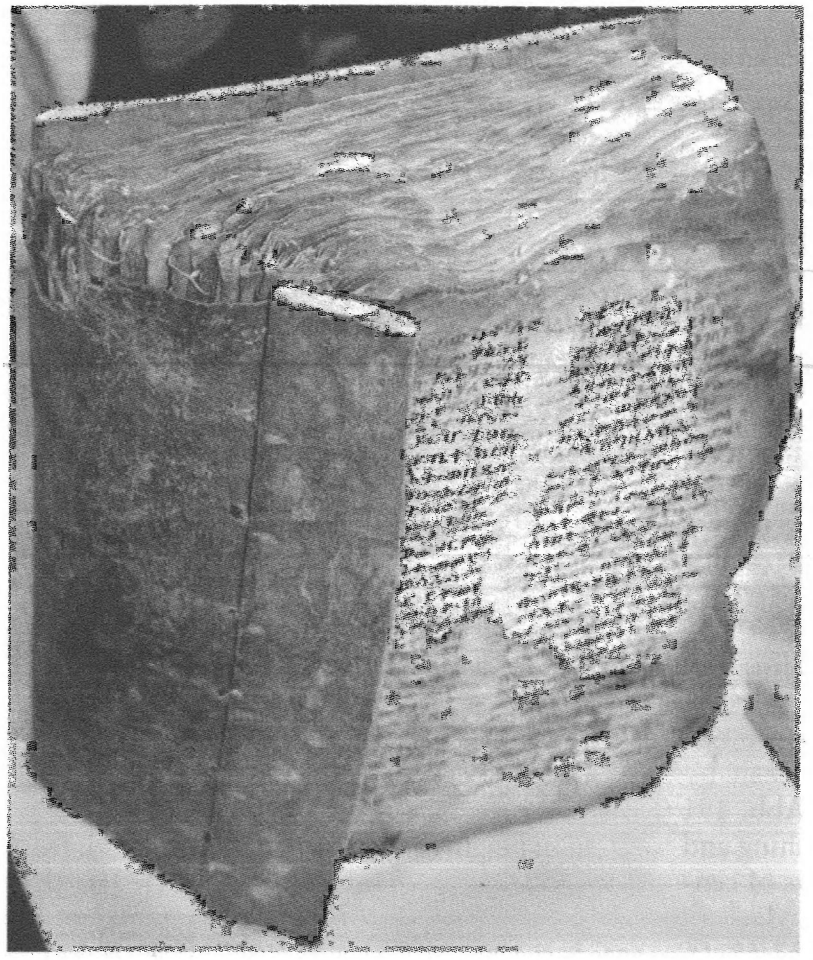

Fig. 3: A manuscript of the *Gädlä sämaᶜətat*, 55 x 45 x 25 cm, 15th cent., Yoḥannəs Käma, Təgray; photo 2006, courtesy of Michael Gervers

is at present in Cambridge University Library, s. BeyRodRép 46f.).

Ethiopian binding technique seems to be of a specific type, technically termed "chain-sewing with two threads" (cp. Bartelt – Hammerschmidt 1976; Bozzacchi 1996; Mellors – Parsons 2002b:16f.). M. are usually provided with wooden covers, very often covered with ornamented leather according to traditional styles (cp. Pankhurst 1983–84).

III. Palaeographic manuscript studies

Apart from the study of writing in the strict sense, the modern concept of palaeography presupposes both the analysis of the mutual interrelationship within a single "data carrier" of texts of different status, and – besides the material aspect of the preparation – the social context presupposed by M. production and use.

We have some information on the training of a copyist as observed in the 20th-cent. imperial *scriptorium*, (cp. Haile Gabriel Dagne in PICES 8). Training consisted, as expected, of traditional church education, including some knowledge of Gəᶜəz and calligraphy (cp. Sergew Hable Sellassie 1981:27–32). A regulation issued in 1919 estimated that it took a copyist one year to copy the Octateuch, eight months and 15 days for the ↗*Fəṯḥa nägäśt*, 18 months for the ↗*Dəggʷa*, and up to 16 months for each of the two parts of the ↗*Sənkəssar* (MahZekr 660–63).

↗*Däbtära* play an important role in M. production, although it has been observed that copying skills are not of central importance for them and other learned people of the church, writing being considered a task of lower prestige (s. ibid. 27ff.; Bausi 2004:14, esp. n. 31). This circumstance may also explain why autograph writings are extremely rare, and only begin to emerge with private and official letters and documents (↗Epistolography), in the 19th cent.

Production of M. was a task of the monastic communities, and ↗monasteries have also been – and in many cases still are – the main repositories of M. M. are rarely preserved in specially devised places ("libraries"): usually they are considered "precious objects", and are inventoried and preserved in the same place (↗*ᶜƎqa bet*) as liturgical objects, paintings, clothes, textiles, crosses, and other paraphernalia (s. ↗*Qəddase*). In some cases M. are entrusted to an **ዐቃቤ፡ መጻሕፍት** (*ᶜaqqabe mäṣaḥəft*, 'keeper of the books'), who is responsible for their care; in many cases written inventories have also been drawn up. Old preserved lists (attested from the end of the 13th cent., cp., e.g., Sergew Hable Selassie in OrbAethChoj) are normally used by scholars in order to establish the *terminus ante quem* of literary works and/or the relative interest of monastic communities in them (cp. BauEr I, 15–21, esp. 20ff.). Inventories of items and books often appear as *additiones* ("additional notes", s. Lusini 1999b), on blank pages and/or in spaces not completely used up by the text, at the beginning or more usually at the end of the M. Unlike the colophon, these notes of various typology (personal and historical records; sentences and judgements on controversies; lists of important people, saints, foreign words, months; prayers, short hymns; calendaric remarks; *fätinä bərᶜ*, 'pen trials') do not directly refer to the main

M. text. The practice of *additiones* may be considered very old, as we find such (almost contemporary) notes even in the most ancient M. The Bible (particularly Gospels, cp. ↗*Wängelä wärq*) and M. of the Acts (↗*Gädl*) of the founder of a monastic community are frequently used to host documents of direct interest to the community, such as feudal deeds attesting benefices, historical records etc. (cp. also *Mäṣḥafä* ↗*Aksum*). In some cases, fascicles containing important feudal deeds are rebound together (e.g., in the "Golden Gospel" of ↗Däbrä Libanos of Šəmäzana, in this case, together with a recent copy of the same deeds). Directly referring to the M. and very useful for its history are notes of other kinds, such as indications of ownership and/or the information usually preserved in the colophon.

IV. Philological manuscript studies

The attitude of the scribes towards their text – actually a subject of ↗philology, or text criticism – is also of importance to M. studies in wider sense. As a rule, Ethiopian scribes do not systematically change the received text, neither do they correct errors; it is a common experience that copyists usually accept and tolerate even extremely corrupted texts, or texts virtually impossible to understand (this is consistent with the average figure of the copyist, who is not necessarily a man of learning). Occasional corrections do not consistently apply each time a M. is copied, so that (contrary to what tends to happen for linguistic reasons, e.g., in Romance texts) each M. does not necessarily represent a different recension of the text. There are also examples of corrections or changes due to cultural and literary requirements, esp. in the case of texts of crucial religious and theological relevance, such as the Bible and others (cp. Zuurmond 1989 part I, 73ff.; Lusini 2004; for the censorship of the *Mäṣḥafä bərhan* of Däbrä Bizän cp. above; cp. also Bausi 2004:17ff., in PICES 15b:546ff.). It is more than likely that the systematic revision of the ↗Bible – O.T. and N.T., in various phases and periods – was due to institutional Church initiatives and re-translations (for the canonico-liturgical collection, cp. Bausi in PICES 15a).

We also lack any analysis for establishing a reliable correlation between the textual history of Gəᶜəz texts – which is a subject of philological research – and the varying peculiarities of the M. as such. The Bible can serve as an example. It was originally translated in Aksumite times and in the course of time became a "conflated text" corrupted by glosses, variant readings and doublets. It was then corrected in the 14th cent. with the help of Arabic (in turn from Greek, Coptic and Syriac) versions, later in the 16th and 17th cent. (cp. above) "deconflated" and revised again, till the establishment of a shorter and better readable "eclectic" text-type (*vulgata*, *textus receptus*) by selection of earlier readings. We cannot establish, however, whether the revision of the text was always accompanied by a parallel and consistent updating of the M. type, or if older models have exerted, or to what extent still exert, their influence. In this respect, very impressive is the case of the *Mäṣḥafä* ↗*ṭefut*, a M. consisting of the Octateuch, Four Gospels and ↗*Senodos*, dating from the 14th/15th cent., that was accurately reproduced (directly from the original model or from an intermediary copy) by order of *aṣe* Iyasu I; the M. is at present preserved in the BritLib, as ms. Orient. 481 (cp. Fiaccadori 1994).

Siegbert Uhlig – Alessandro Bausi

Arabic manuscripts

I. Introduction

The situation with Ethiopian and Eritrean M. in ↗Arabic, as well as ʿ*ağamī* (i.e., M. in other languages written in Arabic script), is even more difficult than with Ethiopic M. Our knowledge is even more limited mostly owing to the relative recency of the research tradition dealing with Arabic and Islamic culture of the region.

Arabic is not exclusive to Muslims. Christian ↗Arabic literature is very rich and M. from ↗Egypt and, perhaps, from the Middle East must have been circulating in Christian Ethiopia since earliest times. This assumption is confirmed by the many translations from Arabic into Gəʿəz (Murad Kamil 1942; Kropp 1986). Moreover, Arabic notes, mostly of a legal nature, sometimes appear in Gəʿəz or Amharic M. (Schneider 1974), an indication that at least some senior clerics – especially in the entourage of the Egyptian metropolitans (↗*Pappas*) – knew and used this language. A special case are M. written in Arabic by former Muslims converted to Christianity, such as, e.g., the one containing the *Sylloges* of *šayḫ* ↗Zäkaryas (Gori 2001).

Arabic being the language of religion and education in Islam, Arabic texts are always widely spread among Muslim communities, including those of Ethiopia and Eritrea. The direct connection between M., the traditional education system and cult practices explains the wide diffusion of M. containing non-Ethiopian works, considered fundamental for the instruction of the faithful and for strengthening of ↗Islam. These are usually copied and commented upon by local scholars. While some of the M. circulating in Ethiopia and Eritrea and containing both foreign and indigenous texts were produced locally, others were brought in by itinerant clerics, learned men or traders. Detailed information on the imported M., their relative proportion regarding indigenous ones, types of texts, countries of origin, once available, would be essential for our understanding of Islamic culture in the area, i.e. the degree of foreign influence and the needs these texts satisfied.

II. Overview of collections and catalogues of Ethiopian Arabic manuscripts

(1) Collections

Very few Arabic Islamic M. have so far become known (only ca. 90 are more or less duly catalogued); an estimate of the total number, even very approximate, is impossible. Arabic M. in private hands or stored in places often unfit for preservation are indubitably very numerous.

In Ethiopia, the ↗Institute of Ethiopian Studies (IES) houses a precious collection of 140 Arabic M. (Hussein Ahmed 1994:129). Most of them come from ↗Harär; recently some M. from ↗Wällo (e.g., the original M. of the hagiography of *šayḫ* ↗Gaʿfar Bukko, s. Hussein Ahmed in PICES 8 [IES 1895; FahLit 54]; the chronography of Wällo, s. HusIslam 209 [IES 1954]) and from the ↗Ǧimma region (esp. M. of the *tiǧānī šayḫ* Maḥmūd b. Sulaymān, nephew of ↗Abbaa Ǧifaar II, s. FahLit 53) have been added. The collection still lacks a detailed and precise catalogue. Five M. (IES 276, 955–58) were copied by Wagner for the ↗Staatsbibliothek Preußischer Kulturbesitz, Berlin, and catalogued (WagHand Hss. or. sim. 5120f., 5134–37, 5139f.). Jomier (1967), who started but never completed the checklist of

the entire Arabic M. collection, provides useful observations on 16 M. of the IES.

The ↗National Archive and Library of Ethiopia (NALE) in Addis Abäba keeps a certain amount of Arabic M., amongst which is a Qurʾān, but we know neither the size nor the content of this collection (s. Bəzuwärq Täsfaye 2006:103).

Jomier (1967:292f.) also mentioned four or five Arabic M. which he managed to consult in the Ğāmiᶜ an-Nūr mosque in Dərre Dawa (including a copy of the *Ṭabaqāt* by the Yemeni Aḥmad aš-Šarğī [d. 893/1487] dated 993 H. [1585 A.D.]) and in Gimma (where he saw the Arabic M. owned by the *sulṭān* ↗Abbaa Ğoobir Abbaa Dulaa).

In Harär, the local Cultural Museum has several Arabic M. on display. However, no catalogue is available, and many of the M. are, in fact, only borrowed by the Museum for temporary exhibition (Pankhurst 1992:215, n. 4).

Harär, Wällo and Ğimma are to date the three Ethiopian regions where the copying and the spread of Arabic M. are relatively well documented – a reflection of the outstanding position of these regions in Islamic Ethiopia. Arabic M. are probably widely diffused in other Muslim areas as well (for some general data about the ↗Gurage land s. Drewes 1976).

In Eritrea, no publicly accessible collections of Arabic M. apparently exist, but local scholars and distinguished families have private libraries (for a general assessment s. FahLit 1–17). The National Museum in Asmära holds and exhibits several apparently old leather-bound M.

In Italy, there are two large collections of Arabic Islamic M. from Ethiopia, at the ↗Biblioteca Apostolica Vaticana (VatLib) and at the Biblioteca Civica "Carlo Bonetta" of Pavia.

The Vatican collection consists of the M. which Cerulli acquired in Somalia and Harär and donated to the Vatican library in 1963. Most of these he had previously published (CerStud I esp. 1–55, II esp. 1–37, Cerulli 1931, 1941, 1942, 1964 [all repr. in CerIslam], 1972). Only four Cerullian M. (Vat. ar. 1791–93, 1796) were catalogued by Levi Della Vida (1965:150–59). It is not clear whether Vat. ar. 1787 was found by Cerulli in Ethiopia or elsewhere: the content points to modern Ḥaḍramawt but it could also be one of the M. imported into Ethiopia (ibid. 146). The M. Vat. ar. 1799 (ibid. XX) came from the Maghreb and was found in ↗Bəčäna in southern Goğğam.

The Civic Library of Pavia has twelve Arabic M. which ↗Robecchi Bricchetti acquired in Harär in 1888–89, described in 1896 (131f.) and donated to the library in 1926. They were later mentioned by Gabrieli (1930:34), catalogued by Traini (1974:1–19) and, finally, briefly described by Vicini (1987:121f.) along with the entire Robecchi Bricchetti's ethnographic collection.

In Germany, Hans Martin ↗Schlobies collected 22 Arabic M. during his stay in Ethiopia (1925–28). They were originally kept at the Preußischen Akademie der Wissenschaften in Berlin with the scholar's entire bequest. After World War II they moved to the Akademie der Wissenschaften und Literatur in Mainz, where Maria ↗Höfner prepared a checklist of the collection, revised by Wagner (1952–53). Eventually, they returned to Berlin – first to the National library and finally to the Archiv der Berlin-Brandenburgischen Akademie der Wissenschaften. All the Schlobies M., including the Arabic ones, were catalogued by Wagner (WagHand nos. 2, 30, 53–57, 85f., 91, 98f., 101f., 104f., 113, 141, 154–57, 161, 179f., 182, 190f., 196f.).

The ↗Staatsbibliothek Preußischer Kulturbesitz owns 21 original Ethiopian Arabic M. (Hs. or. 10451–54, 10457–61, 10463f., 10466, 10468–76; s. WagHand 197 for his numbering) collected by Wagner during two stays in Harär in 1966 and in 1972; almost all have been published (Tedeschi in PICES 4; Wagner 1974a, 1974b, 1976, 1979, 1991). The library also has 15 copies of Arabic M. used by Wagner and Abdurahman Garad (1990): beside the five from the IES, there are three M. (Hs. or. sim. 5117–19) from the Lewis Somali Arabic collection at the London School of Economics (catalogued in Andrzejewski – Lewis 1994a:18f. [ms. 3], in EtRicci 5f. [ms. 4] and Lewis 1998 [ms. 27]); two (Hs. or. sim. 5132f.) from the VatLib (Vat. ar. 1793, 1796); and one (Hs. or. sim. 5138) from the ↗Bibliothéque Nationale de France (BN) in Paris (BN Arabe 4957). Two microfilms have been made for the Institut für Orientalistik of the University of Gießen (Film 21 = Hs. or. sim. 5139f., Film 39 = Hs. or. sim. 5132f.; s. WagHand 199).

The BN has six Ethiopian Arabic M., three in the general Arabic and three in d'↗Abbadie collection. The above-mentioned BN Arabe 4957, with several historiographic texts, was brought, probably in 1890, by ↗Paulitschke, who had got it from *amīr* ↗ᶜAbdullāhi b. Muḥammad in Harär in 1885, and catalogued by Blochet (1925:45). The two other manuscripts, BN Arabe 6118 (dated to 1193 H. [1779/80 A.D.]; Blochet 1925:190f.;

Ethiopian Arabic ms., incipit of the *ʿUnwān aš-šarīf* by Abū al-Ḥasan Nūraddīn ʿAlī b. Nāṣir; copied *Ḏū l-Qaʿda* 1353 [Feb. 1935 A.D.], probably in Belbelletti, by *šayḫ* ʿAbdalkarīm b. *šayḫ* Ṣiddīq b. *šayḫ* Ibrāhīm an-Nūrī; photo 2007, courtesy of Alessandro Gori

BrockGal S II, 569) and Arabe 6628 (Blochet 1925:321) contain the ↗*Futūḥ al-Ḥabaša*. The latter, brought from Šäwa by ↗Mondon-Vidailhet (ChMV XIII n. 1), was used by ↗Basset for his edition (BassHist VII). One of the M. of the d'Abbadie collection, d'Abb. 104 (s. d'Abbadie 1859:113f.; ChAbb 65f.; CRAbb 235, n. 246), also contains the *Futūḥ*. It was brought by Arnaud d'Abbadie together with two more copies of the same work which are now apparently missing. The other two d'Abbadie M. are d'Abb. 161 and d'Abb. 224 (d'Abbadie 1859:171f. and 218; ChAbb 97 and 129; CRAbb 107 and 236). The first is a mixed Ethiopic/Arabic M., the Arabic part of 94 pages containing the *Nuzhat al-malik wal-mamlūk fī muḫtaṣar sīrat man walā Miṣr min al-mulūk* by al-Ḥasan b. Abī Muḥammad ʿAbdallāh al-Ḥabašī, actually a version of the hagiography of *šayḫ* ↗Ḥusayn of Bale (Schneider 2006). The second contains the *Kitāb al-manqūš fī manāqib al-ḫubūš* by an-Nawawī (d. 1277; the name appears in catalogues as an-Nuwī or an-Nuwuwī), an abridged version of the famous *aṭ-Ṭirāz al-manqūš fī maḫāsin al-ḫubūš* by ↗Muḥammad al-Buḫārī al-Makkī.

The ↗British Library in London possesses a copy of the *Futūḥ* (BritLib Orient. 2409, also used by Basset; s. BassHist VI–VII; BrockGAL II, 410, where the manuscript is numbered Br. Mus. Suppl. 599) which was collected by Charles Gordon.

In Russia, the St. Petersburg branch of the Institute of Oriental Studies of the Russian Academy of Sciences owns several Arabic and *ʿağamī* M. collected by Nikolaj Gumilev during his stays in Ethiopia in 1910–11 and 1913 (s. Dobronravin in PICES 15).

In Algiers, the National Library owns two copies of the *Futūḥ*. The first (n. 1628, previously n. 1732, Fagnan 1893:453) was acquired by Pierre Bardey in Harär and given to the library by his brother Alfred in 1883 (Guesdon 2006; Basset 1897:VI). The second (n. 1629, previously 1782a) is a copy of the first (*codex descriptus*).

Recently, some Arabic M. have been published in offset books in Ethiopia and spread through internal book markets. Sometimes different M. of the same text get published, a sign of the continuity of the tradition.

E.g., *al-Qaṣīda al-witrīya fī madḥ ḫayr al-barīya* by Mağdaddīn Muḥammad b. Abī Bakr al-Wāʿiẓ al-Baġdādī al-Witrī, with the *taḫmīs* by Muhammad b. ʿAbdalʿazīz al-Warrāq, copied by *šayḫ* ↗Hāšim b. ʿAbdalʿazīz of Harär in 1140 H. [1727/28], publ. by *al-ḥāǧǧ* Yūsuf ʿAbdarraḥmān, Addis Abäba 1386 H. [1966/67] (cp. Drewes 1983:70) in one book with the *taḫmīs* of *al-Qaṣīda Ibkār al-afkār fī madḥ an-nabī al-muḫtār* composed by the *Qaṣīda*'s author *al-qāḍī* Ǧamalāddīn ʿAbdalkarīm b. Dirġām aṭ-Ṭarāʾifī (d. 1448) and allegedly copied by Hāšim's brother *šayḫ* ʿUmar b. ʿAbdalʿazīz [?]; *al-Qaṣīda al-witrīya* with the *taḫmīs* copied by Ibrāhīm Muḥammad Wazīr in 1412 H. [1991 A.D.], publ. Addis Abäba n.d.); *al-Fatḥ ar-Raḥmānī* by *šayḫ* Hāšim, publ. by *al-ḥāǧǧ* Yūsuf ʿAbdarraḥmān ca. 1970; *ibid.* copied in 1386 H. [1976] by Ibrāhīm b. ʿUmar Sulaymān from the autograph kept in the *maqām* of *šayḫ* Hāšim in Harär, publ. by the copyist in *Muḥarram* 1401 H. [November 1980].

(2) Catalogues

The listings and descriptions (and sometimes editions) of Arabic M. from Ethiopia and Eritrea that have become known to this date are found in the following publications:

BOGUMIŁ W. ANDRZEJEWSKI – IOAN MYRRHDIN LEWIS, "New Arabic Documents from Somalia", *Sudanic Af-*

III. Ethiopian Arabic manuscript studies

A detailed analysis of the characteristics of Arabic M. can only be possible when more M. have been collected and properly catalogued, providing information on their exact location, origin, type, and content. The available data allows the following few observations.

(1) Codicology of Arabic manuscripts

Most of the Arabic M. in Ethiopia are relatively recent and all written on paper. No surely dated M. seems to be older than the 18th cent. (but s. Hussein Ahmed 1994:130 for a M. possibly copied in the 16th cent. and for a "biographical dictionary of famous *ʿulamāʾ* written in 1055 H. [1645]"; Pankhurst 1992:216 refers to an Arabic M. of the IES "apparently written in 986/1578–9"). IES 1854 has a colophon dated *Ḏū l-ḥiǧǧa* 1136 H. [Aug.–Sept. 1724]: however, the copyist (ʿAlī b. ʿAbdallāh al-Yamānī) is probably from Yemen, and the M. could also be of Yemenite origin. IES 310 is dated 112[3?]8 H., IES 258 (Harar 20) is a complete *muṣḥaf* copied in *Raǧab* 1141 H. [Jan.–Mar. 1729] (s. also Hussein Ahmed 1994:130). IES 311 was copied in *Ḏū l-ḥiǧǧa* 1186 H. [Feb.–Mar. 1773]: also in this case the copyist (*as-sayyid* ʿAbdallāh b. ʿAqīl b. ʿAbdallāh b. Abī Bakr as-Saqqāf) is of Ḥaḍramī origin. A marginal note points to the fact that the M. was purchased by *kabīr* Ibrāhīm b. Abā (sic!) Bakr (most probably a Harari) from Ibrāhīm Fallāṭ b. *ḥāǧǧ* Aḥmad for 3 *ašrāf* in *Rabīʿ al-awwal* 1187 H. [May–June 1773].

The size of Ethiopian Arabic M. can range from several pages to voluminous works that can include several texts (e.g., Pavia Robecchi Bricchetti 7; Vat. ar. 1791). Sometimes loose pages are inserted into a larger M., usually of the Qurʾān or Law books (e.g., Hs or. 10463, 10472). Such insertions are comparable to marginalia and *additiones* of longer M. (s. WagHand XV).

Purely Arabic works (whether local or foreign) can be sometimes copied in one and the same M. with texts in local languages written in Arabic script (*ʿaǧamī*). Hussein Ahmed (1994:129) mentions three mixed Arabic/Harari M. in the library of the IES (e.g., IES 276).

Bindings and covers of M. copied in Harär were studied by Pankhurst (1987, 1992) but no research has been done for other Islamic areas.

Argobba *ʿagamī* ms., religious pamphlet referring to the Argobba, attributed to Yūsuf Qanqe "Abba Assiya" (d. 1835), Bitaha/Wata, south-eastern Wällo; photo courtesy of Andreas Wetter

(2) Palaeography of Arabic manuscripts

So far one can only very tentatively try to assess some peculiarities of the ductus in Arabic Ethiopian M. In many recent M. (e.g., WagHand pl. 1) a very thick *nasḫī* ductus is characterized by sharply drawn letters with relatively short *kašīde*. The shape of letters is clear and wide with almost no extensions at the end of the line. The height hardly varies from letter to letter and the words are aligned on the same line, not even final *ʿayn* (ع), *ġayn* (غ), *qāf* (ق), *lām* (ل), *mīm* (م), *nūn* (ن) and *yāʾ* (ى), medial and final *rāʾ* (ر), *zāy* (ز) and *wāw* (و) extending below it. Though in some cases careless and clumsy, the writing style normally remains easily legible. It could be at least partially compared to the ductus of some Arabic M. of northern Somalia. In Ethiopia, this handwriting does not seem to be peculiar of a particular region but to be rather connected with the current use of the Arabic script.

In some recent M. from Wällo (e.g., IES 1897, 1954), letters are written in a regular *nasḫī*, with small and thin letters whose shapes are standardized; they look dry and sharp-edged. *Kašīde* is much reduced or almost non-existent. Words are placed uniformly on the line with very little variation in height. Final extensions under the line are very short in *ʿayn*, *ġayn*, *qāf*, *lām*, *mīm* and *yāʾ*, medial and final *rāʾ*, *zāy* and *wāw*, and are fully absent in *nūn*.

In other recently copied M. of theological content (e.g., IES 1895, 1929, probably from Addis Abäba) one finds a very small and thin *nasḫī*, characterized by regular letters with small *kašīde* and reduced final extensions. Lines are regular and bold, but when the hand is careless, the usually tidy ductus becomes hardly legible.

For the Harär area one can differentiate between more ancient and recent M. Whereas the recent M. show the same thick and clumsy *nasḫī* hand as in other regions (s. WagHand, 144 on Hs. or. sim. 5132 [= Vat. Ar. 1793]: "Mittelgroßes ungelenkes *nasḫī*"; s. also Levi Della Vida 1965:155: "Scrittura estremamente rozza e malformata"), older M. have a more careful calligraphy. In the above-mentioned M. copied by *šayḫ* Hāšim, we find a beautiful *nasḫī* of varying height, regular and well positioned along the lines with short *kašīde*, with some ornamental extensions in final *ʿayn*, *ġayn*, *qāf*, *lām*, *mīm*, *nūn*, and *yāʾ* and in medial and final *rāʾ*, *zāy* and *wāw*. Letters are accurately drawn and the bigger ones are almost monumentally elaborate. Some basic but significant ornament is added in the colophon. In the greater part of the 19th-cent. M. Vat. Ar. 1791, the *nasḫī* has small letters quite sharply drawn and cornered but also sometimes relatively thick. Final or medial and final extensions are very short and almost absent in final *nūn*. Words are placed very smoothly on the lines and the general impression one gets is of a "regular and quite accurate hand" (Levi Della Vida 1965:153). This handwriting is qualified by Levi Della Vida as "African type" (cp. also Traini 1973, passim, "*nasḫī* del tipo usato in Africa Orientale"). The style closely resembles that of central Somalia. The available data is not sufficient to discuss the relationships among different handwriting styles in the Horn of Africa. It is possible that some of the Ethiopian Arabic handwritings (just like the Somali ones) have been influenced by Yemenite patterns.

Preparation of manuscripts

The art of producing M. is still alive in Ethiopia. M. are often higher valued than printed books, especially in the ecclesiastic circles. Most practices related to the production of M. may be rooted in very old traditions but our knowledge about it is limited due to lack of written sources and relatively late age of the oldest presently known M. (13th cent., with exception of the Gospels kept in ↗Ǝndä Abba Gärima). They include the preparation of ↗parchment and the manufacture of the tools involved, from ink and writing materials to tools used for bookbinding and, in the case of the illuminated M., paints and brushes (↗Painting: technical aspects). The procedures for each stage of the production are fixed by certain rules, of which some may even possess magical aspects, for instance, production of red ink, which under some circumstances can be used as eye medicine (cf. also the magic prayer for receiving good skills in calligraphy, ms. London, BritLib Orient. 12511, fols. 3v–4r).

The choice of skin depends on the size and character (religious or secular) of the intended M. Sheepskin and goatskin are most common, the pieces of high quality are said to be extracted from young goats of uniform hair colour. Sometimes skins of calves, horses and even wild animals (antelope, lion) can be used. Some of these may be considered unclean in the religious sense and not used for books intended for church services. For a ↗Psalter, the most commonly ordered M., about 20 sheep skins are needed. The preparation of parchment includes soaking and washing skin in fresh water, stretching it on a special wooden frame (*mäwwaṭäriya*, or *qänbär*, here and later, Amharic terminology being provided), made of four poles (*läbäq*) scraping and cleansing the piece from flesh with a curved knife (*mäqad/mäfaqiya karra*) and pumice (*märramämiya, märamämiya dəngay*), and finally drying it in the sun a couple of days. After that, the hair is removed with a kind of curved axe (*mäṭräbiya, məlačč̈*), the holes are patched, and the surface of skin gets the final treatment with clay (*mädmäṣ/mädmäṭ*) or sand (*hoṣa*) in order to prepare the pieces to absorb properly ink and paint. During the whole process, the tension of the skin is carefully checked and adjusted.

Before cutting of the parchment into pieces to be later folded in half, the required size of the new M. is estimated, and the corners of the sheets are pricked with an awl (*wäsfe/mäkfäčä*). The same tool and a ↗bamboo ruler are used to have margins, columns and lines for straight writing marked on the flesh side.

Black ink (*qäläm*), usually used for writing the main text, may be produced in many ways; its quality depends upon the composition of the ingredients (mainly soot and vegetable substances), the skill of the manufacturer and the time for its preparation: e.g., after mixing, the ingredients are stirred every day for several months. The best sort of ink should be lustrous and as black as charcoal. It could be kept many years in dried

Twin scribes, ill of a miracle of St. Mary, ms. *Tä'ammərä Maryam*, 18th cent., Aksum Ṣəyon (C2-IV-204), fol. 79r; photo 2000, courtesy of Michael Gervers

Most Ethiopian M. are in the form of a square codex. Their size varies from a few cm to over half a meter. Magic texts are frequently produced in the form of scrolls (↗Magic scrolls), always by specially trained ↗*däbtära*. For such short texts as ↗*Ləfafä ṣədq* or for series of pictures, a long strip of vellum folded like a concertina may be used (↗*Sənsul*). Other M. forms also occur: e.g., a Psalter cut in the shape of a cross once was in the possession of the ↗Kəbran Gäbrə'el monastery; a set of magical illustrations on an similarly cut parchment sheet is also known (ms. Paris, BN Eth. 451).

A quire in an Ethiopian codex is usually composed of five folded sheets but older M. tend to have only four. The quires are arranged in such a way that "flesh sides" of folios face "flesh sides", and "hair sides" face "hair sides" (the so-called Rule of Gregory). A single volume should not consist of more than 15–16 quires, otherwise it cannot be bound and is difficult to handle. The layout of many texts is established by tradition, and seldom abandoned. Thus, the psalms are always written in one column, the subsequent texts in two. The longer works are written in four columns, with small characters, and if necessary divided into several volumes (e.g., the ↗Old Testament appears in four parts, the ↗*Sənkəssar* in two).

The numbering of quires at the top left margin is generally used as guide line for binding, but it may be replaced by the last segment of text of the previous quire, which is rewritten at the beginning of the next one. The quires are sewn together with a thick thread or a string made of gut, without binding the spine. Two independent pairs of link-stitches join the quires together, connecting them directly to the covers. For covering, thick boards of hard ↗wood are used, most often of *wanza* tree (*Cordia Abyssinica*), but also eucalyptus, fig and juniper. Especially valuable M. are covered with reddish brown dyed and tooled leather, and occasionally decorated with silver bosses, rosettes and small crosses.

The stamps for tooling (*yämädägg^{w}əs ʿəqawočč*) provide many different designs, but seven are applied most often. Each has a name recalling its form: e.g., *qärnä bägʿu* ('ram's horn'),

blocks. Red ink, made of vegetable components, is used for headlines, punctuation marks, important words and proper names, esp. of God, St. ↗Mary, ↗saints etc. In recent years, scribes started using commercially produced red ink, which is of pinkish or purple hue. Ink in other colours is uncommon, even though M. with passages written in yellow, green and blue occur (e.g., the Gospel Book of *aṣe* ↗Tewodros II, London, BritLib Orient. 733, where on the first pages of each gospel four colours of ink are used). Rare examples of M. entirely written in green and blue inks belong to the d'Abbadie collection (Paris, BN d'Abbadie 196, 102). Writing in gold is mentioned in several texts (e.g., in the note of ms. Rome, ANL, Conti Rossini 25, on the chief scribe at the court of *aṣe* ↗Zär'a Yaʿəqob who had written the homilies on St. Mary in golden letters), but it might rather be a rhetoric feature, as there is no material evidence for such an ink to be used in Ethiopia. Yet, according to tradition, one M. written in gold is kept at ↗Amba Gəšän.

Usually, when writing, empty spaces were left for words to be inserted later highlighted in red; in a few cases, these lacunae were never filled (likewise, empty pages were left for miniatures).

As inkstands (*yäqäläm qänd*), goat, cow or antelope horns are used. Pens (*qäläm*; Gəʿəz: *bərʿ*) are made of dried reeds (*šämbäqqo*), quills and jasmine or asparagus stems, all properly cut and scraped, sometimes on both ends. The width of pen's nib depends upon the size of the characters, and is re-sharpened after about four pages of writing.

ʿaynä rəgəb ('dove's eye'), *mäsqäl* ('cross'). The patterns are arranged in a composition, the same on front and back sides of the cover. In case of religious books, it is usually a cross within a decorative frame. The inside of the cover, front and back, is often embellished with pieces of textile, sometimes even with a little mirror. The latter may suggest that the book belonged to a woman. Many M. are kept in a double leather-case with a strap (*maḫdär* and *dəfat*), to be either hung thereby for protection, or carried along slinged over the shoulders. Metal covers are extremely rare, and some of them seem to originate outside Ethiopia. The oldest ones known today belong to the ↗Gospels in ↗Ǝnda Abba Gärima and in ↗Däbrä Libanos near Ham.

The decoration system of M. includes the ornamentally treated punctuation marks and other signs dividing a text, the miniatures (↗Painting: miniature painting) and the ↗*ḫaräg*. Neither decorative initials nor marginal illustration exist in Ethiopian M.

The miniatures may be gathered at the beginning and at the end of the book, or inserted as frontpages to various sections of the text. A miniature usually occupies the entire page. Half-page and smaller miniatures appear in extensive cycles of illuminations with several hundreds of representations (so, e.g., the ↗*Nägärä Maryam* BritLib Or. ms. 607, with 260 miniatures). The place for illustrations are marked before writing the text.

Learning in M. production is usually a form of apprenticeship from a master that is reserved, in the first place, to students with eight years of traditional ↗education at least. The central skill is the calligraphy, but generally the aim is to enable a pupil to produce a complete M. on his own. The length of the training depends upon the teacher and the aptitude of the student, but usually takes between six months and two years. Painting of miniatures is mostly entrusted to specialists; their contributions, however, seem to have been little valued, since in colophons their names almost never appear alongside with those of the scribes.

Schools of calligraphy evolved around a few centres of traditional learning, with M. produced according to peculiar local styles, for illuminations as well (e.g., at ↗Gundä Gunde, ↗Ḥayq, ↗Gondär etc.).

In Ethiopia the manufacturing of a M. is time-consuming task. The entire process including writing and painting is carried out outside the house, without suitable furniture such as a desk or chair. Moreover it is tradition to work only in daylight. Judging from the notes which sometimes occur in colophons, the production of a large M. like the *Mäṣḥafä ↗ḥawi*, *↗Dəggʷa* or a *Sənkəssar* takes about one and a half years; a medium-sized M., like the Psalter, the Gospels or the *Mäṣḥafä ↗gənzät* might take half a year.

M. were seldom produced for commercial purposes, and for this reason never had a definite market price. The value of a M. depends on its size (i.e. the amount of parchment used), the type of binding and the number of the ornaments and miniatures. The general attitude is that a new copy is more valuable than an old one, but it does happen that old miniatures are transferred into new M.

The royal scriptorium established in Addis Abäba by *aṣe* ↗Mənilək II in 1911, to the aim of supplying the churches of the new capital with M., was re-organized by ↗Ḫaylä Śəllase I. It remained active until the revolution, and a number of sumptuous religious M. it produced are still in use in Addis Abäba and its surroundings.

Mänz

M. (መንዝ; also Mənzəḥ, Mänzəḥəl) is a region in north-eastern ↗Šäwa. It is a remote and rugged, cool and windswept highland plateau with an elevation of ca. 3,100–3,600 m A.S.L., bounded by a mountain range in the east and cross-cut by steep river gorges (for location s. ↗Mähal Meda). The historical M. lies to the west of the ↗ʿAdal lowlands and north of ↗Tägulät (separated from it by the Mufär Wəha river). Sometimes Məhuy in Šäwa is seen as part of M. In the administrative division of ↗Ḫaylä Śəllase I's reign, M. formed an *awraǧǧa* (later in combination with ↗Gəšše, with the capital in Mähal Meda). The natural border between M. and Gəšše is formed by the Qäčč̣əno (↗Wänč̣ət) river, a tributary of the Žämma (Adäbay). M. had three *wäräda*-subdistricts, Gera Mədər, Lalo Mədər and Mamma Mədər.

History of Mänz

The early history of M. is little known. Archaeological evidence suggests that the area was populated in the 1st millenium A.D. Tradition claims that the legendary last Aksumite king Anbäsa Wədəm fled to M. from ↗Aksum when it was sacked by ↗Ǝsato in the 10th cent. In the 14th cent. M. fought beside the neighbouring region of Zega on the side of ↗Ḥaqqaddīn b. Dalḥūy of ↗Ifat against *aṣe* ↗ʿAmdä Ṣəyon but submitted to the Christian Emperor during his war against ↗Ṣabraddīn b. Dalḥūy. In the 15th cent., *aṣe* ↗Zärʾa Yaʿəqob established a monastery at Fərkut(t)a in M. (today known as Kidanä Məḥrät). *Aṣe* ↗Bäʾədä Maryam I had his residence (↗*Kätäma*) at Məsḥalä Maryam in M. and had priests of M. officiate at his ↗coronation. He had a royal church built at Məsḥalä Maryam with the *tabot* of Lədätä Maryam (rededicated in the late 19th cent. to the archangel Rufaʾel). The late 16th–early 17th cent. *däğğazmač* ↗Faris was born in M. and killed while defending Amba Dayər in M., his base during his struggle against *aṣe* ↗Susənyos. The governors of M. in the time of Susənyos are reported to have had the title of *qaṣ* or *makbäb*.

Tradition has it that the three sub-districts of M. were named after three ↗*balabbats*, Gera, Lalo, and Mamma, who were appointed by the 16th-cent. emperor ↗Gälawdewos (or, according to other legends, by a Gondärine emperor in the 17th cent.) to settle their portions of land after the defeat of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī Grañ, who devastated M. in 1531. Gera, the most powerful of the three lords, controlled the greater portion of northern M. Lalo Mədər was the central part, bordered by Afṭänät in the north, ↗Märḥabete in the west and ↗Gədəm in the east. Mamma Mədər was the southern part of M. The figures most probably had historical prototypes in the latter part of the 17th cent.

According to the ↗*Dərsanä Raguʾel, abetohun* "Yaʿ" (i.e. Yaʿəqob), the fourth son of ↗Ləbnä Dəngəl, sought refuge in M. during the wars of ("Grañ"). Tradition sees Yaʿəqob as the ancestor of two branches of the ↗Solomonic dynasty – of the Gondärine dynasty as a great-grandfather of *aṣe* Susənyos (via ↗Fasil Gäram) and of the Šäwan dynasty as the great-great-great-grandfather of the late 17th–early 18th cent. ↗Nägaśi Krəstos Wärädä Qal.

The most famous son of M., Nägaśi Krəstos came from the historical Aganča area in Gera Mədər. He expanded the original boundaries of the region by displacing the ↗Oromo to the south-east of M., founded numerous settlements and churches in the area. Finally, he became the

founder of the Šäwan ruling dynasty. The monastery at Fərkuta flourished during his time. He also founded the church of Kidanä Məḥrät in Aganča, one of the larger churches in M.

Nägaśi's successor ↗Səbəstyanos also ruled from M. Thereafter ↗Abbəyye, whose mother came from Mamma Mədər, moved his capital to ↗Ḥarr Amba but maintained close connections to the M. region. Fərkuta Kidanä Məḥrät served as a refuge for another Šäwan ruler of Nägaśi's line, *märədazmač* ↗Asfa Wäsän, in the late 18th cent. Zännäbä Wärq, the mother of another Nägaśi's descendant, ↗Śahlä Śəllase, was a native of Aganča. A *balabbat* of M., she had her capital in Sälla Dängiya, south of Molale in Lalo Mədər. *Ato* Bäzzabbəh "Abba Dəqər", *balabbat* of M. and the last governor (with the title of ↗*abägaz*) of Šäwa under *aṣe* ↗Tewodros II, had his stronghold in M., and it was in the vicinity of Amba Dayər that his troops fought those of the future *aṣe* ↗Mənilək II in 1864–65 and were defeated. *Ras* ↗Bäzzabbəh Täklä Haymanot was kept prisoner by Mənilək II on Mount ↗Afqära in Gera Mədər in 1905. Mənilək had also a palace and an armoury built on Afqära.

M. played an important role during the ↗Italian war 1935–36 and the subsequent occupation as the site of a fierce ↗resistance movement.

Cultural geography of Mänz

M. is considered one of the core ↗Amhara areas. It is traditionally seen by the Amhara as the place of their origin (**የአማራ ምንጭ**, *yäʾamara mənč̣*). M. has fertile soils which can yield three harvests per year when rainfall is ample. The climate is most temperate in the southern Mamma Mədər. However, agriculture is difficult since the plateau is cut by deep gorges and consists of distinctly articulated lower-level plateaux.

The Amhara peasant farmers live in scattered subsistence-based homesteads consisting of two- to three-generation extended families, where work roles, cultivating barley and husbanding sheep, are defined by gender and age. ↗Eucalyptus and ↗juniper adorn the compounds of homesteads and churches. Molale has a Saturday market where each week some 2,000 peasants gather from far and wide to trade in spices, cotton, livestock, eggs, milk, skins, metal utensils, clothing, cloth, blankets, and jewellery, and numerous other items of interest.

The material culture of the people of M., considered to be the "proper Amharic" one, is marked by some local features. The differences are partially due to the high altitude of M. and the resulting coldness of its climate. The standard ↗clothing in M. is thus the *banna*, a blanket made of locally produced sheep wool (unlike the cotton *šamma* worn by the other Amhara). Barley is used instead of *ṭef* to produce *ənǧära* (↗Bread). ↗Houses are built of stone rather than wattle so that they can resist the winds.

Traditional ↗healing and ↗magic rituals are frequently resorted to in M. and are in high esteem. In a remote place called Sägät, for example, a certain ↗*šəmagəlle* (elder) named Wäfa Läggäsä enjoyed as late as in the 1990s a great popularity, with people coming from afar for his healing, divination, and mediation skills. His authority was so great that it was compared by the locals to that of a feudal lord. He was said to "own" Sägät and was sanctioned as a community leader by the government. He was also said to have founded a church and a school.

Until the late 1960s the only forms of communication were a scraped mule track and a telephone line from Addis Abäba. In the mid-1990s the road to Molale was widened, and the first electricity lines were established.

The ↗Amharic language of M. has developed into a distinct dialect.

Christianity in Mänz

M. is an area with a share in the old tradition of the Ethiopian Orthodox Church. It has many legends related to the origins and spread of ↗Christianity in the region, offering one of the highest density of ↗churches and monasteries in the country.

There are traditions about a visit of St. Mary to M., particularly to the Afqära mountain. A variant, already in the ↗*Dərsanä Uraʾel*, narrates how Mamma Mədər was sanctified by the archangel Uriel who sprinkled Jesus's blood over the area while standing on the hill of Däbrä Qopros (cp. ↗Cyprus).

A holy man, ↗Yoḥannəs Məśraqawi, is credited with the actual Christianization of the area. The saint, traditionally referred to as the "apostle of Mänz", can be plausibly identified with Yoḥannəs of Kəlʾat, acting on behalf of *abunä* ↗Yaᶜəqob and *əčč̣äge* ↗Filəppos of Däbrä Libanos at the request of *aṣe* ↗ᶜAmda Ṣəyon ca. 1330. Oral traditions about "*əčč̣a* Yoḥannəs" in M. combine elements of the Vita of Yoḥannəs Məśraqawi with events of the time of ↗Iyasu I.

The Kidanä Məḥrät monastery at Fərkuta in Gera Mədər – indeed connected with the local accounts on "*əčča* Yoḥannəs" – is the most important Christian foundation. Today two large buildings are found in the monastery compound, one of them allegedly dating back to Zärᵓa Yaᶜəqob's time and the other to the reign of *ləǧ* ↗Iyasu in the early 20th cent. Other important foundations of M. are the Kidanä Məḥrät church founded by Nägaśi and the two churches on Mount Afqära, one dedicated to St. Gabriel at its lower level and the other to the Trinity (Śəllase) at the top level. The Śəllase church is believed to have been founded during the time of *abunä* ↗Täklä Haymanot.

At the north-west boundary of M., in the district of Qaya Gäbrəᵓel, the Yällema Gädam lies, a *balä əǧǧ* (craftsmen's) monastery similar to those found elsewhere in northern Šäwa (cp. ↗Mugär Gädam; Məntək Gädam near ↗Lət Maräfiya). The inhabitants, male and female, produce ↗pottery and follow religious beliefs similar to those of the ↗Betä Ǝsraᵓel; they are sometimes referred to as the ↗Betä Abrəham.

Manẓūma

M. (Arab. منظومة, lit. 'put into poetic form'; Amh. መንዙማ, *mänzuma*) normally refers to a text conceived according to the metrical system of Classical ↗Arabic poetry (as opposed to a prose text, *naṯr*), *naẓm* being sometimes the word for the versified version of an already existing prose text. The word is also widely used to name poetry in local languages spoken by Muslim peoples and is used in most of Ethiopia to designate Islamic poetry in general. As M. poems are usually chanted, they can also be regarded a kind of religious ↗songs.

In Ethiopia, M. appeared first in Wällo, where, beginning with the late 18th cent., Sufi scholars introduced Sufi ↗Islam and established centres of Islamic scholarship. The advancement of M. was closely connected with the activities of the ↗Islamic brotherhoods. From Wällo it spread to other Muslim regions, like ↗Ǧimma, ↗Harär and the ↗Gurage region.

In classical Islamic tradition most M. are didactic in nature, explaining the fundamental notions of the faith. Also mystical topics are frequently dealt with in a M. composition. In Ethiopia most of M. are praise poems. The following topics are the most diffused: prayer for the Prophet ↗Muḥammad (*taṣliya*), praise of the Prophet (*madḥ an-nabī*), biography of the Prophet (*mawlid* and *miᶜrāǧ*) and praising of God (*ṯanāᵓ Allāh*). Berhanu Gebeyehu (1998) identified three different genres of Islamic poetry practiced in Wällo: *täwḥid* (Arab. *tawḥīd*), didactic poems which serve to teach the laymen; *madḥ*, descriptive and panegyric poems composed in praise of the Prophet Muḥammad and local saints (↗*Walī*); and *hayyä*, spontaneously improvised songs about various religious matters.

M. poems are primarily composed in ↗Amharic, although they also exist in ↗Oromiffa and other Ethiopian languages. For the Gurage area, for example, Drewes observed that in the ↗Səlṭi region texts in Amharic are "chanted more frequently than texts in Silṭi" (1976:185). In Harär, the term M. is often associated with the religious songs in Oromiffa, those in ↗Harari frequently being generically referred to as *zikri* (cp. ↗*ḏikr*). M. in local languages follow a metrical scheme, with the final rhyme. Arabic M. are also practiced among Ethiopian Muslims.

M. are performed orally but are often composed beforehand and written down in *ᶜağamī* (Amh. *ağäm*), i.e. Arabic script used for writing in non-Arabic languages. A characteristic feature is the use of many Arabic loan-words and phrases. The refrain sentence is most often an Arabic religious formula which can serve also as a title, even when the text itself is in a local language

(e.g., *Allahummä solli ala muhammädi imamul anbiya säydal mursälin* by *šayḫ* Ahmäd ᶜUmär; *Muhammäd räsuluhu* by Muḥammäd Awwäl Ḥamza).

M. is recited and performed during the month of ↗*Ramaḍān* as well as on the occasion of religious ↗feasts like *ᶜĪd al-aḍḥā*, *ᶜĪd al-fiṭr*, on ↗*mawlid* celebrations and during *ziyāra* (↗pilgrimage) to the shrines of local saints. Further occasions are *wädağa* rituals (Islamized traditional Oromo prayer ceremonies) and *ḥaḍra* meetings (Sufi gatherings for prayers and ecstatic *ḏikr* meditations) organized by individuals. There are different ways of performing M. Most frequently, M. are performed in *əngurguro* [cp. Amh. ↗*ʔingʷərgʷərro*, 'lamentation']) mode, when there is only one singer, sometimes supported by a chorus, but no accompaniment. Another mode is *dəbbe* M. (from *dəbbe*, 'drum'); it is accompanied by drums and clapping of hands. The singer(s) can remain seated or standing during the performance or also dance. The singing and dancing styles vary regionally.

M. tape recordings and CDs are quite popular and can be found in music shops all over the country. So far M. belongs to the least studied arts in Ethiopia.

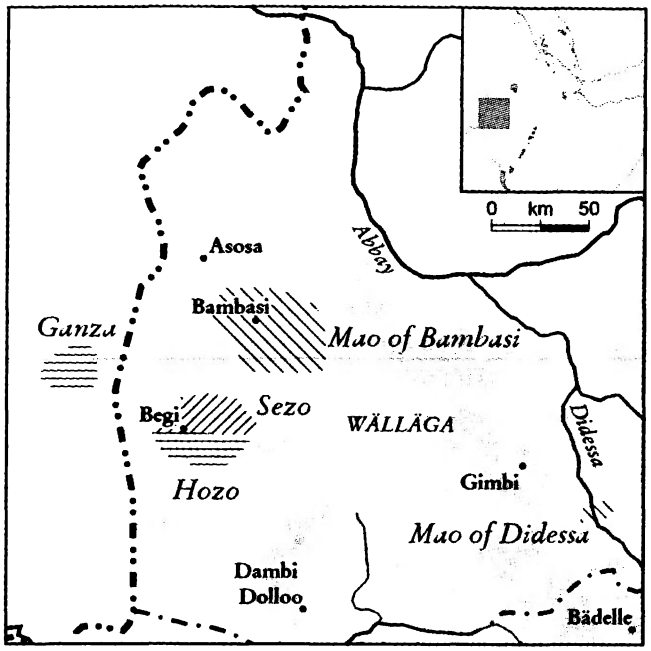
Mao

M. language group is a distinct branch of ↗Omotic, which includes several languages in the western Ethiopian highlands and an outlier in the nearby Sudan. The exact position of M. within Omotic is still debated. Based on lexical correspondences, Bender (2003:286) suggests that the closest relative of M. is the *Ta/Ne* group, and that together they are further related to Dizoid. However, the morphological analyses by the same author (s. Bender 2000:202, 2003:299) led him to consider M. as the most divergent branch of Omotic. M. languages may be hybridized to an unusual degree. Fleming, however, disagrees with both of these conclusions. The difficulty is that we know little of the "substratum" of M. languages, i.e. what language(s) may have been spoken by the ancestors of the current M.-speaking peoples. Koman and ↗Gumuz are probably the substratum.

M. as a branch of Omotic was unknown until very recently. Before that, when it was mentioned at all, it was presumed to be a part of ↗Koman, the sub-phylum of ↗Nilo-Saharan which dominates the Sudan–Ethiopia borderlands. The situation was complicated by the fact that the term M. (derived from the word 'person', e.g., Hozo *maa*, pl. *maʷa*, s. Bender 2000:179) is applied to various linguistic and ethnic groups both by local people and by scholars. Notably, the term is used to refer to ↗Anfillo (s., e.g., Murdock 1959), also labelled "Southern M.", whereas "Northern M." is sometimes used as the name of M. language group and sometimes as the name of the Bambeshi Mao language. S.L.L.E. employs the term "Begi M." to refer to ↗Kwama (Siebert – Siebert – Wedekind 1993). Grottanelli 1940, a book length ethnography on a Gongan people, Anfillo, also contained considerable evidence on a M. language and suggested that M. was Koman. Bryan (1945:192) may have been the first to notice the relationship of M. to the *Ta/Ne* group. Bender gathered data on all the M. languages except Ganza in the 1970s, and he was the source of most of our information on M. until 1989, when Fleming recorded over 2,000 words and phrases in Didessa Mao. In his comparative work (1971) Bender was unable to shake off the perception that the M. were Koman, because of apparent cultural and "racial" similarities to the Koman, but as a linguist he could not include them in either Koman or Nilo-Saharan. Fleming, who just missed recording the M. data around Begi and Asosa in 1957 (while recording several Koman languages), realized that Grottanelli's data and Bender's were akin to each other and definitely not Koman. A process of elimination led to the realization that M. was related to North Omotic which he finally proposed formally (in PICES 7).

M. is divided into three different branches. 1) Bambeshi and Didessa (Didessa Aga) (↗Mao of Bambasi), spread in different communities



from just west of Naqamtee in Wälläga to near Asosa; number of speakers ca. 5,000 (Gordon 2005:113). 2) Cluster of ↗Hozo-Sezo; ca. 6,000 speakers (Gordon 2005:115, 118). The whole cluster is centered on the lower highlands of the western flanks of the Didessa. 3) Ganza (self-name: Gwami), spoken by ca. 5,400 people (Gordon 2005:115), is one language with no recorded internal diversity. First discovered by Reidhead and James, it is found nearby in Sudan in the hill country near the Ethiopian border, being the only Omotic language found outside of Ethiopia. A serviceable corpus of nearly 500 words and phrases has been recorded. There are many "divisions" in Ganza society, probably clans or lineages, but no evidence that they represent dialects. While distinctive for an Omotic language in having no borrowings from Amharic, it does have two from the Oromo language.

While the separation among the three clusters is clear in grammar and lexicon, and the separation is not recent, there is some indication that – lexically – Ganza is a little closer to the Hozo-Sezo cluster than it is to the Bambeshi-Didessa branch; it is also closer to Hozo-Sezo geographically.

For the reconstruction of M. consonantal system, s. Fleming (in PICES 9) and Bender (2003:295f.). Bender also reconstructs a vocalic system of five vowels, *i*, *e*, *a*, *o*, *u* (ibid.).

As genuinely autochthonous in Wälläga as Koman, M. has doubtless shared genes and words with Koman for many millennia. As a repository of old ↗Afro-Asiatic linguistic features, M. bids fair to be sitting in the original Afrasian homeland (its western highland branch). Detailed bio-genetic study of the several M. groups is urgently needed.

Mao ethnography

The term M. (Ma^{w}o; Ma^{w} in Hozo, Ma^{y} in Sezo; in the Sudan also Mau) is an ethnic denomination for several different, sometimes interconnected groups in western Ethiopia, mainly near the Sudanese border areas of ↗Wälläga and ↗Illubabor (in today's Benišangul-Gumuz *kəllə́l* and Gambella *kəllə́l*). Several M. groups are ↗Omotic speakers, others speak languages belonging to the ↗Nilo-Saharan language family. (For discussion of the different M. languages, s. the entries on the languages ↗Anfillo, ↗Kwama, ↗Mao of Bambasi, cluster ↗Hozo-Sezo, language groups ↗Koman and ↗Mao.) The term "M." is mainly used by the western Oromo for all "indigenous" peoples especially of western Wälläga "who accept to any degree a measure of association with the Oromo" (James 1981:29). The term M. itself must originally be Omotic and is given to different, sometimes unrelated groups. The only common feature of all M. groups seems to be that they were once vassal groups of the ↗Anfillo Kingdom and later entered into similar vassal relationships with the Oromo and Berta.

Meaning and usage of the term

It is possible that the term M. is a remnant of an older ethno-political interconnection, e.g., within the framework of the larger Anfillo Kingdom in

Wälläga and its vassal groups, which existed until the mid-19th cent.: "The Kingdom of Anfillo ... [was] based upon an opposition of Busase rulers and Mao subjects ... it seems likely that the subject category 'Mao' was introduced among the indigenous people of Wallega; and that many of them in acquiescing to Kaffa [i.e. Busase] rule became assimilated to this category, when they had not necessarily been 'Mao' before" (James 1981:29). It may, however, also simply originally be a term which was coined by linguistically related groups, but independently from each other. The term seems to be related to the words for 'people' in the Omotic Hozo-Sezo dialect cluster (*maʷ* in Hozo and *maʸ* in Sezo).

The two main M. groups – both sometimes referring to themselves as "M." – are (1) the Omotic speaking Anfillo, remnants of the dominating ethnic group of the Anfillo Kingdom (s. Tesema Ta'a 1980; Moges Yigezu 1995), and (2) the M. north of them, near the town of Begi. The name "Southern M." has been coined for the Anfillo, in distinction from the M. of the Begi area, the "Northern M.". The Northern M. are a cluster of several, linguistically and culturally closely related Omotic-speaking groups, mainly consisting of the Hozo and Sezo, who call themselves collectively the *Beg-mawa* ('M. of Begi'). In the case of Anfillo, the term M. has two meanings – it is often applied to the whole Anfillo group today, but originally it seems to have been used only for the group conquered by the leading classes of the Anfillo, the Busase, who once migrated there in about the 17th cent. These subdued M. are considered in oral tradition the original inhabitants of the country (CerPeople 87). M. families were connected with specific families of the Anfillo nobility as serfs or slaves; the nobility recruited individual M. as serfs for their households and sold others as slaves. At the same time the Anfillo leaders provided the M. protection against raids from others (ibid. 88). The M. of Anfillo do not have their own clan names, but adapt the clan names of their respective patrons, and they also do not know their original language, and differ only by sociolect (ibid. 91).

A third group sometimes called M. are the Kwama of Illubabor, whose language belongs to the Koman language group (Nilo-Saharan). In the *S.L.L.E.* they are listed as "Begi M.", as they live in the Begi area, i.e. the area of the Northern M. (their core area seems to have been Mount Banga area, near Begi). Therefore the Kwama are sometimes also subsumed in academic discourse under the term Northern M. (Zelealem Leyew 2005). In fact, the Kwama near the Begi plateau are called M. by the Oromo and accept the term themselves, while those living in the mountainous Banga area do not, they are being called Koma or similar.

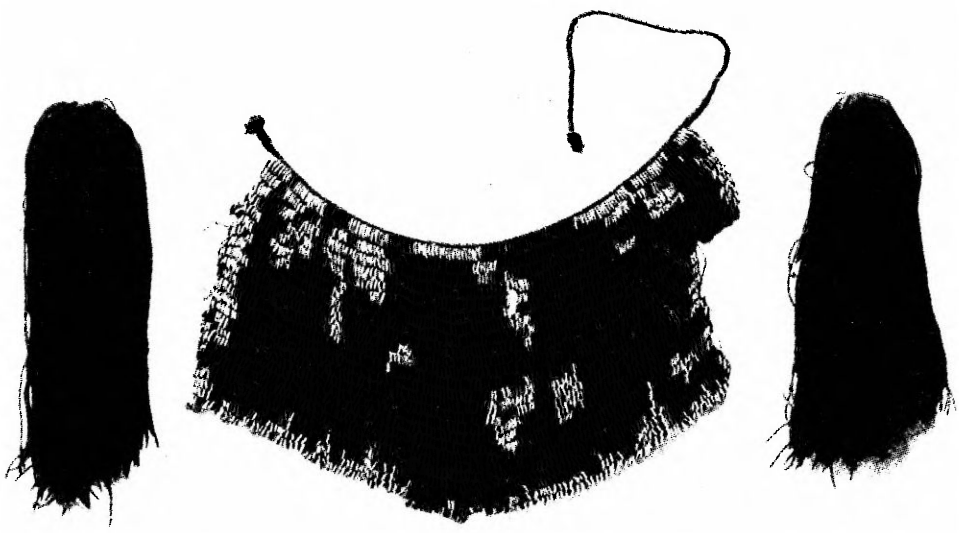
A group culturally linked to the Kwama (but, unlike them, speaking an Omotic language belonging to the Mao language group), and related to the Hozo, are the Ganza, also known as M. (or even, erroneously, "Kwama"), living south of the Berta. Some smaller M. groups, also related to the "Northern M.", whose exact historical and cultural relations to the Hozo and Sezo (Hozo-Sezo) are not yet established, also live in western Wälläga: the Bambasi M. and the Didessa M. (near the ↗Didessa river of Wälläga). These two Omotic-speaking groups are, together with the above-mentioned Ganza M. further in the south, collectively called the "Omotic M." by linguists. It can be supposed that all these smaller M. groups descend from the same M. group. Their languages constitute a separate genetic unit within Omotic, which suggests their common origin. This again suggests that the original language of these groups (in the Begi area) was Omotic, not Nilo-Saharan. The culturally related Koman-speaking group of Kwama would then have adopted their Nilo-Saharan language from other Koman-speakers through a language shift; it is, however, more likely that there was originally no relationship between M. and Kwama. The term "M." would then just express a social hierarchy.

After their subjugation, i.e. about the 17th cent., the "Southern M." Anfillo population has allegedly (CerPeople 87) shifted from a Nilo-Saharan to an Omotic language – which is, however, more distantly related to the Omotic languages spoken by the other "Omotic M.". This would suggest that their genealogical relation to the Northern M. would be extremely remote, if there is any. It is more probable that they were coined "M." in expression of their status of dependence, adopting the term already in use for diverse other groups in the region.

For the ethnography and history of the Southern M., s. the entry Anfillo.

The Northern Mao: Ethnography and history

The groups belonging to the Northern M. (here including the "Omotic M.") are culturally and linguistically interrelated, but separated from



Example of an egg-shell costume of Mao in southern Ethiopia; from Montandon 1913:329

each other by a long history of migrations. The Hozo and Sezo (also Seze), or *Beg-mawa*, are the main groups of the Northern M. In older sources they are also known under the more general term Amam (used by Arabs and Berta, referring to the Northern M. with the Kwama). They and other related groups such as the Ganza and the Bambasi M. live in settlements scattered over a large area. Due to their close connection with the Oromo, the *lingua franca* used by Hozo and Sezo is Oromiffa.

The Hozo and Sezo live in areas north of the former Anfillo Kingdom, to which they were connected as vassals, at least loosely, over a long time; the Kingdom reached up to the Didessa. The hill Gara Mao near ↗Dambi Dolloo is a witness of the formerly wider expansion of the M. (Bahru Zewde 1970:3; also called Tulluu Mao, CerPeople 104). After the decline of this kingdom in the mid-19th cent. most Northern M. partially depended on the ↗*waṭāwīt* rulers of ↗Beni Šangul (these in turn became tributary to the Sudanese ↗Mahdists in the 1880s). In the late 19th cent. the expanding Oromo *mooti* ↗Ǧootee Tulluu of Wälläga allegedly reached as far as Begi, making the area tributary at least for a short time (cp. Bahru Zewde 1970:11f.). In the late 19th cent. the most Northern M. were effectively included into Ethiopia, as dependencies of *šayḫ* ↗Ḫʷağalī of Beni-Šangul.

Within these realms the term M. was connoted with a rather low status (a connotation also linked with the term Amam). The ethnographer Georges ↗Montandon in the early 20th cent. reported that many M. were captured as slaves and sold in ↗Gore in Illubabor (Montandon 1913:332) and other slave markets (↗Slavery); also the traveller Juan Maria ↗Schuver mentioned plans of slave raiding, by a Leeqa Oromo chief with the help of submitted Dinka, "Amam" and Koma in 1881/82 (ed. James et al. 1996:161f.).

In ethnographic literature the "M.", mostly meaning the Hozo and Sezo, are mentioned from time to time, but no major research has been carried out among them (except Grottanelli 1940). Among the first to give ethnographic descriptions of the M. around the "Amam plateau" was Schuver in the early 1880s. A speciality of these M. was the production and wearing of fine waistcloth made of slivered ostrich eggshells joined together by threads (Montandon 1913:329, 331f., s. ill.). The northern M., including the Ganza, practice sister-exchange marriage (James, field notes 1967) and have no form of bridewealth payment. When a young man wishes to marry, his family will stipulate an agreement with the family of the bride, exchanging a girl from the groom's family against the bride. There is a number of avoidance rules; the pregnant wife will not inform her husband about the pregnancy, but a female neighbour. The consumption of any kind of meat is not subjected to taboos, different from the neighbouring Oromo (e.g., hippopotamus or pork may be consumed). Their socio-political organization is polycephalous; 19th cent. reports suggest a high degree of social stability and absence of political hierarchy, the chiefs exercising a rather advisory role.

The Sezo live in a small enclave near the village of Begi in the Beni Šangul/Gumuz *kəlləl*. The Hozo live south of them, in ca. 50 villages between the rivers Dabbus and Daka. Each group numbers ca. 3,000 (Gordon 2005:115, 118). Their neighbours to the west are the Kwama, to the north, south and east the Oromo (ibid. 698). The region remained quite closed to Europeans until well into the 20th cent. In the 1930s Begi belonged to the Province of Beni Šangul under the governorship of *šayḫ* Ḫʷağalī. In that period the

American Protestant Mission (↗Sudan Interior Mission) of Dambi Dolloo, 20 hours of mule journey away, extended their activities as far as Begi, their medical doctor Maxwell coming there once in a year (ZerÉth 333); it is not reported, however, whether these activities led to conversions to Protestantism.

The Ganza, linguistically closely related to the Hozo and Sezo (Ruhlen 1987:322), live in an enclave near Mount Banga (also Manga; Shinn – Ofcansky 2004:177). They are first mentioned as "Gonza", a group of the "Amam", in Schuver's report of the early 1880s (ed. James et al. 1996:149), living in a border region outside the control of Egypt. In Ethiopia the ethnic group numbered 6,291 in 2000 (with 5,400 speakers in 2004; Gordon 2005:115). Their neighbours are the Berta in the west and south, the ↗Šinašša in the north, the Gumuz in the east, and Oromo in the south (Gordon 2005:698; s. also ↗Qubba). There are Ganza on both sides of the Ethiopian-Sudanese border. In the Sudan they live in the Blue Nile Province, south of the river Yabus (below Begi also called Yal), north of Dota, and are sometimes subsumed under the Gumuz (Gordon 2005:191). Here, the Ganza's neighbours to the north are ↗Uduk, a few ↗Komo and Berta, Mabaan to the west, Kwama to the east, and ↗Opuuo and Komo to the south.

The Bambasi M. (also Bambeši), linguistically also related to the Hozo and the Sezo, live in villages in the Dabbus area north of the Sezo, near Bambasi town, in the Beni Šangul/Gumuz *kəllə̀l* and numbered, together with the Didessa M., about 5,000 in 1982 (Gordon 2005:113, 698). In the 1880s they were tributary to a Berta *šayḫ*, thus being a dependency of Beni Šangul (Schuver, ed. James et al. 1996:150f.). Their houses are of a cylindrical shape. Except their own language (the Mao of Bambasi), many speak Oromiffa and sometimes Arabic, due to their proximity to the Sudan. Their socio-political organization is based on a system of exogamous clans. The Bambasi M. are polycephalous; the only recognized authority are the leaders of each clan. Their belief system is based on the concept of a sky god, Yere (or Yereṣi), who lives in "a serene heaven" (Shinn – Ofcansky 2004:58). In the past, the Bambasi M. were also a dependency of *šayḫ* Ḫʷağalī of Beni Šangul.

The Didessa M. (Oromo: Ḍiḍeessaa), speaking a dialect close to the Mao of Bambasi, live near the Didessa valley. Before the conquest by Ethiopia in the late 19th cent., this valley belonged to the Oromo kingdom of ↗Guummaa (Montandon 1913:356). In the 20th cent. tributary relations to the Oromo continued, and Oromo chiefs represented the local non-Oromo population in all contacts with the Ethiopian leadership (cp. Haberland 1954:142).

Mao of Bambasi

M. (Bambasi-Mao, Bambasi, Northern Mao) is a language spoken by a group of people living around Bambasi in the Beni Šangul/Gumuz Regional State; another variety of the same language is spoken near the ↗Didessa river in Oromiyaa, and is referred to as Mao of Didessa (for location s. Mao language group). M., together with Mao of Didessa, is called Mao language (or Bambasi-Mao, to avoid confusion with other languages spoken by various ↗Mao peoples); it belongs to the ↗Mao language group, a branch of ↗Omotic.

The consonant phonemes of the variety spoken in the Bambasi area include *b, p, d, t, g, k, ṗ, ṭ, s, q, ʾ, ǧ, č, z, ž, f, s, š, h, m, n, ñ, l, r, w, y*. It has five short vowel phonemes: *i, u, e, o, a* (which has an unstressed variant *ä*) with long counterparts: *kúusu*, 'ten' vs. *kúsu*, 'approached'; *šiiká*, 'together' vs. *šiká*, 'spread out'. Tone is also phonemic with two levels: *bitá*, 'wine' vs. *bíta*, 'was'.

The syllabic structure is (C)(C)V(V)(C). Word initial clusters are restricted to two members, of which the first is *t*, *k*, or *š* and the second is a glide, e.g. *šwama*, 'brain'; *kwela*, 'cooked'. Other sequences of two consonants are possible in medial position only.

Nearly all nouns, adjectives and verbs are bisyllabic, with high tone on their first syllable in nouns and adjectives, e.g. *síta*, 'pepper'; *zánka*, 'red'.

Nouns show inflections for number, case and definiteness. Plural is marked by the suffix *-ola* for nouns: 'horse' *wora* (sg.) – *waro-la* (pl.), and by reduplication for adjectives: 'tall' *kwaṣṣa* (sg.) – *kwaṣṣ-kwaṣṣa* (pl.). Nominative, accusative and genitive cases are marked by *-š*, *-na* and *-n* respectively. All other semantic cases are expressed by postpositions. Indefiniteness is unmarked. The definite article is a prefix *iš-*: *piš-(ola)*, 'child-(pl.)' vs. *iš-piš-(ola)*, 'the child-(pl.)'.

Personal pronouns are based on the roots *ti-* (1st pers. sg.), *hi-* (2nd pers. sg.) and *ʾi-* (3rd pers. sg.). Fem. gender is indicated by the suffixes *-ša* (2nd pers. sg.) and *-šeš* (3rd pers. sg.). The plural forms are *ham-* (1 pers.), *haw-* (2nd pers.) and *ʾišk-ola* (3rd pers.).

Pronouns occur with the copular enclitics *-yä* and *-tä* which render the existential meaning 'I am', 'you are', etc.

Demonstratives are based on the roots *naʾ-* and *geeš-*: 'this' *naʾa* (sg.) – *naʾ-ola* (pl.); 'that' *geeša* (sg.) – *geeš-ola* (pl.). Their locative counterparts are *nata*, 'here' and *geešata*, 'there'. Interrogatives include *ki-ya*, 'who'; *kiñña*, 'whose'; *kums-ya*, 'what'; *kumsiñña*, 'whose'; *ʾind-ata*, 'where' and *naa-ta*, 'when' (*-ya* and *-(a)ta* are copula).

The numeral system is five-based: the numerals from six to ten are based on the form *ki-* of *ki-ssíi*, 'five', e.g., *kúteezä*, 'eight' (from *ki-*, 'five' and *téezä*, 'three', with vowel dissimilation). Ordinal numerals are marked by *-inge*, e.g. *iški*, 'one' vs. *išk-inge*, 'first'. In phrases, the ordinal suffix is attached to the noun head: *meṣa*$_1$ *awa*$_2$ 'four$_1$ days$_2$' – *meṣa*$_1$ *aw-inge*$_2$ 'the fourth$_1$ day$_2$'.

Verbs show the pronominal bases *ti-* (1st pers. sg.), *hi-* (2nd pers. sg.), *ʾi-* (3rd pers. sg.). Perfective aspect is marked by suffix *-a*: *hi-š-ṣol-a* 'drink (2nd pers. sg. fem. perf.)'. Tense is expressed by auxiliaries: *kump-* 'break', *kump-iža* (present), *kump gamša* (future), *kump-a* (past), *kump-iya* (present perfect), *kump bit bite* (past perfect). The imperative markers are *-ii* for sg. and *-wa* for pl.: 'wash!' *buṣ-ii* (sg.) – *buṣ-wa* (pl.). Negation is marked by *-wa-* in verbs and by *-pa* in copulas: *kump-wa-*, 'not break'; *tin-pa-ya*, 'It is not mine'.

The passive is derived with the suffix *-eq-*: *penq-*, 'chop' – *penq-eq-*, 'be chopped'. Direct and indirect causatives are formed with a prefix *taš-* and a suffix *-sisa* respectively: *buṣa*, 'wash' – *taš-buṣa*, 'make someone wash something' – *buṣ-sisa*, 'cause someone to make someone else wash something'. Reciprocal forms are derived with a suffix *-mund-*: *kazz-*, 'insult' – *ham-kazz-munda*, 'we insult each other'. Iteratives are formed by means of total reduplication: *qir-* 'cut' – *qirqira* 'cut into pieces/repeatedly'. Benefactive and malefactive forms are derived with *-na-* and *-kil-* respectively: *ti-na-šan-*, 'buy for my benefit' – *ti-kil-šan*, 'buy for my detriment'.

Clauses are verb-final, and all phrases are head-final, e.g. Adverb – Complement – Verb: *kwallas*$_1$ *hambil*$_2$ *ʾi-šan-a*$_3$, 'He bought$_3$ yesterday$_1$ a camel$_2$'; Adjective – Noun: *keemit*$_1$ *keeṭa*$_2$, 'big$_1$ house$_2$'. With more modifiers, the order is: Demonstrative – Relative clause – Adjective – Noun: *geešš-iš*$_1$ *šanq-iš*$_2$ *ʾi-šan-it*$_3$ *woora*$_4$, 'that$_1$ horse$_4$ that Shank$_2$ bought$_3$'. Subordinate clauses precede main clauses: *qom-es-iš*$_1$ *ʾi-heeq-itt-iš*$_2$

sonṣ-ol-iš$_3$ *keeṭ*$_4$ *šan-and-a*$_5$, 'After the old man$_1$ died$_2$, the children$_3$ bought$_5$ a house$_4$'.

The ten-word list is as follows: *íški* 'one', *numbu* 'two', *teezä* 'three', *kámä* 'fire', *haaṣä* 'water', *awtokä* 'sun', *ʾáánsä* 'moon', *hándä* 'blood', *ánṣílä* 'tongue', *ààṣä* 'tooth'.

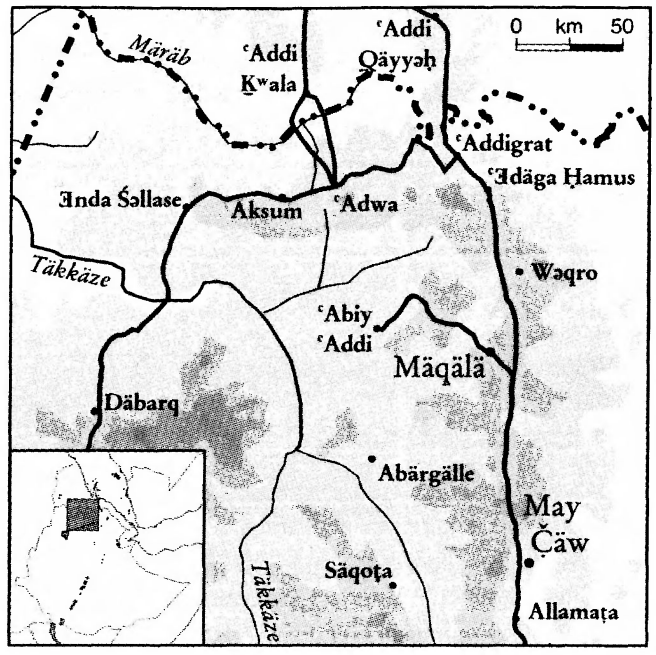
Baye Yimam



Mäqälä

M. (መቐለ, Amh. Mäqälle, መቀሌ; 13° 29' N, 39° 28' E), formerly the capital of ↗Ǝndärta *awraǧǧa* in ↗Təgray, is today the capital city of Təgray National Regional State. It is linked by all-weather roads to ↗Addis Abäba and ↗Aksum, and has an airport, Ras Alula Aba Nega International Airport.

M. lies at an elevation of 2,254 m A.S.L. (at the airport), close to the edge of the northern portion of the Ethiopian Rift Valley, on a Jurassic limestone plateau, in a semi-arid area with a mean annual rainfall of 715 mm. Except for a moderately dense eucalyptus cover on the hills in the eastern edges of M. and some exotic species of trees and shrubs lining the streets, the surrounding landscape is almost treeless.

M. is believed to have evolved from a 13th-cent. hamlet called Ǝnda Mäsqäl (later Ǝnda Mädḫane ʿAläm), becoming a town by the early 19th cent. (Medhane Taddesse 1995:III), when *ras* ↗Wäldä Śəllase of Ǝndärta made Ḥəntalo (↗Anṭalo) his seat of power, and the region of M. (40 km to the north) his recreational centre (Taddäsä Səkkʷar 2000/01:16; cp. Valentia 1967:117). In the tax records of *aṣe* ↗Tewodros II, M. appears as a tributary district within Ǝndärta with a ↗*nägarit* of its own (Germaselassie Asfaw – Pankhurst 1979:81).

The credit for M.'s growth into a regional capital goes to *aṣe* ↗Yoḥannəs IV who made M. political capital of his expanding state. He must have chosen the place for its strategic proximity both to rich agricultural areas (of ↗Rayya Azäbo) and to the ʿAfar ↗salt country. M.'s position on the route to Šäwa, the power base of Yoḥannəs's main rival Mənilək could have been another factor (cp. ZewYohan 67, 82). Three institutions still important for modern M. were founded by Yoḥannəs: the grand palace at Mäʿem Anbäsa ('quarter [cage] of ↗lions'), built in 1882–84 by his architect Giacomo ↗Naretti, together with the engineer Ǝngədašät Schimper and still forming the nucleus of the city, the large market, ʿƎdaga Sänuy ('Monday Market', s. ZewYohan 44, 369) and the church, at Däbrä Gännät Mädḫane ʿAläm, built after the return from Rayya Azäbo campaign in 1871; ↗Arʾaya Śəllase was buried there (BTafY 95, 121ff.). In the 1880s, M. became the Emperor's capital city. Among the factors that further accelerated M.'s growth and ↗urbanization were the establishment of residential quarters by the "nobility" and court servants, the prominence of the ↗*amole* salt market and the subsequent establishment of local and foreign trading and occupational communities, and M.'s strategic position as a transit centre for commodities of the long-distance trade routes of north eastern Ethiopia, attached to the Red Sea ports, and to northern and central Ethiopia. By establishing a market in M., Yoḥannəs could draw on the northern trade routes as well as the salt caravan routes to the town, capitalizing on his political leverage (Medhane Taddesse 1995:27).

The succession of *aṣe* ↗Mənilək II of Šäwa signalled a trading reorientation from northern to southern Ethiopia (centred in Šäwa). The new capital Addis Abäba quickly outstripped M.,

View of Mäqälä before the mid-1930s with the palace of *aṣe* Yoḥannəs IV in the background; from Wencker-Wildberg 1935, illustration annex, ill. no. 33

which, however, retained its political importance as the district and regional administration centre of Ǝndärta (or Eastern Təgray) and Təgray respectively through the 20th cent., and its economical role in the Ethiopian salt trade.

During the ↗Italian War of 1895–96, M. became an important site in the conflict. After the fall of ᶜAdwa in spring 1895, *ras* ↗Mängäša Yoḥannəs retreated from his father's capital M. following the advice of *aṣe* Mənilək II. M. was occupied by the Italians without a shot and integrated into the Colonia ↗Eritrea; from here the Italians extended their occupation south, up to ↗Ambalage. The Italian army established their fort near the Ǝnda Iyäsus church above M. in October 1895. After the re-occupation of Ambalage in late 1895, the fort was besieged by Ethiopian troops, who cut the Italians' water supply. When the Italians surrendered in January 1896, Mənilək allowed them to retreat to their stronghold ↗ᶜAddigrat, probably hoping to prevent an escalation of the conflict, and he appointed his own governor over Ǝndärta at M., *däğğazmač* Tädla Abba Gubän, in order to check the rebellious Təgrayan princes (ErlAlula² 194).

Three historical epochs sustained M.'s urbanization in the 20th cent. The first was the advent of *däğğazmač* ↗Abrəha Arᵓaya Dəmṣu, governor of Eastern Təgray with M. as his capital. Abrəha imitated his cousin Yoḥannəs by establishing his own splendid palace (now the Hotel called Abrəha Castle) on a hill facing the grand palace, a new Saturday Market (ᶜƎdaga Sänbät), and a new church, Śəllase, all of which were situated to the south of M. proper. Likewise, he attracted various occupational groups including Muslim traders, women service vendors, and army retainers. Consequently, in the 1920s and early 1930s, M. witnessed a remarkable growth in trade (Medhane Taddesse 1995:44f.) *Däğğazmač* ↗Ḫaylä Śəllase Gugsa renovated the Palace in the centre to use it as his seat. There were about 5,000 inhabitants in 1935.

The second phase occurred during the Italian occupation (1936–41). The Italians, who occupied the town in November 1935, contributed considerably to the modernization of M. They built a military airport and a fort at Ǝnda Iyäsus (now main compound of M. University); reorganized roads, telephone lines, offices and residences; and installed modern water pipelines, electricity, clinics, postal services, cinema hall and resort/sport centres. They also expanded ᶜƎdaga Sänuy market by introducing corrugated iron shops. This also attracted foreign entrepreneurs (Greeks, Arabs and Armenians). M., then divided into two zones: Italian and Native, grew about twice its former size. In 1938 there were about 12,000 inhabitants (Guida 302f.). Starting from May 1943, M. was in the hands of the leaders of the ↗Wäyyane uprising against the then weak restored Ḫaylä Śəllase I government. The following British air bombardment of the town of September–October heavily damaged the town; on 14 October 1943 M. was recaptured by the Ethiopian government forces (Gilkes 1975:18, 189f.).

The third phase in M.'s urban development took place mainly during 1942–74. Modern urban sectors were diversified, and new administrative offices were established. The M. municipality (founded 1942), telecommunications and post office, Commercial Bank and the Aṣe Yoḥannəs Elementary and Secondary School (1952, 1960) were established. The first master plan was issued in 1962. Small-scale enterprises such as oil refineries, soap mills, leather and caning bags, costumes and flour mills were set up up to 1974.

Most of the industrial establishments, however, either declined, degraded or closed during the 1974–91 wars.

M. has grown rapidly since 1991. In 1984 it had 61,583 inhabitants, in 1994, 96,938 (96.5% being Təgrəññña-speakers), and in 2006, 169,200, i.e. 4% of the population of Təgray. M. is 2.6 times larger than ↗ᶜAddigrat, the second regional centre. It is the fifth largest city in Ethiopia, after Addis Abäba, Dərre Dawa, Adaama, and Gondär.

The largest proportion of the population of M. depends on government employment, commerce and small-scale enterprises. M. now has new engineering, cement and textile factories, producing for the local and foreign market. There is a rising University, which developed out of the pre-1991 Arid Agricultural College, and about a dozen other governmental and private colleges.

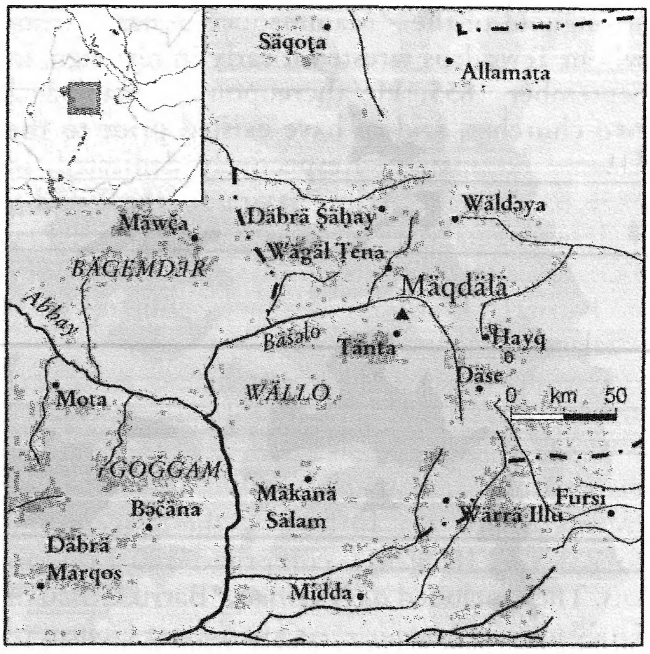
Mäqdäla

M. (መቅደላ) is a 2,777 m A.S.L. high flat-topped mountain (↗*Amba*) and seasonal settlement in Wällo, which will ever be associated with *aṣe* ↗Tewodros II. *Aṣe* Susənyos spent a rainy season there early in the 17th cent. (PerChron vol. 2, 58). Later, it was occupied by neighbouring Oromo, and was especially important as a stronghold of the ↗Mämmädočč dynasty, from whom Tewodros wrested it early in his reign, in September 1855. He thereupon re-established two churches, said to have existed prior to the Oromo occupation. Respectively dedicated, in 1856, to Mädḫane ᶜAläm ('Saviour of the World'), and Ǝgziᵓətənä Maryam ('Our Lady Mary'), they were consecrated by the visiting Egyptian Coptic Patriarch Cyril and the metropolitan *abunä* ↗Sälama (MonVidTheo 70).

Tewodros visited M. early in his career on several occasions and, according to his chronicler ↗Wäldä Maryam, soon established the place as his treasury and prison for political detainees (MonVidTheo 22). In his day these, according to Rassam (1869:261), comprised 180 Ethiopians. They included *däğğazmač* ↗Bərru Goššu of Goğğam; *däğğazmač* ↗Arᵓaya Śəllase Dəmṣu of Təgray; ↗Mənilək, the future king of Šäwa, and his uncle ↗Darge Śahlä Śəllase; Färis Ali of Wällo [*däğğazmač* Färis Aligaz?]; *wag šum* Täfäri of Lasta [Ḥagos Täfäri?]; and *käntiba* Ḫaylu of Gondär. The foreigners included the British Consul, ↗Cameron; Queen Victoria's special envoy, ↗Rassam; the Protestant missionary ↗Stern; and over 20 other adult Europeans, plus several children. Henry Blanc estimated the "native" prisoners at "not less than 660" (1868:211; for a list of Ethiopian and European captives released in 1868 s. Holland – Hozier 1870:48f., 80f.).

M., all observers agree, was an almost impregnable natural fortress (PankHist II, 81f.). Blanc calls it "one of the strongest" in the country: its approach was "difficult on account of the deep ascent and narrow precipitous ravines" separating it from the Bäšəlo and Ǧidda rivers and Wällo tableland (Blanc 1868:205, 207). The fortress complex formed part of a vast mountain massif which consisted of two major cones: Śəllase, the site of the church of that name, and M. which stood to the south. These heights were joined by a narrow strip of somewhat lower land called Ǝslamge, which was also connected by a saddle to ↗Fala, a smaller hill west of Śəllase. The citadel's mountainous defences were reinforced by stonework, which, though "rudely constructed", was "as well designed", as if built by "the best engineer of Europe or America" (Stanley 1874:460).

The M. palace, which stood in the centre of the *amba*, was a large two-storey rectangular building with an outside staircase and thatched roof. When there, Tewodros preferred, however, to hold court in a nearby tent. Separated from the



palace by an open field stood the sheds of the granary, the treasury-cum-arsenal and Mädḫane ᶜAläm church. The latter was a conventionally-designed round thatched building, but without wall-paintings. Though smaller than churches in many other capitals, it was still sizable: it was surmounted by a "glittering cross" and possessed over a thousand Gəᶜəz mss. which Tewodros had taken from churches in Gondär and elsewhere (Pankhurst 1973:15–42). There were also many other thatched round houses of various sizes, which covered almost the entire area within the fort. Those of the principal chiefs were clustered together in a single large fenced enclosure. To the south, the prison comprised two circular houses, likewise within a thorn fence (PankHist II, 81–86). The settlement had a "permanent" population of 3,000, but this increased to over 30,000 when Tewodros and his army were present (Markham 1869:359, 364 and maps p. 315; Holland – Hozier 1870:36, 52; Rassam 1869:311).

M. was the site of the historic confrontation between Tewodros and the British expedition led by Sir Robert ↗Napier. The citadel of M. fell to the British on 13 April 1868, when Tewodros committed suicide to avoid capture. Napier's victorious troops thereupon "dispersed all over the amba in search of plunder" (Markham 1869:359). This included two ↗crowns; the icon of the ↗*Kʷərʾatä rəʾəsu*, or effigy of Christ with the Crown of Thorns carried by the Ethiopian army on campaign; ten altar slabs (↗*Tabot*); numerous processional and other ↗crosses; two marquee-type tents; a number of royal cloaks and shields; several of the Emperor's letters to nobles and others; and just over one thousand mss. Most of this booty was transported on 15 elephants and almost 200 mules to the Dälanta plain, where it was sold at a two-day auction on 20 and 21 April to raise "prize money" for the troops. Many other items were, on the other hand, kept by individual soldiers, and still ocassionally appear in sales catalogues.

After his victory, Napier found it difficult to dispose of M. He proposed giving it to *wag šum* Gobaze (later *aṣe* ↗Täklä Giyorgis II), who declined to accept it. The British commander thereupon ordered the settlement's destruction "as a mark of the anger of the British at the ill treatment of their countrymen, as well as their abhorrence of the cruelties which Theodore had committed there" (Holland – Hozier 1870:77). M. was accordingly put to the flames on 17 April (Markham 1869:367f.). The British then began their march home. They did this in accordance with a promise, made to *däğğazmač* Kaśa, the ruler of Təgray (later *aṣe* ↗Yoḥannəs IV), and to the Ottoman Porte, that Britain would withdraw from Ethiopia as soon as the dispute with Tewodros was settled.

Before leaving, the British gave 600 looted mss. to churches in Təgray and took the remaining 400 back to Britain, together with the crowns, *tabots*, and other booty. Most of these articles were deposited in the British Museum (↗British Library) and the Victoria and Albert Museum. Other M. mss. were acquired by the ↗Bodleian Library in Oxford, Cambridge University Library, the Royal Library in Windsor Castle, as well as other British libraries. Their arrival led to considerable European scholarly interest in Ethiopian literature. Ten mss. were published and/or translated into English by ↗Budge, several of them in facsimile. Other artefacts, however, attracted little interest. A ms. of the ↗*Kəbrä nägäśt* was subsequently returned to *aṣe* Yoḥannəs IV, a royal crown to Empress ↗Zäwditu, and a seal and cap to Emperor ↗Ḫaylä Śəllase I. Other returned items of loot were given to the ↗Institute of Ethiopian Studies Museum and the Ethiopian National Museum. The *Kʷərʾatä rəʾəsu*, despite a request by *aṣe* Yoḥannəs for its repatriation, remained in private possession abroad (Pankhurst 1979). Demands for the return of other loot have been voiced by an Addis Abäba and Edinburgh-based society, the AFROMET (Association for the Return of Ethiopian Maqdala Treasures), founded in 1999.

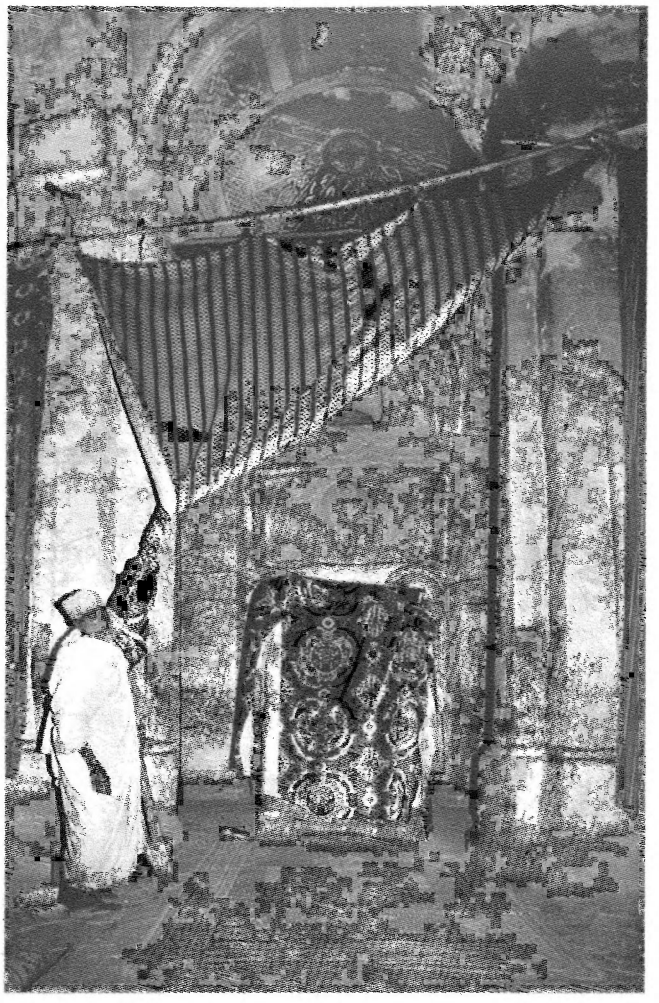
Richard Pankhurst

Mäqdäs

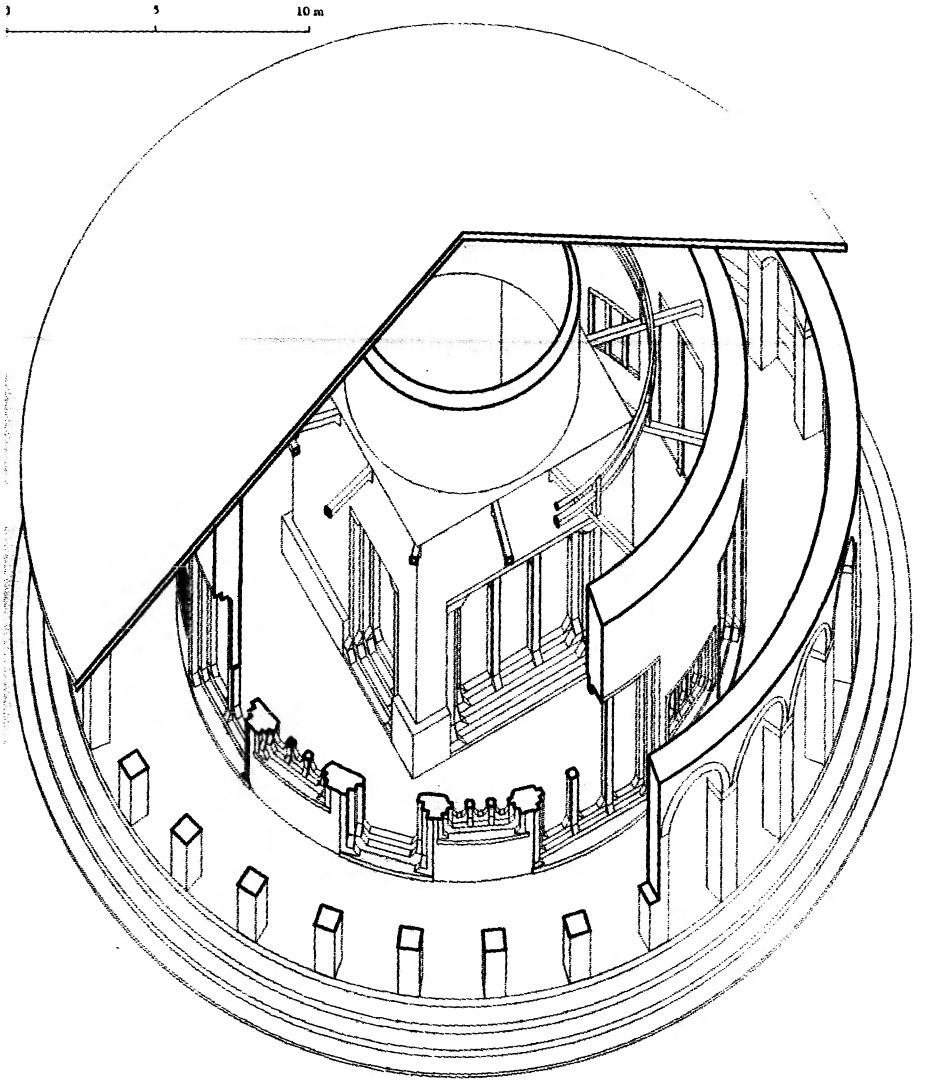
M. (መቅደስ, lit. 'sanctuary', the noun derived from Gəᶜəz verb *qäddäsä*, 'sanctify', hence also 'celebrate Mass' etc.) or *betä M.* (lit. 'house/room of the sanctuary') is the traditional term referring to one of the three space subdivisions of the Ethiopian ↗church building, the other two being the *qəddəst* and the *qəne maḫlet*. Many texts refer to the same area by using as referent the curtain, *mänṭolaᶜət* (↗*Mägaräğa*) or the altar itself (*tabot, mänbärä tabot, məśwaᶜ*); so is it that the ↗*Testamentum Domini* describes it without naming it (Beylot 1984:19ff.). Today the term M. is used in the official terminology describing the church edifice (EOTC 1996:60f.; Kənfä Gäbrəʾel Altayä – Getaccäw Däğäne 2006:47f.). M. refers to the eastern sanctuary of the ancient basilicas and later hall-churches as well as to the central sanctuary of the round churches in which the altar (the *mänbärä tabot* complete with the consecrated tablet or ↗*tabot*) is found, and where, therefore, only the ordained clerics (beginning with ↗*diyaqon*; cp. ↗*kəhnät*) are allowed to enter. The ↗*Fəṭḥa nägäśt* specifically precludes women. Only when the *tabot* has been publicly removed for some reason may the M. be visited by lay people, who may take advantage of the opportunity to gather some dust from there (*əmnät*, ↗*ṣäbäl*) for healing.



Unveiled *mäqdäs* with covered *mänbärä tabot*; Kidanä Məḥrät church of Däbrä Ṣəyon, Gärᶜalta, Təgray; photo 2004, courtesy of Michael Gervers

The threefold arrangement is often identified with that of the Temple of ↗Jerusalem (1 Kgs 6-8; 2 Chr 3-7), although care is taken to distinguish that ancient disposition from that of the New Testament. Within the church, the M. may symbolize heaven; moreover the tradition (cp. ↗*Śərᶜatä betä krəstiyan*) interprets it as, e.g., "Alexandria" (Griaule 1932:23, 30) or "body of St. Mary" (ibid. 4, 8; Schneider 1988:93, 94; cp. also the third strophe of the Sunday portion of the ↗*Wəddase Maryam*).

In round churches, built from the end of the 16th cent. (one of the early evidences seems to be BeckHuntAlm 99), especially in the area of Lake ↗Ṭana and ↗Gondär, the M. is in the centre of the church edifice (cp. di Salvo – Chojnacki – Raineri 1999; Angelini 2006; DAE III). While the *qəddəst* and the *qəne maḫlet* are circular or concentric, the M. is always square. In such "Gondärine" churches, the M. has three doorways: the central



Schematic representation of the church of Narga Śəllase, with the *mäqdäs* in the centre; after reliefs by Alberto Giussani and Giorgio Vassena, from Di Salvo 1999:120

one as well as two others which are a likely relic of the side doors once connecting the M. with now disappeared *pastophoria* (sacristies) or, from ca. mid-13th cent., additional sanctuaries. Doorways may formerly have been screened by curtains (as suggested by some ancient texts, s. e.g., Beylot 1984:19ff.). Much of this arrangement originates in Coptic Egypt. There, the sanctuary was closed in the 7th cent. by the eastern wall of the *ḫūrus* (Arab. 'choir', from Greek-Coptic *horos*), an Egyptian development of the *presbyterium*. Located between the sanctuary and the nave, the *ḫūrus* was hitherto delimited westwards by chancel barriers, as in Ethiopia until the 12th cent., and henceforward by a western wall with doors leading towards the nave. The ca. 16th-cent. introduction of painted walls with doors and curtains around a square sanctuary may be seen as an adaptation of the Coptic *ḥiǧāb* (Arab. 'curtains', a solid screen with centrally placed lockable doors, and eventually decorated with icons). A pair of curtains was put to cover the outside of the double main doors in the western wall of the M. (called *wanna ḫoḫət*, 'main door', or *anqäṣä Ṣəyon*, 'gate of Zion'). In addition, another screen often hangs between the altar (i.e., *mänbärä tabot* with *tabot*) and the doors, preventing the altar to be seen from outside; curtains (or shutters) cover the altar from three sides. In round churches, the outer sides of the M. walls are utilized for spectacular iconographic programmes (↗Painting: monumental).

In the ancient basilicas, the M. lies in the eastern part of the church building. It is elevated and has either a rounded apse or a flat wall, generally with a centrally placed window, and is accessed through a large "triumphal arch". Until about the mid-13th cent. the M. was flanked by two side rooms. One was meant for the preparation of bread and wine before the liturgy (*prothesis*); the other often gave access to the tomb of a saint and was used as a sacristy (*diaconikon*). The post mid-13th-cent. hall-churches have a wide open unified sanctuary area which may house one or more altars (e.g., ↗Däbrä Sina and Betä Śəllase at ↗Lalibäla) or have a space of a size similar to the previous order, but without side sacristies (e.g., Betä Giyorgis at Lalibäla). Later, a table (or a shelf) in the north-east or south-east corner of the M. (called *ḫaddafe näfs*, referring to the post-communion prayer) partly took over the function of the *prothesis* sacristy. It is specially used for the ritual of the purification of the sacred vessels after communion. It could be also used for the keeping of the liturgical vessels, usually in a niche in the northern wall, but more and more in the ↗*ʿəqa bet*. In the course of time, the churches with side rooms gradually received additional (mobile) altars, which turned the side

rooms into as many additional M. This practice continued, sometimes applied to the newer hall-churches type and even to the churches where the seeming sacristies were actually meant to be additional sanctuaries from their inception, and therefore decorated with a ↗*Maiestas Domini* (e.g., ↗Gännätä Maryam) or had an additional altar cut in rock (e.g. Wəqro Maryam, Näbällät; ↗rock-hewn churches).

The window in the eastern wall of the M. marks the East and lets the light enter the inside of the M., expressing the idea of "the Sun of righteousness" (Mal 3:20), that is Christ (Lk 1:78-79), coming from the East at the sunrise, the normal time of the Eucharistic service (cf. Mk 16:2). In such ancient churches as, e.g., ↗Ṣəraᶜ Abrəha wä-Aṣbəḥa, ↗Wəqro Qirqos or Betä Śəllase in Lalibäla, the window is replaced by a niche, corresponding to the Coptic *šarqīya* (Arab. lit. 'the Eastern').

The ceiling of the M. above the centrally located altar is either decorated with a ↗cross or covered by a half or a full cupola. When it is painted, the image is that of the *Maiestas Domini*.

Unlike the Coptic practice, which reserves one tablet for each altar and has several secondary altars, Ethiopia eventually favoured a single sanctuary with multiple *tabots*. The additional altar tablets (*däbbal tabotat*) are kept in the M. or, nowadays, the *ᶜəqa bet* and used only at the feast days of the saints to whom they are dedicated, following the custom of the Copts. Like the Antiochene Churches, the Ethiopian tradition practices the synchronised or parallel celebration of the Eucharistic liturgy for a single assembly, i.e. different groups of clergy directed by the leading celebrants standing at the central altar, consecrate simultaneously their own bread and wine. Such a celebration takes place on feast days in many ancient, and even more so in many modern large city churches equipped with several altars and manned by numerous clergy.

Mäqet

One of the traditional ↗Amhara areas, M. (**መቄት**, or Mäkät, locally also Mäčet) is a district in north Wällo neighbouring on ↗Angot and ↗Šädäho in Lasta – the latter being often seen as one historical region with M. To the west, the ↗Čäčaho ravine forms a natural border of M. with ↗Gayənt in Bägemdər. Lying mainly in the *wäyna däga* ecological zone, M., with ↗Wadla to the south, consists of an immense highland plain stretching east-west and the lower parts below the river valley escarpments to the north (M.) and south (Wadla) of the central plain.

According to the tradition, the area was Christianized by the 14th-cent. disciple of *abunä* ↗Bäṣälotä Mikaʾel, ↗Aron of Däbrä Daret ("the

Thaumaturge"). The foundation of the rock church of Däbrä Abunä Aron a few miles northwest of Gorägorä is ascribed to this saint. The church density in southern M. is particularly remarkable.

Gorägorä (or Gärägära), located at the border between M. and Wädla (today the capital of Lasta), was the site of a camp of *aṣe* ↗Susənyos where he stayed in 1623 after defeating *aṣe* Yaᶜəqob. The traditional title of M.'s governors was *Mäqet azmač*.

In 1930s–40s M. was a subdivision of Lasta, alongside with Wadla and ↗Dälanta; by 1974 the *awraǧǧa* of Lasta consisted of the *wäräda* of M. and that of Lasta. Today M. is a *wäräda* within the North Wällo zone.

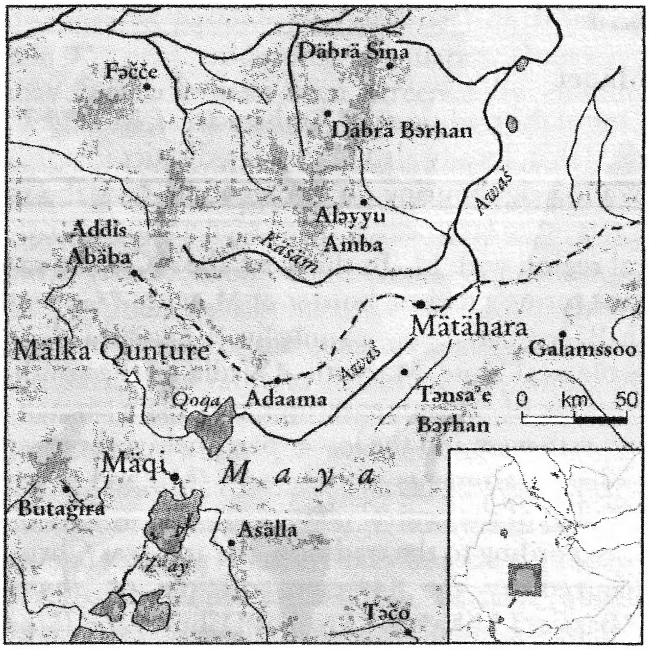
Mäqi

M. (መቂ, also Meqi, Orom. Maqii, Ital. Mácchi; 8° 09' N, 38° 49' E) is a modern town northwest of Lake ↗Zᵂay in the former ↗Arsi region in the Dugda Bora *wäräda* (Məsraq Šäwa zone, Oromiyaa *kəllәl*). It is situated in the historical ↗Dämbäl Mäqi area, on the main road from Moǧo to Šašämäne.



The Italians, who occupied this region during their stay in Ethiopia, built a major camp near the river Mäqi (Maqii) in 1929 A.M. [1936/37 A.D.], which they called M.-Bridge (Ponte Mácchi). Consequently the camp became a market-town (M.-Kamsi), which got its name from the river Mäqi (cf. also Guida 555).

Today M. is a booming town in a rich agricultural region. Most of its ca. 35,000 inhabitants are ↗Oromo but there is also a remarkable number of ↗Amhara and ↗Gurage, especially ↗Soddo (CSA 1996:234; CSA 2004).

Ronny Meyer

Mäqqʷamiya

M. (Amh. መቋሚያ, from *qomä* or a derived verb [*täqʷamä*] 'to stand, be erect') is a prayer staff made of wood or metal with a head of ivory, wood or metal (iron, copper, silver or gold). It is unknown when the M. came to be. It has been attributed to St. Yared though without definitive evidence.

The M. is used by priests and cantors (*mäzämməran*, notably by ↗*däbtära*) to accompany Ethiopian Orthodox Church rituals and in the context of ↗*aqʷaqʷam*, and acts as a physical support for them during long ceremonies. The M. of cantors is a liturgical object, preserved in the ↗*ᶜəqa bet* and it should be distinguished from simple wood sticks, also called M., used by elderly people. It is also a symbol of office or authority. The M. is also used by the Fälaša (↗Betä Ǝsraᵓel) in their liturgical ritual practices. There are at least four main types of M.: (1) a Y-shaped stick; (2) a stick topped by a ring (*ḫəṣən*); (3) a cross-shaped M. used by hermits (*mäsqäl täsällaṭi*); (4) a T-shaped M. for *aqʷaqʷam*. The headpiece would represent the head of a lamb, a symbol of Christ, evoking the overall shape of the ↗Cross.

Musically, M. is an idiophone that punctuates a phrase and sections articulated by the vocal chanting and/or accompanies the ritual dances. Individual musical formulae are identified by name and performed with movements specific to the M. At the appropriate time the instrument is

Silver head of a *mäqqʷamiya*; 20th cent., church of St. George, Ruba Kʷəsa, Tämben; photo 2002, courtesy of Michael Gervers

also used with ↗*ṣänaṣəl* and ↗*käbäro*, where one person usually holds the *ṣänaṣəl* in the right hand and the M. in the left.

Among the various *aqʷaqʷam* movement patterns the M. is most actively employed to accompany the chant and dance in ↗*zəmmame*. Cantors move it in front of them in different directions and strike the ground on specific syllables of the liturgical text. Another way to describe this movement is through the imagery it conveys. According to church tradition the up-down movement of the M. symbolizes the Passion when Jesus was carrying the cross. In other *aqʷaqʷam* manners (*qum ṣänaṣəl*, *märägd*, *ṣəfat*), when *ṣänaṣəl* and *käbäro* are played, the M. serves only as a physical support for the cantors. In *wäräb* and *č̣äbč̣äbbo*, cantors rest it on their shoulder when going through the *qəne maḫlet* (space in the church devoted to the cantors; s. ↗Church buildings).

M. is the only instrument allowed at services during ↗Lent, without the *ṣänaṣəl* and *käbäro*. The M. takes the place of the *ṣänaṣəl* in the *märägd*: it is moved and played as if it were a systrum.

There are four different schools of *aqʷaqʷam* chant. Vocal execution of chanting from the *täkle* (or *täkkälä*) school is well known by its characteristic nasal timbre, the movements with M. in this school are more frequent and encompass a greater spatial area (Damon 2005:20). The style has been ascribed to *aläqa* ↗Gäbrä Ḥanna.

Maqrīzī, al-

M. (المقريزى, Aḥmad b. ʿAlī b. ʿAbdalqādir b. Muḥammad al-Maqrīzī, b. 1364, Cairo, d. 1442, Cairo) was an Egyptian historian and prolific author. Having received a thorough education, he held a number of administrative, scholarly and teaching positions in Cairo and Damascus, but eventually gave up his public career and devoted himself to scholarship. His numerous works deal with the history and geography of ↗Egypt and other Arab countries.

One of his many books, the *Ilmām bi-aḫbār man bi-arḍ al-Ḥabaša min mulūk al-Islām* (Maq-Ilmam), is entirely devoted to Ethiopia, while two others, the *Kitāb al-Mawāʿiẓ* (al-Maqrīzī 1853) and the *Kitāb as-Sulūk li-maʿrifat duwal al-mulūk* (al-Maqrīzī 1936, 1941; tr. Quatremère 1837–44), contain references to this country. M. got his information in ↗Mecca in 1435–36.

The *Ilmām* consists of three chapters of unequal length concerning: 1) the land of *al-Ḥabaša* (↗Abyssinia); 2) the land of ↗Zaylaʿ; 3) the history of the ↗Wälašmaʿ dynasty, including the wars between ↗Ifat and Christian Ethiopia (ca. 1275–1550). They are followed by short notes on: "the southern part of the earth, which is [the

land of] the black" (based on information mainly borrowed from ↗Ibn Saᶜīd or provided by travellers): the towns of Ġāna and Barīsā, Kawkaw, Safāla az-Zanǧ, Barbarā, Zaġāwa, Dunqula (↗Dongola), Ǧarmī, Maqdišu (↗Mogadishu s. EAE vol. 5), Zaylaᶜ, ↗Hadiyya and Kānem. Though occasionally biased and mistaken, the *Ilmām* is important as supplement and counterpart to the Ethiopian sources (cp. TadTChurch 119–55). M.'s only remark on religious matters is that the ↗Melkites are persecuted by the ↗Jacobites and have to feign Jacobitism to avoid persecution.

In the first chapter, the *ḥaṭī* (↗*Aṣe*) is said to rule over 99 governors (Arab. *malik*). *Ḥaṭī* Daʾūd (↗Dawit II) b. Sayf Arᶜad died in 812 [1409/10], and was succeeded by his son Tādrus (Tewodros), who died soon afterwards. His successor was Isḥāq (↗Yəsḥaq) b. Daʾūd b. Sayf Arᶜad (r. 1414–29), also called Abram (Ibrāhīm). During his reign, Circassian military slaves from Egypt (↗Mamlūks) established workshops for making coats of mail, swords and other weapons. An exiled Egyptian *mamlūk*, called aṭ-Ṭabunġā Mufriq, reorganized Isḥāq's army and taught the Ethiopians to make Greek fire. A Copt Faḫraddawla reorganized the system of tax collection, introduced royal dresses and gave the *ḥaṭī* a cross in his right hand. Isḥāq wrote letters to the Franks (*al-Ifranǧ*), proposing them to fight the Muslims together, and was therefore struck by God's wrath, dying in *Ḏū l-qaᶜda* 833 H. [July 1429 A.D.]. When ↗Ǧamāladdīn III b. Saᶜdaddīn "was ruling over Amḥara", he had Ethiopians deported to the Ḥiǧāz, India, Egypt, Syria and Rūm (Anatolia?). Isḥāq's son and successor Andarāws (Ǝndrəyas?) died after four months, his brother Ḥarbanāy (Ḥəzbä Nañ?) b. Daʾūd b. Sayf Arᶜad in *Ramaḍān* 834 H. [May 1430 A.D.], and the latter's successor Salmūn b. Isḥāq soon afterwards. In 839 H. [1435/36 A.D.] the *ḥaṭī* died of plague.

According to the *Ilmām*, Zaylaᶜ, for the greater part uninhabited, consists of seven principalities: Awfāt (Ifat), Dawārū (↗Däwaro), Arābabnī (↗Arabäbni), Hadīya (Hadiyya), Šarḫā, Bālī (↗Bale) and Dāra (↗Dära), each with its own "king", but all ruled by the *ḥaṭī* to whom they pay tribute. Zaylaᶜ is also called Ǧabart (cp. ↗Gäbärti).

The *Kitāb al-Mawāᶜiẓ*, commonly known as *Ḫiṭaṭ*, contains a passage on the ↗Beğa (cf. also Heuglin 1861) and the legend of the ↗Nile waters stopped by the king of Ethiopia. Describing the expansion of ↗Islam among the Beğa (al-Maqrīzī ed. Wiet 1911:315–19), M. quotes the late 10th-cent. ↗Ibn Sulaym al-Aswānī. According to him the Beğa were divided into many tribes, who changed their matrilineal system into a patrilineal one under influence of Islam (ibid. 310–19). The ↗Kunama were called Badēn or Bazān by the Ethiopians, and Bāza by the Sudanese (ibid. 310, 315).

Quoting Ǧirǧis al-Makīn b. al-ᶜAmīd (↗Giyorgis Wäldä ᶜAmid) almost verbatim, M. writes, once again, that exceptional low tides of the Nile, resulting in famine in Egypt, were attributed to the interference of the Abyssinians with the sources of the river (al-Maqrīzī ed. Wiet 1913–22:470; cp. van Donzel 2000:304ff.).

Also in the *Kitāb as-Sulūk* M. gives some information on Ethiopia: e.g., he remarks that the title *ḥaṭī* can be compared with ↗*ḫalīfa* (al-Maqrīzī 1936:615), and mentions the arrival of the ambassadors of the king of Abyssinia in Cairo in 726 H. [1326 A.D.] (Id. 1941:270).

Emeri van Donzel

Mäqśäftä ḥassätat

The M.ḥ. (መቅሠፍተ፡ ሐሰታት, 'Flagellation of the lies') is a Catholic treatise. Written in Gəᶜəz by the Jesuit father António ↗Fernandes and revised by Father Luis de ↗Azevedo, it was published at the Colégio de São Paulo Novo in Goa in 1642. Conceived as a response to the ↗*Mäzgäbä haymanot*, the work covers 240 folia divided in 64 chapters, aiming at refuting the positions of the ↗Ethiopian Orthodox Church from a Catholic point of view. Written probably at ↗Gorgora in the 1620s (BecRASO XI, 484), its origins may be found in an earlier pro-Catholic treatise planned around 1610 jointly with Pedro ↗Paez and Lorenzo Romano (BecRASO XI, 203).

Most of the M.ḥ. deals with Christological and theological issues as well as sacramental practices that were at the core of the Catholic-Ethiopian debate during the 17th cent. A considerable part, thus, is dedicated to refuting "Monophysite" ↗Christology and the first seven chapters reinforce the Catholic claim that the Holy Ghost proceeds from the Son as well as from the Father. The origin of individual souls is also discussed and one chapter is dedicated to the exaltation of ecclesiastical chastity and the need for the regular Ethiopian clergy to abandon marriage.

To justify his positions, the author relies not only on the N.T., but also on the Councils of the Church and the works of the Church fathers, including the Ethiopic ↗*Haymanotä abäw*. He also introduces some of the Catholic saints of the early and late Middle Ages, authoritative figures, not previously cited in Ethiopian religious literature, such as St. Augustine, St. Thomas Aquinas and St. Bonaventure. A copy of the M.ḥ. is available at the Biblioteca Nacional, Lisbon.

Mar

M. (ማር, also ማሪ, *mari*) is an Ethiopic honorific title used mostly in the ↗Gəᶜəz literature and applied to some ↗saints and martyrs (↗Hagiography; ↗Martyrdom). The word is of Syriac origin (*mār*[*y*]*ā*, 'lord'; *mār*[*ī*], 'my lord', cp. Payne Smith 1903:298) and was taken over into Gəᶜəz via Arabic. Thus, saints and martyrs who are called M. – in their ↗*Sənkəssar* commemorations, other hagiographic works etc. – are mostly of non-Ethiopian (but not always of Syrian) origin. Usually they are the most revered and/or popular ones: e.g., ↗Ephrem the Syrian; ↗George of Lydda, ↗Isaac of Nineveh, ↗Jacob of Serug, Behnam (written as Marbəḥnam, Marməḥnam, Marhamnam etc., also separately: M. Bəḥnam/Məḥnam, 14 *Taḫśaś*, s. BudSaint 374–77). Among those called M. are also personalities less known in Ethiopia, e.g., Jacob "the Egyptian" (18 *Mäskäräm*, BudSaint 67–72); in a few cases, the title attested in the Egyptian tradition was dropped in the Ethiopian.

On the whole, the latter tradition was very strict in bestowing this title, considering it very honouring, and there was almost no inflation in its employment. Occasionally, this term was applied as an adjective to the most venerated saints like *abunä* ↗Täklä Haymanot (use of it is only known from a 15th-cent. version of his Vita, ms. Paris, BN éth. 342; in later Täklä Haymanot's hagiography, the term is completely missing).

The best known case is that of *aṣe* ↗Gälawdewos, killed in the battle with ↗Nūr b. Muǧāhid in 1559 and regarded as martyr by the Ethiopian Orthodox Täwaḥədo Church (27 *Mäggabit*, s. BudSaint 746; cp. DombrChr 178). In his Chronicle (written after his death), which is similar in style to an eulogy, and was probably for reading on the commemoration day, Gälawdewos is indeed called M.; in the Chronicle of his brother and successor *aṣe* ↗Minas this Emperor, however, is also called M., due not to his particular

religious prestige, but rather to a literary feature pairing him with Gälawdewos.

Märäb

The M. (መረብ) is the main border river separating the central Eritrean highlands from Ethiopia. This seasonal river has its source near ↗Dəbarwa in the ↗Ḥamasen highlands, Eritrea, north of Ǝmba Takara, and then flows southwards. In its upper course it forms a historical boundary between the former Eritrean provinces of ↗Säraye and ↗Akkälä Guzay. The M. turns west, flowing through a huge and steep valley. Here it forms a state boundary, along the old provincial boundary between Säraye and the historical ↗ʿAdwa *awraǧǧa* in ↗Təgray. When, further northwest, the M. leaves the highlands, it drains away in the ↗Kunama lowlands, flowing only underground, but soon reappears. In the lowlands it changes its name and is now known as ↗Gaš (in Təgre, or Ḫur al-Qāš in Sudanese Arabic) or Sona (in Kunama). ↗Munzinger was the first to describe the hydrological link between the two rivers in the mid-19th cent. The highest flow of the M. river appears in July to September; in exceptional cases an arm of the river joined the ↗Atbara, a tributary of the Nile.

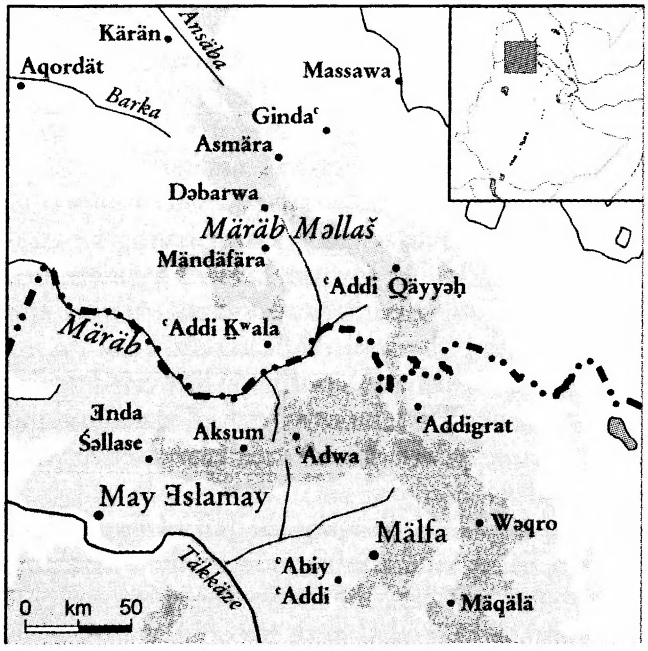
The arid Hazəmo grazing lands (*bäräḳa*), crossed by the upper M., have long been an object of contention between kinship groups of Säraye and Akkälä Guzay (Conti Rossini 1906; KilHDic 247), especially of Sāho pastoralists and Təgrəññña farmers from Šəmäzana. In the past, the middle course of the M. served, together with its most important tributary ↗Bäläsa, as the border between the territories of *baḥri nägaśi* and ↗*təgre mäkʷännən* (Bruce 1791). It was consolidated. as a provincial border in the mid-18th cent. when *baḥri nägaśi* ↗Boḵru Sälomon was endowed with the government of the ↗Märäb Məllaš, after the partition of the ↗Bambollo Məllaš of ↗ʿAndä Haymanot (KolTrad III, A20).

The M. valley in the middle course of the river has long been only under loose political control, the next more important settlements being far; it served therefore as an area of retreat for rebellious chiefs and ↗*šəfta*, such as *däǧǧazmač* ↗Kaśa Golǧa, when he rebelled against *däǧǧazmač* Kaśa Mərčа, the later *aṣe* ↗Yoḥannəs IV, both at that time being pretenders for the throne. In order to establish control over the area, Təgrayan and other rulers settled military colonies in the area of ↗Gundät, located in that valley (starting from the 17th cent. approximately, s. KilHDic 234).

In November 1875 the M. valley became the scene for one of the most decisive battles in the ↗Ethio–Egyptian war, the battle of Gundät at the M. In October the Egyptian army had occupied Ḥamasen and Säraye up to the M., fortifying the village of Gʷədda Guddi in the Gundät district and then planned to attack Təgray itself. However, the Egyptian army found itself in a very difficult position in the M. valley and was virtually annihilated by the Ethiopian army under *aṣe* Yoḥannəs IV (Chaîne 1913:8f.; ZewYohan).

Today's state boundary at the M. is the result of the rapid annexation of the

A bridge across the Märäb south of its source, in Eritrea; photo ca. 1890, from RubInd 84/85, fig. 14



whole province of Märäb Məllaš by the Italians during the negotiations with *aṣe* Mənilək II in 1889. As a result, the M. was recognized *de facto*, and much later *de jure*, by the Ethiopian ruler as the boundary of the Italian Colonia Eritrea: The "M.-Bäläsa-May Muna-line" was formally settled in the Italo–Ethiopian Addis Abäba agreement of 10 July 1900 (Hertslet 1967; Hamilton 1973; ↗Boundaries; ↗Treaties).

In 1952 the M. again acquired great significance as a political symbol, when the ↗Ethiopian–Eritrean Federation was established. Shortly thereafter, on 4 October, *aṣe* Ḫaylä Śəllase I symbolically crossed the M. on the Rama – 'Addi K"ala road and officially inaugurated the Federation here on the M. bridge by declaring the boundary at the M. abolished (Rampone 1953:59–65), while the M. still was legally a boundary until the annexation of Eritrea in 1962. During the last Ethio–Eritrean war (1998–2000) a battle at the M. valley below 'Addi K"ala, even if this boundary was undisputed, demanded a high number of lives in 1999. The M. bridge had been destroyed during that war.

Märäb Məllaš

The M.M. (መረብ፡ ምላሽ, '[Province] beyond the Märäb', also Märäb Mällaš, Märäb Məllasi) was the name of a province north of the Märäb river, i.e. today's Eritrean highlands (↗*Käbäsa*) with their dependencies. The M.M. largely corresponded to the former greater territory governed by the ↗*baḥər nägaš* (*baḥri nägaśi*), the Mədri Baḥri ('Land of the Sea', i.e. the coast). In the formal sense the M.M. comprised the historical provinces of ↗Ḥamasen and ↗Säraye, both unified under the petty dynasty of the 'Ad Däggiyat of ↗Ṣə'azzäga in Ḥamasen. The province of ↗Akkälä Guzay (not lying beyond the Märäb) was originally not included.

The term follows an older pattern in Ethiopian administrative traditions (↗Administrative division). Territories, given by the Ethiopian ruler to their governors, were sometimes not defined on the basis of a historical unity or ethnically, but following geographical landmarks – especially rivers, but also other landmarks – and in that case the term *məllaš* was added to describe the approximate location of the territory. This was the case of the great 17th cent. northern province of the ↗Bambollo Məllaš, the smaller one of Aloha Məllaš, etc. The administrative unit 'Aqäb ('highland') Šire Məllaši appears in the tax records of *aṣe* Tewodros II, i.e. the area of the Šire highlands (Pankhurst 1978:39). Such administrative units could disappear again quite quickly, following the up- or downgrading of governors or due to other administrative concerns.

The exact date of the establishment of the M.M. is not known. It might have appeared in the 17th cent., but perhaps also occasionally before. In that period the "province of Təgray" was reported to consist of two segments, one governed by the ↗*təgre mäk"ännən* with twelve provincial governors, the other by the *baḥər nägaš* also with twelve provincial governors under him, which would correspond to the later M.M. (Barradas 1996:1ff.). The latter half-province beyond the Märäb also appears as "Marebo" in a Portuguese source of the

17th cent., which corresponds to the territory of the M.M. (ibid. 3) The Märäb was consolidated as a provincial boundary in the mid-18th cent. when *baḥri nägaśi* ↗Boḵru Sälomon got the government of the M.M., after the partition of the older Bambollo Məllaš of ↗ᶜAndä Haymanot (KolTrad III, A20). In the tax records of *aṣe* Tewodros II the M.M. is listed as one of the northern provinces paying tribute (along with Wälqayt and other northern territories of Təgrəññña speakers not being part of ↗Təgray proper). In some documents the M.M. is simply appearing as "Ḥamasen", as its centre was located in that province (BTafY 75), the M.M. as a matter of fact corresponding mainly to Ḥamasen with its dependencies.

The M.M. acquired a most prominent position in Ethiopian politics in the period of *aṣe* ↗Yoḥannəs IV, when it was defended against Egyptian expansionism (↗Egyptian–Ethiopian war 1875–76) and later lost to Italian colonialism. In spite of the lost battles 1875/76 Egypt claimed sovereignity over the M.M. (ZerYoh 75, 77). The head of the local ↗Hazzäga family, *ləǧ* ↗Wäldä Mikaʾel Sälomon (later *ras*), however, co-operated with the Egyptians before, starting from the ↗Guraᶜ campaign, and in July 1876 killed his rival ↗Ḫaylu Täwäldä Mädḫən "Ḥabal" of Ṣäᶜazzäga at the battle of ↗Wäkki Dəbba, who was an ally of the Emperor. On 9 October 1876, Yoḥannəs appointed his trusted general (and the architect of the Guraᶜ victory) *šaläqa* ↗Alula Ǝngəda as a governor over the whole M.M. region and promoted him *ras* (ErlAlula² 13). He shortly thereafter even also received Akkälä Guzay, which was thus integrated into the governorate of the M.M. It was the first time in many centuries that an outsider was put over the leading local families.

However, a year after the appointment of Alula, when he travelled back across the Märäb to help *aṣe* Yoḥannəs inside Ethiopia (to face his opponent, *nəguś* Mənilək of Šäwa), *ras* Wäldä Mikaʾel, with Egyptian backing, regained control of the M.M. in April 1877, which he kept until September 1878. He regularly took control of the M.M., and then again retreated when new governors appointed by *aṣe* Yoḥannəs arrived. In December 1878 Wäldä Mikaʾel submitted to *aṣe* Yoḥannəs, was confirmed *ras* in an effort to appease him, and remained the governor of M.M. under Alula.

Finally, in December 1879, Alula imprisoned *ras* Wäldä Mikaʾel, and convinced Yoḥannəs to jail him in Təgray. After thus eliminating the last local hereditary chief of Ḥamasen, Alula went on to impose his central government. He experimented with land reform aimed at establishing his followers from Təgray (often originating from Tämben) as Ḥamasen's new elite while he continued an offensive against the Egyptians, raiding their military posts and trying to capture Bogos (↗Bilin: History). The Egyptians, for their part, retaliated by supporting ↗*šəftas* and by fomenting the anti-Alula resentment among the locals. Amid this conflict Alula tried to renew commercial relations with ↗Massawa and cultivated good relations with Ḥamasen's Muslim traders.

In June 1884, following the fall of Egypt into British hands and the success of the ↗Mahdist revolt in the Sudan, the Ethio–Egyptian struggle over the M.M. ended with the ↗Hewett Treaty. It was agreed that the Ethiopians would assist in the rescue of the Egyptian garrisons in Eastern Sudan – besieged by the expanding Mahdīya – in return for the surrender of Bogos to Alula's government, and for Ethiopia to have free port access in Massawa "under British protection".

In late 1884, recognizing these new opportunities, Alula moved his capital in M.M. from ᶜAddi Täḵlay to the small trade centre of ↗Asmära. It was, theoretically, better positioned for developing the commercial route to Massawa, but soon the entire picture changed.

In February 1885, in spite of the fresh British commitment, the Italians landed in Massawa and started their encroachment inland. Meanwhile the Mahdists, led in Eastern Sudan by their *amīr* ↗ᶜUṯmān b. Abī Bakr Diqna, began penetrating down to ↗Kärän and influencing Muslim tribes nearer to the coast (notably the ↗Ḥabab). Thus a second stage in the struggle over the M.M. started. As Alula solidified his hold in the highlands, the Muslims on the coast and in the west were caught between the Ethiopians, the Italians and the Sudanese. The more drastic developments affecting locals occurred in the west. On 23 September 1885 *ras* Alula collided with the Mahdist force of ᶜUṯmān Diqna at ↗Kufit, half-way between Kärän and Kassala. After his overwhelming victory, Alula tried to reach Kassala to rescue the Egyptians there and expand his control. But as the Italian forces were already gathering on the coast, Alula had to abandon this year-long effort. Frustrated and mistrustful of the local tribes, Alula permitted his men to massacre many of the ↗Nara tribesmen in November 1886. He also

embittered the Beni ᶜAmər, even though some of them, as followers of the *Mīrġanī*, had helped him against the Mahdists.

The M.M., however, would eventually be lost to the Italians. In the late 1880s Italy was successful in using the wish for autonomy of local M.M. leaders (especially in Ḥamasen [such as ↗Ḥadgä Anbäsa and several others], but also in Akkälä Guzay [s. ↗Bahta Ḥagos]), the weakness of *aṣe* Yoḥannəs IV and finally the decision of *aṣe* Mənilək II, his successor in 1889, to accept the partition of the north, first recognizing the Italian possessions in the lowlands, and in 1900 up to the Märäb. This might have been due to a pragmatic approach, considering a partitioned north being too weak to challenge his power and also hoping to win a European partner into his plans to build up a modern Ethiopia under his control, with European support.

The weakening of *ras* Alula, M.M.'s governor, was an important factor in this development. Torn between the Italian encroachment and the Mahdists' threat, Alula had to face his enemies in Yoḥannəs's court, as well as local *šəftas* who collaborated with the Italians. On 26 January 1887 Alula ambushed and massacred an Italian battalion at ↗Dogᶜali, an act which resulted in a renewed Italian military effort together with Yoḥannəs's growing mistrust of Alula's judgment. In January 1888 an Italian military unit was entrenched around Säḥaṭi facing Yoḥannəs's forces. The Ethiopians could not assault the Italians' modern defence and failed to entice them into the open. After exhausting its supplies, the Ethiopian imperial army retreated in late March 1888 beyond the Märäb. Alula was left in Asmära but was soon summoned by an angry Yoḥannəs to help him against Mənilək and the Mahdists. In August 1889, with the help of some Ethiopian and local collaborators, notably *fitawrari* ↗Däbbäb Arᵓaya, the Italians entered Asmära without firing a single shot. They soon reached the Märäb and on 1 January 1890 proclaimed their Colonia Eritrea.

In local Eritrean discourse the term M.M. is still known, but used as a geographical term only, meaning the highlands (↗*Käbäsa*). In Ethiopian tradition it is often identified with Eritrea, even if the in fact considerably larger Eritrean territory does not fully correspond to that of the M.M.

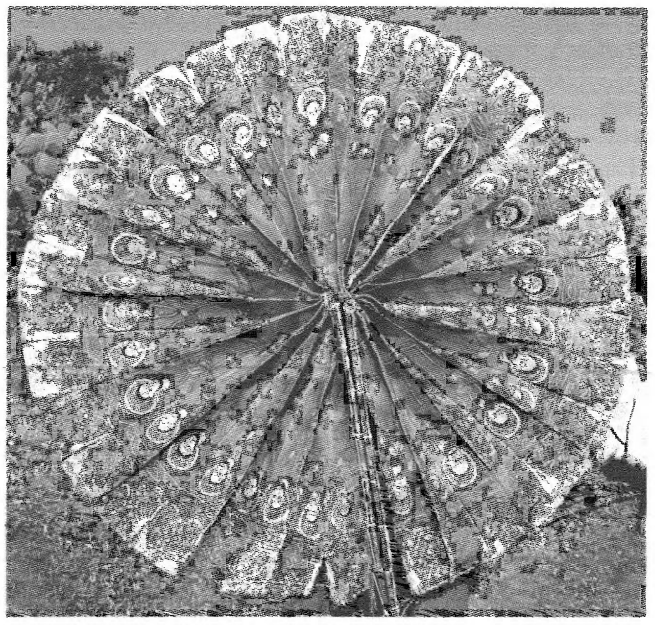
Maräqo ↗Libido

Märäwəḥ

M. (መረውሕ, also *märäwaḥ*, *märwaḥt*, *märawaḥt*, cp. Syr. *marrūḥā*, *marrūḥātā*, Arab. *mirwaḥ*, *mirwaḥa*) is a liturgical fan, Gr. *rhipidion*, *rhipisterion*, *hexapterygon*, Lat. *flabellum*, *ventilabrum*. It was originally used to wave insects away from the eucharistic bread as already noted in the ↗*Didəsqəlya* (Metzger 1987, VIII, 12:3). This practical function was gradually discontinued and, through the influence of biblical texts, the fan became associated with the cherubs (↗Angels) guarding the ↗Ark of the Covenant and with the seraphs and tetramorphs worshipping the enthroned God (Ex 37:7–9; 1 Kgs 6:23–28; Ezek 10:4ff.; 41:18–20). This symbolism also reflected in church rituals: the deacons holding fans flanked the altar during the reading of the eucharistic prayers and angled them towards the celebrant when the *Tersanctus* (Is 6:3; Rev 4:8) was pronounced. It was also visualized in the fans design: their decoration included the depiction of high ranking angelic figures and related to them many-eyed peacock feathers – a sign of vigilance (Ezek 10:12). The fans were common to both Eastern and Western liturgies but once disappeared from the latter already in the 14th cent.

The role of M. in Ethiopian church ceremonies is obscure. It seems that it disappeared from the liturgy (↗*Qəddase*) long ago, because the few examples still preserved in Ethiopia are not correctly identified by the priests. The M. is not mentioned in classic works on Ethiopian liturgy with the exception of ↗Täklä Maryam Sämharay (Tekle-Mariam Semheray 1936:10), who states that when a mass is celebrated according to the rules prescribed in the *Apostolic Canons*, i.e. with seven assistants, the sixth of them carries a fan. However, his description of the item agrees rath-



Liturgical fan, front side; 15th cent., Däbrä Ṣəyon, Gärᶜalta; photo 2005, courtesy of Michael Gervers

er with the liturgical whisk – *č̣əra,* which at one instance (17th cent.?) replaced the fan.

Nine Ethiopian M. are presently known. Eight are made of parchment folded like a *concertina* and originally fastened between two wooden slats with a shaft. They are decorated on one side by ↗paintings. In most cases, one holy figure, identified by an inscription, is painted on each fold while an ornamented horizontal band filled with interlaces and stylized leafy ornament runs along the top and bottom of the whole stripe of parchment.

Two M. belonging to the ↗Ṭana Qirqos church (74 x 16 and 45 x 7 cm) and dated of the turn of the 15th and 16th cent. are similarly composed (the bigger of 29 sections, the smaller of 40): in the centre (and at the top when the fan is unfolded) appears St. ↗Mary *Orans,* flanked by the archangels, seraphs, cherubs, patriarchs, prophets, other biblical figures, apostles and saints.

A very similar and high quality piece dating from the same time (62 x 10 cm and 38 sections) has recently been acquired by the Walters Art Gallery (inv. nr. 36.9).

The fourth example, in ↗Däbrä Ṣəyon in Gärᶜalta, Təgray, is a huge piece of (possibly camel) skin (43 sections, when opened makes a circle 131 cm in diameter), spread between two wooden boards (48 x 12 cm) and fastened on a 50 cm long shaft. Iconographically it is connected with the previous three. According to a local tradition, this fan was executed during ↗Zärᵓa Yaᶜəqob's time, which is not impossible from the stylistic point of view.

To the same group belongs the M. kept in the ↗Däbrä Sälam Mikaᵓel church, which presently contains 21 badly damaged sections (63 x 10 cm each) and some loose pieces of parchment. The repertory of figures also includes two disciples of Paul: Philemon and Titus.

The deteriorated M. that was recently discovered in the church Ǝnda Abbate Wäldä Yoḥannəs near Sənqaṭa, Təgray, and on stylistic grounds dated to the second half of the 15th cent. is made of two strips of parchment sewn together (58 sections, 49 x 10 cm each), one end still fastened to a wooden board. The decoration consists of an ornamental band along the upper border of the parchment and two rows of figures. In the upper row the centrally-placed Celestial Liturgy is depicted (↗*Maiestas Domini* and the 24 Heavenly Priests [Rev 4:4–5]). Their partly discernible names (Akaᵓel, Fanuᵓel, Anuᵓel, Dartoᵓel, Zäraᵓel, Suraᵓel, Rufaᵓel, Gäbrəᵓel, Uraᵓel) seem to originate from a Coptic tradition. In the lower row appears the Entry into Jerusalem with eleven apostles and two golden crosses; in the remaining sections Suraᵓel and Kärubᵓel are represented at the far left and on the extreme right Titus, Philemon, Clemens and Timothy.

The church owns another M. (100 cm in diameter, shaft 27 cm) ordered 20 years ago from an artist from the Amhara region. He partly copied the old piece adding some scenes not appropriate for a M.: the Carrying of the Cross, the Crucifixion and five miracles of Jesus.

One more M., kept in ↗Däbrä Ḥayq Ǝsṭifanos and partly damaged (39 sections are preserved), is presently displayed on the church wall. The compositional principles of the decoration are the same: between two horizontal borders a procession of angels and saints meet in the centre, occupied by the Ancient of Days (Dan 7:9–10, 13–14; Rev 4:4). Thanks to their attributes (crosses and censers), the 24 Heavenly Priests can be identified while six bearded figures holding palm branches and crosses most probably represent the apostles and belong to the Entry into Jerusalem which is not preserved. There are also seven angels armed with swords. The M. is tentatively dated to the turn of the 16th and 17th cent.

An exceptional M. made of wood was photographed in the early 1930s in Addis Abäba at occasion of the ↗*Mäsqäl* festival. It belonged most probably to the church of St. George (Wencker-Wildberg 1935).

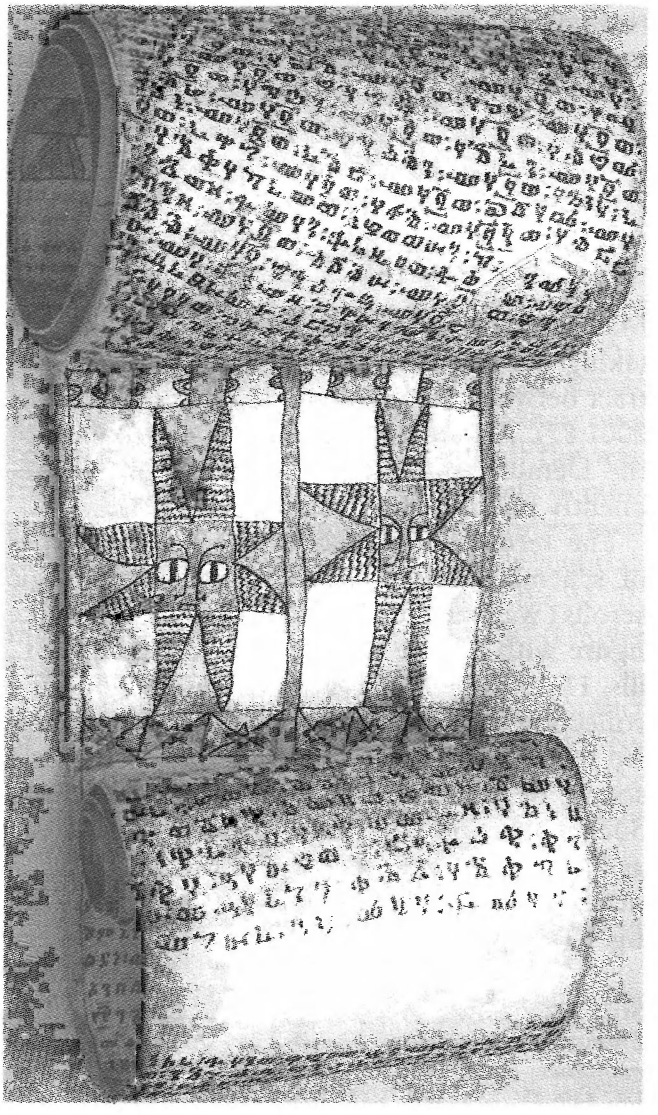
Märbäbtä Sälomon

The M.S. (**መርበብተ ሰሎሞን**, 'Solomon's net') is the designation for a magic text containing a collection of incantations for conjuring up demons and pictures, usually put together in a ↗magic scroll of varying length.

The traditions in which ↗Solomon was considered as the lord and master of demons by reason of his famous knowledge and wisdom were widespread in Judaism and Christendom of the Late Antiquity (cp. the ↗*Zena Ayhud*); their traces appear in the most important Ethiopian text dealing with the biblical King, the ↗*Kəbrä nägäśt*, describing the power of Solomon's wisdom in subduing the demons in order to put them to work for building the Temple (BezKebr ch. 25; Jankowski 1987:295, 360, ill. 212). In the ↗magic literature the role of Solomon is featured in the M.S. and the **መጽሔተ ሰሎሞን** (*Mäṣḥetä Sälomon*, 'The Mirror of Solomon'); the **ማኅተመ ሰሎሞን** (*Maḫtämä Sälomon*, 'The Seal of Solomon') is mentioned in some magic prayers (Burtea 2001:86f.).



The "Seal of Solomon", on a magic scroll written on both sides; 19th/20th cent., St. Petersburg, Peter the Great Museum of Anthropology and Ethnography, no. 4055–10, from Chernetsov 2004, fig. 19

The core of the M.S. constitutes the story of Solomon defeating the king of the ↗demons who is forced to give away information on his magic work (*gäbr*) through which the demons harmed mankind. The title refers most probably to the net the biblical King extended over the demons like over fish in the sea, described in the introduction to some versions of the M.S. (Euringer 1928:93). Another version mentions, instead of the net, the magic names (cp. ↗*Asmat*) of Solomon and supports Löfgren's assumption that the title M.S. refers to the magic formula used by Solomon to make inoffensive the demons, **ሎፍሐም፡ መሐፍሎን፡ ንምሎስ፡ ሰሎሞን** (*lofḥam mäḥaflon nəmlos Sälomon*). The magic properties of these four words are underlined by the fact that, if one would take into consideration only the consonants, they can be read in both di-

rections and in consequence can be put together in a magic square (cp. Löfgren 1962:117):

ሰ	ሎ	ሞ	ን
ሎ	ፍ	ሐ	ሞ
ሞ	ሐ	ፍ	ሎ
ን	ሞ	ሎ	ሰ

Magic squares are used as additions to magic texts taking the role of a seal put on a kind of contract between Solomon and the demons (Burtea 2001:87). An amulet entitled "The Drowner of the Demons and the Net of Solomon" is frequently published in Ethiopia (1997/98).

The term M.S. is also used for a few types of schematic image found in Ethiopian magic scrolls (Wagner 1967:725 and ills. 9-10; cross-like figure with a "face" in the centre, s. ibid. 725f., ills. 11-13; fig.). M.S. is also the designation for a collection of seals and characters which is recopied from generation to generation and serve as a source of models for the makers of the scrolls. Such collections of magic paintings preserved as a book are wide spread and can be found in many monasteries (s. Mercier 1976:235, 1997:42, fig. 33).

Bogdan Burtea

Marcus, Harold Golden

M. (b. 8 April 1936, Worcester MA, d. 15 January 2003, Okemos, Michigan) was a prominent American scholar of Ethiopian and North-east African studies.

M. earned his B.A. from Clark University and his Ph.D. from Boston University in 1964. During his long academic career he held appointments at Michigan State University, Howard University, and Haile Selassie I University (later ↗Addis Ababa University) and visiting appointments at Osaka Gaidai University and the University of Khartoum.

From his position of 35 years as Professor of History and African Studies at Michigan State University M. was the founding editor of the journal *Northeast African Studies* (*NEASt*) and of *H-Africa*, the pioneering internet site for African studies. During the period of the ↗Provisional Military Administrative Council M. played a decisive role in keeping Ethiopian studies alive in the ↗United States. He organized several conferences on Northeast African studies and ↗Ethiopian studies in Michigan; in 1993 he convened the 12th ↗International Conference of Ethiopian Studies and edited its proceedings (PICES 12).

M. is known for his biographies of *aṣe* ↗Mənilək II (*The Life and Times of Emperor Menilek II of Ethiopia*, 1975) and *aṣe* ↗Ḫaylä Śəllase (*Haile Sellassie I: The Formative Years, 1892–1936*, 1987). He was also author of several other monographs, including *A History of Ethiopia* (1994) and *Ethiopia, Great Britain, and the United States 1941–1974* (1983). Shortly before his death, he completed the final manuscript of

A Man Out of Time: the Political Biography of Haile Sellassie I, 1892–1975.

James McCann

Marda-Pass

The M.-P. is located 147 km east-south-east of ↗Dərre Dawa, and 11 km west of ↗Ğiğğiga. The pass, which rises to an elevation of 2,000 m A.S.L. (Guida 438), was of strategic importance during the Ethiopian liberation campaign of 1941. British forces – sweeping northwards from Kenya via Italian Somaliland, and supported by others which had just landed at Berbera in British Somaliland – captured the Ogaden settlement of Ğiğğiga on 17 March 1941. Their objective was to advance on Harär and Addis Abäba. However, the troops were held up at the M.-P., the first defended position they encountered that they could not outflank; it was the only route through the hills that the British military vehicles could take.

Resistance at the boulder-strewn pass was based on six hills, named by the British from left to right as: Saddle Hill, Observation Hill, Marda's Left Breast, Marda's Right Breast, Camel Saddle and, centre rear, Marda's Behind (s. Orpen 1981:231). Realising their predicament, the British decided on a powerful frontal attack, like the one they had launched at Kärän, on the northern front, five weeks earlier (↗Kärän, battle of). They chose to attack at lunch time on 21 March 1941, whilst the Italians were either hungry or eating. The British force – composed mainly of Nigerian infantry and supported by South African artillery and aircraft – had the advantage because the enemy, long isolated from their own country, had been forced to retreat all the way from Jubaland, and were by then largely demoralized. They fought hard, however, throughout the afternoon, but were defeated after nightfall when many deserted. With the fall of the M.-P., the British advance "seemed irresistible" (Glover 1987:133).

In another war, the Ethio-Somalian conflict of 1977–78, the M.-P. again played a role. By September 1977 the M.-P. was controlled by the Somali army. When the Ethiopia-Soviet-Cuban troops started their counteroffensive in early 1978, they by-passed the M.-P. and then could re-capture Ğiğğiga, which was a turning-point in the war (Bereket Habte Selassie 1980:120ff.).

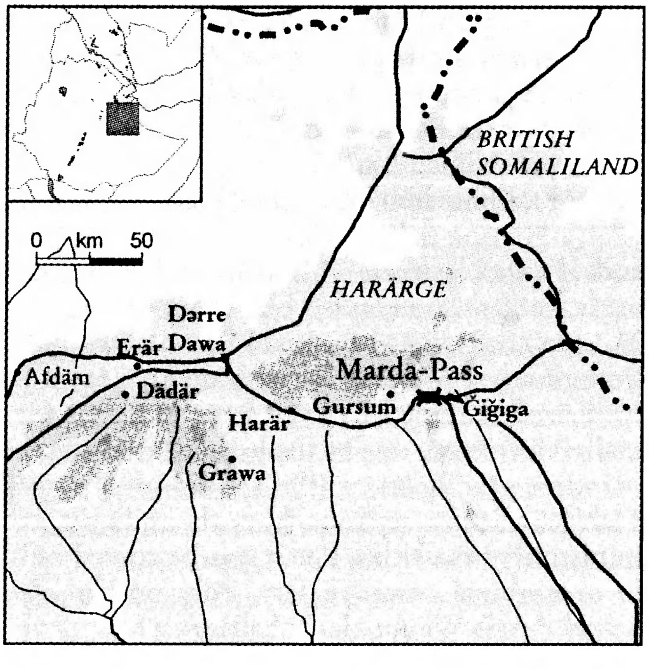
Richard Pankhurst



Mardassaa Ğootee

Fitawrari M.Ğ. (b. 1893, Gidaamii, d. 1929, Ankobär) was the son of *mooti* Didima of Leeqaa (later *däğğazmač* ↗Ğootee Tulluu) and thus the grandson of *mooti* Tulluu Gudda of Qälləm. He was brought to Addis Abäba together with his brothers by *ras* ↗Gobäna and went to the same class at Mənilək II Secondary School as *däğğazmač* Täfäri Makʷännən (later *aṣe* ↗Ḫaylä Səllase I) and *ləğ* ↗Iyasu Mikaʾel.

When his father was imprisoned, M.Ğ. and Ğootee's brother *fitawrari* Amaya Tulluu, then Governor of Sayyoo *awrağğa* (capital ↗Dambi Dolloo), went to Sudan hoping for the intercession of the British government in Khartoum in Ğootee's case. Tradition has it that after three

years M.Ǧ. went to London and returned with a letter from King George (Terrefe Woldetsadik 1968:84f.). He was briefly imprisoned for refusing to hand the letter to the *əndärase ras* ↗Täsämma Nadäw and not directly to Mənilək. Ǧootee was released, though it is not clear whether immediately or only after Mənilək's death the same year.

The tension between M.Ǧ. and Täfäri had started already during school-time when, according to tradition, M.Ǧ. once hurt Täfäri during a game of ↗*gugs* at Ǧan Meda. The animosity increased after the fall of *ləǧ* Iyasu in 1916. Ǧootee, Iyasu's father-in-law, publicly criticized *ətege* Zawditu's ascension to the throne and *ras* Täfäri's rise to power. M.Ǧ. in his turn openly disapproved of the (in his view, false) accusations that Iyasu had converted to Islam. Eventually, M.Ǧ. headed an open rebellion forcing *ras* Täfäri to dismiss the twelve ministers he had appointed. He also blackmailed the Metropolitan by threatening his life to release the rebels from the anathema.

When M.Ǧ. was appointed governor of his father's realm in western Wälläga, he withheld the payment of taxes claiming that *ras* Bərru Mənilək, who had been ruling Qälləm since his father's incarceration, had so impoverished the land that people were not able to pay.

Finally in 1920, M.Ǧ. claimed a freedom for a slave in *ras* Täfäri's court. When the plea was refused, M.Ǧ. threatened to report the matter to the ↗League of Nations which made the abolition of ↗slavery a condition of accepting Ethiopian membership. For this "act of treason" – or, according to other sources, due to the accusations made up by Ǧootee's enemies that M.Ǧ. had been importing ↗fire-arms from Sudan (Terrefe Woldetsadik 1968:85), M.Ǧ. was arrested and imprisoned in Ankobär where he stayed until his death. Because he collapsed after ingesting ↗*koso*, which had been sent to him from Addis Abäba, rumours suggested that he was poisoned. M.Ǧ. was still in chains even after he passed away, and prison officials only dared to open them by the order of *ras* Täfäri.

Märəd azmač

M.a. (መርድ፡ አዝማች, also *märᵓəd/märᶜəd azmač*, old: መርድ፡ አዝማቲ, *märəd azmati*) is an old Ethiopian title of the rulers of ↗Šäwa. Amh. ↗*azmač* (lit. 'the one who leads a raid, military expedition') appears in a few of the military titles. Differently from the military titles like *däğğazmač*, *grazmač* and *qäññazmač*, the title M.a. appeared much later. Formerly, the governor of the province of Šäwa had the title ↗*ṣäḥafe lam*. The first Šäwan ruler of the local dynasty (cp. *abeto* ↗Yaᶜəqob) bearing this title seems to have been Səbəste (↗Səbəstyanos). Shortly after the death of his father *abeto* ↗Nägaśi Krəstos, probably in 1703, he proclaimed that he bestowed the title upon himself by his own authority (BTafA 505f.; AWTarik 40). The title was inherited by Səbəste's son ↗Abbəyye who defeated, reportedly, the generals of *aṣe* ↗Iyasu II dispatched to subdue him (this episode is not reported in the royal chronicles; s. EgeClass 25; BTafA 430f.; AWTarik 41f.). Then, the title of the Šäwan lords – and their hereditary right to rule – was recognized by the monarch. In addition, there is at least one tradition reporting that it was Abbəyye to receive the title of M. from Iyasu II (CecZeila I, 239).

The word *märəd* in M.a. is an Amharization of the Gəᶜəz *märᶜəd*, 'terrible, terrifying', and is known also as a personal ↗name. Originally, the title M.a. referred to the military prowess of the Šäwan rulers, constantly preoccupied with the fighting against the ↗Oromo. Cerulli (1941:16) assumes that Girāmgazᵓi, the name of a 13th-cent. Šäwan *sulṭān* from the ↗Maḫzūmī dynasty ("terrificus dominus"), may be an early equivalent and the historic parallel to M.a. However, there seems to be no mentions of the title in the sources referring to the period prior to the early 18th cent.

Less than one century after Abbəyye, ↗Wäsän Sägäd proclaimed himself ↗*ras* and strictly prohibited calling him M.a. (AWTarik 47; BTafA 526f.). His son Śahlä Śəllase styled himself ↗*ras* and ↗*nəguś*, yet *aṣe* ↗Tewodros II appointed Śahlä Śəllase's son Ḫaylä Mikaᵓel with the title of M.a., in an attempt to control Šäwa. During the time of *aṣe* ↗Mənilək II (who doesn't seem to have used the title M.a.) and later, M.a. was formally elevated to one of the highest titles for the *mäsafənt-*↗aristocracy (the second after *nəguś*, MahZekr 641f.), separate from the military, administrative etc. titles, but it was bestowed only in exceptional cases (in fact, only on the *alga wäraš* ↗Asfa Wäsän Ḫaylä Śəllase).

Denis Nosnitsin

Märəd Ḫaylu

Ras M.Ḫ. (መርድ፡ ኃይሉ; b. 1772, d. 20 July 1799) was the son of *ras* ↗Ḫaylu Yosedeq of Goğğam (by Məskäb), and, through him, grandson of ↗Wälättä Rufaʾel and great-grandson of Empress *ətege* ↗Bərhan Mogäsa (Məntəwwab). He had two brothers, Dənqitu and Trengo, and one son, Gʷalu, from his wife *wäyzäro* Ḫirut (CRNuov 368).

M.Ḫ.'s career was brief, but significant, and lasted throughout the 1790s; he died at the age of 27. He succeeded his father as ruler of Goğğam in either June or early July 1795, and in May 1796 he placed a son of *aṣe* ↗Täklä Haymanot II on the throne with the regnal name ↗Sälomon II. Sälomon, in turn, appointed M.Ḫ. ↗*ras* and ↗*bitwäddäd*. In the early months of 1798, however, M.Ḫ. deposed Sälomon and restored ↗Täklä Giyorgis I to the throne. M.Ḫ. died in battle at Wägära, and was buried in the tomb of his "mother", Məntəwwab, at ↗Qʷəsqʷam, Gondär.

Donald Crummey

Märəd Mängäša

Major General M.M. (መርድ፡ መንገሻ; b. 1912, d. 1966) was a Šäwan-Goğğami aristocrat, distantly related to Emperor ↗Ḫaylä Śəllase I's family. During the occupation of Ethiopia (1936–41), M.M. fought against the Italians with ᶜAbiy Abbäbä (1918–74). After the Liberation, he became aide-de-camp to the Emperor (1942–47). During 1948–56, M.M. served as Commander of the Army's 2nd Division. After a tour as governor of ↗Bägemdər (1956–57), he returned to the military as Deputy Minister of Defence (1957–59). In 1959 M.M. became Army Chief of Staff, a position that enabled him to play a significant role in suppressing the unsuccessful ↗Coup d'état of 1960 against Ḫaylä Śəllase. The Coup plotters sought to arrest M.M. and Brigadier General Asfa Ayena, Deputy Chief of Staff of the Air Force, but they eluded capture and established a command post at the 1st Army Division headquarters for the forces loyal to the Emperor. M.M. also reaffirmed the loyalty of the Army and Air Force to Ḫaylä Śəllase, who subsequently named him Minister of Defence (1961), a position he held until his death.

Thomas P. Ofcansky

Marəyye Gugsa

Ras M.G. (ማርዬ፡ ጉግሳ; d. 1831) was the son, and a successor, of *ras* ↗Gugsa Märsa of the ↗Yäğğu Wärräsek dynasty. His brother, ↗Yəmam, preceded him in office.

M.G. was initially appointed to rule Goğğam, but his violent and oppressive nature led to his removal (CRNuov 367). Yəmam appointed M.G. to rule the lands of *däğğazmač* ↗Maru; however, his rule was marked by violence. When Yəmam died, January 1828, M.G. was elected to succeed him. His reign was characterized by military campaigns, which culminated in the battle of Däbrä ᶜAbbay, February 1831, in which his principal foe was *däğğazmač* ↗Säbagadis Wäldu of Təgray. M. died in battle (CRNuov 376).

Margherita, lake ↗Abbayya

Märḥa ᶜəwwur

M.ᶜə. (መርሐ፡ ዕዉር, 'Guide of the Blind One') is one of the titles frequently used for the lengthy collected treatises also known as the ↗*Baḥrä ḥassab* and offering instructions for calendaric calculations on the basis of the Ethiopian ↗computus, predominantly to define dates of moveable ↗feasts of the Ethiopian Orthodox Church.

Specifically, since the end of the 19th cent., M.ᶜə. became the title primarily associated with the shorter text in Amharic, most probably composed in 1896 by *däbtära* ↗Kəflä Giyorgis, published the same year, without translation, by Ignazio ↗Guidi. At least one later copy of the

Amharic M.ᶜə. seems to exist in a manuscript preserved in ↗Däbrä Maryam at Lake Ṭana.

The Amharic M.ᶜə. is a text of ten chapters, in which the author assembled what he found of interest in the computus and in biblical chronology, in order to make accessible to a wider public what was traditionally only known to the *mämhəran* and transferred through oral tradition. Kəflä Giyorgis ascribes the original authorship of the text to the Patriarch Demetrius, claiming that his Coptic treatise was translated into Gəᶜəz, whence he translated it into Amharic; it seems, however, that the text published by Guidi is a relatively free compilation based on the *Baḥrä ḥassab* tradition.

Another peculiar use of the term M.ᶜə. may be to distinguish between the ecclesiastic computus for moveable feasts called *Baḥrä ḥassab* and a simple calendar called M.ᶜə. (Mauro da Leonessa 1934:55f.); this distinction is, however, not strictly followed, and the two terms in these contexts are usually used interchangeably.

↗Calendars

Märḥa Krəstos

M.K. (መርሐ፡ ክርስቶስ, b. ca. 1408, d. 19 January 1497 [24 *Ṭərr* 1489 A.M.]) was the ninth abbot (cp. ↗*əṣṣäge*) of ↗Däbrä Libanos of Šäwa. According to his Acts (a valuable early 16th-cent. source, ed. Kur 1972), he was born in ᶜƎnaräqan (and baptized Yəmrəḥannä Krəstos) in the district of ↗Wäğ, to Ḫaylä Krəstos and Bärbara, on 13 *Näḥase* (the feast of Däbrä Tabor). His parents "bequeathed" him to St. ↗Mary, but did not recall their promise until the child reminded them. He was entrusted as disciple to the priest Tomas (a spiritual son of the son of ↗Tewodros, the fifth abbot of Däbrä Libanos), consecrated deacon by metropolitan *abunä* ↗Bärtälomewos and ordained priest by *abunä* ↗Gäbrəʾel. Against the will of his family, he left the worldly life and came to Däbrä Libanos of Šäwa where he received the monastic habit (and name M.K.) from ↗Yoḥannəs Käma. In the monastery, M.K. distinguished himself and was appointed *liqä ardəʾət* ('head of the novices'). Probably several years after the death of abbot ↗Ǝndrəyas in detention, M.K. was appointed head of Däbrä Libanos (17 August 1463 [24 *Näḥase* 1489 A.D.], s. Kur 1972: vi) and given significant prerogatives (including the office of ↗*nəburä əd*) by *aṣe* ↗Zärʾa Yaᶜəqob himself (Kur 1972:42ff., 49).

The Acts report about M.K.'s activities in ↗Mugär, destruction of "pagan cults" and a clash with a certain Ǝsṭifanos (unlikely the 15th-cent. leader of the ↗Stephanites) and his followers at Däbrä Sänkwaᶜ (Kur 1972:52ff.). During the tenure of M.K., the position of the monastery improved. With the permission of Zärʾa Yaᶜəqob, M.K. translated to Däbrä Libanos the relics of Ǝndrəyas (Kur 1972:44f.). Under *aṣe* ↗Bäʾədä Maryam, the translation of *abunä* ↗Filəppos, the third abbot, took place (ibid. 90, 91f.). These "relocations" bear witness to the increasing importance of Däbrä Libanos and the favour of the monarch.

M.K. remained very loyal to Bäʾədä Maryam. In ca. 1471, he accompanied the monarch in a dangerous campaign agains ↗Dobaʾa, where, according to the Acts, he worked a miracle in the decisive battle (Kur 1972:63f.; cp. PerrZarY 133). The monarch and the abbot expressed mutual sympathy also at other occassions (PerrZarY 147, 178f., 181f.). During the vacancy of the metropolitan see of Ethiopia after the death of *abunä* Gäbrəʾel (1458), the majority of the ecclesiastics convoked by Bäʾədä Maryam at a council in 1477 opted for instituting an Ethiopian metropolitan (cp. ↗*Pappas*) and, thus, for the independence from the ↗Coptic Church. The Emperor, however, being supported by M.K.'s veto, opted for the metropolitan of Alexandria to maintain the Apostolic Succession (Kur 1972:83–86).

Upon his ascension to the throne, *aṣe* Ǝskəndər, together with the new metropolitan(s) *abba* ↗Yəsḥaq and *abba* ↗Marqos, visited Däbrä Libanos and clearly acknowledged M.K. as head "of all the churches in Ethiopia" (Kur 1972:88f.; cp. Proverbio – Fiaccadori 2004:680f.). The rela-

tionship between M.K. and Ǝskəndər remained good, and the latter continued the practice of placing new monasteries and churches under the administration of Däbrä Libanos (DerDom 340f.). It was possibly during M.K.'s tenure that the translation of *abunä* ↗Täklä Haymanot's relics "in golden sarcophagus" was performed by *aṣe* ↗Naᶜod (Kur 1972:90; cp. Nosnitsin 2003:144 n. 27). Naᶜod is reported to have bitterly mourned the death of M.K. (Kur 1972:114), and he established M.K.'s *täzkar* as that of *abunä* ↗Täklä Haymanot.

Written under *əṣṣäge* Ṗeṭros, soon after the death of M.K., his Acts and Miracles fit well into the literary tradition of Däbrä Libanos's ↗hagiography, and are represented so far by valuable ms. Cerulli Etiopico 247, fols. 55r–172v (Cerulli 2004:193f., no. 247) and ms. of Schøyen Collection, fols. 63a–176b (Mercier 2000:64f.), the latter apparently a rare remnant the monastery's library before the Muslim wars of the 16th cent.

Märḥabete

M. (መርሐቤቴ) is a region in north-eastern ↗Šäwa. M. proper (or Kora, consisting of Lay Bet and Tačč Bet) is the region between the ↗Ğämma and the ↗Wänčət rivers (for location s. Mäkanä Sälam). The name M. is also used to refer to a larger area which includes territories north of the Wänčət.

While most of Šäwa was conquered by the ↗Oromo in the 16th cent., Christian communities remained quite strong both in M. proper and in ↗Midda. There were persistent links with the empire, and the Christian regeneration took place well before the better-known case of the dynasty of ↗Nägaśi Krəstos Wärädä Qal from ↗Mänz. *Aṣe* ↗Susənyos campaigned in the area and appointed a governor about 1605 (BTafA 291). ↗Iyasu I marched through M. in 1696. By then most of M. proper had already been reconquered, a fact well documented by the pattern of church foundation (Stitz 1975:13). It is likely that this reconquest was largely undertaken by local chiefs, but the history of the M. dynasty is little known. Several sources refer to the appointment of *ras* ↗Dəmeṭros as governor in this region about 1700. In other contexts, Wäldu appears as the key figure in the M. dynasty.

The success of the Nägaśi dynasty in the early 18th cent. soon eclipsed that of M. Early in his reign, ↗Asfa Wäsän conquered all the independent Christian principalities in northern Šäwa, including M. in 1777. For the next hundred years, there was a special link between M. and the Šäwan dynasty. ↗Wäsän Sägäd was *abägaz* of M. under his father, and he continued the expansion into Midda and Wärrämo (BTafA 527). Later his eldest son, Bäkruye, held the same position. When *aṣe* ↗Tewodros II invaded Šäwa in 1855, Säyfu Śəllase was *abägaz* of M. (CecZeila vol. 1, 252), and M. later became a principal base for his resistance against Tewodros.

Soon after the future *aṣe* ↗Mənilək II escaped to Šäwa, he campaigned in M. and conquered the stronghold of Tamo from the soldiers of Tewodros (GueCopMen 117). The natural fortresses of Tamo and Kollaš often played a part in Šäwan politics in the succeeding years. However, after ↗Darge Śahlä Śəllase received the governorship of M. in 1877 (GueCopMen 139), the area was brought under firm control. *Ras* Darge continued the policy of expansion and conquered ↗Därra.

M. remained as a rather stable administrative unit for most of the 20th cent. In the late 1960s, it was an *awraǧǧa* subdivided into three *wärädas*,Kora (M. proper), Midda and Därra. Under the *Därg*, Kora was divided into Lay Bet and Tačč Bet, Midda was divided into Midda and Biṭa Bilo, while Därra was divided into Därra and Wärämo Waǧətu. In the 1991 administrative reforms, Biṭa Bilo was merged with Ğämma *wäräda* in South Wällo, while Därra was transferred to Oromiyaa *kəlləl*.

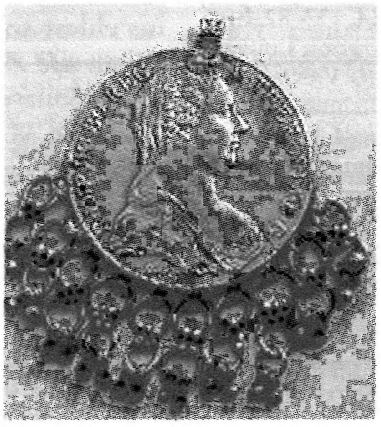
Maria Theresa Thaler

The M. (Amh. ሴት፡ ብር *set bərr*, or አንስት፡ ብር *anəst bərr*, 'woman['s] silver', ማሪ፡ ቴሬዛ፡ ብር *mari tereza bərr*) is a silver thaler bearing the effigy of Empress Maria Theresa of Austria. It was coined starting from 1741, standardized in 1750/51 (from 1772/73 bearing the effigy known from all later coins), and used as the legal currency in Ethiopia until 1945, when it was demonetized. Until 5 September 1947 it was still possible to exchange it in banks. More than one quarter of the world-wide production of M. was exported to Ethiopia (most of this after 1935).

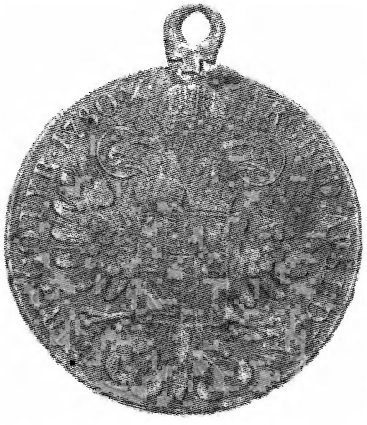
The technical characteristics of the M. are the main reason for its success with Arab merchants starting from the 18th cent. They first introduced it in Ethiopia in the second half of the 18th cent. (PankEcon 468); the traveller ↗Niebuhr reports its use at Red Sea ports already in 1762 (Peetz – Raudnitz 1998:93, 96). The M. came into wider circulation, however, only in the course of the 19th cent. In the mid-19th cent. it was the dominating coin in the Red Sea, known as the *riyāl kabīr* (von Neimans 1857:436). Its weight (28,06 gr.) and fineness (83,3 %), stability, the excellent alloy, the resistance to wear and the complexity of the imprint guaranteed the authenticity of the coin.

After the death of the Austrian Empress in 1780, minting of the coins bearing her effigy and the date of 1780 was maintained only for export, mainly into the Near East. Therefore it was named *Levantiner* (from Levante, i.e. Near East). The obverse shows the generous bust of the Empress, her head covered with a diadem and a transparent widow's veil; the reverse side, the two-headed eagle of the House of Habsbourg bearing the arms of Hungary, Bohemia, Burgundy and Austria.

Struck first in Günzburg, then in various other Habsburgian mints, the M. were traded via Augsburg, Livorno, Genoa, Trieste and Marseille to the ↗Middle East and Africa. A reason why the M. was accepted in Ethiopia, was that it was "minted abroad", as *aṣe* ↗Yoḥannəs IV mentioned in a letter of 1885/86 after he had sent 37,000 M. to fund the Ethiopian monastery in Jerusalem; he also underlined that it was the only currency accepted in Ethiopia (BTafY 182f.). The origin from Austria was understood as a guarantee for stability and a prerequisite that it could be used in international commerce. It was because of this that the monarch showed surprise when he learnt that the M. considerably lost value when used abroad (ibid.). The British ↗Napier expedition (1867–68) and Italian military expeditions (↗Italian war 1895–96) in Ethiopia were decisively enhancing the massive import of the M. to Ethiopia. This together with the fall of the world market price of silver caused a substantial depreciation at the end of the 19th cent. Traded between 4.85 and 5 Fr in 1890, it fell to 2.60 as observed by the French traveller ↗Duchesne-Fournet in 1901. By the end of the 19th cent. the M. had become the only dominating currency even in remote regions of Ethiopia, in some regions replacing other currencies (e.g., in Harär the M. was called "piastre", as it supplanted the Egyptian currency, s. Schindler 1913:48); the newly introduced Mənilək thaler or ↗*bərr* (Amh. lit. 'silver', *yäwänd bərr*, 'man's silver') of 1894, modelled on the M., could not establish itself in local trade (↗Currency: Modern currency).



Maria Theresa Thaler with suspension loop (as coins were worn on necklaces) and silver decoration; courtesy of the author



Maria Theresa Thaler, reverse; courtesy of Wolfgang Hahn

The small coins of the M. were not introduced to Ethiopia. This opened an opportunity to the new small coins of the Mənilək thaler, which were minted from 1894 to 1936, to take their place in the petty trade. Later in the 1930s *aṣe* Ḫaylä Śəllase I issued small nickel coins with his effigy, which were used as small coins of the M., which remained the official currency of Ethiopia. Also the newly introduced banknotes, starting from 1915, referred to the M. (Hahn 2007a:146).

The M. contributed to a considerable change in the Ethiopian traditional economy. Saving had virtually been impossible

with the former economic system (cp. ↗*Amole*); the M., however, allowed saving, thus wealth accumulation (Pankhurst 1979–80). To be accepted by merchants, the M. had to be rather new and the points of the diadem had to be clearly seen (if one was missing, the coin was depreciated or even not accepted). A certain coin with a variant in the veil, perceived as defective by Ethiopians, was called, according to d'Abbadie (s. Pankhurst 1970:80), *maṣäḍo*.

In Eritrea, Italy unsuccessfully attempted to introduce the ↗Tallero Eritreo in 1890, which was supposed to replace the M. and modelled on it (Hans 1950:29ff.). After World War I, however, Italy was finally successful in introducing the Lira as the dominating currency in her colony (in around 1922, s. Hans 1950:32). In Italian Somaliland Italy tried to replace the M. by an Italian Rupee in 1910, but only in 1925 the Italian currency system effectively replaced the M. there (Hans 1950:32). Trade between the colonies and Ethiopia, however, was still quasi-exclusively based on the M.

On 9 July 1935, in an agreement with Austria Italy gained the monopoly concession of minting the M. in Rome. Having become an instrument of the East African conquest by ↗Mussolini, the M. was soon abusively minted in Paris, London and Brussels in order to break the Italian monopoly (Flandrin 1997:206-09). England minted them also, for strategic purposes, in Bombay.

In 1936 the Lira was introduced by the Italians as a second currency in Ethiopia (July 1936: 1 M. = 5 Lire, November 1936: 1 M. = 8.5 Lire, March 1937: 1 M. = 10.5 Lire, July 1937: 13.5 Lire; s. Hans 1950:36). In March 1938 Italy demonetized the M., the Eastafrican Lira becoming the only official currency in ↗Africa Orientale Italiana. This measure, however, was largely a failure. M. were smuggled into Ethiopia in large quantities (Hans 1950:38), staying the only currency accepted by the population. It was then also used in the framework of Ethiopian resistance against the occupant. By June 1940, when Italy entered into the war, the M. had again become the main currency of Ethiopia (June 1940: 1 M. = up to 30 Lire, s. Hans 1950:38f.). The British Military Administration of Ethiopia, established in April 1941 after Italy's defeat, therefore decided to accept the M. as an Ethiopian currency, now used parallelly to the East African Shilling. This was the case also still after Great Britain recognized Ethiopia as a state again in January 1942. One M. then corresponded to 2 ½ East African Shilling (Hans 1950:43).

The Shilling, however, gained predominance over the M., e.g. the Bank of Ethiopia using exclusively the Shilling. This was the basis for the monetary reform of 1945, when the new Ethiopian Dollar (called *bərr*, 'silver', after the M.) was introduced by the Proclamation dated 29 May 1945, substituting all other currencies. From now on the M. could be purchased by the State Bank on the basis of its silver value only, but any contracts and debts based on the M. currency were to be converted into the Ethiopian Dollar 1:1 (one Ethiopian Dollar corresponded to two East African Shilling). The renunciation of the silver currency was a condition for Ethiopia becoming a signatory of the 1944 International Monetary Convention of Bretton Woods (Hans 1950:43f.). The first Ethiopian silver cents (*santim*) were produced in Philadelphia out of melted M. The term "Thaler" was rendered "dollar" in English, which is the reason why the Ethiopian currency *bərr* was also called "Ethiopian Dollar" in the time of Ḫaylä Śəllase I.

Beside trading purposes, the M. was mainly used for making silver ↗jewellery. The M. was the "silver mine" of Ethiopians, owing to the lack of silver mines in Ethiopia itself. It is safe to assume that it was only with the rise of the M. that silver jewellery became wide spread in Ethiopia. Many observers noted that the coins were melted down in the crucible of silversmiths alloying the silver with nickel and copper to obtain a larger quantity of metal; a way for them to be paid for their own work. The fineness of silver ingots is subsequently very variable depending on court, or self-employed silversmiths.

The coin itself was and is still used as jewellery: with a suspension loop and sometimes mounted with small bells, it is worn by Muslim and Christian women as a pendant. As such, the diadem and the nine pearl brooch have to be in relief. This was also a means of saving, as it could easily be re-converted into money. M. coins are also cut in the shape of a cross (*yäləbb mäsqäl*, 'cross of the heart') to be hung on a ↗*matäb* with a earpick and a ring (*qälläbät*; cp. Hahn 2007).

The M. was also used as a unit of weight (Measurements, s. EAE vol. 5)). The double eagle motif on the coin seems to have been taken over into local iconography – it appeared in Ethiopian church painting in the 19th cent. (Rohlfs 1883:352).

Catherine Vanderhaeghe – Red.

Märigeta

M. (መሪጌታ, also *märi geta*, from Amh. *märi* 'leader' and *geta* 'master', pl. *märigetoccˇ*) is an office and title within the ↗Ethiopian Orthodox Täwaḥədo Church given to a learned ↗*däbtära*. The office can only be claimed by someone who has completed a full course of traditional ↗education. The M. is the leading church cantor and in a way the conductor, as he assigns who should present a ↗*qəne* piece, and decides which are the ↗hymns to sing, to what extent, and which mode to use in that particular singing on a particular occasion.

The M. usually runs the ↗*qəne bet* or ↗*zema bet* of his own at the ↗*däbr* where he serves or at his own living quarters. He teaches liturgical music and singing and dancing modes (↗*Aqʷaqʷam*). He also administers the ↗*gäṭär* chapels. For smaller churches M. is often identical with ↗*aläqa*. In larger churches, the office of M. is conferred by an *aläqa* to the one who is qualified.

The Gəᶜəz term መራሒ *märaḥi* for the head of the liturgical choir (along with ተመራሒ *tämäraḥi*, the singer following the lead, s. HabUff 380) has been long in use. It appears, for example, in its plural form *märaḥəyan* in the chronicle of ↗Zärᵓa Yaᶜəqob (DillmZarY 20): the church choir leaders were among the ecclesiastics appointed by the newly crowned Emperor in the church of ↗Aksum Ṣəyon.

Historically, the choir would be subdivided in the choir of the right and the choir of the left (of the *qəne maḫlet*), in accordance with the general subdivision of the court (↗*Kätäma*), headed by the *gra geta* and *qäññ geta*, respectively, who assist the *liqä märaḥt* (↗*Liq*). The two former terms are attested at least since the 15th-cent., e.g., in a document describing the court order of Zärᵓa Yaᶜəqob (Kropp 2005b:133 and n. 58). Several 16th-cent. documents from the reign of Ləbnä Dəngəl (CRAxum nos. 30f., 35, 41–45) and Śärṣä Dəngəl (CRAxum nos. 54, 58), included with the so-called *Mäṣḥafä ↗Aksum*, contain numerous references to the church officials with the functions of *gra geta* and *qäññ geta* (sometimes mentioned in the more ancient forms *yägra geta* and *zäqäññ geta*).

It is not clear when the title *liqä märaḥt* got substituted by M. In any case, a list of ecclesiastics of the Mädḫane ᶜAläm church of ᶜAdwa of the time of ↗Säbagadis (ca. 1820) mentions M. Awsabyos, assisted by *gra geta* Zäwäli and *qäññ geta* Wäldä Mikaᵓel (CRAxum no. 85).

The prominent poet and playwright ↗Yoftahe Nəguśe was a M. (*qäññ geta*).

Evgenia Sokolinskaia

Marinoni, Luigi

Bishop M. (b. 5 February 1882, Clusone, Bergamo, d. 5 August 1970, Milan) was Apostolic Vicar of Eritrea. In 1895 he joined the Seraphic Seminary of the Franciscan ↗Capuchins in Sovere (Bergamo), and in 1897 he entered the Capuchin order at Lovere, assuming the name Fr. Giovanni Grisostomo (Giangrisostomo) da Clusone. After the noviciate, he continued his religious education in the Capuchin house of Cremona, where Camillo Carrara, the future Vicar Apostolic of Eritrea (1911–24), was one of the directors. In 1906, he was ordained priest.

General minister of the Capuchins of the Lombard Province since 1935, on 27 July 1936, M. was nominated titular bishop of Pisita and Apostolic Vicar of Eritrea, and on 7 December he arrived in ↗Asmära with a group of missionaries. From 1937 to 1940, he was active in building churches, schools, missionary outstations and hospitals, and striving to increase the number of missionaries (in 1939, there were 60 Franciscan Friars and 252 nuns, the latter from two different congregations, working in the Vicariate of Eritrea). Most of his efforts were directed towards the Italians. He took some interest in the "meticci", i.e. people of mixed race, as well as, although to a lesser extent, in the indigenous population, especially in the abandoned children issue.

With the outbreak of the war, on 1 April 1941, M. was part of a delegation of the Colonial Government that met with the British General William ↗Platt, 3 km outside Asmära, to negotiate Italian surrender. Although the Catholic mission did not suffer excessive material damages from the war, its activities were severely restricted. M.'s apostolic ministry was limited to Asmära, while the outstations were shut down and the missionaries were restricted to the capital. The situation was rendered even more difficult by rampant banditry (↗*šəfta*), which M. condemned using both the pulpit and diplomatic channels. With the ↗British Military Administration in Eritrea he was respectful, but outspoken. He often confronted ↗Longrigg's military approach, and sought his help to uphold the independence of the Church. He also had a good relationship with Longrigg's successor, Brigadier ↗McCarthy, but also stood against the dismantling of various industries.

In May 1946, M. flew to Italy via Cairo and remained there until 20 September. From 1946 to 1951, he managed to give fresh impetus to the apostolic ministry of the Vicariate. He is said to have contributed to the inclusion of the fundamental principles safeguarding religious freedom into the Eritrean Constitution (22 May 1952; ↗Ethiopian–Eritrean Federation). The work of reviving missionary outstations, especially in the ↗Kunama areas, gathered momentum. M. frequently visited the ↗Gaš-Barka region and spent a considerable amount of energy repairing and building churches and other premises for social and pastoral activities. On 12 August 1961, he resigned from his service as Vicar Apostolic, and was appointed titular archbishop of Amorium; on 15 September he left Eritrea for Milan, where he spent the rest of his life.

Maritime Code

The M.C. of Ethiopia was enacted on 5 May 1960, and came into force on 11 September 1960. It contains a variety of rules pertaining from ↗commercial law regarding the trade across the sea to security law, regulations concerning rights and duties of members of the merchant fleet. Therefore the M.C. has to be seen in connection with the Commercial Code. It was drafted by Jean ↗Escarra, a French law professor and president of the Commission of Reform of the French Commercial Code, who, together with Alfred Jauffret, another French expert, was also the drafter of the Commercial Code.

The Maritime Proclamation No. 137, on which the M.C. was based, was published in the ↗*Nägarit Gazeṭa* of 23 September 1953, thus from the beginning of the ↗Ethiopian-Eritrean Federation. The second preamble to that proclamation describes the necessity of the law by pointing at the importance of the defence of the Empire and the coast including the territorial waters and the

ships. The content of that proclamation was later transferred to the M.C. with a few changes only. The M.C. incorporated virtually no indigenous legal concepts (Aberra Jembere 2000).

The M.C. regulates the following issues: rules with regard to registration, transfers, protective measures, help at seas, international conventions, limitation of liability of ship owners, chartering-transport, marine loans-Marine lien Mortgage, collisions, average-contribution, taxes-dues, and foreign currency. Ships and accessories are declared to be property. Special rules deal with the limitation of state authority: the territorial waters of the state are defined as extending from the extremity of sea-board at maximum annual high tide of the Ethiopian (i.e. Eritrean) continental coast and of the coasts of Ethiopian islands, in parallel line on the entire sea-board, and to an outward distance of twelve nautical miles. Another section deals with the rights to use the territorial waters: the rights to transport persons or goods and the right to engage in fishing towing or salvage within the territorial waters are reserved to Ethiopian merchant ships and vessels and to such foreign ships and vessels as may be accorded these rights for limited periods.

After the secession of Eritrea in 1993, the two ports, ↗ᶜAsäb and ↗Massawa, were taken over by Eritrea so that Ethiopia had no own ports and no own merchant fleet. The fact that Ethiopia has nowadays no coastline and no territorial waters might have resulted in making the M.C. obsolete for Ethiopia.

Märqorewos

According to the account preserved in his ↗*gädl*, the monk M. (ሞርቆሬዎስ; fl. 14th–15th cent.) was the founder of the Eritrean monastery of ↗Däbrä Dəmaḥ, in the Däqqi Täsfa district of the Säraye province, north of ᶜArräza.

Oral and written sources concord that M. was a native of ↗Wämbärta. Several sources see M. as the brother of ↗Absadi of ↗Däbrä Maryam (by the same parents, Tomas and Sälome), probably because both are reported to have received the habit from the hands of ↗Ewosṭatewos of Däbrä Ṣärabi before 1338, when *aṣe* ↗ᶜAmdä Ṣəyon decreed the expulsion of the latter monastic leader from the country. M. should have received his habit in Däbrä Šəmana, a monastery in Ḥənṭalo (↗Anṭalo) or in Səbᶜa (where also ↗Buruk Amlak received habit from Absadi). Possibly M. then accompanied his spiritual father in his journey as far as to ↗Armenia, he then returned and established his own community in Däbrä Dəmaḥ ca. 1340–50.

The main missionary activities of M. as described in his Vita were the conversion of Gize Mədər, near the river Mädbära, and the attempt to spread the Christian faith among the ↗Agäw of the Abärgälle region. After a period of crisis, due to the political and theological clash between the *däqiqä Ewosṭatewos* (↗Ewosṭateans) and the Ethiopian authorities, in the first place the Emperor and the Metropolitan, M.'s monastery started to play an important role as a stronghold of the Christian state under *aṣe* ↗Dawit II. The Emperor should have heard about the saint's fame ca. 1390 and later visited Däbrä Dəmaḥ after a successful campaign against the Egyptian *sulṭān* in ↗Sinnār, richly endowing the monastery with land (↗*Gʷəlt*).

Like ↗Däbrä Bizän, the "fortress" of Ḥamasen controlling the way to the Red Sea, Däbrä Dəmaḥ marked the north-western boundaries, looking at the Eritreo–Sudanese lowlands inhabited by the ↗Beğa, ↗Nara and ↗Kunama. M. died ca. 1420, after having chosen a certain Gabər Ḫer as his successor.

The *Gädlä Märqorewos* was probably composed in the 17th cent.; the known recension can be tentatively dated back to the time of *aṣe* ↗Yoḥannəs I (1667–82). At least three manuscripts of the Vita are preserved at Däbrä Dəmaḥ. Other manuscripts are believed to exist, however, there is no copy of this rich and important hagiographic document in European libraries. The text edited by Conti Rossini in 1904 is full of lacunae, since the manuscript it depends upon (borrowed from Däbrä Dəmaḥ) was seriously damaged by fire. A new edition of the complete text can be considered an important desideratum in the studies of Gəᶜəz ↗philology.

Märqorewos

Abunä M. (**ማርቆሬዎስ**, or Märqoryos, baptismal name Gäbrä ʾEgziʾabəḥer; b. 8 March 1896, Ṣäᶜada Krəstiyan, Eritrea, d. 4 September 1975, Gobba), a prominent ecclesiastic and bishop, was born in Eritrea to *ato* Wäldä Maryam and *wäyzäro* Wälättä Mädḫən. He completed the first stage of church education (↗*Nəbab bet*) at the monastery of ↗Däbrä Dəmaḥ, and was ordained priest by the metropolitan *abunä* ↗Peṭros. After completing the study of the ↗*zema* and liturgy (↗*Qəddase bet*) at the monastery of ↗Däbrä Abbay he started teaching liturgy at Däbrä Dəmaḥ, while studying the monastic canons and writings (*Mäṣaḥəftä mänäkʷäsat*). He received the monastic habit from the then abbot *mämhər* Aṣmä Giyorgis and continued church education by learning the New Testament commentary (↗*Andəmta*), the *Fətḥa nägäśt*, the patristic literature etc. (↗*Mäṣḥaf bet*) in Bägemdər and Səmen.

M. was in Gondär at the time of the Italian invasion of 1935; reportedly, he was wounded during a bombardment. In 1941, after the Liberation, M. was summoned to Addis Abäba by *əčč̣äge* Gäbrä Giyorgis (later *abunä* ↗Basəlyos) and appointed ↗*liqä kahənat* of the Harär diocese and ↗*aläqa* of the churches of Ṭəmqätä Baḥər Qəddus Mikaʾel and Abunä Täklä Haymanot. After years of active service in the Harär area, he was again summoned to the capital and ordained bishop (↗*Eppisqoppos*) of the Bale diocese on 25 July 1960.

In Bale M. founded many churches, including the Mädḫane ᶜAläm church in ↗Gobba where he also established his headquarters. M. was buried in Gobba Mädḫane ᶜAläm.

Marqos

Abunä M. (**ማርቆስ**, b. Egypt, d. 1529–30, Ethiopia) was a metropolitan of the ↗Ethiopian Orthodox Church during 1520–26, upon the death of *abunä* ↗Yaᶜəqob. M. belonged to a group of Egyptian clerics who arrived in Ethiopia in 1481 with *abunä* ↗Yəsḥaq. The sources about them, and the interlinked role of *abunä* Yaᶜəqob, coadjutor and then successor of Yəsḥaq (d. before 1497), are various and somehow contradictory (for a thorough discussion, with new evidence, cp. Fiaccadori 2004).

↗Alvares only refers to Yaᶜəqob as the extremely old *abun* to whom M. would have immediately succeeded (BeckHuntAlvar 357). Yet, with reference to events of the year 1495, the Vita of ↗Märḥa Krəstos, while designating Yaᶜəqob as "bishop" (↗*Eppisqoppos*), explicitly refers to M. as "metropolitan" (↗*Ṗappas*) on his arrival (Kur 1972:88), and repeats this title when reporting that he was present at the translation of the relics of *abunä* ↗Täklä Haymanot (Kur 1972:90, cp. 104). This piece of information might well reflect the official point of view held by the court of *aṣe* ↗Naᶜod (with whom M. seems to have been in excellent terms). Similarly, according to the Vita of *abunä* ↗ᶜƎzra of ↗Gundä Gunde, M. came next to Yəsḥaq upon the latter's death (Caquot 1961:81f., 88). The two Vitas should rather be compared with (and balanced by) the more authoritative Arabic documents issued by the Alexandrian Patriarch John XIII between 1497 and 1508, where M. is always a simple *usquf*, 'bishop' (Fiaccadori 2004:683ff.) – in which capacity, as an auxiliary metropolitan, he did have the authority to consecrate clergy. In fact, Yəsḥaq was formally succeeded by Yaᶜəqob, and only later by M., who had meanwhile (possibly in 1508, if not already in 1497) become a coadiutor of Yaᶜəqob (ibid. 686ff.).

During Alvares's sojourn in Ethiopia, M. was thus the metropolitan – which provides a terminus for his coming to office. As he was a friend of the Portuguese, he appears throughout the latter's account. Among other things, Alvares credits M. with possession of land in ↗Angot, as well as, strikingly enough for European beholders, with the ↗ordination of 2,537 priests at once (BeckHuntAlvar 235, 349ff., 382). Among those whom M. consecrated during his tenure were *əčč̣äge* ↗ᶜƎnbaqom and the abbot of Gundä

Gunde *abunä* ↗Isayəyyas, in 1497 (Ferenc 1976:245). Alvares claimed that M. was sympathetic to Catholic faith: even more so when "he was alone" (BeckHuntAlvar 349).

M. resided in Ethiopia for almost 50 years and, as a senior cleric familiar with the country and the royal court, played a major role in the political events of his period, including the placing of eleven-year old ↗Ləbnä Dəngəl on the throne following the death of his father Naᶜod (BeckHuntAlvar 243). The Portuguese João ↗Bermudez claimed that M. consecrated him as his successor before dying (Bermudez 1875:1), although the metropolitan did not have the authority to do so. M. was succeeded by ↗Yosab only in 1539.

Steven Kaplan – Gianfranco Fiaccadori

Marqos II

Abunä M. II (ማርቆስ; d. between 1582 and 1588) was a metropolitan of the ↗Ethiopian Orthodox Church. Information concerning him is scarce. It is known that, after *abunä* ↗Yosab's death, *aṣe* ↗Śärṣä Dəngəl asked the Coptic patriarch John XIV to send a new metropolitan. M. was appointed in the eighth year of Śärṣä Dəngəl's reign (1570). According to the latter's chronicle, the arrival of M. in 1576 coincided with the military triumph of the Emperor over ↗Muḥammad b. Naṣīr b. ᶜUṯmān and the ↗Oromo in Wag and Dämbəya (the date is also proved by ms. BN 60, 100, in Chaîne 1925).

M. was included in the manifesto published in 1624 by *aṣe* ↗Susənyos. In it, the Emperor, who had recently converted to Catholicism, leveled a number of accusations against the previous Coptic Metropolitans (M., ↗Krəstodolu I, ↗Peṭros and Səmᶜon), such as having had concubines, stealing other people's property, breaking the commandments, unjustly excommunicating emperors and inciting violence against them.

There is no documentation concerning the precise date of M.'s dismissal. According to later information, Śärṣä Dəngəl stripped M. of his episcopal dignity, confiscated his property and exiled him to the island of ↗Däq, where he eventually died. His successor was Krəstodolu I.

Leonardo Cohen

Marqos III

Abunä M. III (ማርቆስ; d. ca. 1647/48), considered the 96th Coptic metropolitan of Ethiopia (↗*Paṗpas*), was the successor of *abunä* ↗Səmᶜon and the first metropolitan after *aṣe* ↗Susənyos's abdication and the restoration of the Alexandrian faith.

During the short gap between Səmᶜon and M. (1632–35), an impostor named Rəzəqla (from Rizq Allāh, according to BegCron 48f.), tried to seize his chance. He managed to consecrate altars (↗*tabot*) and ordain deacons and priests, before being accused of fraudulence (BassÉt 285; letter of Heyling quoted by Ludolf 1691:554).

M., from the monastery of St. Anthony (Dayr Anbā Anṭūniyūs) was consecrated in Cairo in 1634 by the Coptic Patriarch Matthew III (1631–46) and travelled to Ethiopia in the company of Peter ↗Heyling. M. arrived at the royal court in the fourth year of *aṣe* ↗Fasilädäs's reign and settled in ↗Gondär (DombrChr 198; BassÉt 287; BegCron 51).

There is little information about M.'s activities during the 12–14 years he was in charge. According to the Vita of ↗Wälättä Peṭros, he met the saint as early as 1636, and comforted her, afraid of her own success, sustaining the legitimacy of her vocation. M. also left two legal documents (rare example of charters directly produced by a Coptic metropolitan), the two first land charters of ↗Qoma Fasilädäs. These *waqf* in Arabic are dated 1641/42 and bear M.'s seal. They testify to the foundation of the monastery, its link with the mother monastery of Däbrä Sämuna and the first land donation. They mention neither Fasilädäs nor any Ethiopian ecclesiastical authority, since the Queen Mother ↗Wäld Säᶜala, who had founded the monastery, did not recognize

Fasilädäs's royal authority, nor, presumably, that of the ↗ *əṣṣäge*. The desire to gain the metropolitan's support might have induced her younger son and Fasilädäs's brother *abeto* ↗ Gälawdewos to kill, in 1628, the heads of Däbrä Sämuna, a formerly dynamic centre of Catholicism (s. Almeida in BecRASO VII, 405).

According to the Yemenite ambassador ↗ Ḥasan b. Aḥmad al-Ḥaymī, present in Gondär in 1648–49, shortly before his arrival, *abunä* M., considered too rich and powerful by the royal court and the *əṣṣäge*, had been dismissed and arrested under a pretext; he was subsequently exiled to an island on Lake Ṭana. The trial acts were written in Arabic to inform the Coptic patriarch in Alexandria of the situation. Al-Ḥaymī also reported of the arrest, trial, exile and death of Gälawdewos, indicating that the two cases were interconnected (DonHaySirat 179–83, 187–91). According to a report sent by Torquato Parisiani, a Jesuit present in the Red Sea area from 1645 to 1647, to Alfonso ↗ Mendes, M. disclosed Gälawdewos's plot to Fasilädäs, afraid that the latter's brother could restore the Catholic faith. Mendes, writing from ↗ Goa and relying on Parisiani's report as well as on two letters from Bernardo ↗ Nogueira, his former secretary who had remained in Ethiopia, described with great delight the luxurious and decadent life of M. As this *topos* served well his rhetoric against the Alexandrian faith, the statement cannot be considered trustworthy (cf. Wion 2004:266ff.). In any case, the Jesuits confirmed that both M. and *abeto* Gälawdewos challenged royal power, and were at some point connected. Both were thus arrested and exiled, if not killed, in 1647/48.

Some versions of the "short chronicles" report that in 1650 two metropolitans came from Egypt: one, Yoḥannəs, on the request of *abeto* Gälawdewos, the other, ↗ Mikaʾel, requested by Fasilädäs. The former was not accepted and exiled to Särka, the latter became the next metropolitan.

Anaïs Wion

Marqos IV

Abunä M. IV (ማርቆስ; d. 5 July 1716) arrived in Ethiopia in September 1689 (DombrChr 216, 266). *Aṣe* ↗ Iyasu I sent for him because he was dissatisfied with *abunä* ↗ Sinoda, the metropolitan who served during his father *aṣe* ↗ Yoḥannəs I's reign. The Emperor disapproved of Sinoda's role in the Christological controversies concerning ↗ *Qəbat* (GuiIohan 143f.). While Sinoda himself vouched for M.'s credentials, the Ethiopian court had to wait three years before they received a letter from the Alexandrian Patriarch, Yoḥannəs XVI, that formally deposed Sinoda and confirmed M. as Metropolitan (DombrChr 218; GuiIohan 175). No explanation exists for the extraordinary gap between M.'s initial consecration in Alexandria and Sinoda's eventual deposition.

As Metropolitan, M. partook in the consecration of the church of ↗ Däbrä Bərhan Śəllase, Iyasu's most important foundation in 1694. He supported the decisions of the councils concerned with ↗ Christology, held in 1697, 1699 and 1704, with anathemas against proponents of ↗ *Qəbat* (BassÉt 160, 172; GuiIohan 199f., 214–17).

M. is rarely mentioned in chronicles written after the death of Iyasu. A foundation document of the church of ↗ Ḥamärä Noḫ, the work of *aṣe* ↗ Tewoflos, notes his continued support until his death (BritLib Orient. 508, fol. 278r). M. died at the beginning of *aṣe* ↗ Dawit III's reign and was buried at Ğända in Dämbəya, the burial place of a number of Gondärine metropolitans.

Marqos

Abunä M. (ማርቆስ; b. 3 December 1884, Säsaḥ, Akkälä Guzay, d. 16 November 1960, Dängolo Taḥtay) was the first Eritrean bishop of the ↗Ethiopian Orthodox Täwaḥədo Church (EOTC), and an active protagonist of the political developments of his time. He was the son of *ato* Täsfazgi (Täsfa Ǝgziʾ) and *wäyzäro* Wärqu, and was baptized with the name Gäbrä Amlak at Däqqi Aṭros in ↗Karnäššəm. He received traditional education at ↗Däbrä Kol. He then joined the monastery of ↗Däbrä Bizän, and became monk in 1907. M. was ordained priest by *abunä* ↗Ṗeṭros in ᶜAddi Abun (ᶜAdwa) on 28 June 1919. Upon his return to Däbrä Bizän, M. received the community's permission to return to Däbrä Kol for further studies; whilst he was there he learnt ↗*qəne*. He studied different aspects of liturgy at ↗ᶜAddi K̲ʷala and completed his education at Däbrä ᶜAbbay in Ǝndärta where he obtained the degree of the teacher of the *mäzgäbä qəddase* ('the treasury of liturgy'); he started teaching immediately on his return to Däbrä Bizän.

In 1923 he was elected abbot of Däbrä Gännät, a monastery subordinate to Däbrä Bizän. In 1930, M. accompanied the abbot of Däbrä Bizän, *mämhər* ᶜAmdä Maryam, to the coronation of *aṣe* ↗Ḫaylä Śəllase I. When ᶜAmdä Maryam died suddenly in ↗Addis Abäba, M. succeeded him as the abbot of Däbrä Bizän in 1932.

M.'s tenure was remarkable, as he tried to introduce innovations intended to ease the harshness of monastic life. He installed a coal-operated mill, bought a number of houses for the monastery in Asmära and Mändäfära to create a constant source of income for the community, and often travelled for preaching, particularly to ↗Massawa. In 1933 he travelled to ↗Egypt with a number of candidates for the priesthood, who were ordained as deacons and priests at his request.

On 27 November 1937, when the Italian colonial government in Ethiopia, with the aim of creating an autocephalous Ethiopian Orthodox Church, appointed *abunä* Abrəham Patriarch and nominated six Ethiopian bishops (↗*Ep-pisqoppos*), M. was made bishop of Eritrea and Təgray. The Alexandrian Holy Synod was dismayed by this unprecedented step and invited *abunä* Abrəham to Egypt to explain the situation. He never responded, and on 28 December 1937 the Coptic Holy Synod excommunicated him and his followers declaring the consecrations in Ethiopia null and void without the intervention of the See of Mark. The excommunication was lifted by the Coptic Synod on 26 June 1942.

In the bilateral discussions concerning the status of the EOTC in the aftermath of the Liberation, M. was a vocal advocate for the EOTC's absolute autonomy from the See of Alexandria. In 1945 M. expressed his disapproval of the Coptic Church which had not assisted his flock during the Italian occupation. Because he had accepted the ordination of Abrəham, seen as a puppet of Rodolfo ↗Graziani, many considered M. a collaborator of the Italians. In fact, however, M. always opposed ↗colonialism, both Italian (which expropriated some church land and was otherwise known for its negative attitude towards Orthodox Christians and favouring Muslims) and British (which never restored the EOTC's land possessions).

Together with ↗Tädla Bayru and ↗Dəmeṭros Gäbrä Maryam, M. became a staunch supporter of the ↗*Maḫbär fəqri hagär* party that sought the unity of Eritrea and Ethiopia. This position found expression in his many speeches (e.g, his homily written for the feast of ↗*Ṭəmqät* in 1942). A number of oral and unofficial written sources indicate that M. and his clergy went as far as excommunicating Orthodox Christians who would not adhere to the unification of Eritrea and Ethiopia.

M. was close to the Imperial court and initially had some influence on Ḫaylä Śəllase. He is believed to have convinced the Emperor to free jailed members of the clergy as well as such prominent personalities as *ras* ↗Śəyyum Mängäša. After the election of *abunä* ↗Basəlyos as head of the EOTC in 1951, M.'s power was reduced and he lost his authority over Təgray.

Late in his life, M.'s support for the union with Ethiopia softened to a muted ambiguity. He died in a car accident, and rumours of foul play concerning his death still persist.

Marriage

In Ethiopia, as elsewhere in the world, M. is one of the cornerstones of social organization. Given the multi-ethnic nature of Ethiopian society, it is clear that that marital practices vary widely from group to group and region to region. Marital practices also can be shown to have varied considerably over time, particularly in areas where migration and ↗conversion to Christianity and Islam have taken place. When these objective conditions are coupled with the vast differences that exist with regard to the depth and quality of the available historical and ethnographic material, it becomes clear that it is impossible to provide a comprehensive or exhaustive survey of M. throughout Ethiopia. This article seeks, through a presentation of representative examples, to explore some of the most important themes connected to M.: rules governing acceptable M. (age, exogamy), betrothal, gifts and exchanges, types of M., the M. ceremony itself and divorce.

As a rule, traditional M. is not viewed as an arrangement between two individuals, but rather as a central part of a larger social system of links between families, lineages, villages, clans etc. This is reflected in virtually all aspects of the M. process, which involve not only the bride and groom, but also parents, friends, neighbours and other kin. M. are an important rite of passage. In some cases, the M. is also the rite for the transition of the individual to adulthood (↗Initiation), whilst in other cases additional rites proceed M. and perform this function.

Endogamy and exogamy

In all societies M. is governed by a set of rules that determine what is considered an acceptable match. Three points regarding such rules must be stressed. Firstly, customs enforced by community consensus, rather than legislation predominate in traditional societies. Secondly such rules are treated more seriously in the case of the first M., which are arranged and largely controlled by kinfolk more than subsequent unions. Thirdly, modernization and internal migration, particularly ↗urbanization have weakened the ability of traditional societies to enforce these rules.

Most groups prefer M. within their own ethnic or religious group. In cases of interfaith M. in Ethiopia, it is the woman who usually accepts the religion of her husband. There are rules of exclusion that limit potential spouses to members of certain clans or forbid M. within certain degrees of ↗kinship. Among several groups, including Christian Amhara and Təgrəñña-speakers, Soddo and Betä Ǝsraʾel, M. between persons who have a common ancestor in the sixth generation or less is proscribed as incestuous (ShGurage 31; cp. ↗Genealogy). These restrictions often extend not only to biological kin but also to affines, and such non-biological kin as adopted or foster children, and god-parents. Among the Gurage a man cannot take a wife from his mother's lineage or clan. Nor can he marry his half-sisters, their daughters or half-sisters of either parent. It is, however, common for two brothers to marry two sisters.

Among the Maale a man does not marry a woman from his own clan or from a clan with which he shares a ritual link. He can, however, marry a woman from his mother's clan as long as the woman is not related by kinship to his mother. The Konso prohibit M. within the same patrilineage and it is discouraged with close kin as reckoned through one's mother. A man cannot marry his wife's sister (except in the case of levirate M.), nor can two brothers marry two sisters. A man cannot marry a woman in the same age-grade as his father as she is considered to be like his mother. Among the Oromo M. can only take place between members of different moieties, although the ↗*qaalluu* are exempted from this rule and marry their "sisters", i.e. women of their moiety. Among the Đaasanač it is forbidden to marry within the same moiety, clan, or sub-clan. Among the ↗Somali, M. rarely takes place between those who already live in close daily contact, which requires mutual dependence. However, M. between members of neighbouring groups is common. The ↗ᶜAfar are one of the groups in Ethiopia among which patrilateral cross-cousin M. is the preferred form of M. Even among the ᶜAfar, however, usually only one wife (and here generally the first) is a cousin. Another group, the Saho, practice patrilineal as well as matrilineal cross-cousin M.

The wife of a ↗Konso priest is not allowed to marry again if she is widowed or divorced. Among both Christians and Betä Ǝsraʾel priests are allowed to marry prior to assuming office, but they cannot marry once they have been consecrated. Among the ↗Kəmant, only the priests marry in religious ceremonies, they can remarry if widowed only with permission from the high priest (*wämbär*).

In Christian Ethiopia attempts appear to have been made to arrange M.'s between children

Amhara couple wearing wedding crowns; from Farago 1935:188d

of families of the same social standing: nobles, priests and peasants. At the highest levels of society, M. was often used as a political device to create or strengthen alliances between important ruling families, even when this violated Church law and established custom. Moreover, M. endowments could be used as a device to limit the dispersal of property, particularly land, through inheritance.

Throughout Ethiopia it is common to reject M. with members of despised occupations (s. ↗Marginalized people in EAE vol. 5) such as tanners, smith, potters, slaves etc. Parents can often present lengthy genealogies to prove that their families do not descent from slaves or craftsmen. The Maale do not marry the *meni*, whose men are tanners and whose women are potters, even though these craftsmen speak Maale and follow the same customs. Freeman reports that in the Gamo Highlands *mana* (potters) and *degala* (smith and tanners) follow essentially the same M. rules and rituals as farmers, although both are more likely to marry outside their area. While smiths and tanners will marry each other, they will not marry potters and "most farmers would be horrified at the thought of marrying a Degala" (Freeman 2003:189). This is similar to the reality among the ↗Sidaama, among whom *awačo* (smiths and tanners) marry among themselves, but do not marry either other Sidaama or Hadičo (tanners). The tanners are endogamous, although in towns "if a woman has beauty and money, they do not bother about other things such as her social backgrounds [...] what matters is only love and property" (Haileyesus Seba 2003:232). Urban residents also show a much greater tendency to marry outside their ethnic group.

Betrothal

In traditional Ethiopia M. were rarely contracted on the basis of individual preference or romantic attachments. Parents and other kin play a crucial role in arranging and negotiating M. between their children and kinsfolk.

It is useful to distinguish between the age of betrothal, the age of ceremony, and the age of actual establishment of a marital unit. Among the Oromo, Konso and other groups with age-grade systems the timing of M. is intimately linked to the ↗*gadaa* system. Men are not allowed to marry until they reach the appropriate grade in the cycle.

Among the Đaasanač betrothals are arranged before the girl has reached puberty and may precede the M. by several years. They usually reflect the interest of the parents on both sides and often do not result in M. as these interests may change or the couple themselves may develop other preferences. Among the Đaasanač, most men only marry after the death of their fathers. Among the Betä Ǝsraʾel, betrothals often lasted two or three years.

Gifts

Throughout Ethiopia as elsewhere in the world M. is usually accompanied by the exchange of ↗gifts at various stages in the M. process. Broadly speaking these can be divided between dowry and bridewealth: the former consisting of gifts made by the bride's family to that of the groom, the latter of gifts made by the groom's kin to that of the bride.

Among the Boorana Oromo the prospective groom brings gifts such as tobacco, coffee and *čat* to a girl and her kinsmen for an extended period of months and even years. Bridewealth payments of cattle are, however, a crucial part of the M. process. Indeed, this does not come to

its conclusion with the taking of the bride, but rather with the payment of the final obligations.

Bridewealth was common among the Kəmant in the past. More recently, however, the families of both the bride and groom make contribution.

Among the ᶜAfar, the previously mentioned cross-cousin M., is generally not accompanied by anything more than token payments since the arrangement is concluded within the same family. Bridewealth also plays only a minor role among the Gurage. The importance of bridewealth among the Konso increased during the second half of the 20th cent., apparently due to Amhara influence. The custom of giving gifts to the bride's relatives among the Maale also appears to only have taken root in the 20th cent., as part of their integration into the money economy of Ethiopia.

Among the Đaasanač the transfer of bridewealth (in heads of livestock) takes place over many years and reflects a long and gradual process of bestowing rights over the bride to her husband and evolving relations with his affines. So gradual is the process that it is not unusual for one or the other partner to die before the complete transfer has taken place.

Types of marriage

In addition to the variations from culture to culture with regard to marital practices, there are often several types of M. within any given society. While these are not necessarily valued equally, all are considered to be legitimate.

Although it is generally agreed that the Amhara and the Təgrəññа-speakers recognize several different forms of legitimate M., observers are unanimous in reporting that M. as a sacrament (↗Matrimony) performed within the church, known as ቊርባን (*qʷərban*, 'Eucharist', because the ↗Eucharist is administered after the wedding ceremony) or ተክሊል (*täklil*, 'coronation', because the couple wear ↗crowns on their heads; cp. *Mäṣḥafä* ↗*täklil*), was rare compared to the various other options. Among the comparatively few who choose this option are priests and their spouses. It is also found among elderly couples, who have been married in another form of ceremony and celebrate a church wedding when they realize that they will not divorce or re-marry.

The religious (መንፈሳዊ, *mänfäsawi*, 'spiritual') M. is the only one which the Church acknowledges. It is compatible with a civil marriage concluded for administrative purposes.

Sämanya (ሰማንያ, 'eighty') is M. by a civil contract, and is the generally preferred form. Although it is in accord with the law of the Church, and the agreement between the families may be followed by a religious ceremony, an official Church ceremony whether Orthodox or other is rare. The term *Sämanya* refers to Eve who, according to an Ethiopian tradition, was given to Adam on the 80th day of her creation (a tradition possibly related to the *Book of* ↗*Jubilees* 3:11–14; whilst, in fact, this text refers to childbearing, not marriage). This explanation, together with the priest's (unlawful if frequent) blessing, provides this celebration with a Christian veneer. Buxton (1970:83) speaks of the "80 Bond", referring to "80 dollars — the price of a life". In modern society, this wedding is known as ቀለበት (*qäläbät*, lit. 'the ring') and may be performed in the town hall or city council. In itself, the latter may well be associated with Church M., particularly when official documents are needed.

M. on contract (ግርድና, *gərdənna*, lit. 'service'; or ደሞዝ, *dämoz*, lit. 'salary', also sometimes ቅጥር, *qəṭər*, lit. '[hiring for a] price') involves the payment of a monthly or annual salary to the wife by the husband. This form of M., generally considered to be of lower status than the previous two, is widespread in Ethiopia. Under this arrangement, a man and woman live together for a certain period under the terms of a contract. The woman is paid a certain amount, in cash or in product, such as coffee. It is a M. form associated with urban populations and traders and warriors far from home. Today it is in decline, because many consider it to be more like prostitution than M.

M. by capture (ጥልፍ, *ṭəlf*) is practiced by several groups in Ethiopia, often by those members of the population who do not have the means to pay dowry or bridewealth. (In some cases it is a prelude to some of the forms of M. described above.) However, among some groups it is a common form of M. regardless of the economic circumstances of the parties involved. Among the ↗Dokko M. by kidnapping known as *dafa*, although rare today, was still common during the 1970's. In most cases, the kidnapping was largely symbolic and M. took place with the agreement of the girl's father. Among the Käfa this form of M. known as *šoǧo* was traditional, but by the second half of the 20th cent. it was only practiced by the poor. The Đaasanač distinguish between two types of capture (1) *fargoginte* in which the girl has consented to elope with the man of her

choice, but her family has refused him; (2) *hay sare* when a young man, who is a relative stranger, captures a girl he has not courted previously. Among many groups including the Somali, M. by capture has become highly ritualized so that even couples who have parental consent "flee" from their families as part of the M. ceremony. Marriage by capture continues to be widespread in some parts of Ethiopia, e.g. southern central highlands.

Many groups in Ethiopia practice levirate (leviratic) M. in which, when a man dies, his widow becomes the wife and his children the responsibility of a close male relative, usually his brother. Levirate M. as practiced by Ethiopian Christians in the 16th and 17th cent. was harshly criticized by the Jesuits, who viewed such arrangements as scandalous. Among the Oromo this form of M. is known a *dala* inheritance. According to Cerulli (quoted in TrIslam 231), the acceptance of Islam has weakened this custom as it is applied in cases where Oromo custom is observed, but not when the M. has been contracted before a *šayḫ*. Among the Somali, this form of M. is called *dumal*; if a Somali man has no living brothers, a nephew or other kinsmen would be expected to accept the role. If a married woman dies, her clan or clan segment provide a substitute, normally a sister in accordance with the institution of *hisigan*. Among the Đaasanač sexually desirable and fertile widows can pass to the brothers of the deceased; however, this being a matter of mutual consent, either of the parties can cancel the relationship by a simple ritual. Among the Gurage, both levirate and sororate M. are practiced, but are not required by custom or enforced by sanction. A man may marry his brother's widow in order to head a second household and a previously unmarried woman may marry her sister's husband to acquire a family. Among the Konso, a sonless widow may be expected to bear a child with one of her husband's brother's, but if there is a surviving son no such expectation exists.

Polygamy is practiced among numerous groups in Ethiopia although religious and economic considerations limit the actual number of cases. In the 1960s, Hallpike (1972:67) found that about 10 % of Konso men could afford a second wife. During the same period, Shack reported (ShGurage 106) that, although polygynous M. remained an important value among the Gurage, it was increasingly difficult to maintain because of land shortage.

Ceremonies (s. also ↗Wedding)

M. ceremonies in Ethiopia, like most other feasts, have yet to be properly analyzed. In addition to the purpose of joining the couple in M., they also symbolize such values as family, masculinity, fertility and community.

In a church wedding the couple receive communion under a large cloth, which symbolizes that they are one body through holy matrimony. After a feast at the bride's family's home, the couple travel to the groom's. After two days they visit the bride's home, and after another two days both families gather at the groom's house.

Parkyns (1966:259–68) offers a detailed description of a "civil" wedding in the 19th-cent. Təgray including the feasting and dancing which take place separately at the bride and groom's houses prior to the ceremony. Only in the morning does the groom, accompanied by his friends and attendants, travel, in a procession with horses, mules, weapons and much finery, to the bride's residence (*ənda g^{w}al*, cp. ↗*ʒnda*). Additional feasting and (war) dances take place. The bride and groom are seated in the middle, while their respective families and friends remain separate. Gifts are given to the groom. The bride is accompanied back to her new husband's village by his friends, who promise to serve and protect her in her new surroundings. Indeed, one or more of them (Tgn. *ʿarki rəʾsi*, 'chief friend') remain with the couple during their first night together. A few days after the wedding, the bride and groom go on a procession throughout the neighbourhood and are (more or less voluntarily) given wedding gifts.

The high costs of M. ceremonies, due to serving food and drinks during several days of celebrations to all invitees, have long been an object of discussions all over the region. Local elder assemblies even changed local law traditions in order to reduce costs (for Akkälä Guzay cp. ↗Adgəna Tägäläba).

It is interesting to see that many of these same elements including the rivalry, competition and ritualized aggression described by Parkyns survive in Ethiopia today, even in the difficult conditions of resettlement in the late 20th cent. (Pankhurst 1992:197–20). Many ethnic groups, e.g., the Təgre in Eritrea, still practice today the public exhibition of bloody spots on a white sheet after the first night of the couple.

A common feature of M. among the Gurage is a song duel, in which the close friends of the bride and those of the groom compete in singing

the praises of their clan through both traditional and impromptu verses. The groom's side eventually emerges victorious and carries the bride to his village and to the M. feast. The bride and her party remain secluded behind a screen during the entire feast, which often lasts several days. Even after it is over, the wife remains secluded from her husband for an extended period, said to last from several months to a year. Only after this period, the M. is consummated.

Among the Konso there is no M. ritual but merely a wedding feast, which takes place at the home of the groom's father. Only a few friends accompany the bride. Her family does not attend, perhaps as a ceremonial expression of hostility (Hallpike 1972:113).

Among the Kəmant, civil M. (*senaw*), which is performed for everybody but priests, has no religious components. The groom travels to the bride's homestead accompanied by his kin and eight fictive siblings (*mize*), whom he has chosen. The oldest *mize* acts as an advisor to the groom, while the youngest serves food and drink to the bride at the wedding. The M. ceremony takes place in the house of the bride's parents, where a previously agreed upon oral contract is read. Feasting then takes place, although the bride does not appear in public. The groom may sing songs of war in return for which he is given payments which may be vestiges of an earlier custom of bridewealth. On the next day, the bride is carried to the groom's homestead by one of the *mize*. Songs of war and bravery are sung. All the *mize* vow to treat the bride and groom as kin.

Among the Betä Ǝsraʾel, all the neighbours and relatives travel to the groom's village where a coloured thread (usually red and white) is tied around his forehead. He and his attendants then travel to the bride's village, where they spend the night. The ceremony takes place under a covering in the presence of a priest and the families of both the bride and groom. One of his attendants is instructed to protect and instruct the new bride. Later in the day, they bring the bride back to his village. If it is discovered that she is not a virgin, he removes the thread from his forehead and the M. is annulled. Feasting and celebration of a wedding can often last over a week.

Divorce

Many authors have commented on the instability of M. in Ethiopia (BeckHuntAlvar 107f.; Bauer 1977:127–31; Parkyns 1966:268; Hallpike 1972:116; Stauder 1972:7; Pankhurst 1992:263, no. 1–3). This appears to be due to a combination of cultural and historical circumstances. M. may often end in divorce because the couple themselves often have little say in the choice of spouses. On the other hand, later M. may be fragile bonds, because there is little family involvement and hence little pressure to maintain the union. Contract M. are by their very nature limited-term affairs intended to survive only for a set period. In addition to these structural factors, illness and sterility also appear to have had a major impact. In modern time, labour migration of men became an increasingly important factor.

Steven Kaplan

Märsəᶜe Ḫazän Wäldä Qirqos

Blatta M. (መርስዔ፡ ኀዘን፡ ወልደ፡ ቂርቆስ, b. 26 March 1899, Ǧirru district, northern Šäwa, d. 29 October 1978, Addis Abäba) was a traditional scholar and a politician. His father, *aläqa* Wäldä Qirqos, was a teacher of ↗*Dəggʷa* in the monastery of ↗Däbrä Libanos of Šäwa and at ↗Ǝnṭoṭṭo Maryam. M. started his traditional church ↗education before the age of five, and by 1919 had completed the study of ↗*qəne* and exegesis (↗*Andəmta*) of N.T. as well as the writings of the Church Fathers (*Liqawənt*) and the ↗*Fəṯḥa nägäśt*.

In 1920, M. was appointed secretary to the committee for preparing and publishing biblical and patristic Gəᶜəz texts – a work initiated and personally supervised by *ras* Täfäri Makʷännən (↗Ḫaylä Śəllase I). M. was engaged in the translation, and/or commentary on, the ↗*Arägawi mänfäsawi*, Sirach, Ecclesiastes and the Minor Prophets (s. Cowley 1974:174; Sergew Hable-Sellassie 1980:88). He was also assigned to the ↗Bərhanənna Sälam printing press; for a short period he served as an assistant editor of the newspaper ↗*Bərhanənna Sälam*.

In April 1925 the Täfäri Makʷännən School was established, and M. became its Gəᶜəz and Amharic teacher. Then, he composed the first Amharic school grammar (1926/27) which remained a standard textbook in Ethiopian elementary and secondary schools until 1975.

In 1930 M. moved to ↗Ǧiǧiga as Director of the newly opened Ras Makʷännən School. At that time, he was appointed a member of the Boundary Commission formed to demarcate the boundary between British Somaliland and Ethiopia during 1931–34 (cf. ↗Boundaries). He was at ↗Wälwäl during the incident of 1934 and kept record of it (s. mff. EMML 3750, 3755–63).

Märsəᶜe Ḫazän Wäldä Qirqos; photo courtesy of the IES

After the Liberation, M. held several important governmental positions, such as Judge of the High Court (1941–44), Head of the Imperial Record and Archive Office (1944–54), and Vice Minister of Justice (1949–57). As the chairman of the drafting committee of Ethiopian codes, he was charged with the difficult task of creating the new law codes (↗Civil code, ↗Criminal code). From 1958 to 1970 M. served in the Parliament, first as Registrar, then Vice President and finally Acting President of the Upper House. From 1971 to 1974 he was adviser to the Antiquities Administration.

As an eminent religious scholar, M. was appointed chairman of the Amharic Bible Revision Committee (1947–60), which published a new Amharic translation of the ↗Bible (the so-called "Imperial Bible") in 1961.

In 1948 M. and *abunä* ↗Tewoflos headed the Ethiopian delegation at the founding assembly of the World Council of Churches (WCC) in Amsterdam. M. also played an important role in the negotiations between ↗Ethiopian Orthodox Täwaḥədo Church and the Coptic Church resulting in the complete autonomy of the former.

M. was a member of the Board of Education and Fine Arts founded in 1947, and, from 1973, of the Academy of Amharic Language (↗Ethiopian Language Academy). M. was also a member of a committee established to collect materials for the biography of Ḫaylä Śəllase I. In 1974 M. retired.

M. translated several works into Amharic, including the *History* by ↗Herodotus (from English; 1947–52). His personal notes contain valuable information on Ethiopian history from the reign of *aṣe* Mənilək II onwards (s. Sergew Hable-Selassie 1980:90f., 93); most of them (a three-volume reminiscences and his autobiography) are currently being prepared by M.'s son Amha for publication. M. contributed to a number of significant books: he wrote an introduction to *Zəkrä nägär* by ↗Maḫtämä Śəllase Wäldä Mäsqäl (MahZekr ሸ–ቀ [preface]), and a preface to the Amharic text of ↗Gäbrä Śəllase Wäldä Arägay's Chronicle of Mənilək II (GSMen). He also contributed to Marcos Daoud's translation of the Ethiopian liturgy (Daoud 1954). For his ca. 30 publications (Sergew Hable Sellassie 1988:90–93), M. won the 1971 Ḫaylä Śəllase I Award for Amharic Literature.

M. was buried at Yäkka Abbo Church in Addis Abäba.

Asfaw Damte

Märso Ḫaylä Maryam

Däğğazmač M. (*መርሶ፡ ኃይለ፡ ማርያም*) was the son of *däğğazmač* ↗Ḫaylä Maryam of Səmen, who was married to a daughter of *ras* ↗Gugsa Märsa of the Wärräsek dynasty. He was also a half-brother of *däğğazmač* ↗Wəbe, with whom he had an extended rivalry.

Though M. did not hold an important position in Ethiopian politics, he did have a significant role during the 1830s and 1840s, with various appointments in Tämben and Goğğam. M.'s first notable appointment occurred in ca. 1830 when he was briefly appointed as ruler of Səmen. In the aftermath of the battle of Däbrä Tabor, 1842, the victorious *ras* ↗Ali Alula initially reappointed him ruler of Səmen, but then sided with Wəbe and removed M. from this position. The following year he briefly claimed to be ruler of Goğğam, and then early in 1847 M. reconciled with his half-brother, Wəbe, joining him in his struggle against *ras* Ali. The latter captured and imprisoned M., but he escaped in 1851 and took refuge in the ↗Ǝčč̣äge Bet quarter in Gondär. Early in 1853 M. made peace with Ali, and was appointed ruler of Bägemdər, but his claim to this office was short-lived because Ali was soon defeated by Kaśa Ḫaylu (later ↗Tewodros II) at the battle of ↗Ayšal in June 1853.

Donald Crummey

Martin, Charles ↗Wärqənäh Ešäte Martin

Martini, Ferdinando

M. (b. 30 July 1841, Florence, d. 20 April 1928, Monsummano, Lucca [today Monsummano Terme, Pistoia]) was a journalist, writer and political figure. He first visited the Colonia ↗Eritrea in April 1891, as Vice-President of the Royal Commission of Inquiry that had the task of investigating both civil and military Italian officers charged with abuses of power and slaughters and, *inter alia*, to assess the economic viability of the colony. Subsequently, M.'s anti-colonialism shifted to adopt the raison d'être of the colony and its benefits for ↗Italy. Following the defeat of ↗^{c}Adwa, he was appointed the first civil governor of post-war Eritrea on 30 November 1897, a role in which he had to reassess the expansionist policy previously promoted by Francesco Crispi and the military governors in Eritrea.

M.'s aim was to maintain Eritrea's integrity in a peaceful environment, challenging the post-^{c}Adwa anti-colonial trend. He partially demobilized the colony while diffusing local resistance in the plateau, stirred up by banditry and socio-political unrest. M. promoted an organic rule for the colony, granting the separation between the prominent civil rule and the military sphere. Since 1898, he reorganized the administrative space, transferring the capital from ↗Massawa to ↗Asmära, and dividing Eritrea into districts administered in collaboration with the local ruling élite, appointed by the colonial state.

Facing a limited public annual fixed subsidy and the lack of private financial support, which perceived Eritrea as a resource-poor country, M. worked to promote the colony as a raw material source for Italy and as a staging post in regional trade. He engaged experts for surveys of poten-

Governor Martini during a journey of inspection in Beni ᶜAmər territory, Eritrea, with Beni ᶜAmər *šayḫs*; from Schoenfeld 1904:26

tial riches and impulsed research. Aware of the natives' hostility towards land dispossession in favour of Italian peasants, M. shelved the policy of white settlement and opted for a capital-intensive agricultural policy, mainly in the north-west lowland, inducing the local farmers to work as share-croppers; 11 % of the cultivable land was confiscated in the highland, where M. hoped to increase the agricultural output through the natives' partnership. Faced with the outburst of a cattle-plague epidemic, M. tried to protect cattle-breeding – which played a prominent part in Eritrea's economy – by founding a sero-vaccinogenous institute. In order to revitalize the limited budget of the colony, M. promoted surveys for the exploration of mineral resources, but with scarce results. His project of making the country a depot for transit trade had more success, since during his governorship the import-export from Ethiopia sharply increased. To enforce Eritrea's economic interests he fostered peaceful relations with the neighbouring countries, especially imperial Ethiopia; he also gave impulse to the transportation network of the colony, extending the railway and roads systems to the Ethiopian and Sudanese borders.

M.'s intense diplomatic activity, sponsoring a series of border agreements and treaties signed with the neighbouring countries – Ethiopia, Anglo–Egyptian Sudan and Djibouti – enabled the definition of Eritrea's boundaries between 1898 and 1908. In May 1900, after three years of diplomatic negotiations and a financial compensation of 5 million lire, the Ethiopian government agreed on a common boundary running along the watershed of the rivers Märäb, Bäläsa, and Muna. The climax of this diplomacy was M.'s tour to Addis Abäba, where he met *aṣe* ↗Mənilək II and signed a bilateral commercial treaty. He succeeded in establishing a stable colonial administration, in spite of the scanty budgets. M. resigned on 25 March 1907.

Despite some attempts to reinterpret it as an economic doctrine for the exploitation of Eritrea (Yemane Mesghenna 1988:130ff.), M.'s policy seems to have rather been that of pragmatic leadership. His governorship is often depicted as paternalistic and racist, because of his distrust towards indigenous peoples; these, considered unfit for emancipation, were denied access to western education – which was only granted in missionary schools, – a policy which at the time was justified with the need to prevent and contain resistance to colonial rule. During M.'s governorship, the consolidation of Italian rule and the peaceful coexistence between Italian colons and natives were only achieved by a severe legislation towards the latter group.

M. also devoted special attention to the promotion of Eritrea in Italian public opinion. He played a prominent role in the formation of a national colonial ideology, through a skilful propagandistic use of the press and colonial exhibitions. He organized the first colonial congress held in Asmära in 1905, to celebrate the successful consolidation of colonial Eritrea. In 1913–14, M. was appointed minister of the Colonies in the Italian government. He issued various personal accounts on his experiences in Eritrea, some of which have enjoyed wider public acceptance (Martini 1891).

M.'s rich library including the Gəᶜəz and Arabic manuscripts he collected during his stay in Eritrea was acquired by the Forteguerriana library in Pistoia (Santoli 1932; cp. Lusini 2002). His villa in Monsummano houses a public cultural centre.

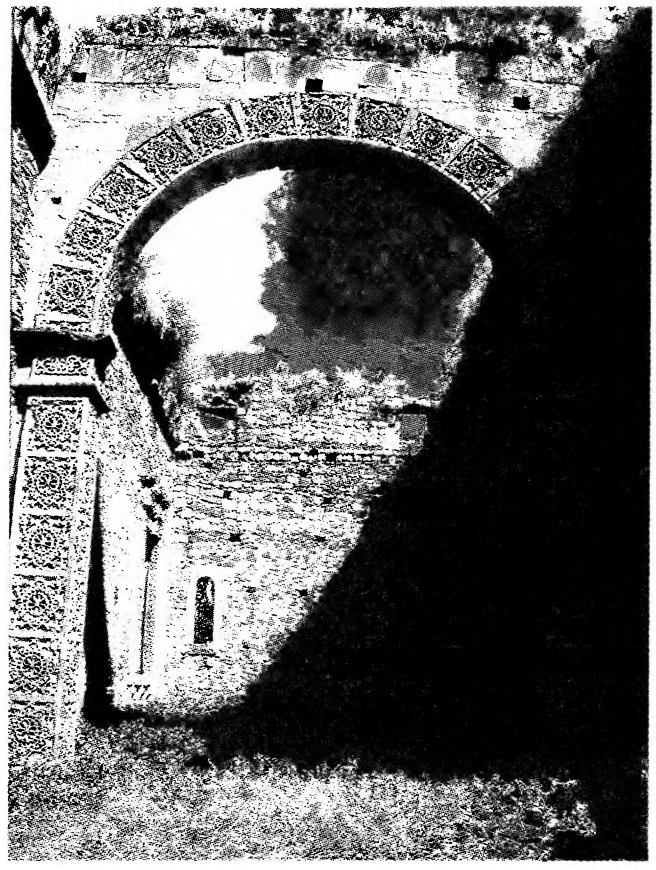
Federica Guazzini

Märṭulä Maryam

M.M. (**መርጡለ፡ ማርያም**) is a church and a monastery in eastern ↗Goğğam, in the historical district called Ǝnnäbəse ("Nebessê" in the sources of the ↗Jesuits), at the top of a hill in a little town by the same name (for location s. Mäkanä Sälam).

M.M. is mentioned in the hagiography of the kings ↗Abrəha and Aṣbəḥa (possibly dating back to the 14th cent., s. Marrassini in MiscAethKur 168, 197 and n. 23). It is impossible to draw further conclusions without additional archaeological or literary evidence as to when exactly the church was founded and whether it is as ancient as the tradition assumes (s. also the local tradition in Cerulli 1933:108f).



Main arch of the central nave in the ruined Jesuit church at Märṭulä Maryam, 1628–1632; photo 1997, courtesy of the author

In any case, Bä'ədä Maryam's wife queen ↗Ǝleni founded a royal monastery at M.M. between 1490 and 1522 (BeckHuntAlvar 459), hence its other name, Däbrä Ǝleni Märṭulä Maryam (GuiIyas 17 [text]). Ǝleni assigned M.M. to the monastic "house" of ↗Ewoṣṭateans (Derat – Pennec 1997:23ff.; GuiIohan 70ff. [text]) and was later buried there (BeckHuntAlvar 459). The abbot of the monastery bears the title of **ርእሰ፡ ርኡሳን**, *rə'əsä rə'usan* (↗*Ras*) as is attested from the 17th cent. (GuiIohan 70ff. [text]).

The old church was decorated with carved stones and was noted for its ornamentation (some can still be seen in a hole north-west of the present church; s. also Heintze 1937, fig. 15) and its wealth, especially its golden altars (BeckHuntAlvar 459; Almeida in BecRASO V, 250ff.; cp. ↗*tabot*). It was destroyed by the troops of ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") in 1535/36 (FotiCr 97) and, supposedly, for a sec-

ond time by the ↗Oromo (Almeida in Archivum Romanum Societatis Iesu, Goana 39, II, doc 5Ad, fol. 429v).

In 1626, *aṣe* ↗Susənyos, seeking to control the growing power of the governor of Goğğam, his brother *ras* ↗Śəᶜəlä Krəstos, by placing the Jesuit mission in Goğğam under his direct control, offered this ruined but still prestigious site to the ↗Jesuits (Almeida ibid.; BecRASO VI, 494f.; Derat – Pennec 1997:25, 29f., 32 n. 52). A new church was built under the direction of the Italian father Bruno Bruni. He was assisted by brother João Martines who had previously worked at ↗Gorgora (Almeida in BecRASO XII, 257f., 269f.; Pennec 2003:178f.). The building, decorated with fine carvings (s. ill.), remained unfinished when the Jesuits were expelled from Ethiopia in 1633. *Aṣe* ↗Fasilädäs then gave the place to his niece Ǝleni (BecRASO VII, 324). In 1684, setting on one of his first military campaigns, *aṣe* ↗Iyasu I promised to restore the church and endowed it with ↗*gʷəlt*-lands (GuiIohan 70ff., 78 [text]; Pennec – Toubkis 2004:255).

The present circular church is decorated with murals in the Second Gondärine style of ↗painting from ca. mid-18th cent. The monastery houses an important library with illuminated manuscripts and a register of land transactions (in a manuscript with the twelve "minor Prophets" [*däqiqä näbiyat*], s. Habtamu Mengistie 2004:134f.). A large collection of liturgical and precious goods – crowns, clothes, paintings on wood etc. – is kept in the *ᶜəqa bet* (s., e.g., Chojnacki 2000).

Claire Bosc-Tiessé

Martyrdom

Christian martyrdom

The notion of M. (Gəᶜəz **ስምዕ**, *səmᶜ*, Gr. μαρτύριον, Lat. *martyrium*), developed by the early Church with reference to those who gave their own life for the Christian faith, seems to have been first established by the late 2nd cent., when a difference (still vague, though, in the 3rd cent.) was also set between "red" and "white" (or bloodless) M., namely, between martyrs (Gr. μάρτυρες, Gəᶜəz **ሰማዕታት**, *sämaᶜətat*), who proved their faith by shedding their blood, and confessors (Gr. ὁμολογηταί, Gəᶜəz **እለ፡ አምኑ**, *əllä amnu*, **ዘይትአመኑ**, *zäyəᵓammänu*), who suffered exile and imprisonment, but not death, for their beliefs (Delehaye 1921). In its traditional meaning, M. is also a term for a story of a martyr or a group of martyrs (Lat. *passio*, 'passion', lit. 'sufferings'): a particular genre of ↗hagiography – in its earliest and simplest form, a letter to a Christian community – that emphasizes the saint's questioning by the authorities (Roman, Persian, Arab), his or her ordeal and execution (s. Ronchey 1990:33–44, 133–49).

The notion of M., if not of the relevant literary genre, forms an integral part of the Christian identity of Ethiopia as well, albeit in a quite different social and political framework. As a matter of fact, after the acceptance of Alexandrian Christianity as the state religion by the local rulers and the subsequent evangelization of the country, there were no state-organized persecutions of Christians in the Aksumite empire (↗Aksum).

In keeping with the original idea of the martyrs as "witnesses" (cp. Gr. μαρτυρεῖν, 'testify, bear witness') of Jesus Christ, up to accepting death punishment for his sake, is the meaning of the Gəᶜəz word for 'martyr(dom)', *səm(a)ᶜ(ət)*, derived from the verb *sämᶜa*, 'to hear', but also 'to witness' (DillmLex 338f.; LesCDic 501f.; but

cp. Peeters 1920:58f., on which Conti Rossini 1945:219 n. 1).

The accounts of the M. of Christians in the Roman empire certainly reached Aksumite Ethiopia already in pre-Christian time, and influenced to a certain extent the self-consciousness of the nascent Christian community. Very deeply felt, however, was the 6th-cent. episode of the M. of the people of ↗Nağrān in South Arabia (commemorated in Ethiopia on 20 *Gənbot*): they were fully vindicated by King ↗Kaleb ƎllƏ Aṣbəḥa, and the story immediately earned a prominent place in Ethiopian tradition. Later, under the ↗Solomonic dynasty, the idea of M. (sacrifice for the religious cause) became less important for Ethiopian Orthodox Christianity, which was marked both by a vital and militant spirit of active expansion and evangelization and by a constant threat by the Islamic states of the south.

Martyrdom of St. George of Lydda: beheading with "hanging crowns" (left), cutting into pieces (right); Stadt- und Universitätsbibliothek Frankfurt am Main, ms. O. Rüpp. IV, 1, fols. 12v, 13v; from Hammerschmidt - Jäger 1968, figs. 66f.

The universally venerated early Christian martyrs were among the first ↗saints of Aksumite Ethiopia. This is indicated by their hagiographies, a few of which were translated from Greek as early as in the Aksumite period, and then included into the major collection of Acts translated mostly from Arabic, the ↗*Gädlä sämaᶜətat*: e.g., the Acts or Martyrdoms of Philea bishop of Thmouis (17 *Ṭəqəmt*, ColSyn VII, 90f.; Bausi 2002), Cyprian and Justina (21 *Mäskäräm*, ColSyn VI, 454–57; Goodspeed 1903), and Arsenofis (19 *Säne*, GuiSyn I, 638-41). Peter, Bishop of Alexandria, is known in Ethiopian tradition as the *täfṣametä sämaᶜət*, 'the last martyr' (29 *Ḫədar*, ColSyn VIII, 392–97; Getatchew Haile 1980). The Acts of Mark the Evangelist (30 *Miyazya*, ColSyn XII, 592–95; Getatchew Haile 1981; s. Bausi 2002:16; Lusini in PICES 15; cp. Fiaccadori 2004:141f., 157) were probably the first martyrdom of an Apostle translated in Aksumite times, while the stories of other Apostles were gradually transmitted via Arabic, and eventually collected in the *Gädlä* ↗*ḥawaryat*. Some of them, like those of Peter (and Paul) (5 *Ḥamle*, GuiSyn II, 232–41, 241–52), Bartholomew (1 *Mäskäräm*, ColSyn VI, 330f.), and, in particular, Thomas (20 *Gənbot*, ColSyn XIII, 331–37), became especially popular, the latter two being connected with ↗India.

Many other hagiographies passed, via Arabic, from Egypt to Ethiopia, where they enjoyed great fortunes. A well-known figure, whose M. then was highly appreciated, is indeed ↗John the Baptist (2 *Mäskäräm*; ColSyn VI, 338ff.). The popularity of the cult of St. Stephen Protomartyr (*Ǝsṭifanosqədmä sämaᶜət*, Acts 6:11) is indicated by the dedication of the monastery of ↗Däbrä Ḥayq ƎsṭifanosƏ, in existence since the 13th cent. Likewise, a church (Betä Giyorgis) in the ↗Lalibäla-complex, part of which may even predate the 12th cent., was originally consecrated to St. ↗George of Lydda (*rəʾəsä sämaᶜət*, 'the head of the martyrs').

The veneration of many more martyrs is attested, in the 13th–early 14th cent., by writings in their honour in the *Gädlä sämaᶜətat* and similar collections, as well as, from ca. 1400 onwards, also in the Ethiopic ↗*Sənkəssar*. Like in Byzantium and the Christian East, the military (and apotropaic) appearance of a number of "military saints", almost all of whom underwent M. (like ↗Gälawdewos [Claudius of Antioch], ↗Menas, ↗Susənyos), was prevailing over their M. in church decoration programmes and other pictorial representations (↗Equestrian saints); the elaborated M. scenes emerged somewhat later, involving the depiction of characteristic elements of a martyr's death (e.g., different kinds of beating and frightening tortures).

Ethiopian tradition was rather strict in styling as martyrs those who died a violent death owing to their faith. There are only scant ex-

amples of locally venerated "martyrs" loosing their lives by the hostile actions of non-Christians. The "Righteous" of Bäräknaha or Mäṭära (↗*Ṣadəqan*), a group of early anonymous hermits of non-Ethiopian origin (19 *Ṭəqəmt*, ColSyn VII, 108), preferred starvation to death, as they were abused by the revolting "pagan" people of ↗Bur. Thus, they became the "protomartyrs of Ethiopia" (SerHist 126; Chaillot 2002:136).

In a few more cases, as already in the eastern and western medieval milieus, the concept of M. (or martyrlike attitude and glory) was extended to other types of ↗holy men: e.g., to religious leaders and their followers both suffering and/or dying as a result of persecutions by Christian rulers (cp. *abunä* ↗Əsṭifanos and the ↗Stephanites). This had, however, a clearly limited impact.

The Byzantine and Christian Oriental tradition of the "neo-martyrs" (s. Rigo 1998 and, in particular, MacCoull 2000:58f. and n. 4) was also known in Ethiopia at least through the Vitae, translated from Arabic, of such Egyptian saints as Anthony (Rawḥ al-Qurašī, d. 847; ed. Peeters 1912, on which Guidi 1922:28–31; cp. Braida – Pelissetti 2001), and ↗George the New (Ǧirǧis al-Muḥāzim, d. 978). Likewise, for the Ethiopian Church, "martyrs" could also be those who died at the hands of the Muslims, or in wars against them: in particular, the victims of the ↗*ǧihād* of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") and the subsequent clashes between Islam and the Christian Kingdom. For the Vita of *əčč̣äge* ↗Yoḥannəs of Däbrä Libanos of Šäwa, M. was undergone by all Christians who, together with *aṣe* ↗Gälawdewos, died in the 1559 battle against ↗Nūr b. Muǧāhid (RicEnbYoh IV, 192; cp. 27 *Mäggabit*, ColSyn VI, 426-29). In fact, *aṣe* Gälawdewos himself is called "martyr" (cp. DombrChr 178), a definition possibly suggested in his own Chronicle, where he "[passed away] like Claudius of Antioch, his companion according to the name" (ConzGal 102). On extolling his Emperor, the author also refers to the M. of *əčč̣äge* Yoḥannəs who, "for the sake of obtaining the martyr's reward" (*bäʾəntä näsiʾo ʿəśetä säma*^{c}*ət*), volunteered to follow Gälawdewos who defiantly went to face death with a much smaller army than that of the Muslims (ConzGal 105). Praising *əčč̣äge* Yoḥannəs and other ecclesiastics who had likewise joined the Emperor, the author openly states that, unlike the soldiers, they wanted to "face the axe like meek lambs because of the love to God", and therefore "received the crown (of M.)", the "shedding of their blood" being "glorious before the Lord" (ConzGal 106f.).

With a few such exceptions as *aṣe* ↗Iyasu I, who was a "martyr" on account of his tragic death, the category of M. remained substantially a closed one (cp. Habtä Maryam Wärqənäh 1970/71:132). In recent times, on the wave of religious nationalism, the Ethiopian Church has been commemorating the victims of the ↗Graziani massacre with a National Martyrs' Day (19 *Yäkkatit*), the martyrs *abunä* ↗Ṗeṭros and *abunä* Mikaʾel, both killed during the Italian occupation (22 *Ḥamle* and 24 *Ḫədar*, resp.), and *abunä* ↗Tewoflos, killed by the *Därg* (4 *Ḥamle*; cp. Chaillot 2002:136).

Since the 17th cent., a Catholic M. formed in Ethiopia, the most illustrious representative of which are the Jesuit Yaʿəqob Alessandri (a half-breed of Venetian ancestry), slaughtered by *däğğazmač* ↗Täklä Giyorgis during the 1628 Təgray revolt; the Capuchins Agatange de ↗Vendôme and Cassien de Nantes, sentenced to death by *aṣe* ↗Fasilädäs and *abunä* ↗Marqos (cp. ↗Heyling) at Gondär in 1638 (and beatified in 1905); the Jesuits Bruno Bruni and Louis Cardeira (the last of the eight Jesuit martyrs), put to death at a market place of ↗Tämben in 1640; and the Franciscans Liberatus ↗Weiss, with his fellows Samuele Marzorati and Michele Pio Fasoli, killed at Gondär, under ↗Dawit III, in 1716 (and beatified in 1988).

Islamic martyrdom

According to the ↗Qurʾān (2:154; 3:157, 169 etc.) those who are slain "in the way of God" (*fī sabīl Allāh*) will expect a special reward in the life to come. Many prophetic traditions (*ḥadīṯ*) describe the bliss awaiting the martyrs (Arab. *šahīd*, pl. *šuhadāʾ*, 'martyr [lit.: witness]', *šahāda* 'M.'). The Muslim legal schools differ in the questions as to who is a martyr and how he is to be rewarded. Normally, the martyrs are divided into three groups:

1) Martyrs who are killed in "battle against the unbelievers" (↗*Ġihād*), or died of their wounds immediately afterwards (*šuhadāʾ al-maʿraka*). They are considered as "martyrs both in this world and in the next". In this world they are given a special burial without washing and in their blood-stained clothes (a proof of their M. at the Day of Judgement). Some hold that there should be no prayers at their tombs, either because they are still alive (their souls residing in the claws of green birds near God's throne, till the Day of Resurrection, when they will be returned to their bodies and live in Paradise), or because their sins have already been forgiven. In the next world they will be granted all kinds of delights. The martyrs' freshly spilled blood is considered ritually clean.

2) "Martyrs of the second world only". They include: (a) persons who die later as a result of their battlefield wounds; (b) persons who die fighting against rebels (a point of discussion is whether a rebel should be considered a Muslim or an unbeliever; in the latter case, the martyr should be included in the first group); (c) persons who die through diseases, specially the plague (*ṭāʿūn*); (d) according to some sources, those who die because of love while remaining chaste; (e) persons who die in the "greater *ǧihād*", i.e. while fighting against their own appetitive soul. They are buried like common people, but rewarded in Paradise like martyrs.

3) "Martyrs of this world only". Every good action is reckoned as such by God only if it is done with the intention (*nīya*). In the case of *ǧihād* this means that the warrior must have the intention to spread ↗Islam, but not to partake in the spoils or to win the pleasures of Paradise. Since only God knows the intentions, on earth all people killed in *ǧihād* are treated alike, but in the other world those who did not have the right intention will not be rewarded as martyrs.

In Ethiopia the notion of all three kinds of martyrs must have existed; Muslim historical sources, however, do not make the differences but indiscriminately refer to *šuhadāʾ*. Almost every source mentions martyrs, as does, e.g., the ↗*Fatḥ madīnat Harar* which describes events from the 13th cent. until the battle of ↗Č̣ällänqo of 1887. Most of those called martyrs fell during wars against the Christians: e.g., the *sulṭāns* ↗Ḥaqqaddīn b. Aḥmad Ḥarb Arʿad in 1386, ↗Saʿdaddīn Abū l-Barakāt in 1415, ↗Aḥmad Badlāy in 1445, many individuals and groups of people in the wars of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ"), the last ↗Walašmaʿ *sulṭān* Ḥabīb in 1559, fighting ↗Ḥamälmal. Many others died fighting the heathen, especially the ↗Oromo, e.g. ↗Muḥammad Gāsā b. Ibrāhīm I

in 1583, Awraʿī Saʿīd b. Ǧōmārī ʿUṯmān and others in 1590 (cf. CerIslam 177 [text], 184 [tr.]; Wagner 1979:667). They, whithout doubt, belong to the *šuhadāʾ al-maʿraka*. Often, their reward is described. About the 5,000 Muslims who fell in the battle of ↗Šəmbəra Kʷäre in 1529 the *Futūḥ al-Ḥabaša* says: "God sealed their lives with M., allowed them to enter the gardens of bliss, provided them with the sweets of life and the black-eyed houris, and showered on them His all-embracing grace", then quoting Qurʾān 9:21–22 (BassHist 64). To incite the warriors to battle, the same pleasures are also promised in advance. The jurist (*faqīh*) Abū Bakr Aršūnā encourages the soldiers: "Paradise is already adorned and Hell is locked. The angels look (upon you) and the black-eyed houris beautified themselves (for you). Rejoice for the eternal life!" (BassHist 59). The quotations show that the Ethiopian Muslims expected to enter Paradise immediately after death and that the conception of the souls awaiting the Last Day in the birds' claws, was not known to them.

The second group of martyrs is represented by *šayḫ* Mīkāʿīl b. Dağna who is called martyr, though he died only two days after his leg was hit by a spear (BassHist 152). On the other hand, two prisoners of war who were afterwards executed by the Christian emperor, got only the eulogy: "May God have mercy with them!" (ibid. 128).

There are at least two cases where the title *šahīd* is given to persons who were killed fighting against (rebellious) Muslims. The first one was ↗Ǧamāladdīn b. Saʿdaddīn who was killed by his envious cousin in 1432 (CerIslam 138 [text] = 145 [tr.]; MaqIlmam 8 [tr.]). Cerulli (CerIslam 145, n. 29) assumes that the cousin might have acted in secret agreement with the Christians. The second person was the *imām garād* Aboñ b. Adaš who died while fighting the Walašmaʿ *sulṭān* ↗Abū Bakr b. Muḥammad b. Āzar (BassHist 6). From the dynastic point of view, Aboñ was the rebel, but ʿArabfaqīh, the author of the *Futūḥ al-Ḥabaša*, favoured the religious party of the *imāms* so that, for him, Aboñ was a martyr.

During their stay in ↗Təgray in 1533, many of Aḥmad Grañ's soldiers died through plague (BassHist 338). Though several victims are personally enumerated, none of them is called martyr. Also ↗Nūr b. Muǧāhid, one of the most venerated rulers of Harär, who fell victim to the plague in 1568 (CerIslam 152 [text] = 159 [tr.]), does not get the title *šahīd*. That means that the extension of M. to those killed by plague, was not usual in Ethiopia.

The existence of "martyrs of love" in Ethiopia is not mentioned in the historical sources. The same may be true for the fighters of the "greater *ǧihād*"; however, one may interprete the expression 'our brethren the martyrs' (*iḫwānunā š-šuhadāʾ*; WagFath 27) which refers to the holy men who entered Harär together with ↗Abādir ʿUmar ar-Riḍā in 1216, in the sense that holy men always fight their souls and as a consequence, should be considered martyrs (not all of Abādir's companions died in *ǧihād*).

In practice, the third group, the "martyrs of this world only", might have been the most numerous. In the sources there are many passages like: "Let us attack the king [i.e. the *nəguś*]! We will get only one of two good things, either victory with remuneration and booty or M. on the way of God and Paradise through the grace of God" (BassHist 21, cf. also 42, 61). Only once is the term *nīya* mentioned in relation to Aḥmad Grañ and 70 people from Mahra, who are said to have had the intention of holy war (*nīyat al-ǧihād*; BassHist 97).

In modern Harär, the martyrs of ↗Č̣ällänqo still play an important role in defining the identity of its people. Just after the battle, their deaths as martyrs were attested to at the *qāḍī* by the testimony of integer witnesses (CerIslam 388). Today, several symbols are reminiscent of the martyrs of Č̣ällänqo: On occasion of his marriage the bridegroom gets from his father-in-law a shawl, named *sati baqla* (lit. 'seven hundred') to remind him of the 700 newly wed men who were slain in the battle. The red earthen floor (*qēḫ afar*) in the traditional Harari house is a symbol for the blood shed at Č̣ällänqo. In the flag of the Harari National League the red stripe across the top also represents the blood shed at Č̣ällänqo, and the black at the bottom, the death (Gibb 1997:383).

Maru

Däğğazmač M. (ማሩ; d. 17 *Ṭəqəmt* 1820 A.M. [27 October 1827 A.D.]) was a leading figure in the politics of central Ethiopia during the first three decades of the 19th cent., ruling for ca. 25 years until his death on the battlefield. He succeeded his uncle, *qäññazmač* Käbte, as ruler of ↗Dämbəya. M.'s base was established in Fänğa, the site of his most important church foundation, Fänğa Maryam, which he richly endowed with land (Ill/IES, X.25–XI.4). M. is most noted for expanding his domain from Dämbəya to ↗Qʷara and ↗Mätämma to the west and south-west. At one point, after seizing Wägära and Bäläsa, he controlled all the approaches to Gondär. This domain, known simply as Yämaru Qämmäs (or ↗Maru Qämmäs), formed the power base from which ↗Tewodros II, Ethiopia's first modern emperor, was to emerge.

M.'s early career was marked by an allegiance to *ras* ↗Gugsa, who ruled central Ethiopia from ↗Däbrä Tabor. On Gugsa's orders M. attacked and captured *däğğazmač* ↗Wäldä Rufaʾel, and then campaigned in Wällo and Yäğğu with his overlord. During this period, *ras* ↗Wäldä Śəllase of Təgray invaded Səmen and installed a vassal in Armačəho, which in turn, provoked M. to invade Armačəho and install his own vassal. In the ecclesiastical conflicts during the 1820s, M. participated in a doctrinal council in Gondär, and despite a direct appeal from *abunä* Qerəllos, sided with Qerəllos's rival, *əčč̣äge* Wäldä Yona, a proponent of ↗*Śost lədät*.

In June 1825 Gugsa died, and, after a power struggle, was eventually succeeded by ↗Yəmam, his son. During the struggle for succession, M. supported one of Yəmam's adversaries, but was not adversely affected by this situation. In 1826 *däğğazmač* ↗Ḫaylä Maryam, ruler of Səmen, died in a battle against Yəmam, and Yəmam consigned ↗Wəbe Ḫaylä Maryam, his son, into M.'s custody. In marrying M.'s daughter, Yäwarq Wəha, Wəbe became M.'s son-in-law (M. had married a daughter of *ras* Gugsa, and some years later *ras* Ali, successor to Gugsa and Yəmam, married a daughter of Yäwärq Wəha [CRNuov 378]). Upon M.'s request, Wəbe was released and assumed his father's position as ruler of Səmen. He then refused to submit to Yəmam, who subsequently sent M. to discipline his son-in-law. Together, Yəmam and M. defeated Wəbe and M. was rewarded with a significant addition to Yämaru Qämmäs, land north of Gondär, running from the Bälägäz to the Angäräb including Wälqayt.

The defeat in battle permanently set Wəbe at odds with his father-in-law. As Wəbe gradually gained favour with Yəmam, problems soon arose between M. and his overlord, and Yəmam ordered M. to return the lands he had previously received from Wəbe. On M.'s refusal, Yemam invaded Dämbəya, killing many people and scattering others. These developments also brought about an alliance between M. and ↗Goššu of Goğğam, which in turn led to a battle at Koso Bär, Amadamit, a mountainous area in west-central Goğğam, some distance south of Lake Ṭana. The Goğğam nobles eventually abandoned M. and joined Yəmam's forces. Knowing the battle was futile, M. defiantly swore that he would not be captured, but would rather die on horseback. He was subsequently shot, killed and buried at Wäšära (CRReal 903).

According to one chronicler, M. seemed invincible until his death. Yearly he raided the land of the Arabs, the Takrīr (↗Tukrīr) and the *Arämani* (the western lands that bordered the Sudan) and enslaved "Šanqəlla". His success in these raids caused many from all over Ethiopia to join his ranks (CRNuov 372). He was eventually succeeded by ↗Kənfu, the son of his niece, Wälättä Täkle (RubTew 21). It was in Kənfu's household that Kaśa Ḫaylu, future Tewodros, grew up, he was known at that time as Kaśa Maru (RubTew 29). There is a list of *gʷəlt* lands that M. distributed in BritLib Orient. 604, fol. 17v.

Maru Qämmäs

M.Q. (ማሩ ቀመስ, or *Yämaru Qämmäs*, lit. 'what Maru tasted') were the lands, which *däğğazmač* ↗Maru accumulated as his personal rule, and which became, after his death in 1827, the object of competition between a variety of successors, most notably ↗Kənfu, who controlled the patrimony from 1831 to his death in 1839, and ↗Mänän, mother of *ras* ↗Ali Alula of the ↗Wärräsek, who was in control from 1839. The lands consisted of Dämbəya, where Maru had his principal residence at Fänğa, Agäwmədər, Qʷara, Mätämma, and, at one time or another, Wägära and Bälässa. Kaśa Ḫaylu (future ↗Tewodros II) was brought up in the house of Maru by Kənfu and was a contender

for the rule of M.Q. His victory over Mänän in 1847 gave him control of M.Q., a base from which he successfully waged the campaign, which led him to the throne in 1855.

Mary

The Blessed Virgin M. (Eth. ማርያም, Maryam; ancient var. ማርያ, Marya), the mother of Jesus Christ, is the most venerated saint in ↗Ethiopian Orthodox Täwaḥədo Church (EOTC).

The main sources on the life of M. are the Gospels. Her name first appears in the genealogy of Jesus (Mt 1:16) where the latter is described as a descendant of Abraham and David through Joseph, the would-be husband of Mary (s. also Lk 1:26). The assumption that not only Joseph (who was not Jesus's biological father) but also M. was a descendant of David finds no corroboration in the N.T. Only Lk 1:26–2:51 gives detailed information on M.'s life, but her origin remains obscure, the only information being that Elizabeth, the mother of ↗John the Baptist, was M.'s relative (according to one version of the hagiographical story of M., Elizabeth was Joachim's sister and thus the Virgin's aunt). In any case, in the N.T. M. rather seems to be of modest origin (cp. her prayer in Lk 1:48). The Ethiopian tradition, however, gives her the epithet *wälättä Dawit* (ወለተ፡ ዳዊት, 'the daughter of David'). The ↗*andəmta* commentary and the traditional scholars (*liqawənt*) say that Eleazar begat Matthan (Matyan; Mt 1:15) and Qəsran, the father of Joachim (Iyyaqem), the father of Mary. According to the introductory exhortation to the Miracles of Mary (*Täʾammərä Maryam* 1968/69:4f.), M. was not only a descendant of David on her father's side but also of Aaron on her mother's side (s. also Lk 1:5).

While the Gospels offer little information on the life of M., the important secondary sources in the Ethiopian tradition are such apocryphal texts as the story of M.'s nativity (*Mäṣḥafä ↗ləddäta lämaryam*), the story of her life (↗*Nägärä Maryam*), Dormition and Assumption (*Mäṣḥafä ↗ʿəräfta lämaryam*, *Mäṣḥafä ↗ʿərgäta lämaryam*). The *Mäṣḥafä ləddäta lämaryam* tells how M.'s parents, Anne and Joachim, were, like Abraham and Sarah, childless in old age. They prayed, promising to give their child to serve in the Temple, and their prayers were heard. M. was conceived (the feast of *Śənsäta*, celebrated by the EOTC on 7 *Näḥase*) and born (*Lədäta*, on 1 *Gənbot*). She was presented to the Temple at the age of three (*Bäʾata*, on 3 *Taḫśaś*) and stayed there until the age of twelve. When the time came for M.'s first menstruation she was given to Joseph, who was old and had no wife. Joseph agreed to guard her, but left on a lengthy trip, during which time M. conceived (feast on 29 *Mäggabit*). Joseph was about to leave her when it was revealed to him in a dream that the child was from the Holy Spirit. Nine months later Mary gave birth to Jesus (cp. ↗*Lədät*). This story makes it clear that M.'s marriage was never consummated, and the Church teaching emphasizes that M. remained a virgin even after she gave birth to Jesus.

The important dates of M.'s later life, all feasts in the EOTC (*Täʾammərä Maryam* 1968/69:13–17), are the Flight to Egypt (*Səddät*, 24 *Gənbot*, being, in fact, one of the Six Minor feasts of Our Lord), and the entrance in Qusquam, Upper Egypt (*Däbrä Qʷəsqʷam*, 6 *Ḫədar*). Church tradition teaches that Mary generally followed Jesus in his missionary activities, being present at the wedding in Cana of Galilee (Jn 2:1–5) and when he was crucified. She was with the disciples in Jerusalem until they were dispersed to preach the Gospel. The Gospels do not refer to the time or circumstances of her death. According to the tradition followed by the Copts and Ethiopians, the Dormition of M. – her natural death – took place on 21 *Ṭərr* (↗*ʿƎräfta*) and her body was assumed to heaven on 16 *Näḥase* (↗*Fəlsäta*). Her "Covenant of Mercy" with Jesus (↗*Kidanä məḥrät*) is celebrated on 16 *Yäkkatit*. Other feasts celebrated in honour of M. refer to such posthumous events as the Building and Consecration of her first church at Philippi (*Ḥənṣätä betä krəstiyan bäsəma* and *Qəddase beta*, 20 and 21 *Säne*, resp.), entry of her icon at Saidanaya (*Ṣedenya*, 10 *Mäskäräm*), and the day designated by Bishop Hildefosus of Toledo (*Bäʿalä Däqsəyos*, 22 *Taḫśaś*).

Mariology

M.'s place in the theology of the Ethiopian Orthodox Täwaḥədo Church (EOTC) is reflected in the frequent epithets of the Virgin, such as

ወላዲተ፡ አምላክ (*wäladitä amlak*, 'the Begetter of God'), ድንግል፡ በክልኤ (*dəngəl bäkəl'e*, 'Virgin in two ways') and others. In the spiritual sense she is also called the "sister of the Angels", "daughter of the Prophets" and "mother of the Apostles".

The basic belief is reflected in the symbol of faith of the EOTC, i.e. the Confession of the Faith of the Apostles (*Amäknəyo zäḥawaryat*): *wänäś'a śəga əm'əgzə'ətənä Maryam qəddəst dəngəl zä'ənbälä zär'a bə'əsi* ... 'and took flesh from our Lady Mary, the Holy Virgin, without the seed of man ...' (MQ, *Śər'atä qəddase*, IV, §§ 32–45, here § 37; cp. Aymro Wondmagegnehu – Motovu 1970:43, MD 63f.). The Hail Mary formula of the EOTC (*Täfäśśəḥi o-Maryam mələ'tä ṣägga* ...) is equivalent to the Ave Maria of Catholics (Aymro Wondmagegnehu – Motovu 1970:106f.; cp. MD 50f.).

Some other important liturgical, theological and even Church law texts contain Mariological formulas, mostly focusing on the mistery of Incarnation and Christ's being true God and becoming man in all aspects, through the womb (*maḥṣän*, *kärś*) of M., "a daughter of flesh" (*wälättä śəga*, s. Priess 2006:95ff.).

Mariology is closely connected to the ↗Christology of the EOTC, as is best demonstrated, e.g., by the *Anaphora of St. Mary*, where one finds, alongside with the mention of the Incarnation of Christ in the womb of M., an extensive discussion on God and on the equality of the Three Divine Persons (MD 136–40, §§ 45–78).

M. is called *wäladitä amlak* because God was begotten by the Virgin in flesh as her own son; she was therefore not simply the "Mother of Christ [-the-man]" (Χριστοτόκος, *Christotókos*, lit. 'Giver of birth to Christ') or the "God-receiving" (Θεοδόχος, *Theodóchos*) but the "Begetter of God" (Θεοτόκος, *Theotókos*, lit. 'Giver of birth to God'), as accepted at the Council of ↗Ephesus in 431 in response to the heresy of ↗Nestorius (and adopted by the Ethiopians with the bulk of Cyrillian literature in Aksumite times; ↗*Qerəllos*). In the course of time, rich terminology has developed in Ethiopic literature on the basis of this idea, which describes M. as *wäladitä fäṭari*, 'Begetter of the Creator'; *wäladitä bərhan*, 'Begetter of Light'; *əmmä əgzi'abəḥer*, 'Mother of God', *əmmä bərhan*, 'Mother of Light', etc. (Hayoz 1956:51–54).

M. is *dəngəl*, i.e. 'Virgin' (or *dəngəl fəṣṣəmt*, 'Perfect Virgin'), but is frequently also called by the honorary title *dəngəl bäkəl'e* ('double Virgin', or 'Virgin in two respects', MD 33) which is usually understood, figuratively, as Virgin "in body and in spirit" (Agostinos 1970:378f.; Getatchew Haile 1992:64, 68 n. 14; MD 33 n. 1). The eternal virginity of M. is primarily understood by the EOTC, like by other Christian traditions, as her virginity "before, during and after" the birth of Jesus (cp. already the 15th cent. ↗*Ra'əyä tä'ammər*, Getatchew Haile 1992:82f.; Habtä Maryam Wärqənäh 1970/71:139). The references to Joseph as *bə'əsiha* ('her husband') in the early (Aksumite?) translation of Mt 1:16, 19 had already been altered in the 13th-cent. Gospels' version into *fäḫariha* ('her betrothed', s. Zuurmond 2001:17, 36f., 302f.), possibly to underline the fact that the marriage was never consummated. There was even an attempt to make *fäḫariha* a synonym of *'aqqabiha*, 'her guard'. 15th-cent. *abba* ↗Giyorgis of Sägla refutes heretics (here called *Anṭidiqomaryaṭos*, i.e. Antidicomarianites) who maintained (as did, e.g., ↗Arius) that M. lost her virginity after the birth of Christ, due to her following union with Joseph (but Giyorgis was probably unaware of figurative interpretation of the "double virginity", YaqMist I, 150f., 210–13).

With deep affection, Ethiopian tradition describes M., the Mother of God and the Virgin, as 'chosen' (*ḫərit*), 'blessed' (*bərəkt*), 'saint' (*qəddəst*), 'the purest among the pure ones' (*nəṣəḥt əmnəṣuḥan*), 'joyful' (*fəśśəḥt*) etc., pondering on M. as an impeccable human being, blessed by all sort of spiritual perfection and beauty and the ideal of a Christian lady (cp. GrohHymn 63f.). Moreover she is the "Unburnt Bush", or *'əśä paṭos*, of Ex 2:23–4:18, and therefore 'the tree of life' (*'əśä ḥəywät*) and 'the tree of Paradise' (*'əśä gännät*).

Emphasizing M.'s purity and virginity, the Ethiopian tradition clearly stated that M. was free from any sin. This can be understood as some equivalent of the Catholic doctrine of the immaculate conception (Agostinos 1970:375ff.), without however implying the Western teaching about the "original sin", which is not found in Ethiopia. The EOTC rather followed the belief as proclaimed in the Anaphora of Cyriacus of Behnesa, "O Virgin, thou wast not conceived through the lust, but in lawful marriage wast thou born from Hannah and Eliakim ..." (MD 135). His Homily on the feast of M.'s Assumption (↗*Fəlsäta*) also refers to the human nature of M. who "... was born like all men" (cp. Bombeck 2003:330 [text]). A homily proclaims "The Holy Spirit has (already) sanctified and purified M. in her mother's womb in a sanctification and purity that cannot be told" (Getatchew Haile 1992:40f.,

cf. 82-89). However, having declared recently that M. "is free from the original sin derived from the descendants of Adam, clean from any sins of the flesh or soul" (EOTC 1996:51), the EOTC has formally adopted a formula completely in accordance with that of the Latin Church.

As mother of Christ, the King, M. is the Queen (*nəgəśt*) of the Heaven or Heavenly Church (Krüger – Kannen 1954:243), and the Lady (*əgzi᾽ət*; her believers are *agbərt*, 'servants'). As Queen, her place is on the right of her Son's throne (ibid.). She is below the Creator, but above all the creatures, and should be praised accordingly (Habtä Maryam Wärqənäh 1970/71:141).

As mother of God who bore Christ, M. is the Temple of the O.T. where God was present, but due to the Covenant of Mercy (↗*Kidanä Məḥrät*) she also symbolizes the new relationship between God and mankind and the new Church of the N.T. M. can also be compared with the (Tent of the) Tabernacle, in which the Tablets of Law were preserved, and the ↗Ark of the Covenant, or with the Holy of Holies (i.e. ↗*mäqdäs*; an important idea, cp. BTafY 46f., 85). In as much as ↗Zion is the Church and the dwelling of God, M. is the image of the Church, of Zion and of Jerusalem as well (cp. Ps 131/32:13; Is 2:3; cp. GrohHymn 199ff.). As M. begot Christ, she played role in the foundation of the Church and the Holy ↗Eucharist.

M. is identified with the "[White] Pearl" (*Baḥrəy*) that, according to the *Life of Ḥanna*, existed in Adam and, untainted by his transgression, descended to Joachim and the womb of his wife (Budge 1933:4ff.; cp. Böll 1998:130, n. 194; Hayoz 1956:19). M. is thus *sä᾽aritä märgäm*, 'abolisher of curse', i.e., abolisher of the original sin (cp. ms. EMML 5944, fol. 128v).

In prayers, M. usually is called and approached directly, since it is believed that she is the most powerful intermediary between God and the faithful, and every plea to God first reaches M. If she accepts it, she further intercedes to God. The EOTC believes in the great strength of M.'s intercession (Habtä Maryam Wärqənäh 1970/71:131f.). This belief roots in the Covenant of the Mercy, which presents the parallel to the O.T. "pacts" and elevates M. to the most powerful among the ↗saints. M.'s ↗*kidan* is the most long-standing and powerful (*Tä᾽ammərä Maryam* 1968/69:61), and open to all faithful (becoming "servants of M."; ibid. 6f.).

M.'s role as donator and source of grace is revealed in her miracles. She can comply with each kind of the plea of the faithful, concerning both body and soul. The faithful can count on her intercession in obtaining the mercy of God on Judgement Day, as is reported in the numerous stories of the *Tä᾽ammərä Maryam*, and in saving them from the infernal punishment (as is notably described in the apocryphal *Apocalypse of* ↗*Mary*). According to the *Tä᾽ammərä Maryam* (1968/69:59), replying to M.'s plea for salvation of the souls of her believers, Christ is reported to have said: *akkonu täsäbba᾽ku bä᾽əntäzə*, 'Have I not become man for the sake of this?' M. even accompanies the souls of the deceased to Paradise (hence her role in the funeral rite, ↗*Mäṣḥafä gənzät*).

M.'s coming, and her miracles, were announced in the O.T. along with the birth of Christ (Habtä Maryam Wärqənäh 1970/71:135-38). Moreover, M. existed before the Creation of the world (*əgzi᾽ətənä Maryam näbärät əmqədmä ᶜaläm bäḥəllina amlak*, 'Our Lady Mary existed before the world in the consciousness of God', s. *Tä᾽ammərä Maryam* 1968/69:3), and the world itself was created for M.'s sake (ibid. 4). In many cases she came before Christ, whose name became Wäldä Maryam ('the son of M.). Christ's body was even understood to be the body of Mary which he took from her (hence the epithet ቤዛዊተ፡ ዓለም (*bezawitä ᶜaläm*, 'Redeemer of the World').

The status of the Virgin is thought to have been raised immensely in the 15th cent., during the reign of *aṣe* ↗Zär᾽a Yaᶜəqob. It is also commonly believed that Zär᾽a Yaᶜəqob's reign also witnessed the emergence of several Mariological "heresies" and heated Mariological discussions. A number of "dissident" groups did not accept "excessive" elements of Zär᾽a Yaᶜəqob's worship of M. Members of the community of ↗Gundä Gunde, or the ↗Stephanites, rejected prostration (*səgdät*) before the images of M. (the earliest independent attestation of this practice dates into 1453, s. BauEr I, 48f. n. 113) or while her name is called, arguing that it is fitting only for the Father, the Son and the Holy Spirit. The "dissidents" were persecuted by the Emperor who labelled them *śəärä Maryam* (lit. 'enemy of M.', Eth. equivalent for the Antidicomarianites) or ↗*Ayhud*. Some clerics did not accept the idea that the *Kidanä məḥrät* offered a way of "justification" for criminals (cp. ↗Zämika᾽el), or did not recognize the *Tä᾽ammərä Maryam* (Getatchew Haile 1991:3, 82f.). However, the resistance concerning the cult of M. was mostly initiated by small groups of educated ecclesiastics and had little impact on the Church as a whole and on the religious life of the faithful. By the

end of the 15th cent., under *aṣe* ↗Naᶜod, whose deep devotion to M. is well attested, the Stephanites seem to have mildened their position and accepted the prostration to M. (Caquot 1961:80f., 106f.; cp. Getatchew Haile 1983:100ff.). The easing of the controversy was also due to the distinction introduced between two terms: *amläkä* ('worship as God', reserved for the Godhead) vs. *sägädä* ('prostrate oneself, worship').

Some discords concerning the veneration of M. existed also in the 16th–18th cent., but they were not among the major issues debated by the competing theological schools of the Gondärine time. The question of the extreme worship of M. was raised again at the Council of ↗Boru Meda in 1878 by the adherents of the *Śost lədät* doctrine, though, according to the source, as a secondary issue, after the main questions had been solved (GueCopMen 155). The council condemned the formula proposed by the theologians of Šäwa: *latti yədällu kəbr wäsəbḥat wäməslä wälda amləko wäsägid* ('for her [M.] honour and glory is due, and, together with her Son, veneration and worship'), favouring that supported by the school of Təgray: *latti yədällu kəbr wäsəbḥat wäläwälda amləko wäsägid* ('for her [M.] honour and glory is due, and for her Son veneration and worship') (Algermissen 1988:50b; Getatchew Haile 1983:111 n. 88, 1992:63; cp. Agostinos 1970:399ff., who considers the condemned formula a result of a confusion of vocabulary, and thus not a true heresy). However, M. can be adressed to in the same language and manner as Christ, *əsäggəd läʾab wäwäld wämänfäs qəddus … əsäggəd läʾəgzaʾətənä Maryam dəngəl wäladitä amlak …* 'I prostrate myself to the ground (in adoration) before the Father, the Son, the Holy Spirit … I prostrate myself to the ground before Our Lady Mary, Virgin, Begetter of God …' (*Mäṣḥafä ṣälot* 1953/54:9ff.).

Getatchew Haile – Denis Nosnitsin

Church and popular veneration of St. Mary

Church veneration

The importance of the Marian veneration in Ethiopia since the early (Aksumite) period appears to be confirmed by the dedication of the main sanctuary of the country, ↗Aksum Ṣəyon, which seems to be old and original. The Betä Maryam church of the ↗Lalibäla complex is dedicated to M. as well.

During the Liturgy (↗*Qəddase*), starting to read the Pauline epistle, the deacon exclaims: "Whoever who does not love our Lord and Saviour Jesus Christ and does not believe in his birth from holy M. of twofold virginity, the Ark [*tabot*] of the Holy Spirit, until his coming again, as Paul said, 'let him be cursed' [*wəguz - ἀνάθεμα*]" (MQ, *Śərᶜatä qəddase*, III, § 136, 28 =

MD 44). This is an "enlarged quotation" from 1 Cor 16:22, into which the mention of the birth of Jesus and the "double virginity" of M. described as "the Ark of the Holy Spirit" are inserted. It may be taken as characteristic of the EOTC devotion to M. The veneration of M. is, first of all, a Christological affirmation, since M.'s virginity is the sign of Jesus's being conceived from the Holy Spirit, and, consequently, of his being God.

Over the centuries, the Marian cult in Ethiopia underwent an extraordinary development, particularly from the 15th cent. onwards. The translation of the *Miracles of Mary* (↗*Tä'ammərä Maryam*) during the reign of *aṣe* ↗Dawit II, and the later uncommon piety of *aṣe* ↗Zär'a Ya'əqob, the author of numerous Marian treatises and the initiator of the series of 33 ↗feasts of the Virgin (cp. PerZarY 75), have secured for M. an exceptional position, up to the point where the reading of the *Tä'ammərä Maryam* in church is obligatory. There were even attempts to offer M. the cult equal to that of her Son, until the final resolution at the Council of ↗Boru Meda in 1878 (Algermissen 1988:50b; Getatchew Haile 1992:63).

The 33 feasts of the Virgin M. once introduced by *aṣe* Zär'a Ya'əqob remained in force. In practice, only five of them are widely celebrated (one of them, ↗*Fəlsäta,* prevails over Sunday; cp. ↗Sabbath), nine more are still largely followed (s. EAE II, 671b). The monthly calendar dedicates five days of each month to M.: the 1st, the 3rd, the 16th, the 20th and the 21st (s. EAE vol. 2, 672a). Among the five main feasts, one should underscore the feast of ↗*Kidanä Məḥrät* (16 *Yäkkatit*), which is specific to Ethiopia; it expresses the highest point of veneration which the Christians of Ethiopia give to their saintly patroness, in whom they trust in a quite particular manner (EOTC 1996:54).

A popular tradition reports that Christ himself has given Ethiopia to his Mother, making her the appointed protector of the country (Nollet 1949:366; Agostinos 1970:383, 387; Aymro Wondmagegnehu – Motovu 1970:106, 108). This role of M. is repeatedly underscored during the Liturgy (MQ 28, *Śər'atä qəddase,* §§ 128, 176 = MD 43, 50; Aymro Wondmagegnehu – Motovu 1970:107).

The vocabulary employed in the liturgical prayers also demonstrates sufficient honour rendered to M. (cf. Nollet 1949:370–79, 395–411; Agostinos 1970 passim; Stoffregen-Pedersen 1990:75–84; Algermissen 1988:49b–50b). Four Marian ↗Anaphoras are known, although only one of them appears in the official book of common prayer of the EOTC. Even if one puts aside the very popular ↗*Wəddase Maryam*, which originates in Coptic tradition, and many other prayers (s. below), one can mention several Marian texts of the Liturgy. E.g., after the reading of the *Acts of the* ↗*Apostles*, the priest says "Rejoice, O thou of whom we ask healing, O holy, full of honour, ever-virgin, God-bearer, mother of Christ, offer up our prayer on high to thy beloved Son that he may forgive us our sins. ...." (MQ 30f., *Śər'atä qəddase*, III, §§ 155–59 = MD 48). This often quoted prayer is, in fact, translated from Coptic, where it occurs just before the "Canon of the Creed" and the Creed itself, both in the Horologion, at Matins, and in the Offering of the incense (s., resp., Burmester 1967:101, l. 5 and 38, l. 5, with the full English version given at Appendix 28, p. 338; the Gə'əz version is found e.g. in *Mäṣḥafä sä'atat* 1952:48f.).

On the other hand, the Anaphora of St. Mary contains several comparisons, such as "O Virgin, when there abode in thy womb the fire of the Godhead, whose face is fire, whose clothes are fire, whose covering is fire, how did it not burn thee?" (MQ 88, *Anaphora of St. Mary*, § 80 = MD 141). While M. is constantly adressed to as an interceder to obtain from God the remission of the sins, the latter text refers, as usual, to the basic miracle of Incarnation, referring again M. to her role as Mother of God. Here, the connection between Mariology and Christology shows once more. The same is true, e.g., for another passage where, alongside with the mention of the Incarnation of Christ in the womb of M., an extensive discussion on God and on the equality of the Three Divine Persons is found (MQ 85–88, *Anaphora of St. Mary*, §§ 45–78 = MD 136–40). The omnipresence of M. in the prayers is also apparent in the fact that the Hail Mary is recited during the Liturgy immediately before the Lections, and each time after Pater Noster.

Popular veneration

One has to acknowledge that in spite of the theological accuracy of the EOTC, the popular worship sometimes tends to exaggerate M.'s cult, in Ethiopia as well as in other countries of the Christian world, and that in the liturgical texts one can find passages that can be accepted only under condition of their interpretation in general or figurative sense (cf. Agostinos 1970:384f., 392f., 398ff.).

In everyday life, the devotion of people to M. appears in concrete and visible signs. Thus,

many personal ↗names include the component Maryam or Dəngəl: Habtä Maryam ('gift of M.'), Ḫaylä Maryam ('power of M.'), Ṣəge Maryam ('flower of M.'), Wäldä or Wälättä Maryam ('son' or 'daughter of M.'), Fəqurä Dəngəl ('the beloved of the Virgin'), Säblä Dəngəl ('corn-ear of the Virgin') etc. This list can be continued almost endlessly.

One who has read the *Tä'ammərä Maryam* is not surprised to hear the beggars asking for the alms "in the name of M." (*səlä Maryam*), sometimes after having mentioned many other, less important saints. The number of churches dedicated to M. is very large and includes various names, such as *Ṣəyon*, 'Zion', names of her feasts (e.g. *Lədäta*, Nativity), *Kidanä Məḥrät*, etc. One can claim without exaggeration that almost all churches that are not dedicated to M. possess at least one ↗*tabot* in her name. Going to a church dedicated to the Virgin, especially on one of her numerous feasts, is a very common act of devotion to M.; an even more appreciated custom is to make a ↗pilgrimage to a sanctuary dedicated to her: in Aksum (↗Aksum Ṣəyon), in Lalibäla (Betä Maryam), in ↗Amba Gəšän, near Däse (where the church of the Virgin was built prior to the arrival of the relic of the Cross), and also in ↗Bərbər Maryam, in Gamo Gofa.

The general great personal devotion of the believers is a remarkable feature: many of them daily recite the *Wəddase Maryam*, the Pater Noster together with the Hail Mary and other compositions (↗prayers, ↗*mälkə'* etc.) addressed to M. The liturgical manuscripts frequently use red ink to write the names of both Jesus and M. each time they occur in the text. Those who do not prostrate before the image of M. are frequently considered to be "heretics", and are referred to by the historical label *śärä Maryam* ('enemy of M.', Agostinos 1970:396; the term can be used today, e.g., in reference to the Protestant missionaries). Recently, the EOTC has decidedly reasserted the importance of worship of M., in this connection recalling various points of the doctrine (EOTC 1996:51–55).

Another feature of the veneration of M. are the omnipresent Marian icons (cp. Heldman in PICES 7). M.'s personal presence is felt through her images, which are treated as if divine power resided in them (in reference to the icon of Saidanaya, cp. Getatchew Haile 1992:171). Those who can afford it may even build within their homes a special niche for adoration, called (*yä*)*śə'əl bet*, lit. 'icon house', accomodating the devotional image of the Madonna and Child.

Through the early expansion of Christian Ethiopia as well as by diffusion, the veneration of M., which became very popular, also found its way into the partially Christianity-inspired folk religions (↗Religions, traditional) of southern and south-western Ethiopia. In a ↗Gurage praise song dedicated to "Maryam" (documented in Shack – Habte Mariam Marcos 1974:21, 60f.) she is depicted as creator of life and death. According to the old Gurage belief "Maryam" was considered the "sister of Virgin M." and often confused with the female spirit ↗*Däm^{w}am^{w}it*. Likewise, the ↗Basketto deity of fertility *Qačaarunde*, female counterpart or "mother" of *Ṣosii*, the male high-god, sometimes was equated with M. (VSAe I, 217). Similarly, the female deity of Oromo religion, ↗*Ateetee*, was related to M. (Orom. *Maram*; VSAe II, 548). Examples for the veneration of M. in a mainly non-Christian environment could also be found in the South-west, e.g., in Käfa, where an ancient church dedicated to M. was ↗Andarača Maryam. However, it was rededicated to the ↗*eqo* cult by ↗Kaye Šeročo (Lange 1982:163, 165, 298, 304, 308, 323).

Ugo Zanetti

Marian literature

One of the constituent elements of the veneration of M. in Ethiopia has been the ↗Gəʿəz literature of the ↗Ethiopian Orthodox Täwaḥədo Church (EOTC).

The nucleus of the Marian literature was adopted from the ↗Coptic Orthodox Church of Alexandria. Among Marian works translated into Gəʿəz, e.g., a Homily of Proclus of Cyzicus included in the ↗*Qerəllos* should be mentioned (s. Weischer 1979:64–87), which was directed against the teaching of ↗Nestorius, but which, logically, contained passages which became basic for the Ethiopian Mariology (ibid. 65). There are some other works devoted to M., mostly homilies (cp. ↗*Dərsan*), that are ascribed to early Christian authors, e.g., ↗Cyriacus of Behnesa, ↗Cyriacus of Jerusalem, John the Evangelist, Basil of Caesaria (↗Basil the Great), Theophilus of Alexandria (s. Conti Rossini 1912), Timotheus of Alexandria, and ↗Jacob of Serug on Annunciation (Uhlig 1999). Excerpts from a Homily of ↗John Chrysostom on Annunciation as well as from a Homily of ↗Ephrem the Syrian on M. are found in the ↗*Haymanotä abäw*. These texts, however, are attested mostly in recent manuscripts (cp. mss. BritLib Orient. 604, 692, 744 [WrBriMus nos. 216, 256, 325]) and turn out to be translations from Arabic in most of the cases. The authenticity of most of them has not been proven yet. In the celebrated 14th-cent. ms. EMML 1763 a few Marian texts are attested (no. 25 is the same Homily of Proclus; cp. nos. 19, 20, 23, 34, 73, 81f.; cp. 14th-cent. Berlin, Staatsbibliothek Or. fol. 117, nos. 1, 13f., 18f., 23 [DillmBerl no. 66]).

The growth of the Marian literature in Gəʿəz, initially enriched by translations from Arabic, becomes clearly visible from the 14th cent. *Abunä* ↗Sälama II "the Translator" is credited with the translation of the ↗*Laḥa Maryam* and the poetic Marian office ↗*Wəddase Maryam* (s. van Lantschoot in PICES 1, 401), for which an Amharic commentary was later elaborated by an anonymous Ethiopian scholar and became popular, being recited in churches and at residences of the notables during the 15-days fast preceding the feast of M.'s Assumption (↗*Fəlsäta*). As to the Ethiopian works, homilies ascribed to ↗Rətuʿa Haymanot could have been composed as early as in the second half of the 14th cent. (ms. BN Abbadie 80 [CRAbb no. 133], fol. 120; cp. orient. quart. 1166 [HamSixBerl no. 149], no. 2; Orient. 786 [WrBriMus no. 343], no. 2).

The amount of the Marian literature was further enhanced by the cycle of the mostly translated (but with a few original Ethiopian compositions) apocryphal works about M.'s life: in addition to the *Laḥa Maryam*, these were such texts as the narrative on M.'s conception and nativity (*Zena śənsäta wälədäta läʾəgziʾətənä Maryam*; Budge 1933a:122-42); the accounts of her Nativity (*Mäṣḥafä* ↗*lədäta*), her Dormition and Assumption (*Mäṣḥafä* ↗*ʿəräfta lämaryam* and *Mäṣḥafä* ↗*ʿərgäta lämaryam*, resp.), and the *Apocalypse of* ↗*Mary*. Some details appear in the apocryphal ↗*Täʾammärä Iyäsus*. Later, a few more texts, such as the narratives about the Holy Family's flight to Egypt, known as the *Nägärä Maryam* (translated

probably in the 15th cent., RicLett 834; e.g., mss. BritLib Orient. 602 [WriBriMus no. 212], EMML 2044, 3157), were added.

The Life of M.'s mother Ḥanna (Budge 1933a:1-53) was probably translated in the 14th cent.; the peculiar idea of "[the White] Pearl" (*Baḥrəy*), elaborated in it (Budge 1933a:4ff.), appears in a number of other works of Gəʿəz literature (Beylot 1972), including the ↗*Kəbrä nägäśt* (BezKebr 82ff., 133 [text]). All these works greatly expanded the otherwise modest dossier on M.'s life and enriched the theological thinking of the Ethiopians.

The readings for most (though not all) Marian feasts were already included in the early (ca. 1400) version of the ↗*Sənkəssar*: 7 *Näḥase* (BudSaint 1196f.), 16 *Näḥase* (ibid. 1222ff., *Fəlsäta*), 10 *Mäskäräm* (ibid. 34ff.), 6 *Ḫədar* (ibid. 211f.), 3 *Taḫśaś* (ibid. 315ff.), 28-29 *Taḫśaś* (↗*Lədät*, ibid. 418-25), 21 *Ṭərr* (ibid. 523-27), 16 *Yäkkatit* (ibid. 635-38), 1 *Gənbot* (ibid. 848f., *Lədäta*), 8 *Säne* (ibid. 977f.).

By the time of *aṣe* ↗Dawit II, the writings devoted to M. started to build in mss. (sometimes lavishly illuminated) extensive compendiums containing Marian texts only, focusing on different phases of the Virgin's life and/or her celebrations. Probably one of the earliest known examples of such a cycle is the Homiliary preserved in the church of Betlehem (Gayənt). Dated probably to 1400-10 (AfrZion 92), the manuscript contains, in its first part, 16 texts, starting from the *Mäṣḥafä lədäta lämaryam* (Bombeck 2003:2-23 [text]) up to the Homily on M. by a certain John the Bishop of Ethiopia (*Yoḥannəs ṗappas zäʾityoṗya*; probably identical to "*abba* Yoḥannəs" in ms. Orient. 616), on M.'s birth and childhood, the Nativity of Christ and the Exile of the Holy Family, and ending with her Assumption (Bombeck 2003:426-47). Similar collections are found in a number of other mss., both ancient and recent: probably 15th-cent. Ṭānāsee 45 = Kebrān 45 (HamTana I, 189); 18th-cent. Orient. 604, Orient. 606 (WriBriMus no. 217) and Orient. 605 (no. 214), Ṭānāsee 72 = Dabra Māryām 14; Abbadie 158 (CRAbb no. 56); EMML 2461 embraces over 90 texts (cp. Budge 1933a:lxii-lxiv). The beginning of the translation of the ↗*Täʾammərä Maryam* falls upon the time of Dawit II (the Betlehem ms. contains 15 miracles, s. Bombeck 2003:540–76).

Many texts reflect the Cyrillian doctrine of M. as the Θεοτόκος. Thus, the *Kəbrä nägäśt* refers to the exalted status of M. as *wäladitä amlak* (BezKebr 133). Besides, one can assume the existance of Mariological discords in the early 15th cent. and even earlier. Refuting the doctrine of ↗Nestorius and, possibly, addressing unnamed opponents, *abba* ↗Giyorgis of Sägla in his ↗*Mäṣḥafä məśtir* describes some "heretics" as those who call M. "the Begetter of the Saviour", and not "the Begetter of God" (YaqMist I, 84) and refutes some other of their views.

The reign of *aṣe* ↗Zärʾa Yaʿəqob, who used his authority to establish M.'s status akin to that of a goddess ("since there is no one more honourable than she, after God"; CRRicBerhan II, 44), had a great impact on the veneration of M., as he incorporated it into his state-building program, making the Marian feasts compulsory (Budge 1933b:xlvi–xlix).

There are many historical attestations of Zärʾa Yaʿəqob's deep and sincere personal devotion to M. Elevating her position, the Emperor established a special relationship between the Virgin and his subjects. The concept of the ↗*Kidanä Məḥrät* gained new popularity, and new texts entitled *Mäṣḥafä* ↗*kidanä məḥrät* appeared. One of them (of ↗Ṭana Qirqos) stressed the relationship between M. and the Solomonic kings (s. Conti Rossini 1910). Elsewhere, Zärʾa Yaʿəqob described his visionary experience, when he entrusted his Kingdom to M. as tithe, or ↗*ʿaśrat* (Getatchew Haile 1992:154f.), an idea which was later elaborated in the peculiar tract *Dərsanä kidanä məḥrät* (EMML 1860).

Zärʾa Yaʿəqob believed that it was M. herself who miraculously assisted him in many decisive moments. He believed it was M. who helped him to defeat ↗Aḥmad Badlāy (CerMaria 89, 95f.) as well as to foil mutinies and rebellions (the rebels being the "enemies of God and his Mother Mary"; Getatchew Haile 1992:157). The *Täʾammərä Maryam* became one of the most influential works of Gəʿəz literature, and its reading during church services became nearly as important as reading from the Bible. The *Mäṣḥafä śərʿat* (lit. 'Book of the Regulation'; Budge 1933b:xlvi-liv), or so-called the Canon of Muʿallaqa (the church in al-Fusṭāṭ at Old Cairo) was to be read before the *Täʾammərä Maryam* as admonition (cp. also Getatchew Haile 1992:63). Still today, the clergy enjoy reading the texts and interpreting them them in the vernacular language for the faithful.

Extensively promoting writings about M.'s supernatural powers, Zärʾa Yaʿəqob and the clergy of his royal camp (*kahənatä däbtära*) translated, revised, composed and disseminated texts dedicated to the adoration of M. A new *Mäṣḥafä* ↗*säʿatat*, composed by *abba* Giyorgis of Sägla,

more pronounced in respect to the veneration of M., substituted the translated *Mäṣḥafä säᶜatat zägəbṣ* (Getatchew Haile 1983:111 and n. 88). The introduction of the *Arganonä Wəddase*, as parallel of the *Wəddase Maryam*, both having become the main poetic works of the Marian literature, falls in the same period.

The polemics between Zärᵓa Yaᶜəqob and different "heretical" groups (e.g., the ↗Stephanites) also found their way into the contemporary Mariological literature. The *Täᵓammərä Maryam* enhanced the most important aspects of M.'s sainthood, her unlimited capacity of performing miracles (CerMaria 94-122; Getatchew Haile 1992:149-57). The polemics with those who did not fully accept the *Kidanä məḥrät*'s power to "pardon" criminals found reflection, e.g., in the third tract of *Raᵓəyä Täᵓammər* (Getatchew Haile 1983:99; 1992:122-27; cp. ↗Zämikaᵓel).

Aṣe ↗Naᶜod continued the tradition of extreme veneration of M. He established additional feasts – monthly commemorations of M.'s Nativity, Assumption, and Transition, – and brief entries were additionally included in the *Sənkəssar* (e.g., the 21st day of each month, s. BudSaint 78 [*Mäskäräm*], 180 [*Təqəmt*], 266 [*Ḫədar*], 393 [*Taḫśaś*], 522 [*Ṭərr*], 642 [*Yäkkatit*], 721 [*Mäggabit*], 817 [*Miyazya*], 917 [*Gənbot*], 1020 [*Säne*], 1138 [*Ḥamle*], 1235 [*Näḥase*]). Naᶜod is also credited with authoring several Mariological literary texts and hymns (cp. Turaev 1904).

The expansion of the *Täᵓammərä Maryam* is indicative of the popularity and strength of the veneration of M. A luxurious manuscript of the *Täᵓammərä Maryam*, completed in the beginning of the 16th cent., contains 150 miracles (Cerulli 1957); one of the largest collections from the Gondärine time (1719) includes 316 stories (ms. Orient. 643 [WriBriMus no. 41]; cp. ms. EMML 1606); the "standard collection" of the miracles, compiled in the 17th cent., includes only 33 miracles. Another feature demonstrating the spread of the Marian works is the composition of the Ethiopic ↗Psalter, which includes, in addition to ↗*Mäḥaləyä näbiyat*, extensive poetic compositions devoted to M. (found already in the 15th-cent. Psalter mss.; this practice is still applied for the church editions of the Psalter).

The EOTC acquired four ↗anaphoras dedicated to M. The most commonly used one (*Gʷäsᶜa ləbbəyä qalä śännayä*) is ascribed to Cyriacus of Behnesa, and was composed or translated probably in 1382-1424 (s. Böll 1998:16; cp. Hammerschmidt 1987:17). The second anaphora of M. is ascribed to the 15th-cent. *abba* Giyorgis of Sägla (Hammerschmidt 1987:34). Two other, lesser known anaphoras date to an unknown period (Hammerschmidt 1987:25f.; cp. EMML 1159). Several Marian passages are included in the liturgy, e.g., in the preparation part ("M. is the incense, and the incense is He, because he who was in her womb is more fragrant than all chosen incense", MQ 31, *Śərᶜatä qəddase*, III, § 161 = MD 48).

While the most important period for the Ethiopian Marian literature in prose was 14th-16th cent., the hymnody devoted to M., intended for liturgical purpose and personal devotion, kept thriving in later centuries, especially in the Gondärine culture (which left a rich heritage of M. artistic representations). Earlier works of Marian literature, several new texts devoted to M. and linked to different aspects of her veneration also appeared. Though in many cases recent and probably secondary compositions, they deserve systematic studies.

A substantial number of Marian accounts was adopted into the *Täᵓammərä Maryam* (notably, devoted to different Marian churches, starting from ↗Däbrä Məṭmaq). Among the other works worth mentioning are, e.g., a Homily on M. and ↗Zion (in a large Mariological collection, EMML 2044, 37.18); the *Mäṣḥafä ↗aḫbəro*; anonymous homilies for M.'s Nativity, 1 *Gənbot* (EMML 3998) and or her story for 21 *Ḫədar* (EMML 3580, in the *Dərsanä Maryam*). The title ↗*Dərsanä Maryam* appears in relation with some separate texts as well as with a compendium made of different Marian works (cp. EMML 3998).

Numerous supplications and esp. ↗prayers to M. are known: *Naᶜabbəyaki o əmmä bərhan* (mss. EMML 64, 138); *Tämaḥṣänku oᵓəgziᵓətəyä Maryam* (EMML 353, 983); *Obəṣəᵓət zäᵓalbəki rəsḥat* (ibid.); *O əgziᵓətəyä Maryam bäqəddəsənnaki qäddəsäni* (EMML 1338); cp. Marian prayers in Lifchitz 1940:236ff.; 17th-cent. EMML 658; widespread apocryphal prayer "in the wilderness of Edamya" from the *Nägärä Maryam* (EMML 543), "prayer of M. on Bartos" and "prayer of M. on Golgota" (Basset 1895; Conti Rossini 1896). M.'s genealogy is found in EMML 1534, 17th-cent. 1837. Marian prayers are sometimes included into collections of magic *asmat* (EMML 1664); there are even collectios of the *asmat* of M. herself (EMML 426, 2121).

M. is a frequent character in hagiographical works (which extensively draws upon the Marian literature) and episodes of her life inspired many local traditions (like the flight of the Holy Fam-

ily reaching Ethiopia). Portions of Marian literature became elements of the faithfuls' everyday life: they start their day by reciting the opening prayer in which they invoke the three names of the persons in the Trinity and renounce Satan, and recite the Pater Noster, the Hail Mary, the Magnificat (*Ṣälotä Maryam*), the Nicene Creed, and a number of Marian hymns.

Getatchew Haile – Denis Nosnitsin

Hymns to the Virgin Mary

Gəʿəz literature boasts a large collection of ↗hymns extolling the Virgin M. It is difficult to list them all exhaustively (ChRep alone registers 71 compositions; cp. GrohHymn 29–36). Thematically, they can be classified into: hymns that celebrate M. as the mother of God; hymns that evoke M. standing under the Cross; and hymns on her flight to Egypt, with all the sufferings endured.

Only a few of these works can be tentatively dated. The surge in translation and composition of Marian ↗anaphoras and hymns took place during the 15th cent. Besides, the religious controversies of the 14th–15th cent. stimulated the composition of a number of the Marian hymns. Still part of the EOTC's liturgy, they are found in such liturgical books as the *Mäzgäbä* ↗*dəggʷa*, ↗*Məʿəraf*, ↗*Mäwaśəʾət* and ↗*Zəmmare* (s. GrohHymn 26ff.). The Gondärine time was another formative period in the development of Ethiopian spiritual poetry devoted to Mary.

The following works are considered the most famous:

- ↗*Akkonu bəʾəsi*, each verse of which makes an allusion to a miracle of M. (according to the "standard collection" of the ↗*Täʾammərä Maryam* composed of 33 miracles; GrohHymn 322–82);
- ↗*Anqäṣä bərhan*, traditionally attributed to the 6th-cent. St. ↗Yared (cf. VelMe I, 159f.);
- ↗*Arganonä Maryam* (or *Arganonä wəddase*), one of the most precious Marian works, produced during the period of *aṣe* ↗Zärʾa Yaʿəqob, with readings for each day of the week (Leander 1922; Daniel Assefa 2003);
- ↗*Ǝgziʾabəḥer nägśä*, a collection of hymns composed in honour of the saints, including M.;
- ↗*ʿƎnzira səbḥat* (also *Arganonä wəddase*), a well-known composition with a verse for each letter of the alphabet;
- ↗*Maḫletä ṣəge*, one of the most beautiful pieces of Ethiopic literature, ascribed by a tradition to a certain *abba*

Ṣəge Dəngəl, but fitting with the style of the 15th-cent. *abba* ↗Giyorgis of Sägla (Fessehatzion Andemariam 1994; for the edition s. GrohHymn 67–353);

↗*Mälkəʾ*, which celebrate M. by listing and praising each part of her body as the centre of divine gifts. Some of these have titles of their own; some go under the generic title of *Mälkəʾa Maryam* and can be identified only by their *incipits*; a few Marian *mälkəʾat* are included into the collection ↗*Mälkəʾa gubaʿe* (cp., e.g., the *mälkəʾ* published by Hayoz 1956:28–125). Those with a specific title are:

Mälkəʾa anqäṣä bərhan, 'Image[s] of the Gate of Light' (ChRep no. 241; MG no. 44), an adaptation of the Marian office of the *Anqäṣä bərhan*;

Mälkəʾa bäʾata, 'Image of Her Presentation [in the Temple]' (Aklilä Bərhan Wäldä Qirqos 1952/53:87; Raineri 1989:107);

Mälkəʾa Edom, 'Image of Edom' (ChRep no. 302; MG no. 38; Raineri 1989:107), ascribed by a tradition to *aṣe* ↗Ləbnä Dəngəl (Getatchew Haile in PICES 10, 373);

Mälkəʾa fəlsäta, 'Image of Her Assumption' (ChRep no. 213; MG no. 40; Raineri 1989:107), ascribed to *aṣe* ↗Zärʾa Yaʿəqob (Getatchew Haile in PICES 10, 373);

Mälkəʾa kidanä məḥrät, 'Image of the Covenant of Mercy' (ChRep no. 360; MG no. 42; DillmChr 136–46; Raineri 1989:93–98) of *abba* Zämäläkot (Getatchew Haile in PICES 10, 373);

Mälkəʾa lədäta, 'Image of Her Birth' (ChRep no. 23; Aklilä Bərhan Wäldä Qirqos 1952/53:87; Raineri 1989:108);

↗*Mälkəʾa Maryam* [2], 'Image of M.' (ChRep no. 220; MG no. 45), ascribed to *aṣe* ↗Bäʾədä Maryam (Getatchew Haile in PICES 10, 373) or to *aṣe* ↗Naʿod;

Mälkəʾa Qʷəsqʷam, 'Image of Qʷəsqʷam' (MG no. 41; Aklilä Bərhan Wäldä Qirqos 1952/53:88; Raineri 1989:107);

Mälkəʾa səʿəl, 'Image of the Icon [of M.]' (ChRep nos. 32, 368);

Mälkəʾa ṣəge, 'Image of the Flower' (ChRep no. 397; Aklilä Bərhan Wäldä Qirqos 1952/53:88; Raineri 1989:107; presumably a poetic adaptation of the *Maḫletä ṣəge*);

Mälkəʾa Ṣəyon, 'Image of Zion' (Aklilä Bərhan Wäldä Qirqos 1952/53:88; Raineri 1989:107);

Mälkəʾa wəddase Maryam, 'Image of the Praise of M.' (ChRep nos. 398 [Monday], 326 [Tuesday], 383 [Wednesday], 385 [Thursday], 290 [Friday], 319 [Saturday], 299 [Sunday]; MG no. 43; Raineri 1989:107), a poetic adaptation of the Marian office ↗*Wəddase Maryam*.

Other hymns include:

↗*Mäzmurä dəngəl*, with each of its 151 parts meant to elaborate the corresponding Psalms of David (↗Psalter);

Sälamta ('Salutations'), a collection of short *sälam*-hymns addressed to M., by different authors and dating from different periods (GuiSLett 81);

↗*Säqoqawä dəngəl* (ChRep no. 268; Hayoz 1956:135–235; Aklilä Bərhan Wäldä Qirqos 1952/53:85), often sung during the fast of Qʷəsqʷam and on Good Friday and traditionally ascribed to a certain *qolla šum* Yoḥannəs (Getatchew Haile in PICES 10, 373), but possibly translated into Gəʿəz from an Arabic *Vorlage* (ed. by Hayoz 1956:118–226);

↗*Səbḥatä fəqur* belonging to the ↗*Säʿatat* and sung every day in the monasteries, and dating from the 15th cent.;

Wəddase əmqalä näbiyat ('Praise from the Words of the Prophets'), a poetical re-elaboration of the messianic prophecies sung every morning during the period that precedes the Nativity of Christ (↗*Lədät*);

Wəddase Maryam, a long composition with a section for each day of the week, traditionally attributed to St. ↗Ephrem the Syrian (VelME I 159f.);

↗*Ḫoḫətä bərhan*, a composition of both prose and poetry.

All ↗*Qəne*-hymns improvised during Marian feasts are devoted to M.

There are a few Marian hymns in Amharic, one of the earliest probably being the ↗*Məśṭira ṣəgeyat*.

In addition, there is a number of compositions that can be partly considered Marian hymns: *Məntänu aʿassəyäkki* ('How can I Reward you?') is a short invocation to M. attested in the *Säʿatat* and belonging to the *Täfäśśəḥi* ... (*zäzäwätər*) sung every day (Mogäs ʿƎqubä Giyorgis 1966/67:145–51). The author, *abba* Giyorgis, meditates on M.'s love and mercy: "I would not exist even for one hour if She had not forgiven my sins ...". Another hymn that shows M.'s eternal love for mankind is the ↗*O rəḫrəḫtä ḫəllina* (ChRep no. 368; Roman 1922–23), which is the incipit to *Mälkəʾa śəʿəl*, 'Image of the Icon [of M.]'. The composition is ascribed to *aṣe* ↗Gälawdewos (Getatchew Haile in PICES 10, 373) and belongs to the ↗*Säʿatat* (Mogäs ʿƎqubä Giyorgis 1966/67:182–87). Some hymns are devoted to the motive "lamentation of M." (van den Oudenrijn in PICES 1). There are also many short Marian hymns, such as *O əgziʾətəyä* ... (GrohHymn 33), *Ǝsebbəḥ ṣäggaki* ... (ibid. 31) etc., attested in many manuscripts.
